2864 in Wales, and through his zinc interest at one time he acquired a lithopone factory, the most important lithopone factory in England. At what time I do not know but I think it was some time in—the twenties.

Q. Now was there any thought in 1933 or prior to that, in connection with the British arrangements of combining Mr. Robinson's zinc or lithopone interests with the titanium industry in England?—A. I think it was in Mr. Robinson's mind, yes. But I do not think it cut much ice with the National Lead Company. Robinson was an intimate friend, or very good friend, of McCarty; also well acquainted with Mr. Cornish, and he had mentioned to

McCarty at one time, I think that was before National Lead Company took over the majority of the interest of Titan Co. A/S, that he would like—he did not know evidently what the relations were between the Norwegian and the American—that it had been suggested to him by friends that he go into the titanium business. That was only natural for him because he had these big factories down in Avenmouth and had to roast his zinc ore and make sulfuric acid, and he had some difficulties in disposing of that acid, and talking to McCarty he said that if they intended to go into the English market he would be very glad if there could be a cooperation and if they did not want to have any joint enterprise
2865 he would be glad to give him sulfuric acid.

Q. Now what was your attitude, and what was the position that you took with reference to combining the interests of the lithopone and titanium businesses?—A. I was not enthusiastic about that at all.

Q. What was your reason for that?—A. There were several reasons. One was that I did not like to link up too much with lithopone, and the second was that I did not feel that Imperial Smelting Corporation really was the most desirable firm for us to join with at that time. I was not certain that Avonmouth was the place for a factory. However, McCarty was keenly interested in it. He had great confidence in Robinson and thought that his help in the management would be a very good thing, which I think he was right in.

Q. This question of titanium being affected by the existing business in lithopone also had arisen in Germany prior to that time, had it not?—A. Yes.

Q. And what disposition was made of that matter in Germany?—A. The situation was somewhat different.

I ought, perhaps, with regard to Mr. Robinson—well, we will come back to that a little while later. The situation was different. In Germany we gave 50 per cent, rather the Germans took an interest of 50 per cent in the
2865-A enterprise, and they delivered the raw materials, practically all, 100 per cent. Their interest in lithopone was 50 per cent, a little less than 50 per cent, in the lithopone convention, so that economically they had a greater interest in developing the titanium than the lithopone, so I felt far better about the thing.

2866 Q. You thought that the connection with the German company was not such as to prejudice the promotion of the titanium pigment business?—A. Yes, not

at all. And I think that is very evident from the agreement we made, because that agreement of 1927, I have not heard anyone who knows about it who does not consider it very, very favorable for us.

Q. And did you find that in fact the German company did promote its titanium business at the expense of lithopone?—A. They put every effort to get the titanium business for us.

Q. Now going back again to the Imperial Smelting Company, what was the situation with reference to the relative costs of sulfuric acid from I.S.C. and from the German company?—A. Yes. I have also another point. When we started we were discussing with Mr. Robinson the position—pardon me. May I mention another thing first?

Q. Yes.—A. When we talked about, when Mr. McCarty took up the question with Robinson more seriously, he asked me what percentage I thought we should give Robinson, or let Robinson have, as an interest in the matter, and I suggested 25 per cent. That was before the other two companies came in, because I said, "We cannot give him less than that."

2867 Now keep in mind that Robinson's concern did not represent very much knowledge of chemical business in itself. They made lithopone. They were very good metallurgists but not chemists. I mean not in the chemical line of the industry, and Robinson had in mind at that time to form, he wanted to form, a commercial white pigment company; trying to get white lead and lithopone and zinc oxide—lithopone and zinc oxide already practically controlled—and titanium together, and I thought it would be most unfortunate for titanium, being a new, young pigment industry, young industry, so I did not feel an interest in it, but anyhow when I took it up with Robinson I said to him that we ought to be able to produce in England at costs which are at least competitive with the Continental costs so that competition from the Continent should not be able to kill us in England, and the most important item was sulfuric acid. You could get the ore from Norway for about the same cost, one way or the other, and he thought he knew acid costs in Germany, and he said, "I know we can deliver at the same price as the Germans." However, when later we came down to discuss the prices it proved that their price was considerably higher than the Germans. The ratios were somewhere about—they would sell somewhere about 50 to 55 shillings

where the Germans were willing to sell at 30 marks
2868 or 31 or 32 marks, around about that. That was the ratio. And of course with the quantities of acids necessary, this was a very important item. Now, Robinson of course could sell at cheaper prices as long as he had surplus acid.

Q. Was the German company in a favorable position with reference to the production of sulfuric acid?—A. Well, they were probably in more favorable position than anybody else in the world, except perhaps the Dutch and Belgian industry. Naturally you have got there a combination of circumstances which was nearly unique. You had got along the River Rhine all those dye industry factories belonging to the IG using sulfuric acid in large quantities, and you know when you make acid you take pyrites which they get from Spain mostly and burn off the sulfur and then send the cinders to a copper extraction factory where they extract copper and they have the iron oxide which remains and is sent to the steel and iron producers briquetted. As they were placed along the Rhine, these factories or consumers of sulfuric acid just took the pyrites down to Duisberg where they had this copper extraction factory close to the Ruhr district where you had all the iron and steel producers. That was one thing, and another was that
a factory, that is the one in Leverkusen, which was,
2869 as to European conditions, a very large factory—I think they made at that time about 150,000 to 200,000 tons of sulfuric acid per annum, and conditions were very favorable. Another thing was the fact that during and after the last war, with inflation, the Germans had got their plants written down to practically nothing so they had a very favorable condition.

Q. Dr. Jebsen, after the British agreement had been made was there a free exchange of technical information between the British company and the American company?—A. Yes.

Q. And between the British company and the German company?—A. Yes.

Q. Now what effects did that have? What values did that have?—A. Well, it is a very important thing naturally to get in every new thing which is formed or developed as quick as possible into your own factory, and they visited each other's factories very often, and particularly in Europe, the German and English ones, and they cooperated so well that there was—well, Kaegebehn can tell us about that. There were one or two patents taken

out jointly in the name of English and German chemists—isn't that so?, I mean they cooperated by exchanging views, also in developing inventions.

Q. Could you describe the benefits to the Titan
2870 companies and to the National Lead Company of those British arrangements?—A. You mean with regard to their manufacture over here or in Europe?

Q. No. I mean what benefits did the National Lead Company on the one hand and, say, the Titan Company, Inc. or the Titangesellschaft derive from those British arrangements?—A. Well, the outstanding benefit to the National Lead Company was in the technical matter they developed; inventions, particularly in antimony pigment, and when I say an antimony pigment I mean a pigment containing a small percentage of antimony which gave a pigment more chalking resistant than we had before. I believe du Pont developed a pigment on the same lines, so here I think a patent was taken out in du Pont's name. I am not certain about that, but Kaegebehn would be able to tell you about that. Then naturally this British arrangement had the advantage of we giving National Lead Company more profit on the business than otherwise and secured the whole position much better and, well, as a business arrangement it had different advantages—naturally so.

Q. When was the British factory set up, Dr. Jebsen?—A. We started immediately after these arrangements were done in 1933 to erect a factory and it was put in operation in the summer of 1934; very quickly done.

2871 Q. And has it remained in operation ever since?—A. Oh yes, a very nice development.

Q. And has it been in operation during the war period?—A. Yes, and it has its factory placed adjacent to the ICI factory in Billingham and it got sulfuric acid from them, and there has been intimate connections between the staff of those two companies up there, and certain experiments have been carried out with the facility of the British company, of the ICI I mean, drawing on their experience to some extent. We got the manager of the British Titan Products Company when we started from them. The ICI presented one man and the Goodlass Wall presented one of their men for this and it was left to me to talk with them and find out which one to recommend and I took the one from the ICI, Mr. Stopford, who has proven to be a very good choice.

Q. Has Mr. Stopford been over here during the war period?—A. Twice I think it is, yes.

Q. Before the war you were a director, were you not, of the British Titan Products Company?—A. I was a member of the board.

Q. And on those trips of Mr. Stopford's to the United States have you discussed with him a revision of the British arrangements?—A. Yes.

Q. Have you reached an agreement with him
2872 about that?—A. Practically so. We have not signed any agreement, but I think we have got the agreed upon conditions for adjustment which we thought would be more in accordance with the present—what has been criticized here.

Q. Can you suggest to us the main features of the new arrangement?—A. It is the elimination of the territorial restrictions and changing of the exclusive licenses to non-exclusive licenses. That is the main thing.

Q. Is there to be any change in the relative ownerships of the companies in the BTP?—A. Yes. That is another side of the matter; that the English wanted to have a larger share in the business, so instead of National Lead Company owning 44 per cent it would go down to 25 per cent and the rest would be distributed between the English companies.

By the COURT:

Q. Do you propose to continue the exchange of technical know-how?—A. Yes, know-how and non-exclusive licenses.

Q. Tell me, how do you propose to deal with the problem which you were heard upon yesterday where you said where there is competition it is very difficult effectively to operate on a basis of complete cooperation?—A. I am afraid it will have an effect in that way. I am afraid that as time comes it will——

2873 Q. It will break down?—A. It will break down or it will be a looser cooperation than it was. You won't get that intimate cooperation as it was before. You cannot change human nature in those things.

By Mr. WEBSTER:

Q. Has Mr. Stopford stated to you that the BTP, the British company, are prepared to accept these revisions of the 1933 arrangement?—A. Yes.

Q. Dr. Jebsen, have you an opinion as to the prospects of the British company after the war?—A. Yes, or rather I would say, basing myself upon what our English friends have expressed in that matter particularly, they are looking forward to a very, very great development. The fac-

tory in Billingham, which has a capacity now of about 7000 tons of TiO_2, they intend to extend to the capacity which they can have there in that site and in those buildings, which does not mean more than 10,000 tons, and it is planned to have another factory in Grimsby. They are negotiating for the site and I do not know whether they already have this or not, and that is for a similar capacity. Further, they intend to put up a factory in Australia. Mr. Stopford is at present in Australia. He passed here some time ago down to Australia with a view to organizing everything necessary for the erection of the factory and prepare so they can start immediately conditions permit.

2874 Q. Do you still retain your position as a member of the board of the British Titan Products Company?—A. Yes, but it is I suppose seen that I may retire, in that agreement—that is one thing we should mention: In that agreement we have, where it was previously reserved that there should be two members of the National Lead Company appointed—is it two or three? I think if is three—that will be eliminated. Of course it is open to the British to elect members as they want but not as representatives of the National Lead Company.

Q. Does your own experience confirm Mr. Stopford's opinion as to the future prospects of the British company?—A. I think it does. Every reason to believe so.

Q. In the new proposed arrangement with the British Titan Products Company and the other companies that are interested in that company there is no provision whatever, is there, for the continued exchange of technical information?—A. Pardon me?

Q. There is no provision whatever with reference to the exchange of technical information?—A. In the new agreement you mean? In the contemplated agreement?

Q. Yes.—A. Frankly, I don't remember at the present moment. Maybe there is not.

By the COURT:

Q. What would be your forecast then? At least
2875 so long as the present management lives? You know what I mean?—A. Yes.

Q. The present personalities that have developed, intimate friendships and associations over these years—would you really expect to see the National Lead Company rushing into England trying to undersell and take away the customers of the British Titan Products Company?—

A. No, I do not think they could even if they were trying, because we have a custom duty in England too.

Q. Would you expect the British firm as soon as there were not any duty to try to undermine National Lead Company's position with its customers?—A. Well, I do not think so.

Q. You would be surprized if you saw anything like that happen? A. Yes.

Q. Maybe after all the present gentlemen have retired and a new staff of young people who have not been developed—A. Or some other changed conditions of some kind, you know. Stopford is a very keen business man and he will look out for his own interest first, but I suppose he would find it in his interest to not do a thing of that kind.

2876 By Mr. WEBSTER:

Q. You said in answer to his Honor's question that you did not think that the National Lead Company could take an aggressive position with reference to the English market. I wish you would give your reasons for believing that that would not be possible.—A. Well, what I meant was that simply that the English duty is so high. I don't remember how much, but it is so much that it won't pay for the National Lead Company to go in.

By the COURT:

Q. Would that interfere with the National Lead Company building its own plant in the British Isles?—A. No; but I do not see how the National Lead Company would have reason to change their previous attitude or idea of when they go in with a plant they will cooperate with some domestic people.

Q. I quite agree with you.—A. There are certain markets which are more or less natural for companies to work in and operate in and others which are less.

Q. Where it operates under a disadvantage?—A. Yes.

By Mr. WEBSTER:

Q. So it would be your view it would not be feasible for an American company to attempt to capture the English market?—A. Out of the question, in my opinion. You must keep in mind also another thing; that the
2877 British are, after all, very patriotic, very nationalistic in those things. "Buy British" is a slogan which is more than the words. It is a reality.

Q. Have you an opinion with reference to the ability

of the British Company—I am looking at it simply from the standpoint of business capacity or ability in the absence of any agreement or arrangement, or anything of that sort—have you an opinion as to the ability of the British company to import into the United States after the war?—A. Not with the tariff on as it is and I wonder if it can go even otherwise. During all these years, practically up to a few years before the war, whenever we tried to find out whether we could import from the United States—after all, the Titan companies were free to import where we wanted for our own markets—we could not do it on a competitive basis. It did not pay.

Q. What was the reason for that?—A. Of course we had the costs from the Germans, as we could buy from the Germans at cost price, and here the Americans, they wanted cost plus 10 per cent, that is cost price, as you know, due to the special arrangement, and it was only in the last year that we had an opportunity to take some material from here with an advantage. That was partly due to quality too.

Now with regard to the British situation they got their prices fairly well down. I think they must be up
2878 over the last year. I do not know what it was during the war, because they do not give information. And as to costs, too, the British have come down very well with their own production, and naturally when they are going to extend now it is very likely that they will be able to produce cheaper, and with the duty you have got here, and with the situation with regard to the American manufacturer—after all, remember one thing: You do not change. You do not get the manufacturer easily to change from one manufacturer to another of pigment. You have to keep people on the spot and deal with them and handle them and talk with them and get acquainted with their difficulties in the use of this pigment. It takes a long time to get in, naturally, people prefer the domestic manufacturer. You see what I mean? McCarty once said to me: "The lithopone from two factories are not alike even when the factories belong to the same company."

2879 Q. Just developing that subject a little further, was the European titanium pigment ever quite the same as the product developed over here?—A. No.

Q. What were the differences?—A. Well, there you are getting into very much of details.

Q. I mean, differences in general.—A. But, for one thing, for instance we had over in Europe, the product

was apt to chalk a little bit quicker than here. And for that reason, substantially the same material we sent over from Europe proved not to be quite as satisfactory as the American. There are smaller things, I can't very much explain how you can tell the tittle differences there may be—in the settling of the material and the surface part and so on, that you have to apply, and so and so.

Q. There are appreciable differences between the products that comes from the different companies as well as products that comes from different countries, is that true?—A. Yes. And even different factories within the same country, too.

Q. I want to turn to another subject. Do you know Dr. Blumenfeld?—A. Yes.

Q. Are you familiar with the process of manufacturing pigments which Dr. Blumenfeld developed?—A. To some extent, yes.

2880 Q. Did you have discussions with Dr. Blumenfeld between 1930 and 1933 with reference to business in Europe?—A. Yes.

Q. Now I wish you would just describe, as briefly as you can, the negotiations that you had with Dr. Blumenfeld, say between 1930 and 1933 with reference to European business matters?—A. Well, that is——

The Court. That is a long order, Mr. Webster. I was wondering whether you would not accomplish more—whether there are some specific elements which you either want to amplify or, even more importantly, if you want to follow the story as we have it on important matters, whether you could not direct his attention to those specific conversations. I will allow you to lead to that extent.

Mr. Webster. I will undertake to do that. I asked the general question because I thought perhaps that would bring in a number of points that might be covered at perhaps greater length if I were to ask a number of specific questions, but I am quite prepared to accept the other.

The Court. Use your own judgment. I don't know what this witness is prepared to say, of course, which you do.

2881 Q. What was Dr. Blumenfeld's position, say in 1930, with reference to manufacture in Europe?—A. He had two companies under his management. One was the Terres Rares, which, I am told from him, and I have no reason to doubt, controlled and owned his patents; and then he had given a license to Societe Thann & Mulhouse, a French Company, which is one of the

oldest French chemical companies which manufactured in France; and he had given licenses to Montecatini in Italy and had also arrangements with the Aussig, Verein fur Chemische und Metallurgische Produktion Aussig in Czechoslovakia, which provided for exchange of know-how of patents and so on. That is as far as I know. I have never seen those agreements, but I am told. And that was in 1930. And his factory in France I understood had a capacity of I believe somewhere about 2000 tons of TiO_2 per annum; I am not quite certain about those figures, but it was in that neighborhood anyhow.

In Italy, the Montecatini Company, in which Blumenfeld had an appreciable amount of shares—I understand that was his compensation for giving know-how and giving license there—the capacity I was told at one time I think was 1500 tons, another time I was told it was 1800 tons, and somewhere about there it would have been. And I think he had given Montecatini permission until
2882 further notice to export to England particularly.

He hadn't disposed of his patent rights in England at that time. Later on he licensed Laporte, or the National Titanium Pigments. And from that moment of course Montecatini could not export to England any more. He himself sold, or Thann & Mulhouse, I mean, in Belgium and Holland, but not very much. His sales organization was not very much developed and he had not, by far, the same technical sales service as we have. We had started such service in Titan Company A/S in 1920, 1921—1921, I think it was, 1922, and when we started in the English market we at once engaged one of the foremost experts in paint and pigments, paint manufacture, a man named Mr. Noel Heaton, who has written books about paints and was considered to be an authority in paint manufacture. And he read papers, gave lectures, and went around and visited the various factories to introduce titanium and studying the difficulties that customers were up against during that time, and so on. He had very heavy uphill work and sometimes he thought the paint manufacturers were too stupid for words as to these things, and so on, because the English paint manufacturers were very, very conservative, so conservative that in talking with one of the largest and most progressive ones when I told him that he could mix TiO_2 and an extender; but why couldn't they buy TiO_2, blend it there, and
2883 so they would save freight over there. He said, "Dr. Jebsen, for one thing, our paint manufac-

turers are fools, including ourselves. If I go to one of our managers and talk about pigments, if they can press you for a shilling on the price they think they have done a great thing, but if I ask them 'Why don't you mix it yourself and you will save so much' they say, 'I never thought of that.' It is too bad, but, anyhow, it is characteristic of what you are up against."

Q. Let us get back to the Dr. Blumenfeld situation. Did the time come when consideration was given to an arrangement with Dr. Blumenfeld relating to the allocation of business in Europe?—A. Yes.

Q. Was there a conference in Paris in 1931 that had connection with that subject?—A. There were two periods there in that development.

Q. Just describe those, please. A. One was, the talks initiated more or less by Ticknor and Chase from the Commercial Pigments Company over here, who came over to Europe and had also visited Mr. McCarty over here in the National Lead Company, and were interested in getting cooperation in these matters. I had met Mr. Blumenfeld, the first time I met him was in 1922, where I was brought together with him through a Russian living in London, a professor—what was his name, then, I,
2884 don't remember exactly—he was mentioned to me by the former Norwegian Consul General in Petrograd, who was married to one of the Nobel family; and he said his brother-in-law, who was the head of the Russian Nobel family, had recommended this professor or chemist who was in London, who had taken some interest in titanium, and he asked me if I would see him, as he would like to see me when I came to London. I think that was in 1922. And he was very much of a talker and not very much else. But he brought me together with Blumenfeld at that time. And already at that time, at the same time when I was in Paris, talking to Lobstein, Blumenfeld suggested a joint venture, but I was not very much interested about that. They broached the subject at that time. Then I didn't see anything of Blumenfeld for many years until this matter came up through Ticknor and Chase. And at that time we weren't, I was not very much in favor of really getting into any close contact; I investigated it, talked, and naturally I was trying to explore the situation anyhow, to find out what there may be in the matter. But I found that these companies of Blumenfeld were quarreling all the time, and naturally you are not very much inclined to go together with people

who are quarreling between themselves and don't speak well of each other.

Q. Let me get down to the 1931 meeting if I can.
2885 By whom was that arranged, if you know?—A. That I don't remember, who arranged that. Probably Ticknor and Chase I think, because they came over.

Q. In any event, they were present at the meeting, were they not? They were present at the meeting, that is Ticknor and Chase?—A. It is funny, I don't remember much of that meeting at all, to be frank, and evidently I can't have put much importance to it because——

Q. Did you yourself make any report of that meeting to Mr. McCarty or—— A. I found that amongst the papers which have come up now, but I didn't remember anything of it. I didn't report to McCarty about it, as far as I remember. I may have written a letter, but I found there was some memo here amongst the papers which came up.

Q. Did you write some notes that you gave to Dr. Mayer?—A. I don't remember if I did. That note which you found there and which has been—I do not deny that that is written by me, but more likely I have given that to Dr. Kuhne and Dr. Kuhne has given it to Mayer, and so on.

Q. Did you attach any particular importance to that 1931 Paris meeting?—A. What do you mean? I was interested in talking and finding out about these things, and it was fairly clear to me, as far as I remember,
2886 that not anything would come out of this.

Q. Nothing did come out of it at that time?—A. No, nothing did come out of it.

It is an extraordinary thing, but I think it is an indication—after having seen this memo which has been presented here, I wonder why I should never have sent anything of that over to New York. If it had been of importance I would have done so.

Q. There was discussed at that meeting the subject of an allocation of business among certain European companies, was there not?—A. Yes. There you are coming on to another point. That meeting, as I have seen from the memo, it was a question there of getting a technical and commercial cooperation, if I remember right.

Q. Among the European companies?—A. Yes. Now the commercial part was a problem in Europe all the time, not so much of immediate but with a look to the future, because the whole constellation—there you have got—

particularly Montecatini was somewhat of a problem; they had put up this factory and they couldn't place their production in Italy and they wanted to export it. The Italian exchange was very weak, and it was to be feared that Montecatini, if he wanted, could go to the Government, Mussolini, and ask for support in exporting, and that means that he could sell at any price. Now, his
2887 quality wasn't a very good one and varied considerably from the samples we had been able to pick up here and there. And there was a danger, if that kind of quality went around and was sold, that it might do a lot of harm to the reputation of the titanium pigments.

After all we had got—in Norway, for instance, we had experience previously with lithopone, which was introduced to Norway and also to all the Scandinavian countries at a relatively very low price at the first beginning, and was applied here and there and outside, and so on, with very bad results. And the name of lithopone was so bad in Norway that even after the last war, and up in the '20s if you mentioned lithopone the master painters wouldn't touch it, it wasn't any good at all.

Now with a view to all this it was better to get some kind of regulation of these sales. That was one of the problems we had in mind. If you take another situation which occurred very shortly—I think it was in 1933, 1934, where the Germans were competing in the English market with lithopone, and I remember young Robinson, the son of W. S. Robinson, he was the head of what they call the Non-Ferrous Metal Products Company, which were dealing with lithopone and zinc oxide—he said to me, exasperated one day,—he was trying to get the Germans out of the English market where they have been selling
2888 lithopone,—and he said, "It is no use to put the price down because as the Germans are reasoning today, they say the Government says 'So much for exchange we will have to get from lithopone; you got that before, you have to continue to get it;' so, the lower we put the price the more is sold of their lithopone because they have to sell it to get that amount of exchange."

Now, whether he was entirely right or not, I do not know, but there was some support from the Government in Germany for selling material.

The COURT. I think we will take a short recess.

(Short recess.)

Q. Dr. Jebsen, you had said that there were two considerations in connection with these European arrange-

ments at this time, and you had discussed one of them. Have you in mind another consideration that was involved, another primary consideration?—A. You mean two periods, or do you mean technically——

2889 Q. I thought you said there were two considerations, one you have just described, and was there also the matter of technical information development?—A. Well, I mean——

Mr. DIXON. I must confess, your Honor, I don't know just what the first one was, according to Dr. Jebsen's testimony.

Mr. WEBSTER. Well, I will withdraw the question.

The COURT. Very well.

Q. Now subsequent to this Paris conference when was it that adjustments were made among the European companies with reference to their participation in business in Europe? When did that come about?—A. When reference was made to——

Q. When was it that there was an adjustment among these European companies with reference to their business in Europe?—A. You mean this Contract of Four and Six and that part of it?

Q. Yes.—A. Well, that was developed slowly after 1933 chiefly—well, some of it before. That was particularly the Aussig concern in Czechoslovakia, Mr. Mayer there, and he was very interested in that question and had several talks with the Germans, with Dr. Kuhne, about it.

Q. Now, the Aussig agreement——A. And that Aussig agreement, yes.

Q. Do you recall offhand the date of the Aussig agreement or the year in which the Aussig agreement

2890 was made?—A. I don't remember whether 1933 or 1934, but it was in the summer of 1933 that it practically—that it reached its final form.

Q. What was the purpose of the Aussig agreement?—A. It was chiefly—the main part of it was, I mean from the Titangesellschaft's point of view, was to get the factory occupied. We were dealing there with a factory which had a large, according to European countries, it had a capacity for 10,000 tons of composite pigment, and that was the equipment, and there was room for putting in considerably more equipment. The whole thing was planned for a large development.

Q. You are describing now the TG factory?—A. The factory of TG, yes. And we had been fighting for some years against conservatism—I would rather say doing up

hill work in getting this pigment introduced. Now Auusig had a very small plant more like a pilot plant. The capacity was 500 to 700 tons of TiO_2. And I know that Kuhne told me once that Mayer had been to Leverkusen and Kuhne had shown him quickly through the factory there, just went quickly through, and that Mayer was very much impressed and said, "It is really only by taking a courageous step like this that we will be able to establish this industry at all." So, he was interested, he was a fairly far-sighted man, and he said, "Better concentrate on getting ahead instead of dividing up
2891 the forces."

Now of course IG and the Aussig people had a lot to do with each other. Aussig was a concern which before the last war had a very large importance in the Austrian-Hungarian monarchy, and after the last war they had to develop on the basis of what was remaining there of the, we might say, the Austrian succession states. They were interested in many products; they had very wide ramifications. In fact, in those countries—they were more or less like the IG was in Germany. So, they had many interests in common, these two concerns. And, therefore, for them it felt natural to develop an agreement of this kind, as defined in the agreement, arrange for a quota in those countries in which they both operated together in titanium, and for supplying such other material from the factory which was then equipped, that is in this case the Titangesellschaft factory. And it was done on a basis of leaving about, I think it was, one-third of the profit to the manufacturer and two-thirds to the sales organization, if I remember right.

Q. Had that contract been terminated before the invasion, the occupation of Czechoslovakia, do you know?—A. It had a very extraordinary development there because—well, as far as I remember this, the invasion into Czechoslovakia in the Autumn of 1938 led to I think
2892 Aussig—maybe the Town of Aussig or the City of Aussig coming in under German domination, as far as I remember. And the Aussig concern had already started to put up some factories further out of reach of the Germans, in Hruschau for Rhuschan, Czechoslovakia. That is right. The pilot plant, or this plant of 500 or 700 tons, came then within the German domination, and the Government, or Hitler, demanded some German chemical manufacturer to take over that factory. And that was then taken over by IG and another German factory, I have

forgotten the name, fifty-fifty; a smaller manufacturer there.

And then the problem came how to deal with this, and it was arranged in the way that the capacity—I believe that capacity was deducted from the Aussig, those 700 tons which were there, were deducted from the quota which the Aussig concern had the right to have. So, at the same time the intention was not to increase that factory, it was to keep it going and it was. The German Government wanted to keep the population employed to the extent it was employed before.

Then in 1939, when there was a further invasion, there was a question of how to deal with that, but, frankly, the thing became so complicated I didn't——

The COURT. I thought it became very simple.

The WITNESS. No, not so very simple.

2893 Q. Dr. Jebsen, do you recall the contract that we speak of here as the Contract of Four and the Contract of Six? You recall those two contracts?—A. Yes.

Q. Did you take part in the drafting and negotiating of those contracts?—A. Yes.

Q. What was the purpose of those two contracts?—A. The purpose was a similar one as between Aussig and the Titangesellschaft. In other words, the regulation of the markets with a view of first this Montecatini matter, to solve that problem, and from our point of view we were interested in preventing Blumenfeld from applying for a higher duty in France which he had been indicating several times. We had some difficulty in holding the market in France with the supply from Germany because of the duty and this exchange, the French exchange, going down. And if he had gotten a higher duty we would have—could have been shut out entirely. Naturally we wanted to maintain our market, possibly develop it and gain time until we could put up a factory in France on a reasonable economic basis.

Q. When you say "our interest" you mean the interest of Titan Company, Inc?—A. Incorporated.

Q. And the contract that has been spoken of here as the contract of deliveries was just another feature of that?—A. Of a similar nature as the other one with Aussig.

2894 Q. Are the Contract of Six and the Contract of Four and the contract of deliveries still in existence?—A. The contract in which Montecatini was interested was terminated by them, as far as they were concerned, in, I

think it was, the year before, about in 1939, maybe, or 1938; I don't remember exactly now, but you can find it in the papers somewhere. And there was no continuation of the agreement, it was stopped, except that it was understood that we will see if we could get some kind of an arrangement, and in the meantime carry on as best we could in the matter. The contract with the French company, when the war broke out, of course those things stopped, you couldn't any more; I mean, everything was disrupted and there was nothing more in it.

Q. Have you dared to form any opinion at all as to what may happen with reference to these matters that were involved in these contracts after this war?—A. No. I am entirely blank. After all, who can tell what is going to happen? I mean, first of all, if there aren't going to be any peace treaties, what will be the legal situation between these countries and so on?

I would like to mention one other thing you talked about yesterday, whether I thought these contracts were in existence or would continue after the war and I said I did not know. I mean, after all, that is a purely
2895 legal matter of a business—a treaty matter, when the time comes. And, of course, there is, regarding the 1920 agreement, a question of not only the American Government's decision but also the question of the Norwegian Government's attitude, because the Norwegian company, Titan A/S may be still responsible for those agreements which have been taken over by Titan Company, Incorporated. But I suppose——

The COURT. Has Leverkusen been bombed?

The WITNESS. Well, we have very little news. I had a letter from our people in France after France was liberated, and according to that it seems that there has been very little harm done to the factory.

Q. Now, Dr. Jebsen, I think all of the matters that have been discussed up to this point with a few exceptions have related to situations inside Europe. I now want to ask you a few questions about the arrangements in the United States. There is in evidence here a contract between the National Lead Company and the du Pont Company made in 1933. Did you have any part in the negotiation of that contract?—A. No, practically none, except when it was negotiated it was submitted—it was sent to me shortly before, in principle, the thing, and that was early in 1933.

The COURT. Weren't you the fellow that was supposed to sell it to the Germans?

2896 The WITNESS. Yes, but that was not the negotiation of the contract between du Pont and National Lead.

Q. When that contract was brought to your attention, or the draft of the contract, did you observe any important difference between that contract and, say, the 1920 agreement?—A. Certainly. There was a very wide variation, very wide.

The COURT. The agreements speak for themselves. While this may have been very exciting on December 6th, it is now January 25th.

Q. If I may refer to the contract itself, you did recommend to the German company that it consent to the Lead Company making that contract, did you not?—A. Well, I will have to take the story a little bit earlier than that part of it.

The COURT. That is what I was afraid of.

The WITNESS. Yes, but I shan't go into the agreements themselves.

The COURT. All right.

A. (Continued) But when it was sent over to me for my consideration, and also with the request of exploring the attitude of the Germans, I wrote back and pointed out the differences that I shan't go into now, and then I didn't hear anything until Beschorman came over, and he had a contract with him, the way it was to be signed. And
2897 I told him the same thing. So he said to me, "Well, we have got to sell the agreement to the Germans." He thought it was important for the National Lead Company. I was not in agreement with them to be quite frank, I did not like the idea as it was. And then we went to the Germans, went to Leverkusen and Beschorman presented the agreement to Dr. Kuhne.

By the COURT:

Q. Before you go into that, did Mr. Beschorman indicate to you why he felt that it was so important for National Lead to make this deal?—A. No. He was a very self-willed person.

Q. He did not say to you, for instance, "You know that du Pont is a very powerful organization and if they decide to fight with us on this proposition we will probably take a licking"?—A. No.

Q. He did not say that?—A. No, not at all.

By Mr. WEBSTER:

Q. You did give a half-hearted endorsement to this——

A. Well, wait a minute. Then when Beschorman had talked with Dr. Kuhne, Kuhne did not go into the agreement at all, but just said that the legal department would go through it and he then answer it, and he had no doubt that the thing would be all right, because National Lead Company was fifty per cent interested in the German
2898 company, and so on.

When I was asked to come to Frankfort some time later, then I was faced with a whole situation there, because then they put up these questions, and they put up quite a number of objections the same as I have put up to Beschorman and to over here; there was no denying those things. So I just told him that those objections have already been sent by me to National Lead Company earlier. And the result was, however, that this was not consented, evidently the National Lead Company had not got any further with the du Pont Company. And I said, National Lead Company wishes to make this agreement but it is dependent on your approval. They said, "Well. isn't it signed?" I said, "No, it is not signed, and now it is up to you."

So I put it to them straight, whether or not—now, they, were very desirous of pleasing the National Lead Company; the cooperation had been a good one in every respect, and naturally they felt that if they did not sign it the atmosphere might become colder than otherwise, the temperature may sink. So, they wrote them their objections to the—over here to the National Lead, as you will have seen from the correspondence. And then I came over here and had a talk with Mr. Rupprecht about it.

The Court. Was that before the agreement was
2899 signed?

The Witness. That was before the agreement was signed. You can find this in the letters.

A. (Continued) And there I finally said that in view of these various pictures which have been worked out—"that it will be eminently satisfactory in the end, and so on," it seemed to me that National Lead Company—that the Titangesellschaft may have important benefits out of this. It was in my opinion a lukewarm explanation of: Well, go ahead and sign it and take your chance in the matter.

Q. Did Mr. Rupprecht at that time, that is, 1933, accept the provisions of Article XIV of the 1920 agreement?—A. No.

Q. Did Mr. Rupprecht ever accept the provisions of

Article XIV of the 1933 agreement?—A. No. I often ask myself sometimes—but I never got him. He was too slippery for that, quite frankly.

By the COURT:

Q. What did he say? Can you remember the words?—A. No.

Q. The substance of what he said?—A. No. The substance is what you can see was more or less expressed in this letter he wrote.

Q. Tell me about it orally. I haven't seen the
2900 letter for some time—A. Well, he said that, after all, we haven't exported to these countries, you are protected by patents in these countries; how can we export? And I think the whole thing will work out to be eminently satisfactory to you.

He talked about the non-exclusive licenses, which I didn't like at all and which I couldn't see the reason for. He said that it was a rule from the executive committee or finance committee not to part with any property entirely; they have to put it up—if he should give an exclusive license it will be tantamount to parting with the property, and he would have to put it up to the executive committee, and he thought that they are not—that the approval would not be given.

He used that executive committee as something which he could not work up against. Of course I thought it was a very unsatisfactory way of handling this, and, frankly, I thought it was not quite the way I think National Lead Company should accept the treatment of that kind. But, nevertheless, at the same time he said it would work out satisfactorily.

Beschorman was very keen on having the thing done. I don't think Beschorman really understood what the whole thing was about. And, that he expected a certain amount of advantage in getting technical informa-
2900a tion and engineering service and so on from the du Pont Company. I think he and Thompson were rather fascinated by the big du Pont Company and so on, which I think I wasn't quite so impressed with. But, finally, after all, I was an employee of the National Lead Company, and found that I would have to help the matter along.

2901 The COURT. You were a good soldier.

The WITNESS. Yes.

A. (Continuing) And then, as you have noted, I think

the Germans in writing back, they accepted the situation; in other words, they refrained from any legal or contractual basis for complaint, but at the same time they tried to emphasize what their position was, the basis, so that they had every opportunity to grumble afterwards if the thing should not work out to be eminently satisfactory.

By Mr. WEBSTER:

Q. Now, Doctor, I am coming to another subject. Did you have anything to do with the negotiations between BTP and Laporte in 1936 to 1940?—A. In 1940 not at all. I was over here. In 1936—1936, I though it was a bit earlier—I was sitting in on some talks with them, but the negotiations was left first to Stopford and Thompson of R. W. Greeff, and later Tasker came into it, the talks between them, and I was sitting in on a few of those talks.

Q. That was a matter between BTP and Laporte with reference to a domestic situation, was it?—A. Yes.

Q. And you had knowledge of that as a member of the board of directors of BTP, is that right?—A. Yes.

Q. But, as I understand it, you were not one of the negotiators of that arrangement?—A. No, I was
2902 not one of the active ones.

Q. I would like to have you, if you will, describe just as briefly as you can the situation which led up to the arrangements with the Japanese. Now I am going to ask you the general question in the hope that you will just take us through that as quickly as you think you can and give an adequate answer.—A. Well, the first contact with the Japanese was a visit by Mr. Fujida to our Norwegian factory in 1920. I was not there. I was over here at the time. And then he started to buy from the Norwegian company, and we let him do so—we sold to him but not to anybody else, but without having any specific arrangement.

The COURT. That is the Fuji Paint Company?

The WITNESS. Fuji, yes, I think that was. Fujida was the name, anyhow, of the man.

A. (Continuing) Then when the German—when the Titangesellschaft was formed and Japan was included in their territory, after awhile we gave the agency, that is, Titangesellschaft gave the agency, to the Doitsu, IG's company over there, and continued however to work with this paint company. And as sales developed I understood from the Germans that Fujida was trying time after time to get us interested in putting up a factory in Japan.

Finally, it was the same story as in certain
2903 other countries—the exchange became weak and licenses—importation became more difficult; there was a question of getting licenses from the Government, importation may have been forbidden, which is very soon after we had made the arrangement.

So, it was considered, in order to hold that market, considered vital to put up a factory there and naturally, following the then policy, as we have been doing all the time, trying to take a domestic partner, and of course Fujida, who was the man who had worked up this idea and done the work, he was the nearest to be chosen. I didn't know that Fujida, which proved advantageous, was connected with this larger concern, Kokusan Kogyo, and I think that was again connected with the still larger Nippon Kogyo—these names are in these letters or reports somewhere—and so then it was divided fifty-fifty.

Now we had our arrangements with Blumenfeld, and naturally the question was of taking him in at the same time. I mean, that would be the fair thing to do, not to leave him out in the cold, I mean, if this——

Q. Well, he had actually received consideration with reference to the Japanese market, hadn't he, on the contracts of Four and Six?—A. Yes. But naturally we could have put up a factory in Japan without him if we
2904 wanted to. But we thought this was best, to take him in on the enterprise there. But at the same time we did not want a technical cooperation because of all these reasons, I don't need to have to repeat them, in exchanging licenses and know-how and so on.

So, therefore, it was arranged, the way you can see from the agreement, that the license was given from the Titangesellschaft through Doitsu to this new concern, or to the Titan Kogyo. And Blumenfeld gave an option on his patents which could be used in case sometime in the future a general cooperation should develop.

And then, with regard to share capital, well, it was divided up between the Blumenfeld concern and ourselves in the same proportion as the quota, 70-30.——

Now these shares, our shares, I mean the National Lead Titangesellschaft and so forth, should really have been—it was in cash then—should have been taken out by the Titangesellschaft if we had followed the ordinary practice of the thing. Then, however, it was decided that instead of Titangesellschaft doing it, because of exchange difficulties, it should be I.G., which took the one half, and Titan

Company took the other half.

Weber Andreae, one of the I.G. directors, was over here on a visit and talked to Beschorman and asked him if
National Lead would—or Titan Company, Inc.,
2905 would take on a cash payment for them because
they had difficulties in providing the cash under the regulations in Germany, and Beschorman agreed to it. And it came up with me afterwards in Europe, and he told me Beschorman agreed, and I had no objection to it. After all, it was a relatively small amount. The idea was that the I.G. should buy the shares back after a certain period, they should pay an interest at five per cent or six per cent, I don't remember now how much, or be charged for that, and whatever came of dividends should be deducted, and so on. It looked as if the possibilities for the future of that company will be so good that probably there would not be much to pay when the time came.

And it wasn't only those cash shares but also the shares for patents and good will, which amounted to a considerable amount. The first capital there was 1,500,000 yen, of which 750,000 came under the European-American part. We had 70 per cent of that. And I think that of the 70 per cent of 750,000, that is about a little over over 500,000, we had to pay in cash was a little over a hundred thousand yen.

Q. Did the company engage in actual manufacture?—A. Yes.

Q. Did it do so successfully?—A. As far as I know,
yes. It had quite good sales, according to the re-
2906 ports: Now, keep in mind, it was the Germans
naturally having the organization in Japan, who took care of the thing.

Q. Do you know the tonnage that was produced there before, say in 1941?—A. No, I would not remember now, but if it is of interest, we can find those figures.

Q. You have no present recollection?—A. No. But I think you must have those figures somewhere in the offices.

Q. Dr. Jebsen, are you in a position to express an opinion concerning whether it would be feasible or whether it would have been feasible for the National Lead Company independently to establish a factory and business in Japan?—A. I do not think it would have been possible. Well, less there than anywhere else.

Q. Just state briefly your reasons for that?—A. Well, I mean the National Lead Company had no business in Japan, we had no business in Japan otherwise, I mean

except through this Fujida, and conditions in Japan of course are so foreign to us. It would just have been a gamble.

Q. Do you think the Japanese could have engaged successfully in importing titanium pigments into the United States?—A. Except with dumping and Government support, then you can do anything, practically, if they were going to; but even so, it is a matter of quality, too. With the quality, keep in mind I have never seen the product which they made, but a very large part of it went into face powder.

2907

The COURT. Face powder?

The WITNESS. Face powder. That was the most important sale that they had for quite some time over there, so I am told.

Q. Now, Doctor, I want to ask you about the situation with reference to South America. You mentioned yesterday that when the 1920 contract was made, both companies desired to engage in business in South America, and that was left open to both companies?—A. I beg pardon?

Q. I say, you said yesterday that both companies were reserved freedom for operation in the countries of South America.—A. Yes, as far as sales are concerned.

Q. Now later was anything done about the rights with reference to the sales by the Titangesellschaft in South America?—A. Any arrangements were done between the Titan Company A/S or Incorporated and the National Lead Company.

Q. No. Did something happen later with reference to the Titan Company, Inc., and Titangesellschaft with reference to South America?—A. Yes. We left it to the Germans to operate that market.

Q. What was the reason for that?—A. The reason was that we had, Titan Company, Inc., had practically no connections of use in South America. We hadn't found any agents who could operate for us who were satisfactory. I think it was more or less incidental what we sold down there. And Titangesellschaft, the Germans, were hammering all the time and keeping pestering me for getting larger markets, and they had their organization, they had companies of their own in most of the countries down there, so it was very difficult for me to deny them to sell down there; they had a very good organization for it. And our experience was that one had practically to put up more or less our own organization, to get the pigment introduced, or you had to work very

2908

closely with the agents—a very close cooperation. We had the experience in Belgium and Holland, for instance, that the agency we had there didn't work. We had a very highly reputed, a highly renowned firm, Peter Schoen, who worked for us in Holland and the results were very unsatisfactory. We had an agent in Belgium which also was very unsatisfactory. So, finally, we put up our own organization there, formed our own little company for doing these things, and it was only after that that we really got our pigments introduced in those markets.

Now, in South America we couldn't do much, and
2909 they had an organization for the work. And they took on, very energetic on it, immediately afterwards. They sent over a chemist to investigate the situation, a pigment paint chemist: however, he came back with rather disappointing reports. He found that the consumption of white pigments in those countries was not a very large one at all.

Q. Has that market in fact ever developed a very large consumption of that product?—A. Not a very large consumption.

Q. Mr. Williamson wanted me to make it quite clear that your testimony with reference to South America relates only to the Titan Company, Inc. and the Titangesellschaft, and that it does not include in any way the National Lead Company.—A. No, we acted entirely separate from each other.

Q. You were not in a position to make any—— A. I was not familiar and I am still not familiar really with what the National Lead Company did down in South America.

Q. You were not in a position to make any arrangements on behalf of the National Lead Company and you did not do so; is that correct?—A. Yes. I only did it on behalf of Titan Company, Inc.

Q. Now, Doctor, did you have anything to do with the Canadian arrangements that were made about 1937?—A. No.

2910 Q. Did you have anything to do with the arrangement that was made with the Zirconium Company?—A. No.

Q. Did you have any part in the negotiations with the Virginia Chemical Company?—A. No.

Mr. WEBSTER. That is all.

By the COURT:

Q. Dr. Jebsen, what was the total production say about

1939, or 1940, on the Continent of Europe of titanium composites or TiO_2, as you prefer it?—A. Well, I expected the question but I wanted to see our report, annual report, to be quite certain, to refresh my memory about it, and perhaps I can do it——

Q. Can you give me a round figure?—A. I think in 1939, I think the factory in England produced somewhere about 5000, 6000 tons of TiO_2, somewhere about that, I think. And the Germans somewhere about up to 10,000, I believe 15,000. And then you have the Blumenfeld concern and Laporte, I would say about 20,000 tons of TiO_2.

Q. How about the United States?—A. I am making this observation, your Honor, because I am not at all certain about these figures, but they can be had here; we have them in our files.

Mr. WEBSTER. They are contained in your annual reports, are they not?

2911 The WITNESS. In the annual report, yes.

Mr. WEBSTER. Which have been turned over to the Government.

The WITNESS. Very, very detailed statements there.

Q. What is your impression of the American production?—A. At that time? In 1939? Well, I think my impression was that they were about three or four times, about four times as high

Q. Do you run from eighty to a hundred thousand tons?—A. Yes, somewhere about that.

The COURT. All right.

2912 Cross-examination by Mr. DIXON:

Q. Dr. Jebsen, we went into some of the provisions of the 1920 contract rather at length yesterday. It was one of the purposes of that contract, was it not, to allocate to the companies, that is the two companies who entered into it at that time, Titanium Pigment Company and Titan Co. A/S, certain exclusive territories in the world in which those two companies would confine their manufacturing and sales activities, is that correct?—A. Yes.

Q. And it was also one of the purposes of making that division of territories to prevent competition from the other company coming into that territory of the other company without the approval, and subject to such price regulations and control as might be placed upon that business by the company in whose territory such exports may have been made?

Mr. WEBSTER. Just a moment. I am not going to interrupt at all if I can keep from it, but I would ask to have the question so framed, that some consideration be given to the form of the question so that the witness will be sure to understand. It was five minutes I think after the first word before I finally heard the verb.

The COURT. Are you apprehensive of the witness's capacity to comprehend it?

2913 Mr. WEBSTER. Not at all.

The COURT. Because we are dealing with a highly trained witness.

The WITNESS. The first time I am a witness.

The COURT. I did not mean highly trained witness but highly trained gentleman, and I will instruct him now to make sure of this:

If the question put to you is not clearly understood you may so state and I will see that counsel reframes his question so that you do fully understand. I don't want your answer to a question which you do not fully understand and are satisfied that you understand.

Now do you understand the last question?

The WITNESS. Yes, I believe I understand.

Q. Thank you, Dr. Jebsen.—A. But keep in mind the purpose. This territorial division was a means to an end. It was not a purpose. It was a means to an end, the end which I pointed out yesterday, of creating conditions which made full cooperation on the technical side possible.

Q. But one of the purposes, as I have stated, was to enable the companies, say Titan Co. A/S in 1920 or any time thereafter, including the Titan Company, to control any imports of titanium pigments into that particular territory of Titan A/S or Titan, Inc., wasn't that a fact, Doctor?—A. Not any imports.

2914 Q. Within the Licensed Field?—A. Yes, but I mean only from the company who was cooperating, yes.

Q. That is right. In other words, any company——A. To put it straight, in order to get a full exchange of information and technical knowledge we wanted to prevent competition of a commercial nature.

Q. So the purpose of the exchange of the technical information which you have mentioned was also to prevent what we will call, and I believe you have sometime referred to, technical competition, is that correct, Doctor?—A. Technical competition.

Q. So that as these various companies like TG and

BTP and Titan Kogyo were allocated particular portions of the territory originally allocated to Titan A/S under the 1920 contract, these new companies enjoyed the benefits of the corporation, of technical cooperation, did they not?—A. Yes.

Q. And they also enjoyed the benefits of no imports by any of the other companies into their particular territories without their approval? That is also one of the benefits, was it, Doctor?—A. Yes. It appears from the contract itself.

Q. And as these companies grew and as this business developed in the manner that you have described, the value of that lack of competition or the threat of
2915 competition from imports into the territories of TG and BTP became greater, did it not, Doctor?—A. Perhaps so. I would not say absolutely, but perhaps so. I mean it depends on so many factors which are coming in.

Q. But at least it is your position that BTP's position in its territory was strengthened by the increased production of the plant supplying that exclusive territory; it obtained a stronger position in its exclusive territory, did it not, because it had nothing to worry about, assuming it were possible, from imports into its territory?—A. I do not get that question.

The COURT. Reframe it.

Q. These various factories that were ultimately built in the exclusive territories allocated to those companies started off with a small capacity, didn't they, Doctor?

The COURT. Small production?

Mr. DIXON. Production, rather.

A. Well, we started with a relatively small production, compared with United States production, but we tried to start out these companies, these factories, as I mentioned before, at the time when a certain minimum outlet was developed, certain minimum consumption was developed, so that they should have a reasonable economic basis to stand upon.

Q. And until the capacity of the factory in that
2916 exclusive territory developed to a greater capacity, or as its capacity increased, the market in which that particular factory was then built would be taken care of, if necessary, by the imports from the other territories where the factories had a larger capacity; that is true, isn't it, Doctor? Do you understand my question?—A. Not quite. Of course, as I have explained, I mean we

developed the market in England by deliveries from Germany until its factory was ready for operation.

Q. And as soon as——

Mr. Webster. Just a minute. I think he ought to be allowed to complete his answer.

The Court. Had you finished your answer?

The Witness. Yes, if I understand your question right.

Q. And as soon as the British factory developed larger production then the imports from the German factory stopped? That is what happened, wasn't it?—A. As soon as the British factory started operation and could give a supply to the customers then of course the German imports stopped, because the British company had got their exclusive licenses under those patents—under the patents. Importation could only take place with their approval anyhow.

Q. Of BTP in its own territory?—A. Yes, in this case.

2917 Q. And if BTP said to TG, We don't want any more imports into our territory, they would have ceased under the 1920 contract, wouldn't they?—A. Under the 1933 contract and 1927 contract.

Q. Now the various Titan associated companies had what percentage, would you say, of the market capacity of the territories outside of the United States with reference to the whole market for titanium pigment?

The Court. I do not follow your question. Do you mean under the Blumenfeld deal?

Mr. Dixon. That is right.

A. You mean the potential capacity or do you mean the capacity——

Q. I will withdraw my question, Doctor. The only other group producing titanium pigments throughout the world, exclusive of the United States, was what we have heretofore called the Blumenfeld group, is that correct?—A. Yes.

Q. And they started in the titanium business I believe about the same time as Titan A/S, didn't they?—A. No. I think they started in considerably later, several years later.

Q. Well, you started in 1916, was it, in Norway?—A. We started our factory in 1916 and we started operations in 1919.

2918 Q. And Blumenfeld had Thann & Mulhouse in France with a factory in about 1922, didn't he?—A. I did not know, but I believe so, because as far as

I remember it was only in 1922 that—well, in fact I did not know of Blumenfeld actually being active in titanium before I met him in Paris at that time. There may have been some patents, but frankly not that I was personally much aware of that fact, and I suppose it was round about that time that he started to put some pigment on the market. I do not know, but I suppose that is the case.

Q. Well, the only other companies manufacturing titanium pigments in Continental Europe up until say 1928 were the Blumenfeld companies and your own companies or the Titan companies? That is correct, isn't it?—A. Yes, with one little reservation. I cannot give you a definite date as to what Auer Company did.

Q. You mean Auer—A-u-e-r?—A. Yes, Auergesellschaft.

Q. That company finally went out of business?—A. Yes, but they had spent seven to nine million marks on their business before they closed down.

Q. So excluding the Auer Company, the only other group of companies operating in Continental Europe up until 1928 were your groups and the Blumenfeld groups? —A. Yes. May I just mention one other thing, and that is in France, when you talk about these groups,

2919 there were two inventors, Carteret and Devaux. They had a pilot plant in France which was visited by Mr. Hallett of the National Lead Company in 1928 or 1929, I believe, where they were making some titanium pigment. But as to what you may call the serious competitors, it was Blumenfeld at that time.

Q. Do you know what proportion of the total titanium pigment market was supplied by the Blumenfeld companies in Europe in 1928 approximately?—A. No.

Q. Well, in any event I believe we can say that about that time your companies, the Titan companies and the Blumenfeld companies were the only groups commercially engaged in the business in Europe at that time? That is correct, isn't it?—A. I think so.

Q. So that the only competition that the Titan companies had from European companies in 1928, of a commercial nature, were the Blumenfeld companies?—A. Commercially, yes.

Q. Now, you had no competition from any of the other Titan companies, as you have stated? That is correct?—A. Commercially?

Q. Yes, except that imports were made into the Titan territories at the request of the Titan companies. That is a fact, is it not, even in 1928? Is that a fact, Doctor?

Mr. WEBSTER. Again I apologize for interrupting,
2920 because Mr. Dixon was considerate of me when I asked general questions, but he talks about the various companies, and the various countries, and the Titan companies and the associated companies with reference to events that were perhaps of some importance here all in one big lump, and I do suggest that he be instructed to try to specify so that Dr. Jebsen can give a more or less specific answer on that.

Mr. DIXON. The witness has not stated he does not understand my question.

The COURT. That is what I was about to say. Go ahead.—A. May I just, for the sake of clearness, say I understand the Blumenfeld companies, the Thann & Mulhouse at that time, Thann & Mulhouse and Montecatini and Aussig, as far as Europe is concerned?

Q. That is right.—A. There was in London a group which was promoted by a man by the name of Tilden-Smith and he operated with a company called the National Titanium Pigment Company which later was taken over by Laporte. I don't remember exactly the dates when he started to introduce his pigment. He sent it around to the various paint manufacturers. It may have been a little later or maybe been a little earlier. I cannot say. I would like to make that one exception.

2921 Q. Do you know whether the National Lead Company was importing into the British market in 1928 and 1929?—A. I do not remember. We took once or twice some material from the National Lead Company over to England but I cannot say exactly the dates and the years. There were a few times.

Q. So that at that time, at the end of 1928, you really just had the two groups in Continental Europe, the Blumenfeld group and the Titan group?—A. Yes, of commercial importance, yes.

Q. And the Blumenfeld groups, so-called, were beginning to seriously and substantially compete in the European markets with your companies? That is a fact, isn't it, Doctor?—A. Yes.

Q. Now the Montecatini Company was even exporting outside of Continental Europe, wasn't it, at that time?—A. Exporting to England.

Q. Do you recall whether they were also exporting even small amounts into the United States around 1930, 1931 and 1932?—A. I do not recall, but I have seen that in some of the papers mentioned here. Of course I was

not very much interested in what exports took place into the United States.

Q. But you always kept National Lead informed of what was going on with reference to the European
2922 situation?—A. Yes.

Q. And the activities of the Blumenfeld companies were reported to the National Lead Company?—A. Yes, as far as I knew about it.

Q. Now this technical cooperation, this other factor in these agreements, that was a very important factor underlying these agreements, wasn't it, Doctor?—A. The technical cooperation, yes.

Q. And as a result of that technical cooperation flowing between and among the various members of the Titan group you obtained distinct advantages, did you not, in the technical operations of this business over any other company that did not have that available to them?—A. Yes. I think that was a very constructive part of the whole thing.

Q. And these exchanges of information relating to the working out of the technical problems of this industry also in many cases resulted in patent collaboration, did it not? That is collaboration in patent applications in the titanium pigment business?—A. I do not quite see what you mean by "collaboration."

Q. All right. I will ask you another question: You mentioned yesterday, as I recall it, that TG developed a new product, I believe around 1935, Rutiox, with a very high hiding power?—A. In the laboratory.

Q. And it is a fact that when that product was
2923 discussed at your, shall we say, international committee meetings that the British companies and their research divisions did aid and collaborate with the German companies on the working out of the details ultimately leading to patent applications on that product?—A. They took up the work in the Rutiox matter also.

Q. So there is one example to answer my question as to whether or not this technical cooperation between the companies resulted in joint patent collaboration on applications?—A. Yes.

Q. And there may have been others I presume. And of course when these patent applications were filed and patents issued, or when they were filed, all of the information relating to those new applications was immediately available to all the other Titan associates, wasn't it, in-

cluding the National Lead Company in the United States?—A. Yes. When you say "immediately" I mean——

Q. Well, in the ordinary course of business?—A. Yes.

Q. The transmission of that information would make it available to all the Titan associated companies?—A. Yes. May I just mention when you talk about patent collaboration, as far as I understand what you really mean here is technical cooperation in those developments.

Q. Well, I had gone beyond that, Doctor. I had brought it to the stage of the patent applications, and
2924 when it had reached that stage, before a patent had issued, whatever was covered in that application relating to any improvement on any of the processes you were then using was immediately available, was it not, to all the other Titan associates?—A. Oh yes, that is right.

Q. And of course it was not available to anyone who was not associated with the Titan-National Lead companies?—A. Yes.

Q. And when you made the Aussig and Contract of Four and Contract of Six agreements in 1933 and 1934 that exchange of technical information was not provided for from the Titan companies to the Blumenfeld companies in those contracts, was it?—A. No.

Q. It was just a commercial arrangement in those contracts with the Blumenfeld companies?—A. Yes, but there is one thing in those agreements where we talked about patents too, and perhaps I should make that clear, and that is where it was a question of patents regarding applications of our pigments use patents. They were made available for both parties to the purpose of facilitating the sale everywhere around.

The COURT. Even with the Blumenfeld's?

The WITNESS. Even with the Blumenfeld's. In other words, we could not use a patent involving the use of titanium to prevent Blumenfeld from selling to the customers.

2925 Q. That was arranged and provided for in your contracts with the Blumenfeld group?—A. Yes. You will find that in the agreements.

Q. But apart from those contracts with the Blumenfeld group it related to a commercial control of those markets by your Titan companies and the Blumenfeld companies; that is a fact, isn't it, Doctor?—A. Yes. Well, as far as those sides are concerned. If somebody else came in it would be a different matter. It would be beyond our control.

Q. Someone did try to come into the Dutch market in 1939, didn't they?—A. Yes.

Q. And it was immediately decided by the Titan companies and the Blumenfeld companies that no arrangement should be made with van der Lande, this new Dutch company?—A. I would not say immediately. We were watching the van der Lande Company as it developed. We were trying to find out what kind of people they were, and the information we got was that they were people who repeatedly had taken up, apparently, a new production with no purpose of really going in, but after they had made themselves a nuisance they just took some compensation for dropping out.

Q. Did the Titan companies ever pay van der Lande any money? A. No. We did not fall for that.

Q. It was decided rather to fight them to co-
2296 operate with them? Is that the position taken by your two groups? A. Yes. I would not say it really came to a decision, but Blumenfeld told me about it, that he had an opportunity, he had heard van der Lande would be willing to make some arrangement, and I said, "I don't think we should do so," and that is what it was left to. That competition was not so serious at that time that I would call it a decision. It was not under a very serious consideration.

Q. It never really got started? Is that a fair statement, Doctor?—A. Yes, and I do not think they intended to get started. I think they intended, what they had done before in other cases. They did not have a real staff of people. What they had done was they got hold of a master mechanic from the Auer Company and was trying on the basis to do something.

Q. Now, Montecatini was exporting not only to all the other countries of Europe but also to England before Contract of Six was made, wasn't he, Doctor?—A. All of the other countries? I do not know. But he was exporting to England anyhow.

Q. And after Contract of Six was made Montecatini did not export into the British market any more, did he?—A. I don't know exactly——

Q. As long as that contract was in force?—A. I don't remember when that was, but after the contract was
2927 signed Montecatini exported to the extent that was provided for in that contract.

Q. In other words, the competition from Montecatini

in the other territories that had existed theretofore——A. Was regulated.

Q. ——was stopped, wasn't it?—A. Was regulated.

Q. Was regulated, yes. So that when these agreements were completed with the Blumenfeld companies in Europe you had a completely stabilized or regulated market in the titanium pigment business? That is a fact, isn't it?—A. I should explain a little to you there how that kind of thing worked.

Q. Well now——

Mr. WEBSTER. Just a minute.

The COURT. Answer the question first and then give your explanation.

The WITNESS. I think I need that explanation as an answer for your question when you ask about completely regulated and so on.

The COURT. All right, go ahead.

A. There is still a competition going on in that kind of thing. For instance, Blumenfeld and our people, they competed and they fought each other in order to get customers, even took customers from each other even after that agreement was made.

2928 The COURT. What is the point of that?

The WITNESS. Two points. One was that these agreements after all are relatively short termed. We had our sales agent and he had his commission. He was interested in selling as much as possible. He could not cut down the price. The price-cutting competition was eliminated by those agreements, and compensation for oversales was arranged for when the year was over, but after a period of two or three years the question of quota could be taken up for revision.

The COURT. We will suspend at this time.

(Recess to 2.15 p.m.)

AFTERNOON SESSION

GUSTAV ADOLF JEBSEN, resumed the stand.

Cross examination continued by Mr. DIXON:

Q. When we adjourned for lunch we were discussing the contract the Titan companies made with the Blumenfeld companies after 1933 in Continental Europe, and that customers were also exchanged between the companies in the various territories allocated to the Blumenfeld and Titan companies under those agreements, were they not, Dr. Jebsen?—A. Not that I know of.

Q. Don't you recall in 1939, I believe it was, that you referred in some of your reports to giving some of the customers to Thann in its territory?—A. To Thann?

2929 Q. Thann & Mulhouse, yes.—A. No. I do not recall. It may be the case, but I do not recall.

Q. Well, in any event in working out the quotas agreed upon for the markets in those territories covered by Aussig, Four and Six Contracts there was commercial cooperation between your group and the Blumenfeld groups to regulate the markets in those territories?—A. The sales—Yes.

Q. And they were governed by those contracts within the territories, is that correct, Dr. Jebsen?—A. Yes.

Q. Now during this period of time you mentioned the British Laporte Company, that was the other producing company in England, was it, apart from BTP?—A. Yes.

Q. And BTP had a price arrangement with Laporte covering the prices of titanium pigments sold in the territories of Laporte, and British Titan Products Company, did they?—A. Yes. I don't remember exactly the time when it started, but anyhow it was so.

Q. And after the Laporte Company took a license from Blumenfeld Laporte no longer competed in Titan's territory outside of the British Empire, did they?—A. No. They respected the Blumenfeld patents in that territory.

Q. So they did not compete any longer with your companies in the territories that you had theretofore had competition from Laporte in; that is correct, isn't it? Commercial competition?—A. You mean on the Continent?

2930 Q. Yes.—A. Yes.

Q. You also mentioned this morning the creation of the Japanese company. That was in about 1935, was it?—A. Well, I don't remember the date, but probably somewhere around that time; 1935 or 1936. You have that in the agreements anyhow.

Q. Well, the titanium business was then developing rather rapidly in Titan's territories, wasn't it?—A. Yes.

Q. And the production of your plants was increasing considerably, was it not?—A. Yes. You have the statistics there. Yes.

Q. And Japan was in TG's territory?—A. Yes.

Q. And TG was serving the Japanese market at that time with products manufactured at Leverkusen?—A. At which time?

Q. 1935—A. Yes; before the Japanese company started operations?

Q. I am talking now about before.—A. This is the time afterwards.

Q. And Blumenfeld was also selling in the Japanese market, was he not?—A. Yes.

Q. And after the Japanese company was created and the Japanese factory in operation, no exports were made by either Titan or Blumenfeld into that market, were they?—A. No, and we had difficulty enough in importing before that time.

2931 Q. But you did export too and you did sell in the Japanese market prior to the creation of the Japanese company, didn't you?

The COURT. So he testified, through the Doitsu Company.

Q. And one of the reasons for the creation of the Japanese company was to prevent the development of a titanium business in Japan which might export into the other Titan territories, was it not, Doctor?—A. I would not say that exactly is the case. It was more in the following way, that we wanted to erect a factory in Japan in order to maintain and keep that business. There was a certain discussion, and certain people thought the money you put in there would be lost, and then those people were consoled with the idea that it looked like an insurance against Japanese competition so if you did not get anything out of it otherwise we might have a sort of insurance against them.

Q. Insurance from importing by any other Japanese company that might develop into the Titan territories?—A. Yes, but I would not say it was the purpose.

Q. I understand, but that was one of the reasons?

The COURT. It is a by-product?

The WITNESS. Yes.

The COURT. Whose territory was China in?

The WITNESS. That was Titangesellschaft.

2932 The COURT. And the Japanese development would threaten any market in China?

The WITNESS. Yes. That is right.

Q. So when all these Titan companies were created and the agreements made with the Blumenfeld companies that we have described and the price agreement with Laporte, the entire titanium production throughout the world, exclusive of the United States, was substantially under all

these agreements, is that correct, Doctor?—A. Outside the United States?

Q. Yes.—A. Yes.

Q. So that the only other producers not directly involved in any of these contracts were those in the United States, and any imports from any company in the United States that might be producing titanium pigments would have an immediate effect of breaking down these frontiers, as you called them, would they not, Doctor?—A. As far as that company?

Q. Yes.—A. But not as far as these companies which were exchanging technical information and making a technical exchange and cooperating together.

Q. To the extent that any such imports that might have come into those territories which had been allocated to the company, and the agreements which had been made within those territories, such imports might have

2933 interfered with the plan for regulating the markets in those territories? Is that not a fact?—A. No. I cannot say that. I do not follow that entirely why it should.

Q. In other words, you did not think any imports into say the territory in China by some company that was not in on this agreement—you would not be concerned about that, would you?—A. Not except as a competitor in any way.

Q. You would, however, if you saw or met that competition in any one of these territories, you would, of course, take immediate steps to prevent its recurrence if it came from any of your companies, wouldn't you?—A. I would try to regulate it in accordance with the agreement.

Q. And there were some occasions in which you did endeavor to trace imports which could not otherwise be accounted for into some of your exclusive territories?—A. There were some instances, some small ones, but not of much importance.

By the COURT:

Q. They were not important as quantity, but they were important in principle?—A. Yes; they were important particularly as far as psychology was concerned.

Q. You wanted to make sure that everybody was observing the territorial arrangements?—A. Yes—were

2934 loyal to the whole thing.

Q. What was the reputation of the Japanese courts? Did they respect foreign investments?—A. I

really do not know. But I do not think there was much reputation at all. But I really do not know.

By Mr. DIXON:

Q. You testified this morning, I believe, with reference to this Paris conference in March of 1931. That was between the Titan companies and the Blumenfeld companies? That is correct?—A. You mean that meeting in 1931?

Q. In March of 1931 in Paris.—A. Yes. That was the meeting I have been reading about and do not remember much about, but that was between the Blumenfeld and Titan companies, and I believe Ticknor and Chase were there, isn't that so?

Q. I was not there.—A. Pardon me, but I thought you might know.

The COURT. The questions go in the other direction.

Q. In any event, Doctor, at that meeing there was rather a complete discussion of the entire titanium situation in the world, wasn't there?—A. Yes, but let me first explain——

Q. Just a moment.

The COURT. He wants to explain, and I will let him.

2935

A. (Continuing) But I have so little memory of the whole thing there, and practically I could not remember anything before I came over and saw these papers, so I am not talking from memory on this.

Q. I understand, Doctor, because we don't hold that against you, because this is a good many years ago. I hand you what has been marked Exhibit 208 for the plaintiff and ask you to examine that and state to the Court whether you prepared that report.

Mr. WEBSTER. He did not prepare the whole report.

Mr. DIXON. Yes. I am asking him now what he prepared.

A. Is this the report for 1931, March?

Q. Well, I presume it is, Doctor, yes.—A. Because I have seen one of these papers. I shall have to read through all this?

The COURT. No. Look at it and tell us whether you are the one who is the author of this document. The answer might be "Yes" or "No", or it might be "Yes" in part and "No" in part, or it might be "I cannot recollect." Those are the possibilities.

A. I will have to say I cannot recollect. When I saw this at one time I asked myself—I could not remember

it at all—when I came over it here recently when I
2936 was reading through this.

The COURT: Can you tell by examining the style of writing, whether it corresponds to the style you were accustomed to use at the time? Are there any expressions in it which would give you a clue?

The WITNESS. I might very well have done it. I won't deny, but I cannot confirm. I might very well have done it.

The COURT. Very well.

Q. I will hand you what has been marked Plaintiff's Exhibit 530 and ask you if you wrote that letter to Mr. McCarty enclosing with it the report of this conference I have just showed you?—A. I must read this letter.

Q. That is all right. Take your time, Doctor.—A. I think I remember the letter, but do you want me to read the whole thing?

The COURT. Are you the author of that letter?

The WITNESS. Yes. I recognize that.

Q. And attached with your letter did you send this report that I have just shown you of the conference in Paris that you referred to in this exhibit?—A. It is very likely, but I cannot say definitely Yes, but it is very likely.

The COURT. Is there a sentence in there to which you want to call the witness's attention?

2937 Mr. DIXON. Not particularly, Judge.

Q. Now in this conference in Paris on which you made this memorandum——

Mr. WEBSTER. Just a moment, your Honor. This Exhibit No. 208 is an exhibit consisting of a letter from Dr. Mayer to Mr. Burton, and then at the top a letter from Mr. Chase to Mr. Beschorman, to which are attached that report by Dr. Latka, which appears as Dr. Latka's report, and containing, I believe, in addition a memorandum on the inside which is referred to in the Chase letter as Dr. Jebsen's memorandum. So that even on its face it does not purport to be Dr. Jebsen's report, but Dr. Latka's report, together with——

The COURT. A memorandum by Dr. Jebsen?

Mr. WEBSTER. A memorandum which Mr. Chase says was written by Dr. Jebsen.

Mr. DIXON. I asked Dr. Jebsen whether he prepared that particular memorandum. I am not asking about Mr. Chase's memorandum.

The COURT. That is Exhibit 208. You mean thereby a memorandum attached to Exhibit 208?

Mr. DIXON. That is right. The reason for that is, in the interest of avoiding duplication of memoranda it was not attached or printed with the other exhibit. That is all.

2938 The COURT. Very well. You would not contradict that the memorandum was written by you and so appears on the face of the document?

The WITNESS. No, but I cannot say.

The COURT. I say you would not deny?

The WITNESS. No. I cannot deny.

Mr. WEBSTER. All I wanted to make clear on the record was that all Mr. Dixon showed him was that part.

Mr. DIXON. That is all I asked about. The record shows that.

The COURT. The record may not have shown to which page your finger pointed, so we now understand the memorandum therein referred to as being the memorandum authored by the witness.

Q. And on page 2 of this memorandum that you made under paragraph (a) we find a reference as follows:

"It is presumed that an agreement will be reached between the Commercial Solvents Co. and the Titanium Pigment Co. regarding a cooperation within their territory of such a nature that an exchange of licenses and experience can take place between all the companies concerned."

Do you recall whether that was discussed also at this meeting in Paris, Doctor, in 1931?—A. I do not recall that but, as I said, I do not recall that meeting

2939 at all.

Q. You have completely forgotten about it now? You have completely forgotten about this Paris conference in March of 1931?—A. I have said it repeatedly, and also previous to somebody else here, that that memorandum of that conference I have no memory of except I remember I had a talk with Mr. Mayer and Dr. Kuhne at that time in Paris, but the whole conference—it has escaped my memory. I won't say that that means that it did not take place. That is an entirely different thing.

The COURT. Manifestly it took place and you are not disowning the paper?

The WITNESS. I do not say neither yes nor no because frankly, I am sorry, but I cannot help it. I may mention that Tickner and Chase made a lot of representations at various times.

Q. Well, do you remember they were present at this meeting? They were the head of, or at least connected

with, Commercial Pigments Company in the United States. You knew that, didn't you?—A. Yes.

Q. When was the first time that you saw Mr. Ticknor or Mr. Chase, if you recall?—A. That I do not dare to say. I did not meet Ticknor much at all. I met Chase once or twice. I met Ticknor once in London together with Chase.

Q. When was that?—A. That was in 1933. That
2940 is the time Mr. Ewing of the du Pont Company was there.

Q. You mean 1931, not 1933?—A. No, I think that was 1933.

Q. Was that the time that you had a luncheon with Mr. Ticknor and Mr. Chase and Mr. Ewing and Mr. Burton?—A. Yes.

Q. And Mr. Beschorman?—A. Yes.

Q. I will hand you what has been marked Plaintiff's Exhibit 200 and ask you to examine it and state to the Court whether that is one of your letters, or a photostat of one of your letters (handing)?—A. That is right.

Q. Will you read that and state whether that refreshes your recollection as to when that meeting was held and what occurred at that meeting?

Mr. WHITNEY. What is the date of that letter?

Mr. DIXON. September 11, 1931.

A. Yes. That must have been in September 1931. You are right. It appears from the letter and it is perfectly true. Was not Beschorman there too?

Q. Yes. Beschorman was there. And according to your letter, Plaintiff's Exhibit 200, Mr. Ticknor and Mr. Chase explained that the combination with du Pont would in no way impair the plans of a coming together of their and our group—it would rather further the matter." Do you recall that?—A. Yes.

2941 Q. And that was in fact stated to you by Mr. Ticknor and Mr. Chase at that time when you wrote this letter, was it, Doctor?—A. Yes.

Mr. WHITNEY. You remember that?

The WITNESS. Yes. I remember that.

Q. That was after the du Pont Company had taken over or acquired Commercial Pigments Company, was it?—A. That I do not know, but I suppose that was the case.

The COURT. That was after Krebs had taken over Commercial?

The WITNESS. And I believe it was stated at that time—I have asked Mr. Ticknor at that time whether he was

afraid of du Pont being more interested in lithopone than titanium or something on that line.

Q. And after that meeting in September of 1931 there was an informal price arrangement made between the Blumenfeld companies and the Titan companies in Europe for the time being, do you recall?—A. Not as a consequence of that meeting.

Q. Do you recall whether Dr. Blumenfeld stated to you that he would go along or wait until something was worked out in the United States before proceeding further with any negotiations in Europe?—A. I do not recall it but I wrote very extensive letters, so I suppose you can find it in the letter itself, what happened at that time. I
2942 sent photographs over here, so to say, about what happened.

The COURT. You mean photographic reports?

The WITNESS. Yes. I mean they are fairly long, those reports, and I do not think much happened which was not in the reports.

The COURT. There has been some comment about that, not uncomplimentary.

The WITNESS. Yes.

Q. I will hand you this Exhibit 200 again and ask you to read it and state whether that refreshes your recollection as to whether you had any conversations with Mr. Blumenfeld about September of 1931 about further arrangements in Europe?—A. Well, here you have it stated: (Reading)

"Mr. Blumenfeld here in Paris has told me that he was informed by Mr. Ticknor and Mr. Chase of the situation in New York, and that du Pont would continue the conversations with National Lead Company. He was willing to wait; he was, however, in a difficult position as he could sell more than he could produce."

Q. Does that refresh your recollection now, Doctor, as to whether Dr. Blumenfeld said he would await the outcome?—A. I mean what is stated here is correct. That is perfectly true.

Mr. WHITNEY. Your Honor, Mr. Dixon intro-
2943 duced this entire file of Dr. Jebsen's letters and nobody questioned that they were truthful as written, in the sense that they reflected what Dr. Jebsen then thought. Now nobody claimed that he was then prevaricating and there is therefore no function to cross examine insofar as it points to Dr. Jebsen or as to reading to Dr. Jebsen what he then wrote and asking him

to say that he was not then telling a falsehood, and that is all that Mr. Dixon is doing now. He could do it for a week and thereby, in effect, be summing up from the letters, but insofar as it is confined to that I hope it is to that only.

The COURT. Very well, you need not object, but I will instruct Mr. Dixon that corroboration is unnecessary in this instance since it is true that none of the letters have been challenged, and that the cross examination, if any, should be directed towards filling in gaps or supplying mental reservations which you think may lie behind some of the communications, and matters of that kind, but the mere reassertion of the facts which are reported in these letters will get us no place, for this reason: The matter is of great antiquity, and as between Dr. Jebsen's present recollection and what he reported in the letters I will always take the letter in preference to his present recollection even if he were to contradict his letter.

Mr. DIXON. If I may interrupt, your Honor,
2944 I hasten to assure the Court that I have no intention of going over these letters for that purpose.

The COURT. Very well.

Mr. DIXON. I have only referred to two or three of the documents, but so that it may be clear I have no intention of going through all, and then only very briefly.

The COURT. Very well.

By Mr. DIXON:

Q. Now, Doctor, the 1920 contract, Article XIV, prevented any license to any company within the territory allocated to a company like Titanium Pigment without the licensee assuming the obligations of the contract of 1920? That is correct, is it?—A. You mean prevented to give licenses or give sub-licenses?

Q. Yes, without the consent of all the other parties to the contract.—A. It is clearly stated in the agreement, with certain limitations which I do not think it is necessary to go into here.

Q. That is right; and no approval of such a license was necessary if the licensee assumed all of the obligations of the 1920 contract in that territory? That is true, isn't it?—A. Yes.

Q. Now you mentioned this morning that you were not directly involved in the negotiation of this contract between Titanium Pigment Company and Krebs; that
2945 is true, isn't it?—A. Yes, and I think——

Q. In the first—— A. —not the negotiations between those two companies.

Q. And when was the first time that you had any notice from Titanium Pigment Company that they were contemplating the making of such a license agreement with Krebs Pigment & Color Corporation?—A. When I was over here in 1932, I think it was, I knew that negotiations with du Pont and Dr. Thompson were had, certain conversations, but I never discussed the thing with Dr. Thompson at that time.

Q. Did he discuss it with you?—A. No.

Q. Did he say anything to you about any proposal to exchange licenses with Krebs and Titanium Pigment Company at that time?—A. We did not discuss it at all.

Q. What was the occasion then for your being notified of such negotiations, if you recall?—A. Well, I don't think you should call it "notified." I was here and I heard about it.

Q. You do not know who you heard about it from?—A. No.

Q. And did you ask any questions at that time of whoever told you about it, about the negotiations?—A. No.

Q. And when was the next time——

The Court. I take it your relations were—who was the vice-president in charge then, the executive
2946 vice-president?

The Witness. Mr. McCarty, who was my very good friend.

The Court. Was still in charge?

The Witness. Was still in charge. He was ill. He was sick very much, but he happened to be in New York some time when I was over and he asked, "How are these things getting on?" And I said, "I have heard that Thompson is negotiating or talking with du Pont," but that was all. Thompson I had very little contact with.

Q. Do you recall the next time that you heard about such negotiations?—A. I heard no more. The next time was the letter which Dr. Thompson wrote me; a letter in January, I think it was, 1933; where he sent some memorandums, I think it was, about certain understanding he had reached with the du Pont Company about making an agreement and he sent them over and wanted my reaction and the European associates' reaction to it.

Q. And what was your reaction to those memoranda?—A. A very strong one.

Q. In other words, can you state to the Court whether

you were in accord with the proposed agreement with Krebs as submitted to you at that time by Dr. Thompson?—A. I wrote back and pointed out very strongly, as strong as I could, the radical deviations which I
2947 considered this proposal represented, deviations from the principles of the 1920 agreement.

The COURT. You were very much disturbed about it?

The WITNESS. I was shocked.

The COURT. You were afraid that might cause the whole structure to topple?

The WITNESS. Yes. I could not understand how at that time National Lead Company could contemplate——

The COURT. Doing any such thing?

The WITNESS. Doing any such thing. I was shocked at that time.

Q. So you did not approve of that proposal as submitted to you by Dr. Thompson?—A. No. I think you have got it on the record here too.

Q. That is right. And did Mr. Beschorman then come over to talk to you about this agreement?—A. He came over I think in May. I did not get any answer from Thompson. But he came over in May and at that time he had, as far as I remember, he had with him the full draft of the agreement which Thompson had not sent. He had sent certain principles and so on, and when Beschorman took it up with me in Paris I presented to him the same arguments as I had presented to Thompson, not so extensively, but shorter, and he just got up, very, very impatiently saying, "But we have got to sell this agreement." I think I stated this yesterday.

2947a Q. Did you inquire of Mr. Beschorman as to what he meant when he said "We have got to sell them this agreement"?—A. No. Except my impression was that he wanted to have it done.

Q. Did he give you any reason as to why it had to be sold, as he called it?—A. No.

Q. And did you ask him for any reason why it had to be sold?—A. It would not have led to anything. He was not the type of man who would have answered that, anyhow, as far as our relations were at that time.

Q. So you did not receive any satisfaction from Mr. Beschorman at that time?—A. No.

Q. And was the matter discussed with the German people in Titangesellschaft at that time?—A. We left together, Beschorman and I, for Cologne, very shortly after his arrival in Paris, and met there Dr. Kuhne and Dr.

Raspe, I suppose—yes, Dr. Raspe was there who was the manager of the factory and Beschorman presented his draft to Kuhne and wanted his approval of it. I don't remember much what he, Beschorman, said at that time, if anything, but I remember very well that Kuhne just gave a courteous answer that he felt sure that this would be—that the interest of Titangesellschaft would be taken care of and then he said he wanted now to leave it to the legal department to study it.

2948 Q. The Germans were very particular you said, I believe, about being exact and formal in such matters, is that right, Doctor?—A. Oh, yes, generally so.

Q. And so Mr. Beschorman did not sell the agreement, to use that word that you used, to Dr. Kuhne when he went to Europe in April of 1933, is that correct?—A. I think so. He sent back a courteous answer, non-committal.

Q. And you discussed the agreement with him thereafter, when they had the TG officials there, didn't you?—A. I don't think you mean the TG officials.

Q. The I.G.—A. I discussed it up in Frankfort, where they had several lawyers, and Mr. Weber Andreae was there and Mr. Kuhne was there. You can find it described in one of my letters.

Q. It was a matter of considerable discussion at the meeting in Frankfort, was it not, between yourself and the I.G. officials?—A. They had got a shock when they had read it. The discussion was not very long because I told them that what they had said I had already said or written to the National Lead Company, so I said to—it was several months apart, and then Beschorman came with this proposal which I thought showed that National Lead Company could not get any further with du Pont. I told him then, "So you will have here to make up your mind whether you will approve it or not."

2949 They asked specifically, "Isn't this agreement already signed?" and I said "no, the signature is waiting until we hear from you about it," and then they got together and drafted a letter stating what they considered the most important principles for the 1920 agreement, adressed to me, and it was sent over to New York.

The COURT. Is that the letter in which they named certain conditions upon which they would approve?

The WITNESS. Yes.

Q. From the letter that you transmitted to Mr. Beschorman, from I.G., after these conferences, there was

not any doubt in your mind, was there, Doctor, that they were insisting that the territorial limitations, or the exclusive territories allocated to TG under the 1927 contract with Titan A/S be respected if they were to approve the agreement? That is a fact, isn't it?—A. That is what they wanted to be fixed now.

Q. And that was the condition that they imposed to the granting of any consent or approval by TG of the proposed-Krebs-Titanium Pigment agreement; wasn't it?

Mr. WHITNEY. Just a moment, Mr. Dixon. I never minded any examination as to what anybody said or wrote. I was a little reluctant about "what was in your mind;" but the generality "that that was the condition imposed" caused me to rise.

2950 The COURT. Objection sustained. You need not answer.

Q. Now did you state to the I.G. officials at the Frankfort meeting of June 1933, that you expected to go to the United States in July of 1933?—A. That I do not remember, whether I said in July, but that I was likely to go over sometime that summer, yes. I used to go practically every year to New York.

Q. Had you been discussing the Aussig and these other agreements with Mr. Blumenfeld just about the same time?—A. We had a short discussion, if I remember right, in Paris, somewhere between the meeting in Frankfort and when I left for New York.

Q. Well, was there any particular reason for your coming over to New York in July of 1933, other than to make an annual visit?—A. Well, naturally, I felt very much interested in having a talk with the people in New York about this whole matter. After all, you have all these letters and I had practically no discussion with Beschorman, and I was anxious to get over and find out a little where the land was lying.

Q. In other words, it was quite a responsibility on your shoulders as manager of the Titan companies, as to whether or not such a contract would be any deviation of the 1920 contract, wasn't it?—A. Yes, not the re-

2951 sponsibility, but I was very interested.

Q. So you were naturally anxious to discuss this matter firsthand, is that correct?—A. Yes.

Q. With the people in New York. That was one of the reasons for your coming over in July of 1933, wasn't it? A. Yes.

Q. And you did have such discussions, didn't you?—A. Very little, and I will tell you why: when I took it up with Dr. Thompson I did not get anywhere. I could not get him. He got a headache.

Q. Who was superior, Thompson or Beschorman?—A. Beschorman was my superior. Thompson was the head of the research laboratory over here. He was really not a business man, but he mixed into business and took part in these negotiations.

Q. Mr. Beschorman was head of the Titanium Pigment Division of National Lead at this time, wasn't he?—A. Yes.

Mr. WHITNEY. Won't you kindly permit him to complete his answer. "I will tell you why."

Mr. DIXON. Just a moment, this is my examination.

The COURT. All right. We will get around to it.

Mr. WHITNEY. It was his inquiry that stopped in the middle of a sentence, but now may we go back to the sentence?

2952 The WITNESS. Shall I continue?

Mr. DIXON. He said Dr. Thompson got a headache.

The WITNESS (Continuing). And he was old; and rather—he was not very strong. Mr. Beschorman I did not get anywhere with as I told you. Mr. Cornish had recently had a stroke, so in the company there was practically nobody to talk with except Beschorman and Thompson. Carter, who became president after Cornish was there, but did not take much interest in these matters at all and was not informed about them, so I felt entirely lost at that time when I came over.

Q. Did you have any trouble talking with Mr. Beschorman about this matter?—A. Oh, yes. He was not a man easy to talk to.

The COURT. That is what I meant when I said your relations were not of the same quality as they were with Mr. McCarty.

The WITNESS. Very much different.

Q. Did you have any discussion at all with Mr. Beschorman about this proposed agreement?—A. He generally said to me, "Don't go into detail, Dr. Jebsen. You are too far a man for details," and that was the way he tried to get around it.

Q. You were a stockholder in Titan Co., Inc., weren't you?—A. Yes, and I felt very decisive about it.

2953 Q. And naturally you would therefore have a personal interest in this agreement, or proposed agreement?—A. Yes, I had, but at the same time I was an employee of the National Lead Company, paid by the National Lead Company for taking care of their interests, and to me it was a matter of choice, and I thought my own interests will have to stand behind the National Lead Company's, because I was their man in Europe.

Q. Did either Mr. Carter or Mr. Beschorman or Dr. Thompson tell you that you had to approve this agreement?—A. Well, that is a strong word, but Beschorman tried to use the pressure they could on me for approving it.

Q. Well, was this a matter for you alone, Dr. Jebsen, to approve this proposed agreement?—A. For me alone?

Q. Yes.—A. No. I was really what—alone? After all it was dependent on the Germans first of all.

Q. Yes. In other words this agreement could not be made unless it was approved by TG, could it, under the 1920 contract?—A. Yes, or by I.G.

Q. Yes, or by I.G. either, so this was not a matter of you doing personally what National Lead ordered or told you to do, was it, Doctor?—A. I could not act for the I.G. in this matter at all.

Q. I understand. Did you have many conferences with Mr. Beschorman about this proposed agreement
2954 when you were here in July of 1933?—A. We talked about it. Or I talked about it. He did not talk much about it. He just tried to waive it aside.

Q. Didn't he ask you what can be done to get the approval of I.G. to this agreement?

Mr. WEBSTER. May I object to that as the witness has answered this question several times.

The COURT. Yes. I was reflecting in my mind the point at which I should intrude. I will let him go just a little further.

Q. (Question read.)—A. The agreement was presented to me as being the result of long discussions between du Pont and the National Lead Company, and it had been developed and was well considered by them. They thought that it was of interest to the National Lead Company to have that agreement made, and there was no time for redrafting the language, or I would not say time, but they were not inclined to redraft or change it.

Mr. DIXON. I am wondering if I can get an answer.

The COURT. I think that is all right.

Mr. DIXON. I would like, if possible——

The COURT. All right. Reframe another question and we will sharpen down the issue.

The question was whether Beschorman asked him whether something could be done to persuade the
2955 Germans to go along. Is this about the size of it? That Beschorman put such a question to you?

The WITNESS. No. He just left me confused.

The COURT. Because he had that letter from the Germans specifying the five conditions at that time?

The WITNESS. Yes.

Q. Did Mr. Beschorman introduce you to Mr. Rupprecht?—A. Yes, and it led to having a talk with Mr. Rupprecht.

Q. Had you met Mr. Rupprecht before this July meeting?—A. No.

Q. That was the first time you had met him?—A. Yes.

2956 Q. And where did you meet him, if you recall?—A. In Beschorman's office.

Q. What was the subject of discussion between you and Mr. Beschorman and Mr. Rupprecht in Mr. Beschorman's office?—A. I was trying to get Beschorman to get Rupprecht to see the difficulties we were encountering with regard to the IG.

By the COURT:

Q. Let us stop going around in circles, Doctor. You wanted to presuade Rupprecht to go along on the territorial arrangement?—A. Yes.

Q. And on the technical exchange?—A. Yes. To accept those principles.

Q. To accept the principle of territorial limitation and technical exchange?—A. To get as far as I could to accept the 1920 agreement.

Q. As far as you could go in persuading him?—A. Yes.

Q. That was the object of your visit?—A. That was the object of my talk.

Q. You tried to sell that kind of proposal to Mr. Rupprecht?—A. Yes.

By Mr. DIXON:

Q. What did Mr. Rupprecht say to you at that time with reference to respecting the territories of the Titan associates?—A. He had too many answers in one
2957 way. One moment he talked about the executive committee, they would not accept that kind of

thing. At another moment he said, "You are secured against any invasion from us through your patents," and so on. At the third time he said, "For legal reasons."

Now, with regard to legal reasons, as was said in those letters, I couldn't take that serious. With regard to the other things, I found it very difficult to take those serious too; but at the same time my impression was that he had a desire of trying to fall in in some way, so——

The COURT. You mean accommodate you?

The WITNESS. Accommodate, yes.

A. (Continuing) And he was trying to paint a picture in that direction, that there wasn't anything to be feared. But I didn't get, what I would say, down from sound to things, to get down to some definite undertaking. So, to me of course the question was in sending these letters back, what shall I say? I mean, to the Germans. I felt on the one side I had to be, as you said (addressing the Court) a good soldier, and at the same time I thought this may work out all right when the time comes. So I just wrote a few words to Kuhne and Weber-Andreae trying to transfer that opinion, convey that opinion.

Q. Well, how many conversations did you have with Mr. Rupprecht?—A. Only one.

2958 Q. Just the one conversation?—A. Yes.

Q. About how long was it, do you recall?—A. The conversation?

Q. Yes; in time.—A. It may have been an hour, it may have been two hours; I can't say; if it was in the morning or afternoon, I really don't remember.

Q. You don't recall precisely what Mr. Rupprecht said,—I mean the exact language,—about respecting the territories?—A. No. That is too long a time ago.

Q. But when you left that meeting, Doctor, were you satisfied by what Mr. Rupprecht had said to you that he would see that Krebs would respect the territories of the Titan companies if this agreement were made?

Mr. WHITNEY. Objection. It is a state of mind.

The COURT. Objection sustained. You can give him the first part of your question.

Q. (Record read as follows: "Q. But when you left that meeting, Doctor, were you satisfied by what Mr. Rupprecht had said to you?")

A. No. It depends upon in what respect you mean. If you mean satisfied, that I felt happy about the thing, no.

By the COURT:

Q. In what respect were you satisfied?—A. Well, I was satisfied to that extent that I believed—he had been able to sell himself to some extent—I be-
2959 lieved that there might work out something as he called eminently satisfactory.

Q. In other words, you did not really anticipate any further trouble?—A. No; or, rather, I was hoping that as time developed I might be able to get him to understand and sooner or later fall in line.

Q. And go a little further?—A. Yes. But in other words, it was a matter to me of further development. I was dealing with a situation where my impression was that Beschorman did not really understand this agreement either, I mean the 1920 agreement, or the consequence of it. I say, as I said, I felt I was lost practically at that time.

By Mr. DIXON:

Q. One of the things on which you were not satisfied was the exchange of licenses, wasn't it, Doctor?—A. I wanted exclusive licenses and he didn't give that. He wanted only these exclusive except himself.

Q. That was to be made a matter of negotiation, wasn't it?—A. Yes.

Q. Did you have any discussion with him about whether those licenses, when negotiated would be exclusive for your European company?—A. Nothing further than what was written in that letter.

Q. And on what other point, if any, were you
2960 not satisfied when you left that meeting with Mr. Rupprecht?—A. When you have been trying to get him to fall in line with the 1920 agreement and the result is what it was there, then take just the difference between those two. I can't remember in detail what it was.

Q. Of course we understand that he did not subscribe to all the provisions of the 1920 agreement, Doctor.—A. Pardon me?

Q. He did not subscribe—— A. No.

Q. ——to all of the provisions of the 1920 agreement in the sense that you made a written contract with him. Now, you discussed with him, did you not, at this meeting the things that you wanted to be assured of if you were to inform your foreign associates that they could safely approve this agreement?—A. I don't—isn't this the same as your question?

Q. No.—A. I don't get the point in your question.

The COURT. That is an answer. He says he doesn't understand it.

MR. DIXON. Would you read the question?

Q. (Read as follows: "Now, you discussed with him, did you not, at this meeting the things that you wanted to be assured of if you were to inform your foreign associates that they could safely approve this agreement?")

2961 —A. It was discussed, but whether it went so far as to say if I were to inform the foreign associates whether they could safely approve this agreement, I don't think I looked upon it exactly from that point of view. After all, I didn't have the responsibility for the Germans to that extent.

Q. Well, of course, the Germans didn't get all they wanted in the letter that they sent, did they?—A. No, but I was not a representative of the Germans.

Q. Were you satisfied when you left the meeting with respect to the action of Krebs in respecting the territorial limits of the Titan companies?—A. I was hoping——

MR. WHITNEY. Your Honor, I had an objection to your Honor's question but I let it go because your Honor asked it.

THE COURT. No. You should not do that. I will sustain your objection.

MR. WHITNEY. I am glad I did, because I felt this witness was strong enough, unlike another witness, not to feel that he ought to respond to the Court, if you know what I mean, so I thought I would not object, and he respondent in the way that your Honor may recall or will check in the record.

I do object to Mr. Dixon now asking him the same line of questioning, of pressing further what was in his mind.

2962 THE COURT. Objection sustained.

Q. You have been reading the transcript of course of the trial every day, Doctor?—A. Not fully, not entirely. Certain days I did not get so far as to do it.

THE COURT. Do you feel strong enough to stand up under that?

THE WITNESS. Frankly, I had something else to do also which had to be done, and I couldn't—I felt as if my mind got stale after a little, when you are reading.

Q. Were you in the room all the time, Doctor, when Mr. Beschorman and Mr. Rupprecht were together?—A. That

I don't remember, but I don't believe so. I think that Rupprecht probably arrived and then I was called in, and how long he may have been there beforehand I don't know. Maybe I left also before Rupprecht left; I can't say.

Q. Did Mr. Beschorman ever say anything to you after this meeting that you have described with reference to anything that Mr. Rupprecht may have said to him about the request of the German company as set forth in the letter?—A. No, nothing particular.

Q. Do you recall when this meeting was held with Mr. Beschorman, I mean the approximate time, in July?—A. I think it must have been in the latter part of July. It was very hot, I remember.

Q. Was it before or after Mr. Rupprecht wrote
2963 the letter to Mr. Beschorman?—A. It was after that.

Q. When was the first time that you saw that letter from Mr. Rupprecht to Mr. Beschorman?—A. Beschorman showed it to me.

The COURT. Wait a minute. I want to be sure I understand this. The visit between Dr. Jebsen and Mr. Rupprecht you say was after the letter of reassurance?

Mr. DIXON. Yes.

The COURT. All right.

Q. And did he show it to you in the meeting that you had with Mr. Rupprecht?—A. I don't think so.

Q. Did he show it to you before you discussed the subject with Mr. Rupprecht at this meeting?—A. Of course my memory isn't very strong on those matters, but I believe he showed it to me before Rupprecht came. That would have been the natural thing to do.

Q. What if anything did he say about that letter to you that Mr. Rupprecht had written to him?

Mr. DIXON. On June 28th, your Honor.

The COURT. Will you pause a moment? Is this the letter which was intended as the transmittal to the Germans that we are talking about?

Mr. DIXON. Yes.

The WITNESS. I understand it is the letter from Rupprecht to Beschorman, isn't it, in answer to the IG's?

2964 The COURT. The letter, subsequently, transmitted to the TG or IG.

The WITNESS. Yes.

The COURT. All right. Now you may re-read that question.

Q. (Last question read.)—A. I don't remember now, but if I should try to recall, or in trying to recall, I think what he said was, it would be a very short comment on the things, in that he had been trying and didn't get any further.

Q. Did he say anything to you about how he managed to get that letter from Mr. Rupprecht?—A. No, I don't remember.

Q. But you did see that letter before you went into this conference with Mr. Rupprecht and Mr. Beschorman, you are certain of that?—A. Yes, I am fairly certain.

Q. Did you discuss that letter with Mr. Rupprecht?—A. I don't think we had the letter for this particular discussion. What I was trying was to get Rupprecht to see and understand the situation in Europe and with regard—in other words, the 1920 agreement. That was my concern. It was the same with regard to Beschorman himself.

Q. What had Mr. Beschorman said, if anything, to you about this letter from Mr. Rupprecht dated June 28, 1933?

—A. I don't think he commented upon it in any
2965 other way than when I was talking about this he said, "Don't bother, Dr. Jebsen, you are talking too much of the details."

Q. And everything will work out all right?—A. Well, I don't remember whether he said that, but evidently he wanted me to have that impression.

The COURT. Did he say to you that du Pont was a high-class, reliable concern?

The WITNESS. No, I don't think he said that. But I don't think it was necessary either. I knew du Pont's reputation.

The COURT. We will take a short recess.

(Short recess.)

By Mr. DIXON:

Q. I believe you testified, Doctor, that in your conversations with Mr. Rupprecht and Mr. Beschorman you were endeavoring to get Mr. Rupprecht to understand the conditions in Europe about the 1920 agreement; that is correct, isn't it?—A. The principles of the 1920 agreement.

Q. And did Mr. Rupprecht indicate to you that he understood those conditions?—A. Well, he was always very evasive.

Q. Well, were you satisfied that he understood?—A. No.

Q. Now, what conditions of the 1920 agreement did you think he did not understand?

2966 Mr. WHITNEY. Well now, your Honor, I object to that. The original question was objectionable. One is enough.

The COURT. Objection sustained.

Q. I will hand you what purports to be a copy of a letter dated July 12th from Mr. Beschorman to the IG Company and ask you to examine the same and state to the Court whether you ever saw that letter before.

Mr. WEBSTER. The exhibit number is what?

Mr. DIXON. 273; it is in that group.

A. I think I have seen the letter before; but do you want me to read it through?

Q. That is what I am asking you, did you ever see it before?—A. Yes.

The COURT. That is all you have to do. He has seen this letter.

A. (Continuing) Let me refresh my memory a little bit. (Witness refers to letter). I did not want to take up your time. Excuse me.

Q. Did Mr. Beschorman show you that letter, do you recall?—A. I think he handed it to me. I think I was the one who sent it over, didn't I? I think you will find it somewhere.

Q. Do you recall whether he handed it to you before or after you talked with Mr. Rupprecht?—A. No, that
2967 I can't recall exactly. If you will let me read it I may be able to find out.

Q. Yes (handing exhibit).—A. No, I can't say exactly whether it was before or after.

The COURT. Can you tell from the date?

The WITNESS. This is July 12th, this letter; but when I saw Rupprecht, I don't remember exactly the date.

The COURT. Is there anything to refresh the witness's recollection as to the date of the Rupprecht meeting?

Mr. DIXON. We have never been able to set that date, your Honor, specifically, and for that reason there is nothing in the file from which we are able to refresh his recollection on the date of such meeting.

Q. In any event that letter of July 12th to IG by Mr. Beschorman was shown to you by Mr. Beschorman; that is correct, isn't it?—A. Yes. And I think you will find that I have been the one to send it over to IG.

Q. Yes. I was coming to that. And on July 21, 1933, you forwarded that letter to the IG Company, did you not?—A. I think it was July 21st; I am not certain about that. Yes.

Q. And with the forwarding of that letter of Mr.
2968 Beschorman, to which was also a copy of Mr. Rupprecht's letter of June 28th, you also wrote a letter yourself, did you not?—A. Yes.

Q. And you also wrote one to Weber Andreae, did you not?—A. Yes.

Q. And with those two letters, namely, the one to IG and to Weber Andreae, you enclosed the letter from Mr. Beschorman of July 12th and Mr. Rupprecht's letter of June 28th, did you not?—A. It looks like it here. "I beg to enclose and send you a letter addressed to I.G. Farbenindustrie with enclosures," so they were copies, evidently.

Q. Yes. You are quite familiar with those letters, aren't you?—A. Yes.

2969 Q. You have seen them recently, even, haven't you?—A. Yes.

Q. And with the letter to Weber Andreae you indicated that the views expressed in Mr. Beschorman's letter of July 12th had been expressed also to you; that is correct, isn't it?—A. Yes, you have got it here, "Considering the views and interpretations as expressed by Beschorman, and by Mr. Rupprecht in his letter to Mr. Beschorman, it seems to me that a collaboration can be looked to which will be of important benefit to Titan Gesellschaft."

By the COURT:

Q. Is there anything in that letter which would help you establish whether the letter of July 12th, Mr. Beschorman's letter, was written before or after your meeting with Mr. Rupprecht? Can you tell from the tense of the verb you used in that letter?—A. No. This letter was evidently written after I had a meeting with Rupprecht——

Q. Yes, but you refer to meeting Rupprecht in your letter.—A. Yes. "I have met Mr. Rupprecht, president of Krebs Pigment & Color Corporation"——

Q. Go ahead. What else does it say?—A. "who verbally has expressed to me the same views as to the future cooperation which has been expressed by Mr. Beschorman."

Q. You use the words "has expressed to me" in both cases,—"verbally has expressed to me the same
2970 views as to the future cooperation which has been expressed by Mr. Beschorman."

Q. Do you recall now whether in—what year was that in?—A. Pardon me?

Q. What year was this? What year is the date of that letter?—A. 1933.

Q. Do you know whether in 1933 you had a sufficient command of the English language so that you knew the difference between "had expressed" and "have expressed," or would you say that that was a nuance you hadn't yet mastered?—A. I wonder if I master that today or "I have expressed" or "did express."

The COURT. All right, we cannot get any light from that.

By Mr. DIXON:

Q. Now, handing you again this letter of July 12t from Mr. Beschorman to I.G., will you examine it and state to the Court whether the substance of that letter was stated to you by Mr. Rupprecht when you had this oral conversation with him, as indicated in your letter to Weber Andreae, on July 21?

Mr. WEBSTER. Your Honor, doesn't the letter speak for itself?

The COURT. No. That is a perfectly pertinent question. I will explain to you after the witness has
2971 answered, if you want me to explain to you why.

But I should think that a present explanation might be interfering with cross examining counsel.

Mr. WEBSTER. By then I think it would be of no advantage to me, you Honor.

Mr. WHITNEY. Your Honor, might I suggest a middle ground, that he read it and then lay it aside and answer in his own way what Rupprecht said?

The COURT. He is reading the letter for the purpose of answering the question whether or not in substance that is what Mr. Rupppreeht said to him. That is the object of the question.

Mr. WHITNEY. The whole question would be how he interprets the word "substance." The letter is not susceptible of representing a man's memory of a substance of oral expression, and I would submit to your Honor that it can be given to him to refresh his recollection, then he can lay it aside and then, independently, having had his recollection thus refreshed—I am trying to have enough command of English to say "having had" correctly, I think it is important here—then lay it aside and give your Honor the substance of his recollection.

The COURT. I have no objection to that course in your time, but this is now Mr Dixon's time, and
2972 there is nothing improper in the course he is pursuing.

Mr. WHITNEY. May I make it clear to your Honor? Here is a letter of a page and a half long, written by another man. And I most respectfully object to a question asking whether that page and a half correctly reflects the substance of the conversation had twelve years ago, of which it does not purport to be a record but it is an independent letter.

The COURT. I will overrule your objection and reserve explanation until after the answer has been given.

Mr. WHITNEY. I respectfully exempt.

A. It is very difficult to remember.

The COURT. Let me reframe the question, if you don't mind, because I think it may call for a more precise answer than the way it is now framed, with Mr. Dixon's permission.

Mr. DIXON. That is entirely all right, your Honor.

The COURT. Are the views attributed to Mr. Rupprecht in that letter the same as the views which were expressed to you by Mr. Rupprecht at the meeting you had with him?

The WITNESS. It is difficult to say, because Rupprecht was a man you could never pin down to anything. When you say that, your Honor, I am wondering whether
2973 or not this letter was written after the talk with Rupprecht?

Mr. WHITNEY. Does your Honor bear in mind that the name Rupprecht does not appear in this letter?

The COURT. I am not aware of anything.

Mr. WHITNEY. I am only suggesting it because it is true.

The COURT. When I say Rupprecht, I mean du Pont——

Mr. WHITNEY. It makes your question difficult.

The COURT. Du Pont/Krebs/Rupprecht.

The WITNESS. After all, it is an immense difficulty to recall what happened at the meeting in 1933.

Mr. WHITNEY. Of course with a man of Mr. Beschorman's character, as described here, you can't slant line as quickly as we lawyers do.

The COURT. Let me put the question to you this way, still with Mr. Dixon's consent, and you object to it.

Mr. DIXON. Not at all, your Honor. Not at all.

The COURT. I always mean that in a genuine sense.

By the COURT:

Q. After your meeting with Mr. Rupprecht, if your assistant, a hypothetical assistant, attending that meeting, had prepared Mr. Beschorman's letter as a draft of a

communication to be sent by you to the I.G., would
2974 you have felt, or do you feel, that such a draft would have accurately portrayed the results of your conference?—A. Again it demands for an exact memory as to what happened in that meeting.

Q. Of course, there were a certain number of important principles that you came there to discuss, and it is with reference to those important principles that I would like you to focus your mind and tell us whether your impression, and at best we can now have no more than an impression of what occurred in that year, corresponds to the impression conveyed to the I.G. by the text of Mr. Beschorman's communication.

Mr. WEBSTER. Your Honor, I am not objecting in any way to your Honor's question, but I respectfully suggest that that question, in more accurate form than questions that Mr. Dixon has asked with reference to the text of a letter written at that time, does raise the question of subtleties of language and expression which renders the question susceptible of unfair use in the case of Dr. Jebsen, who, confessedly, has not mastered the shading of the English tongue.

Now I am not objecting to the question, but I am just casting a shadow on the value of the question as a means of getting at the truth.

Mr. WHITNEY. Your Honor, I hope with equal
2975 respect—I really mean that, your Honor, I respectfully diverge from Mr. Webster because I do object. Your Honor has asked for an impression in his own mind and the impression on I. G.'s mind, and I really think that is not relevant to the issues anyway. The question is, what did Rupprecht say on behalf of du Pont?

The COURT. Of course we cannot get any longer a precise recollection from this witness as to what Mr. Rupprecht said, so we have to go to the next best thing, which is to get the substance of Mr. Rupprecht's communication. Well, we have to go to the next best thing, which is the substance of Mr. Rupprecht's communication. Well, we haven't got that very clearly because the witness's memory is naturally vague on the subject. But here we have a communication by a stranger with respect to whom this witness has written a letter, as I recall, to Mr. Weber Andreae, if my memory serves me, wherein he said "These views"—and I am not sure whether he referred to Rupprecht's letter or Beschorman's letter, but I think he re-

ferred to Mr. Beschorman's letter—"These views were also conveyed to me."

Now they could have been conveyed to him only at the one place that he has testified to, namely, at the session with Mr. Rupprecht. Now, in order to get a more
2976 precise definition of the views conveyed to him at the session with Mr. Rupprecht, we have here a statement with which we ask him to make a comparison. I think it is not unfair under the circumstances.

Mr. WHITNEY. Would your Honor permit me to point out that it is not true that he has not testified as to what Mr. Rupprecht said, and I am laying aside the direct examination. He testified on cross-examination that Mr. Rupprecht talked about the Executive Committee——

The COURT. That is right.

Mr. WHITNEY. ——that he talked about the fact that "You are secured against that through your patents"; that he talked about the fact that "for legal reasons," all three of which were used at one moment or another by the witness. He testified at considerable length as to what Rupprecht said. To get at what Rupprecht may or may not further have said, by confronting him with a letter by a third party on a different subject, two and a half pages in length, would be in my respectful view prejudicial error, your Honor, and I want to press it because I really feel it very strongly. Mr. Dixon has been allowed great latitude, and I am satisfied he could go on another twenty-four hours trying to get at what Rupprecht said, in addition to what I have read to your Honor and what has been testified to.

The COURT. I will allow it.

Mr. WHITNEY. I respectfully except.

2977 The COURT. If you haven't lost the question as the result of all this legal debate, can you answer it?

The WITNESS. What I mean—excuse me; you want to get to the truth of this matter.

The COURT. Yes.

The WITNESS. Isn't it really the best thing to base on what I have—I wrote at that time?

The COURT. What did you write?

The WITNESS. When I have my recollection about this—I mean, I am now talking about recollection, talking about what I think was the case at that time I can't put down exactly. But my general impression from that time was

that I was very dissatisfied really with the situation as it was. I had to act as a good soldier. And I was trying to express, to convey the situation to Weber Andreae and the others with the idea of, as you may call it, neutral, being neutral or of being diffident. And, therefore, I was trying to refer to Beschorman, who had given me things. You see what I mean. And I think when maybe—it sounds different to you in what I may have intended, but it seems to me that about saying here:

"Considering the views and interpretations as expressed by Mr. Beschorman, and by Mr. Rupprecht in his letter to Mr. Beschorman, it seems to me that a co-operation can be looked to which will be of important benefit to Titangesellschaft."

2978

The COURT. Go ahead. What else did you say in that letter?

The WITNESS. But before that, if your Honor wants that part——

The COURT. Let me look at it.

The WITNESS. You have to refer to Beschorman's letter.

By the COURT:

Q. Let me read to you this passage, the first sentence is to the effect that you were enclosing a letter to I.G. Now that is a letter from Mr. Beschorman; that is the letter from Mr. Beschorman dated July 12th.—A. And which enclosed also I think the letter to Beschorman, the copy of letter.

Q. Then you say, following that—you listen carefully to your sentence, then I will ask you a question:

"I have met Mr. Rupprecht * * * who verbally has expressed to me the same views as to the future cooperation which has been expressed by Mr. Beschorman."

Now what I want you to tell me is, at the time you wrote those words did you feel or did you not that you were making an accurate comparison that the views expressed by Mr. Beschorman as to future cooperation were also the views expressed by Mr. Rupprecht as to future cooperation? I want you to tell me as truthfully as you can recall whether that paragraph did represent your then state of mind.—A. I can only express what I may call what I feel about it, and that is that it was in general terms, talking about it without going exactly in one way or the other. If you look back at it, I felt at that time, I felt that I was in a very difficult position, and I felt that on the one side my personal in-

2979

terest was not very much of doing this thing; on the other side, National Lead or Beschorman wanted me—or wanted, rather, to have this thing through. So, my intention was to put the responsibility on Beschorman and National Lead as much as possible. You see what I mean?

Q. I understand all that. But you did say in your letter that the views expressed in Mr. Beschorman's letter, "as to a future cooperation," are the same views which were verbally expressed to you by Mr. Rupprecht. Now, was that the truth?—A. I hope so, but I can't recall.

Q. You did not intend to tell other than the truth when you wrote your letter of July 21st?—A. No, I would not say that.

Mr. WHITNEY. Your Honor, I think your Honor will recall that under cross examination he said this: I thought this may work out all right when the time comes, so I tried to write a few words to Weber Andreae and
2980 Kuhne to convey that impression.

The COURT. All right, you can develop that.

Mr. WHITNEY. That was on cross examination. But, if your Honor please, respectfully, the point is this: The question, so far as I am concerned, is what du Pont did. Now, the question as to what Mr. Jebsen thought they did or as to what I.G. was caused to think they did are collateral matters. And I think Mr. Dixon having developed that subject and having received a clear response, the essence of which is to convey that impression because "I thought this may work out all right," he is not entitled to come back to the same subject and try to cross examine on the answer that he obtained before.

The COURT. Oh yes, he may. There is no such rule of cross examination. That is the essence of the art of cross examination, that you are not bound by the previous answer of the witness, either of your own or of your adversary's.

Mr. WHITNEY. But, your Honor, it is one thing for Mr. Dixon to do it and it is another thing for your Honor to ask the witness whether something is honest. That puts him in an impossible position, if I may respectfully suggest it.

The COURT. No. "honestly" there would not necessarily have anything to do with it because I was
2981 trying to develop the very point which you call to my attention, namely, that he had testified that

he may have had some motives other than strict accurate reporting in expressing those views, and I was trying to find out whether that was so. His answer to that is on the record. I don't have to elaborate on it.

Mr. WHITNEY. You were putting it to him so strongly, your Honor——

The COURT. I will put it to him softly or strongly as long as I can get his true answer.

Mr. WHITNEY. You might get different answers. People are only human, they have proper respect for the Court and to the Court's questions may give different sorts of answers than to counsel's questions.

The COURT. I will suggest that you can put the question to him in any other shape, intermediate or outside of the shapes I have tried in several attempts I have made. I want you to be sure of this, that the only difference between the bench and bar is that the Court does not draw a blank as to what the answer is. So what comfort which the Court derives from a trial is denied to the bar?

Mr. WHITNEY. There is an undue tendency even on the part of the most truthful witness to be responsive to the Court.

The COURT. Well, that may be. You see, Mr.
2982 Whitney, we have two communications—I want you to understand why I a driving at it. We have a written communication from Mr. Rupprecht and we have evidence that exists of an oral communication from Mr. Rupprecht. What the written communication is is not in dispute because we have the written evidence of that communication. What the oral communication is is enshrouded in vague memories. However, we have a contemporaneous communication which makes some reference to that oral communication. And I think cross-examining counsel, with or without the aid of the Court, can mine in that contemporaneous communication for whatever it will yield. Maybe when it is all dug up the question of weight will still be very troublesome.

Go ahead, Mr. Dixon. I did not mean to take up so much time.

Mr. DIXON. That is entirely all right, your Honor.

By Mr. DIXON:

Q. Just one more question. Dr Jebsen, with reference to your conference with Mr. Rupprecht, if you recall, did he say anything to you about not being able to give you any further assurances in writing other than those

given in the letter of June 28th to Mr. Beschorman?—A. I don't think that came up.

Q. By the way, was Dr. Blumenfeld over here
2983 in this country at this time, do you recall?—A. Yes, I think so. He was over here some part of that time, but exactly the dates I don't remember.

Q. Do you recall seeing him with Mr. Chase and Mr. Beschorman?—A. I recall seeing him with Mr. Beschorman but I can't remember if Mr. Chase was there, but probably he was.

Q. What was the general subject—— A. Yes, Chase was there. Pardon me.

Q. ——of your discussion with Mr. Blumenfeld at that time, if you recall?—A. He discussed the arrangements, the contemplated or what you may call proposed possible arrangements in Europe.

Q. By that you mean the arrangements theretofore discussed by you and Dr. Blumenfeld and Aussig, and also Montecatini?—A. Yes. Somewhat of a continuation of that. I believe at that time the question of exchage of licenses was not in. I am not quite certain about that.

Q. But I take it the conferences between you and Mr. Beschorman and Mr. Rapprecht with reference to this contract were not discussed with Mr. Blumenfeld in July of 1933?—A. You mean the du Pont contract?

Q. Yes. That was not discussed with Dr. Blumenfeld?—A. No.

Mr. Webster. I want to be sure your answer was
2984 "No, it was not discussed." Is that right?

The Witness. Pardon me?

Mr. Dixon. That is right.

Mr. Webster. Your answer was no——

The Witness. No, it was not discussed.

Q. Now, Doctor, I hand you what has been marked Plaintiff's Exhibit 887 and ask you to refer to page 4 thereof and state to the Court, if you will, as to whether the items or correspondence described on page 4 of that exhibit have any particular significance or meaning to you as an officer of Titan Company?—A. Which paper is this? Whether these letters have a meaning to me?

Q. Yes. That are set forth on page 4 of this exhibit.

Mr. Webster. May he have an opportunity, first to identify it, to see what the exhibit is, that is, the remainder of the exhibit?

A. These are just a number of letters and cablegrams, it seems to be.

Q. Will you refer to the exhibit, 887, Doctor, and state if you ever saw that before?—A. Yes, this is of June—which date is this? Is this the one of June 8, 1930, isn't it?

Q. 1938.—A. 1938. Yes.

Q. Now, you have seen that before, haven't you, Doctor?—A. Yes.

2985 Q. Did you have anything to do with the preparation of that memorandum?—A. Yes.

Q. Now I will ask you to turn to page 4 again and examine the list of letters set forth on page 4 of that exhibit and state to the Court whether as an officer of Titan Company, Inc. those letters have any significance to you?

The COURT. I hear no objection.

Mr. WEBSTER. I only refrain because I don't want to——

The COURT. Don't refrain to save time. Did I hear one?

Mr. WEBSTER. Yes, I do object.

The COURT. Sustained.

Q. Did you prepare this portion of the memorandum, Doctor, this Exhibit 887?—A. That I can't tell you. Isn't this a memorandum which was written after a visit to Wilmington, or is it before a visit to Wilmington?

Q. I am sure I don't know.

Mr. WEBSTER. I can't hear you.

The WITNESS. He asked whether this memorandum here—I can't see the date of this memorandum; it is just June 1938.

Q. The date, Doctor, is June 8, 1938. Does that refresh your recollection?

2986 Mr. WEBSTER. No. I thought the meeting was on June 8th.

Q. June 9th.—A. June 9th I believe—yes, that is what—well, that is after; June 8th was the meeting; I had a meeting down in Wilmington with Mr. Rupprecht and this was written after that meeting.

Q. And you prepared, did you, page 4 of that exhibit?—A. That I don't know, whether I prepared that page 4 or not. The whole thing here was worked up rather in haste after the visit down in Wilmington, and I think that was a combined effort of Mr. Kaegebehn and myself. And these letters here which are from 1933—of course I won't say whether I can recall all of them—whether they have been put in by Kaegebehn or by myself I can't say at the moment.

2987 Q. Well, do they have any particular meaning to you as part of this exhibit?

Mr. WEBSTER. I object to that.

The COURT. I will sustain the objection. There must be questions which you can frame to elicit the answer that you want. That is not one of them.

Q. Will you state to the Court, Doctor, the reason for those letters being attached and made a part of this exhibit, if you can?—A. I suppose that this was done at the time where I was very dissatisfied with the developments of the relations with du Pont. I had been trying to get them into line with the 1920 agreement, and I suppose this is just trying to recall for Kaegebehn and myself what the history was of that situation, taking out those letters which you considered to be the more important ones, and giving that history.

Q. In other words, to you those letters were the more important ones dealing with any matters arising during the date of those letters with reference to the relations between Krebs and Titan Company, Inc.?

Mr. WEBSTER. Your Honor, that is objected to as repetitive and argumentative. It is not a question but a statement of fact.

The COURT. I will let him answer it. You may answer the question.

2988 The WITNESS. Will you repeat that question?

(Question read.)

A. With the reservation that it may have been put in by Kaegebehn and not myself.

The COURT. You don't remember that?

The WITNESS. No. I would say yes, probably they are——

The COURT. You were collaborating?

The WITNESS. We were collaborating on this matter. After all, you have to go through each letter to find out really what they are. I mean, I don't remember every date on these letters which you have put down there. But trying to work out a memorandum of this kind, naturally you would be very apt to put in these letters which you considered to be the important ones.

Q. You were here in the United States in 1940, were you, Doctor?—A. I arrived here on the 15th of July, 1940.

Q. And you have been here more or less ever since?—A. Yes.

Q. Were you acquainted with any of the negotiations had between the du Pont Company and the National Lead

Company when the 1933 agreement was being amended?—A. I didn't take part in any of the conversations about that, but I was consulted. But I was present in the negotiations with Mr. Rupprecht.

2989 Q. You were not present?—A. As far as I remember, not, but I was consulted.

The COURT. Consulted about your side of the picture?

The WITNESS. Yes. I mean Garesche, I think it was Garesche who was dealing with it and talked with me about it; and I can't remember that I was present with Mr. Rupprecht. If I have been I have not taken part in the conversations.

Q. I will hand you what has been marked Plaintiff's Exhibit 507 and ask you to examine the same.—A. This is a letter to Garesche——

Q. Yes.

Mr. WEBSTER. Your Honor, if the purpose of this is to get the witness to refresh his recollection as to whether he himself recapitulated in written form certain previous correspondence simply by giving the letters by dates, it is immaterial, and the fact that he did so does not seem to me to make any difference on the issues in this case.

The COURT. We are still trying to arrive at certain oral as opposed to written communications.

Mr. WEBSTER. But the fact that he undertook to set down by dates certain previous correspondence would seem to me a perfectly——

2990 The COURT. An innocuous thing unless it serves to remind him as to some conversation.

Mr. WEBSTER. (Continuing) ——a perfectly neutral fact.

Q. Now, that was prepared by you, was it not Doctor?—A. I think so.

Q. Mr. Kaegebehn didn't prepare that?—A. No, I don't think so.

Q. Now, referring to page 3 of this exhibit, I will ask you to compare the letters named or described on page 3 of that exhibit with those contained on page 4 of Exhibit 887.

Mr. WHITNEY. That is objected to as a collateral waste of time.

The COURT. Are they the same?

Mr. DIXON. They are.

The COURT. All right. The witness will take your word for it that they are the same.

The WITNESS. Yes, but I don't think they are.

The COURT. If they are not——

The WITNESS. One, two, three, four, five, six, seven; and here you have one, two, three, four, five six, seven, eight, nine. There are two more here anyhow.

Q. You added the other two letters or took out two of the letters?—A. Which are here (indicating).

Q. Which were in the Exhibit 887?

2991 Mr. WHITNEY. That is objected to as having no foundation and no sign that he was looking at the earlier exhibit when he wrote the other one two years later.

Mr. DIXON. I would like to be able to get a question in.

The COURT. Very well, let us proceed. What is the question?

(Question read.)

Mr. WHITNEY. That is objected to.

The COURT. Objection sustained.

The WITNESS. I did not get that. Is that a question?

The COURT. Never mind. Do they correspond to any extent?

The WITNESS. I think so. Some of them are the same, but not all of them, as far as I can see.

Q. And the ones that you put in Exhibit 507 to direct to Mr. Garesche's attention in August of 1940, were the ones which you regarded of significance in the relations between Titan Company and the du Pont Company; that is a fact, is it not?

Mr. WEBSTER. I object to that, your Honor.

The COURT. Go ahead. Answer the question. You regarded——

A. Yes, I mean, after all I probably—I haven't
2992 read these so I can't tell you now, but I wouldn't put them in unless they were of interest.

The COURT. You were not interested in preparing a catalogue.

Next question.

Q. So that those letters did in your opinion bear upon the relations between Krebs or the du Pont Company and the Titan Company or the foreign associates of the Titan Company, Inc.; is that correct?

Mr. WEBSTER. I object.

The COURT. Objection sustained.

We will suspend at this point.

(Adjourned to Friday, January 26, 1945, at 10.30 a.m.)

2993 UNITED STATES OF AMERICA

vs.

NATIONAL LEAD COMPANY, ET AL.

NEW YORK, *January 26, 1945, 10.30 o'clock a.m.*

Trial resumed.

GUSTAV ADOLF JEBSEN, resumed the stand.

Mr. WEBSTER. May I make a correction?

Mr. DIXON. Yes; we have a few too, Mr. Webster.

The COURT. These casual corrections do not mean that you have abandoned the practice of making more complete ones?

Mr. WEBSTER. No, not at all.

Your Honor will recall Mr. Barton. He is still here. He has been over his testimony rather carefully, and it is no reflection of any sort on the reporters to say that he has found several inaccuracies or errors that he would like to correct. Now, I have told him that I don't think there is any occasion for him to resume the stand and that I think all of these changes are of a character which will be accepted without objection by anybody. They are in the nature of either typographical changes or slight corrections where the reporter has not heard exactly or Mr.

Barton has failed to state exactly some of these
2994 chemical terms. I therefore have got up a schedule of those and I suggest that it be taken into the record as the others have, subject to the right of Mr. Dixon of course to make further corrections if he desires.

(The schedule above referred to appears in full at pages 3121 to 3125a hereof.)

Mr. WEBSTER. Before you resume your cross-examination I would like to make another——

Mr. DIXON. I have some corrections to make.

Mr. WEBSTER. All right.

Mr. DIXON. May it please the court, on the 5th line of page 2948 I believe it should be after Dr. Kuhne's name "when he went" or "Mr. Beschorman".

The COURT. "to use that word that you used, to Dr. Kuhne"—"when he went"?

Mr. DIXON. Yes, meaning Mr. Beschorman. If we could substitute the words "when Mr. Beschorman went" it would be much clearer.

The COURT. All right. "when he went" is clearer.

Mr. DIXON. And on page 2951, the middle of the page, I believe it is "research laboratory".

Mr. WEBSTER. Yes, I noticed that. I believe that word had not yet been coined.

The COURT. "research".

2995 Mr. WEBSTER. Instead of "ersatz".

Mr. DIXON. And the 8th line from the bottom of 2963 I believe the word "On" should be added to my statement—"On June 28th". In other words, you were inquiring I believe about the date of the letter.

The COURT. Is that all?

Mr. WHITNEY. Your Honor, although we never attach much importance to what counsel says, when it takes a little twist here, something I said which is so unfortunate from my point of view, I would like to correct it. At the bottom of page 2949. A natural slip on the part of the reporter caused me to say to Mr. Dixon, "Never mind any examination as to what anybody said or wrote." What I did say of course was, "I never mind any examination as to what anybody said or wrote."

It would be helpful in the next line if there were quotations around "what was in your mind". "I was a little reluctant about 'what was in your mind.' ".

The COURT. Very well.

2996 Mr. WEBSTER. Your Honor, in connection with the examination of Dr. Jebsen, I would like to suggest, if I may, a consideration which I think has not been brought out either by Mr. Whitney or Mr. Dixon or by the Court. It requires me to go back over one or two questions and answers and then to make my statement relating thereto.

The COURT. What is the page reference?

Mr. WEBSTER. Page 2973, at the foot of page 2973, your Honor asked this question:

"Q. After your meeting with Mr. Rupprecht, if your assistant, a hypothetical assistant, attending that meeting, had prepared Mr. Beschorman's letter as a draft of a communication to be sent by you to the I.G., would you have felt, or do you feel, that such a draft would have accurately portrayed the results of your conference?"

To which Jebsen replied: "Again it demands for an exact memory as to what happened in that meeting."

Your Honor said:

"Q. Of course, there were a certain number of important principles that you came there to discuss, and it is with reference to those important principles that I would like you to focus your mind and tell us whether your impression, and at best we can now have no more than an

impression of what occurred in that year, corresponds to the impression conveyed to the I.G. by the text of
2997 Mr. Beschorman's communication."

I then suggested that this was getting into an area where language-shading might affect the consideration of the question in such a way as to perhaps prejudice the witness.

Then again on page 2977 there was a discussion about whether or not that question should be answered, and the question was answered, and the witness said:

"When I have my recollection about this—I mean, I am now talking about recollection, talking about what I think was the case at that time I can't put down exactly. But my general impression from that time was that I was very dissatisfied really with the situation as it was. I had to act as a good soldier. And I was trying to express, to convey the situation to Weber Andreae and the others with the idea of, as you may call it, neutral, being neutral or of being different"——

The COURT. No, "diffident" was the word he used.

Mr. WEBSTER. (Continuing reading): "And, therefore, I was trying to refer to Beschorman, who had given me thi[illegible] You see what I mean. And I think when maybe—it sounds different to you in what I may have intended, but it seems to me that about saying here:

"'Considering the views and interpretations as expressed by Mr. Beschorman, and by Mr. Rupprecht
2998 in his letter to Mr. Beschorman, it seems to that a cooperation can be looked to which will be of important benefit to Titangesellschaft.'"

Then the Court asked this question, which brings me down to the point of my remarks—on page 2978:

"Q. Let me read to you this passage, the first sentence is to the effect that you were enclosing a letter to I.G. Now that is a letter from Mr. Beschorman; that is the letter from Mr. Beschorman dated July 12th.—A. And which enclosed also I think the letter to Beschorman, the copy of letter.

"Q. Then you say, folowing that—you listen carefully to your sentence, then I will ask you a question:

"'I have met Mr. Rupprecht • • • who verbally has expressed to me the same views as to the future cooperation which has been expressed by Mr. Beschorman.'

"Now what I want you to tell me is, at the time you wrote those words did you feel or did you not that you were making an accurate comparison that the views ex-

pressed by Mr. Beschorman as to future cooperation were also the views expressed by Mr. Rupprecht as to future cooperation? I want you to tell me as truthfully as you can recall whether that paragraph did represent your then state of mind.'

2999 And Dr. Jebson replied:

"A. I can only express what I may call what I feel about it, and that is that it was in general terms, talking about it without going exactly in one way or the other. If you look back at it, I felt at that time, I felt that I was in a very difficult position, and I felt that on the one side my personal interest was not very much of doing this thing; on the other side, National Lead or Beschorman wanted me—or wanted, rather, to have this thing through. So, my intention was to put the responsibility on Beschorman and National Lead as much as possible. You see what I mean?"

Then another question by the Court:

"Q. . . . But you did say in your letter that the views expressed in Mr. Beschorman's letter, 'as to a future cooperation,' are the same views which were verbally expressed to you by Mr. Rupprecht. Now, was that the truth?—A. I hope so, but I can't recall."

And then your Honor wound that up by saying:

"You did not intend to tell other than the truth when you wrote your letter of July 21st?—A. No, I would not say that."

Now there have been other phases of the case in which Mr. Whitney's interest has been less than mine so far as the subject matter is concerned, and I think perhaps

3000 this is a phase of the case in which in reference to the subject matter his interest may be greater than mine. But I do have this important interest in the case, and that is with reference to Dr. Jebsen, who has taken the stand for the purpose of giving his testimony. Now I think that this whole matter must be considered with reference to the statements which he has made at all times, that he was unable, and I use words that appear in the record, "to pin Mr. Rupprecht down," and also the statement that Mr. Rupprecht was "slippery."

Now taking into consideration that that is the gist and the substance and burden of his testimony with reference to this matter, I think it is important again to examine what it was he said. He said he was enclosing the letter from Mr. Beschorman, the substance of which we are now all well acquainted with, that there was a letter from Mr.

Rupprecht, and that Mr. Rupprecht had orally said what he said in his letter,——

Mr. DIXON. If the Court please——

Mr. WEBSTER. ——and he has been taxed with the question of whether or not what he said in the letter as to what Mr. Rupprecht had said was true.

The COURT. I do not follow, to be candid with you, Mr. Webster, the object of the colloquy.

Mr. WEBSTER. The object is simply this, that
3001 Mr. Rupprecht, your honor himself stated, * * * we have Mr. Rupprecht's letter which is, as we know, evasive, which simply says "I think you will find that conditions will be eminently satisfactory," and it seems to me therefore pointless on cross-examination to try to, in the case of a man who does not have mastery of the English tongue, to say "Did Mr. Rupprecht say to you what he says in his letter," and he says "Yes, he did say that." But what is the purpose of the proof, except——

The COURT. Mr. Webster, I think you misconceive the whole purpose of the questions put by the Court, and I think you probably misjudge the value assigned by the Court to the results of that inquiry, which, I sadly confess to myself, have not produced as much dividend as I had hoped they would. In my inquiry I thought I made it plain yesterday that you had this situation; you had a written communication from Mr. Rupprecht which, of course, is in evidence, and is, of course, an important piece of evidence as to what Rupprecht said or understood and agreed, and to the extent of that material there it is in the scales of evidence.

In addition and supplementary thereto you have evidence of a conference at which oral communications were made by Mr. Rupprecht to Dr. Jebsen and Mr. Beschorman.

We were engaged yesterday in a quest to ascertain
3002 what was the substance of those oral communications, to determine whether (a) they varied the written communication; (b) added thereto; or (c) lessened the substance of that communication whatever it might be. And if we were able to deal with an event of recent occurrence, and if we were able to deal with a witness who had a very clear recollection of the details of that conversation, all these hypothetical explorations would, of course, have been pointless, fruitless, and probably improper and inadmissible. But we were dealing with a transaction of relative antiquity. We were dealing with a witness whose memory on the subject was relatively faint, and I tried to

do what is normally done under the circumstances, which is by one device or another, prod the witness's memory. I do not mean prod an unwillingly memory but I mean to revive a faint memory, which sometimes is successful, by association, comparison association of ideas, reference to written documents, and contemporaneous events. I confess that the sum total was not as productive as I hoped it might be, but whatever it is, there it is. The amount of weight to be attached to it is the question I always reserve until the very end when the whole thing can be judged in its proper setting. I am at a loss to understand what it is you want to know; that I should assign less
3003 weight than I have or you think I should assign?

Mr. WEBSTER. No. In looking over this record rather carefully last night I had a feeling we were being carried along with the idea expressed in one or two of your Honor's questions, that there was some inconsistency between what Dr. Jebsen had said on the stand and what he had said in his letter to Weber Andreae and to I.G.

The COURT. I did not really, and if there is such inconsistency I am going to let Mr. Dixon point it out to me in his brief. So far all I have been trying to do is to ascertain what occurred at the oral conference, and we have certain pointers; the fact that Dr. Jebsen wrote a letter in which he said that what Mr. Beschorman said as to future cooperation was "also expressed to me by Mr. Rupprecht" as a slight evidence because those words in themselves are highly ambiguous. It may be that those words mean that Mr. Rupprecht had said "such is our policy with respect to Europe, such is our economic posture, that I do not see why you gentlemen need concern yourselves with this problem. I don't know why you are worrying yourselves about our activities in Europe. Just let us alone. We think everything will be all right." Maybe that is what he said. Maybe he said, "I hereby solemnly swear and agree I shall never sell a pound of titanium in
3004 Europe. I don't want to put it down on paper because Mr. Dixon's sleuths will be after me, but you know me as a gentleman and that I will not break my word, and you can go away and feel completely content that you will have no competition from us in the European market."

There are the two possible extremes. Maybe I have not even given the complete extreme. Maybe all he said was, "If you want to do business with du Pont you will just have to take chances with du Pont, which is a responsible

organization, and we usually do not hurt our friends, but no promises whatever." That is about as far as we get. We have the whole range of possibilities.

Mr. WEBSTER. Yes. I think it is an important point. I simply thought Dr. Jebsen was not adding or subtracting anything from what Mr. Rupprecht said in his letter.

The COURT. That may be. I will examine his testimony and weigh the two documents and see whether or not they add up or subtract the same. I have not formed any definitive conclusion in my mind, but I have no objection to revealing what is in my mind. There is one advantage in dealing with a jury of one as opposed to a jury of twelve. A juror of one can disclose how his mind is reacting. I think thus far I have gotten, that at the
3005 conclusion of a conference with Mr. Rupprecht, Dr. Jebsen felt somewhat reassured as to the possibility of trouble with the du Pont people in the European Continent. Now whether that was the result of promise, or the result of intention, or simply the result of greater understanding of du Pont policy, I am, I will say, so far more or less in the dark.

Mr. WHITNEY. Your Honor, a little different from Mr. Webster, I want to say that my afterthoughts were I had been a little too active yesterday, and we all had been perhaps other than your Honor, whose duty it is to be active at any stage, and that presented to me one thought overnight and that was this, that your Honor pointed out that these were matters of antiquity.

The COURT. Not within the terms of the customs statute.

Mr. WHITNEY. Well, it occurred to me that in a case where the prayer is for an injunction, matters of antiquity are of very small importance.

The COURT. I agree with you.

Mr. WHITNEY. And we were out of proportion in the emphasis we were giving to antiquity in this equity case.

The COURT. Proceed.

3006 Cross examination continued by Mr. DIXON:

Q. Dr. Jebsen, after your conferences with Mr. Rupprecht in July of 1933, you returned to Europe, did you?—A. Yes.

Q. And did you have any conversations with Dr. Raspe when you returned from your conferences in the United States with Mr. Rupprecht?—A. With Dr. Raspe?

Q. Yes.—A. You mean concerning the subject matter we were talking about yesterday?

Q. Yes.—A. I don't remember.

Q. Well, do you recall whether or not—— A. I do not think I would have had that because Dr. Raspe was not a man in authority regarding this matter at all.

The COURT. He was a plant manager, wasn't he?

The WITNESS. He was a plant manager, yes.

Q. Did you talk with Weber Andreae about it?—A. I met Weber Andreae in the ICI building in the lift incidentally when I came back, and I told him I had sent a letter to Frankfort about it and wanted to have this thing attended to as quick as possible, and he promised he would see to do it so This was in the summertime and there were holidays going on here and there, but the idea was to get this thing out of the way as quick as possible.

Q. Do you recall whether you said anything to him about friendly relations being now established between du Pont and Titan Companies?—A. No, nothing special in that respect.

3007 Q. Or anything with regard to an exchange of technical assistance or information between the two companies?—A. No. We were just meeting in the elevator, going up or down I don't remember, and we just talked in the elevator; other persons were there too at that time. So there was no place of going into any——

Q. Well, did you discuss this matter with anyone else, with either TG or IG?—A. Not that I remember. What happened was I went to Paris and there were a few telephone conversations between Frankfort and myself. They sent over a draft to the letter, to the answer they want, and I corrected one or two things—I don't remember exactly what, smaller matters—and that was all.

I would like to mention, if you don't mind, reading those letters yesterday evening—perhaps it would be a little help for your Honor to see the German text of that letter which the IG wrote in answer to this.

The COURT. You mean in preference to the translation?

The WITNESS. Yes. There was one expression which is not a very exact translation of the German letter. It is very difficult perhaps to find a word——

Q. You mean the one relating to delimitation of territory?—A. I mean the one of August 7th in which they say—it is addressed to me, to be sent on to New

3008 York, but they say:

The point of view which the National Lead Co. has taken in the letter of July 12th signed by Mr. Beschorman, Vice-President, and which appears from a letter from the Krebs Pigment & Color Corporation of June 28th 1933

signed by Mr. C. H. Rupprecht, President, of which also a copy has been submitted to us, does not formally correspond with the wishes which we expressed to you in our letter of June 20th 1933."

Then it comes:

"We note" • • • from these letters the assurance that National Lead Co. and Titanium Pigment Co. as well as their new American Contract Partner, the Krebs Pigment & Color Corporation, will loyally respect"——

Now, in German it says not "We note", but they say "entnehmen diesen Briefen jedoch die Zusage," and so on.

The COURT. Have you got the German text in front of you?

The WITNESS. Yes.

The COURT. May I look at it?

The WITNESS. Now, the word "entnehmen"——

Mr. WEBSTER. Wait until his Honor reads that sentence.

3009 The COURT. What were you going to say about the verb "entnehmen"? You say that it is not accurately translated by the word "note"?

The WITNESS. Yes. I mean perhaps it is more correct—better—to say "that we deduct" or "take out" from this letter, not say "We note"——

The COURT. You mean the word "deduce"?

The WITNESS. "deduce", yes.

The COURT. Very well.

The WITNESS. I don't know whether that would help. That is my understanding of the word "entnehmen".

Q. The IG or TG did subsequently send a letter to Titan with reference to another interpretation placed upon one of their letters in which they said that they were referring to delimitation of territories in their reply of August to Titan, didn't they, Doctor?—A. Yes.

Q. You are familiar with that letter, are you?—A. That was the correction of the first one, or an explanation of the first one.

Q. As I recall it, I think that was correct.—A. Yes.

The COURT. Was there something else you wanted to add before Mr. Dixon put the question.

The WITNESS. No, just the one thing, that if there had been any oral understanding—some explicit dis-
3010 cussion between Rupprecht and myself in that meeting with Beschorman, I think it would have been

natural for me to go to the Germans and explain that.

The COURT. Very well.

The WITNESS. Whereas I didn't pay any visit to Germany at all. In other words, I left the weight of the thing on the correspondence as it was.

Q. Do you recall whether you discussed this matter with any of the other IG or TG officials?—A. Over the telephone, yes. But that was just concerning the formation of the reply, as far as I remember.

Q. Well, I referred a moment ago to a correction made by IG in one of their letters, namely that of August 7th, as set forth in Exhibit 288. Do you recall such a correction in the German letter of August 7th, 1933?—A. Do you mean the definition of "Gebietsabgrenzungen"?

Q. Do you recall that correction by the Germans?—A. From what I have read about this, yes, not from—I mean, I had to refresh the whole thing from reading those letters; so I am basing myself on what I read.

Q. But you do recall that they made clear in that correction the meaning which they attach to the German word "Gebietsabgrenzungen", that it is the correct word?—A. Yes. I recall that there was an incident of that kind, but the mere thing when I recall it is being reminded of it through the letter.

3011 Q. Do you know how that correction arose or what the occasion was of the Germans sending that letter to you, Doctor?—A. The word——

Q. As shown in Plaintiff's Exhibit 288, for the purposes of the record.—A. I was in doubt whether that word referred to what you may call territorial frontiers or whether it referred to Licensed Field.

The COURT. Yes. Licensed Field.

Q. Did you raise the question with the Germans as to what they meant by the use of the word?—A. It is all in the letter, Mr. Dixon.

Q. I understand.—A. And my memory is refreshed from the letter, to be quite frank.

Q. Would you like to see the letter?—A. No, I mean I don't think that is necessary.

Q. I thought it was not.

The COURT. What you mean is that you have no recollection over and above what is in the letter?

The WITNESS. No.

Q. But you don't recall how that particular matter happened to be discussed between you and IG?—A. No.

Q. Well, now coming back to your return to Europe

after the conferences, did you discuss this with any other officials of TG or IG. That is this matter of the proposed contract between Krebs and du Pont?—A. Not that I remember.

3012 Q. Or Krebs and National Lead?—A. Not that I remember.

Q. Did you say anything to anybody about this agreement being one which would establish a cooperation between du Pont Company and the Titan companies?—A. Not that I remember. My impression—I am just trying to pick out—my impression is that the thing was left as it were. I think the Germans understood perfectly well——

Q. Now I am——

The COURT. You had better suspend that.

Q. But Mr. Rupprecht had told you when you were in the United States that this would work out satisfactory, didn't he?—A. He said it would turn out eminently satisfactory.

Q. And do you recall whether, after you returned to Europe in the year 1933, anyone visited the Krebs plant in the United States from TG or IG?—A. Sometime, some years later, I think it was, I don't remember when, Dr. Raspe was over here and I believe he was down there; I can't remember exactly, but I believe he was down there. It seems to me that it would have been natural that he visited the plant.

Q. Are you certain that—— A. Pardon me. When you ask about that, may I mention that some years later, I believe it was some years later, I mean, Dr. Kuhne was over here and visited; he made a trip throughout

3013 the United States throughout the United States and visited du Pont, too. Not particularly concerning titanium. He——

Q. When was that, if you recall, Doctor—A. No, I don't recall which year. But I think you can find that someplace.

Q. In any event, you think it was considerably after 1933?—A. I believe so, but really I don't remember exactly.

Q. Would you say to the best of your recollection that there was no, what we will call, technical cooperation in the sense that someone from TG was permitted to visit the plants of Krebs and anyone from Krebs would be permitted to visit the plants of TG after you made the 1933 agreement?—A. I believe Dr. Raspe was over here

a year before Dr. Booge—Dr. Booge came to Leverkusen one time.

Q. When did he come, do you know?—A. In 1937, I think it was.

Q. Who is Dr. Booge?—A. He was the head of this research department concerning lithopone and titanium pigments in du Pont.

Q. Do you know whether he was over visiting the TG plants before 1937?—A. I don't think so.

Q. Do you know whether anyone from TG or IG was over to the United States prior to 1937 visiting the Krebs plant?—A. I believe that I do recall that Dr. Raspe
3014 was over here before that time and visited the plant. I believe that was the case. So that it was a kind of mutual courtesy—one saw the one plant and the other saw the other.

Q. How did Dr. Raspe happen to visit the Krebs plant in the United States, do you know?—A. Well, Dr. Raspe came over here to visit the National Lead Company's plants and I suppose at the same time he was brought into contact to visit the other one.

Q. Did you say anything to Dr. Raspe that if he came over to the United States he could visit the Krebs plant?—A. No, I did not say anything about that, as far as I remember. After all, that would be in the hands of the National Lead Company over here to see if that could be done.

Q. Well, do you recall when Dr. Raspe made this visit to the United States to inspect the plants of National or Krebs, if he did?—A. I think I said that I thought it was the year before Dr. Booge came over to Europe.

Q. That would be about 1936, in your recollection?—A. No. I say I believe that was the time.

Q. About that?—A. Yes. I am deducting that practically from the events as they came.

Q. Would it refresh your recollection any as to whether there was any cooperation in the technical sense between du Pont and the Titan companies if it appear that
3015 Dr. Raspe visited the Krebs plants before that time.

Mr. WHITNEY. I don't think that is warranted unless he has evidence to support it, your Honor. He is putting to the witness a situation that he is refreshing his recollection by a statement to the contrary of what the witness said.

The COURT. That is permissible cross-examination. You

may suggest to the witness an answer and ask him whether it is true.

Mr. WHITNEY. If he has any evidence to support it, your Honor, is not that right?

The COURT. Not necessarily.

Mr. WHITNEY. It is intimidation, otherwise.

The COURT. Oh, of course, if it reaches that proportion I would interfere.

Mr. WHITNEY. If a man that has been working actively on a case and has 4,000 pages of paper under his hands suggests to the witness that it is a fact that a certain thing is disclosed by the evidence, I suggest that that has to be supported by the evidence.

The COURT. Oh yes, if he says it is disclosed by the evidence.

3016 Mr. WHITNEY. I don't think Mr. Dixon has any personal knowledge of this, and anything he says must be based on evidence. I would like to know whether it is.

(Question read.)

The COURT. Before which time? Meaning 1936?

Mr. DIXON. Yes.

Mr. WHITNEY. I don't think that is a proper way to refresh his recollection.

The COURT. Are you prepared to show that Dr. Raspe did visit before 1936?

Mr. DIXON. Yes.

The COURT. Very well, I will take counsel's statement. The answer is yes or no. Would it refresh your recollection if you were told that Dr. Raspe did visit the plant before 1936?

The WITNESS. If you can show me the evidence I can tell afterwards whether my recollection will be refreshed.

The COURT. The answer is "I don't know."

Mr. WEBSTER. I don't think it would make any difference if he did.

The Court: That is beside the point. Let us proceed.

3017 The WITNESS. Perhaps that would help you, Mr. Dixon. May I state that it was the rule that our contact with du Pont was through the National Lead Company.

Q. What I am endeavoring to find out, if you can recall, Doctor, is whether or not there was any technical cooperation arranged for between Titan and du Pont in your conference with Mr. Rupprecht?—A. In 1936 you mean?

Q. Yes, in 1933.—A. No.

Q. Would it change your recollection any if the fact should be that Dr. Raspe did visit the Krebs plant shortly after the Krebs-du Pont agreement of 1933?

Mr. WHITNEY. I object to the form of the question.

The COURT. Objection sustained.

Mr. WHITNEY. He did visit the plant in 1933. It is in evidence. If he would just put in the paper instead of asking these theoretical questions——

Mr. DIXON. Obviously, your Honor, I am trying to conduct this examination to aid the Court, if possible, on what was happening.

Q. Well, I will hand you, Doctor—do you know now whether Dr. Raspe did visit the Krebs plant in 1933?—A. When you tell me it is so, it must have been so, but frankly I don't remember it. I could not remember if Dr. Raspe was over here at all in 1933.

Q. Well, I will hand you what has been marked
3018 Exhibit 290 and ask you if you recall such a visit now having been made by Dr. Raspe?

Mr. WEBSTER. Your Honor, may I interpose to ask whether that Exhibit 290 refreshes his recollection, and if it does——

The COURT. Let him look at the exhibit.

(Witness refers to exhibit.)

The COURT. Do you know that Dr. Raspe was in this country in 1933?

The WITNESS. Of course he must have been, after this letter, and he must have visited the plant.

The COURT. Now will you start from that point. The witness is now in agreement with you that Dr. Raspe was in this country and did visit the Krebs plant in 1933.

The WITNESS. But I base it on this letter, your Honor, because——

The COURT. Very well.

Q. Does this aid you in recalling at all the occasion or the reason for Dr. Raspe coming to the United States and visiting the Krebs plant, Doctor?—A. No. There would probably be no other reason than his interest in visiting—he did visit here a few times—in order to get technically educated.

Q. Do you recall when Dr. Booge visited the TG plant in Germany?—I recall that, yes. In 1937.

3019 Q. Now do you know of your own knowledge, Doctor, as to whether or not you found or had any complaints from any of the Titan associates with reference to any imports into their territories from the Krebs

Company or du Pont Company?—A. I do not know particularly the Krebs Company or the du Pont Company. There were some complaints. Not knowing where they came from I don't remember exactly whether it was from the one or the other, whether they may have been from the National Lead or from the du Pont Company.

Mr. DIXON. That is all.

The COURT. Mr. Whitney.

Cross examination by Mr. WHITNEY:

Q. Dr. Jebson, have you ever discussed what your testimony would be with me or with any other representative of du Pont whatsoever?—A. No.

Q. Yesterday afternoon his Honor ruled, I am on page 2943, that "cross examination • • • should be directed towards filling in gaps or supplying mental reservations which you think may lie behind some of the communications".

Do you know what a mental reservation is?—A. Well, how shall I define that? It is a reservation made without expressing it, isn't it?

Q. Yes. You might say one thing while having in mind possibly a slightly different shading. That would
3020 be that you reserve a mental reservation. Would that be your view of it?—A. I think so. Isn't that what you call, you cross your fingers? Isn't that the expression more or less?

Q. Yes. Of course we are construing what his Honor said. I take it "you cross your fingers" would be a popular expression of it. So, I shall cross examine in part as to whether that ever happened.

At page 2947 his Honor was questioning you about your first receipt in Europe of the news of the du Pont—— A. What?

Q. About your first hearing in Europe of the du Pont-National Lead agreement.—A. The 1933 agreement?

Q. Yes, 1933. And the Court's question was: "You were very much disturbed about it?" And your answer was: "I was shocked."

And the Court's further question: "You were afraid that might cause the whole structure to topple?

"The WITNESS. Yes."

What structure did you have in mind?—A. This structure which formed, it was the basis for, in other words the 1920 agreement and those principles, which was the basis for the cooperation technically.

Q. And then you said: "I could not understand how at that time National Lead Company could contem-
3021 plate——" and his Honor said: "Doing any such thing?"

"The WITNESS. Doing any such thing. I was shocked at that time."

That is to say, at that moment it was a shock to you that National Lead could even contemplate this threat of toppling of the structure of 1920; is that right?—A. Yes.

Q. Then later in the same page you report your taking that up with Mr. Beschorman in Europe and you say: "he • • • got up, very, very impatiently saying, 'But we have got to sell this agreement.'"

Now I derive from your use of the word "very" twice and the words "got to sell this agreement" two things—I would like to ask you if they are right—that Mr. Beschorman felt very strongly about it; is that right?—A. That was my impression.

Q. And, secondly, that he felt that he had to sell to the Germans something that they would not necessarily accept unless there was some selling work done, is that right?—A. Yes. But that last part was naturally on the basis of my criticism of the situation.

Q. In other words, Mr. Beschorman had not fully understood before coming to Europe that it would have to be sold, and you explained that to him, did you?—A. Yes.

Well, what he has understood from the letters be-
3022 fore I don't know, but anyhow that was his reaction to my criticism of the situation.

Q. Now after you both got back to the United States and you took up the principles with him, was his answer consistently along the lines that you testified to, as follows: "Don't go into details, Dr. Jebsen. You are too far a man for details"?—A. Repeatedly.

Q. Repeatedly.—A. He did that.

Q. Yesterday you said "generally," and I wanted to make sure whether that meant "repeatedly."

Then just before meeting Dr. Rupprecht you said you were "trying to get Beschorman to get Rupprecht to see the difficulties we were encountering."

Was it that you were expecting that it was Beschorman rather than you who should try to convince Rupprecht in the first instance?—A. Well, after all, I wanted him to help me in that effort, and naturally I thought his word would have more weight with Rupprecht than my word would have. After all, he was a vice-president of Na-

tional Lead Company, he had been conducting this. So, if I could get him in the matter to help me, so much the better.

Mr. WHITNEY. Your Honor, I say with great respect, I may have had a wrong impression but I had the impression that perhaps that thought did not reach your
3023 Honor when your next question was: "Let us stop going around in circles, Doctor. You wanted to persuade Rupprecht to go along on the territorial arrangement?"

The COURT. I see what you mean. You are quite right. I did not gather the distinction which you have now drawn and I did not intend to emphasize the word "you" as you have just now read my question.

Mr. WHITNEY. I take it that what seemed like a circle was really the fact, that Mr. Beschorman, executive vice-president of National Lead, had a position with Rupprecht, as it were, and Dr. Jebsen was a stranger from abroad who had never met Rupprecht.

The COURT. I didn't get that point.

Q. But you did yourself obtain an opportunity to speak to Mr. Rupprecht, didn't you?—A. Yes.

Q. So that his Honor was quite right in later asking you:

"Q. You tried to sell that kind of proposal to Mr. Rupprecht?"

That is to say, you personally, had an opportunity to try to sell it to Mr. Rupprecht?—A. Well, to sell the idea of that, of the 1920 agreement, if that is what you mean with that proposed——

Q. It is his Honor's language, but I think that is what he meant.—A. Yes.

3024 Q. And then Mr. Dixon asked you: "What did Mr. Rupprecht say to you at that time with reference to respecting the territories of the Titan associates?" And that is what we sometimes call a $64 question, in the sense that he is asking you what Mr. Rupprecht said. Now can you add this morning to what you answered yesterday afternoon, which was as follows: "He too many answers in one way. One moment he talked about the executive committee, they would not accept that kind of thing. At another moment he said, 'You are secured against any invasion from us through your patents,' and so on. At the third time he said, 'For legal reasons.'"

And in the morning, in answer to precisely the same

question on direct examination you said:

"Well, he said that, after all, we haven't exported to these countries, you are protected by patents in these countries; how can we export? And I think the whole thing will work out to be eminently satisfactory to you.

"He talked about the non-exclusive licenses, which I didn't like at all and which I couldn't see the reason for. He said that it was a rule from the executive committee or finance committee not to part with any property entirely; they have to put it up—if he should give
3025 an exclusive license it will be tantamount to parting with the property, and he would have to put it up to the executive committee, and he thought that they are not—that the approval would not be given.

"He used that executive committee as something which he could not work up against."

Can you this morning add anything to what Mr. Rupprecht said beyond what I have read?—A. No. I think that describes the situation.

Q. As I read it, you gave more detail in the morning than in the afternoon; is that not so?—A. Pardon?

Q. As I read it, you gave more detail in the morning than you gave in the afternoon?—A. Well, I suppose my mind was considerably fresher in the morning. That is the difference.

The COURT. We will suspend for a few minutes.

(Short recess.)

3026 Mr. WHITNEY. Your Honor, we were at 2957. But I had to go back to 2900 and now I come forward again:

"Q. After the talk with Mr. Rupprecht on a question yesterday, Dr. Jebsen, you commented:

"Now, with regard to legal reasons, as was said in those letters, I couldn't take that serious."

Why was that? Mr. Rupprecht had given you legal reasons for not falling in, and you say you could not take that serious.—A. I said I did not believe him. Well, it comes to the same thing. Well, after all, when a man puts forward three or four different things and they are contrary to what was arranged between the National Lead Company and the European companies, because after all they had been accepted over here, you could not ask me to take it serious.

Q. In other words, you had understood that the 1920 structure was legal under American law, had you?—A. Yes.

Q. And therefore when Mr. Rupprecht gave you that reason you thought that that was an ill-founded reason, did you?—A. I thought he was trying to put forward an excuse to stop me.

Q. Then your next sentence yesterday was:

"With regard to the other things, I found it very difficult to take those serious too;"

3027 Did the fact that you knew in your own mind that Mr. Rupprecht's legal explanation was an unsound one, prompt you to believe that his other explanations were made up or fabricated?—A. Yes. With the "other explanation" I suppose you refer to the Executive Committee?

Q. Yes.—A. To me——

Q. And patents.—A. Well, naturally, where the patent protection was concerned, I mean I could use my own judgment and that was yesterday so far, but when you come to the Executive Committee, that seemed to me to be just an excuse. I thought that the thing was important enough to get the executive committee to accept the matter, I thought it was a very highhanded way and I think I even wrote Mr. Beschorman at one time too about this mentioning of the executive committee and about the manner Rupprecht dealt with these matters; that the negotiations ought to be with the executive committee then if there were higher interests which we could not touch.

Q. Your next sentence was:

"but at the same time my impression was that he had a desire of trying to fall in in some way."

I believe his Honor expressed that this morning as that you felt reassured to some extent, is that right?—A. I think that is about the situation.

Q. Did you feel somewhat relieved?—A. With 3028 some doubt to be quite frank, at the same time.

Q. Relieved with doubt?—A. Yes. I mean I could not say I was entirely relieved. There was a certain vibration in my mind, so to say.

Q. Was that the thought that you carried back to Germany, to Europe?—A. Yes, or, to put it somewhat different, I was not entirely happy about it but I thought we would have to take a chance.

Q. This was in the summer of 1933?—A. Yes.

Q. Now, in October of 1933, there is in evidence a letter written by you, Plaintiff's Exhibit 288, from which I read this:

"I was in Frankfort the day Germany denounced their membership in the League of Nations, and Hitler published his manifest and his speech. It will interest you that the public was very calm and there were no demonstrations in this connection. From Germans I gather that the general sentiment was a relief that the situation now was made clear and they were generally in hope that this would bring the disarmament question to a final settlement."

Was that the same sort of relief that you were feeling contemporaneously about Mr. Rupprecht?—A. Well, I don't get quite the parallel so far.

Q. Then you went on yesterday in speaking about
3029 Mr. Rupprecht:

"And he was trying to paint a picture . . . . that there wasn't anything to be feared."

A. There wasn't anything to be?

Q. Feared.—A. Feared? I see.

Q. Is it fair to say that Mr. Rupprecht at all events was trying to reassure you? It is one thing as to whether you were reassured. It might be a different thing as to whether Mr. Rupprecht is trying to reassure you. I am now asking the second.—A. I think you will note from various of this correspondence that I steadily came back and tried to get Rupprecht in line and did not get him in line.

Q. But he was trying to be friendly and reassuring toward you?—A. Yes.

Q. To give you relief.—A. Yes—well, not give relief, but to try to relieve my mind.

Q. To relieve your mind.—A. Yes.

Q. And you were trying to get him down to sounder things?—A. No, from sound to things. All of us, get down to a matter of fact instead of talking.

Q. Perhaps my analogy to Mr. Hitler was not so remote. We did get down from sound to things.—A. Yes.

Q. Now then you said:

"I just wrote a few words to Kuhne and Weber
3030 Andreae trying to transfer that opinion, convey that opinion," and in the morning you had said, "convey that impression."

The impression or opinion that you sought to convey was the impression of being reassured, is that right?—A. It was the impression of we should take the chance. You see what I mean?

Q. Yes. And that is the question I believe that the Court asked you on the next page, when he says:

"Q. But when you left that meeting, Doctor, were you satisfied by what Mr. Rupprecht had said to you that he would see that Krebs would respect the territories of the Titan companies," and you said "If you mean satisfied, that I felt happy about the thing, no."

Now you did not feel happy about the thing, did you?—A. No.

Q. But your duty to National Lead made you feel that you ought to do what you could to make Kuhne and Weber Andreae feel happy about the thing?—A. To give the approval to sign this agreement.

Q. And would you not go as far as to say you wanted them also to feel happy about it?—A. I think there I would like to take a neutral attitude.

Q. You yourself would like to take a neutral attitude.—A. Yes.

3031 Q. What attitude would you like them to take?—A. Well, as a business man, as a representative of the National Lead Company, of course it was my duty to try to get them to feel happy, but at the same time I did not want to take more responsibility than absolutely necessary.

Q. Right. In other words, your duty might cause you to wish to convey some impression or opinion to them. You did not feel that your duty was to give them a precise analysis of what you really thought?—A. No. I left that to them, and personally I think they knew what they did when they wrote back their letter. Their position was, as far as I understand, always, without having talked with them, but I am just reasoning, but from my talk in Frankfurt before I went over, that they wanted to accommodate the National Lead Company.

Q. They, like you, wanted to accommodate the National Lead Company?—A. To accommodate the National Lead Company.

Q. Then his Honor asked you:

"In other words, you did not really anticipate any further trouble?" And you answered: "No; or, rather, I was hoping that as time developed I might be able to get him to understand and sooner or later fall in line."

Do I understand that it would not be true that you did not really anticipate any further trouble? Perhaps I had better put it more directly: you feared further

3032 trouble, did you not, or you were in doubt?—A. I felt uncertain about the future. I had not got as clear a basis as it was desirable to have vis-a-vis the Ger-

mans and vis-a-vis the whole thing. I mean in order to get—in other words, I wanted to get them down to the 1920 agreement but I could not get them.

Q. I think I am clear. You spoke in the morning of Mr. Rupprecht as slippery?—A. Yes.

Q. And in the afternoon you spoke of him as elusive?—A. Yes.

Q. And therefore would it not be fair to say that Mr. Rupprecht left you in doubt?—A. Yes, in my mind that is perfectly true.

Q. I just want to go over this again to get the connections. His Honor's question was "In other words, you did not really anticipate any further trouble?—A. No; or, rather, I was hoping that as time developed I might be able to get him to understand and sooner or later fall in line."

And then his Honor's next question:

"And go a little further?" I take it his Honor meant, Well, assuming that your answer to my first question had been "Yes," that you did not really anticipate any further trouble, what you wanted was to get Rupprecht to go further than he had yet gone, and
3033 your answer was, "It was a matter to me of further development."

Do you recall that? "It was a matter to me of further development." That is what you said to the Court yesterday.—A. (No answer.)

Q. Perhaps I can help you by going on:

"I was dealing with a situation where my impression was that Beschorman did not really understand this agreement either, I mean the 1920 agreement, or the consequence of it."

Did you mean to say that the hope was conveyed to you that you would have to further develop the opportunity to get Rupprecht to accept the sound principles?—A. Yes.

Q. And then you say, "I say, as I said, I felt I was lost practically at that time." Now to me that means that you were not reassured; you were lost at that time.—A. Yes. It is the same over again.

Q. Then passing two pages later Mr. Dixon asked you: "Well, of course, the Germans didn't get all they wanted in the letter that they sent, did they?" and you answered: "No, but I was not a representative of the Germans."

Was it true that the Germans knew you were a representative of National Lead?—A. Oh, certainly.

Q. And that the Germans knew that you were free, as any business man is free, to try to present to them the National Lead viewpoint?—A. Certainly.

Q. Mr. Dixon's next question is:

"Were you satisfied when you left the meeting with respect to the action of Krebs in respecting the territorial limits of the Titan companies?"

Your answer is short, it is in three words: "I was hoping." You were doubtful, but hoping?—A. Yes, yes.

Q. Doubtful but hoping, is that a fair summary?—A. No, I didn't quite hear what came before "I was hoping."

Q. I will just reread it. It is a question by Mr. Dixon.

"Were you satisfied when you left the meeting with respect to the action of Krebs in respecting the territorial limits of the Titan companies?—A. I was hoping."

A. That is perfectly correct.

Q. Now over a few pages later Mr. Dixon says:

"And did Mr. Rupprecht indicate to you that he understood those conditions?"—being these 1920 conditions—"A. Well, he was always very evasive.

"Q. Well, were you satisfied that he understood?—A. No."

Now you have told us that you understood Mr. Rupprecht in such a way that you were left lost, in doubt, although hoping for further development.

Now this is the converse question that Mr. Dixon is asking you,

"How did you understand that you left Mr. Rupprecht?" Did Mr. Rupprecht understand the principles of 1920. Had you succeeded in carrying to Mr. Rupprecht an understanding of the principles of 1920?—A. This I do not know, because as I said, he was very evasive in the matter.

Q. You could not tell whether you had succeeded or not?—A. No.

Q. And then you say later, "My general impression from that time was that I was very dissatisfied really with the situation as it was." Do you adhere to that?—A. Yes.

Q. Now his Honor was quite understandable, because unlike you with the Germans, and unlike me, he has to bear a responsibility, so he was quite understandably anxious to try to get some more precise answer, and the question was this— A. Who is this you are talking about?

Q. The Court. (Reading:)

"Now what I want you to tell me is, at the time you wrote those words did you feel or did you not that you were making an accurate comparison that the views expressed by Mr. Beschorman as to future cooperation were also the views expressed by Mr. Rupprecht
3036 as to future cooperation. I want you to tell me as truthfully as you can recall whether that paragraph did represent your then state of mind."

And your answer was:

"I can only express what I may call what I feel about it, and that is that it was in general terms, talking about it without going exactly in one way or the other. If you look back at it, I felt at that time, I felt that I was in a very difficult position,"—and I want to pause there. Is it true to say that when you wrote those letters you were not trying to make an accurate representation of anything—and you know what "accurate" means?—A. Yes, sir. No, I was not trying to do that, but I was——

Q. It was not a question with you of truth or the opposite, as if you were on oath in a courtroom, was it?—A. No.

Q. It was a question of being a representative of National Lead, a man who had an investment in Titan, Inc., a man who had relations with the Germans, to try to put things in the aspect best suited to sustain your hope for future development, is that right?—A. Certainly.

Q. And the difficult position was that necessarily you had to take one view as a representative of National Lead and appreciate that the Germans must take a dif-
3037 ferent view, isn't that true?—A. I don't quite get that.

Q. What made the position difficult for you? Was it the conflict between the German company and the National Lead view?—A. Yes, and it was a conflict between—after all, we were asking the Germans to accept the position or relationship with du Pont which was very different from the relations that we had, the basic principles that we had presented to them in 1927.

Q. And did that put upon you the necessity of trying, in effect, to reassure the Germans while you were not yourself personally fully reassured in your spirit?—A. Yes. or rather to try—it put me in the necessity to try to get the Germans to accept something which I did not like—I mean personally. You see what I mean?

Q. Yes, I do. Now you went on and said:—— A. But

at the same time I thought we should take the chance. You see what I mean. In other words, when I say that, we had not gotten down from sound to things—the thing was too indefinite in certain respects, if you understand what I mean?

Q. Yes, but you see the language of the letter to the Germans was rather interesting, the two letters to Kuhne and Weber Andreae were in identical language and they were both very short. First, it is not your habit on vitally important matters to write very short letters, is it,
3038 when you are trying to sell an important thing?—A. (Witness laughs.)

Q. Or explain an important thing.—A. You are not the first to accuse me of that.

Q. Well, it is the other way around. I rather think I see a meaning in it. Wasn't this an uncomfortable letter for you to write?—A. Yes.

Q. And you said "I have met Mr. Rupprecht, president of Krebs Pigment and Color Corporation, who verbally has expressed to me the same views as to the future co-operation as has been expressed by Mr. Beschorman." Considering the "views and interpretations as expressed by Mr. Beschorman," what do you mean by "views"? Point of view? Attitude?—A. This was a very hot day in July, Mr. Whitney, so I do not know. I do not think I examined every word in the way you are trying to do it now.

Q. "And considering the views and interpretations as expressed by Mr. Beschorman and by Mr. Rupprecht in his letter to Mr. Beschorman," that is falling back on the actual Rupprecht letter, isn't?—A. It comes to what I said before. It comes to falling back on Rupprecht and Beschorman on that matter.

Q. "It seems to me that a cooperation can be looked to." That would be in the future, wouldn't it?—A. Yes.

3039 Q. "which will be of important benefit." When you just said you were falling back on Rupprecht and Beschorman, did you mean that you were not wanting to take responsibility of your own in the matter?—A. I repeatedly said that.

Q. That you were just wishing the Germans to get their reassurance, if they could get it, from Mr. Beschorman's and Mr. Rupprecht's letters?—A. Yes.

Q. And you were not going to add to them independent views of your own?—A. No.

Q. Or independent support of your own.—A. Except saying, "Well, as far as I am concerned, I think the best thing to do is to go ahead and take a chance in the matter."

Q. Right. And these men were personally well known to you, weren't they; both Kuhne and Weber Andreae—A. Yes.

Q. And when you wished to take your own responsibility in the matter they were quite different characters, were they not, Weber Andreae and Kuhne—different types of men?—A. Yes.

Q. If you were taking your own responsibility would you write a leter identically verbatim to both men?—A. Who can remember that at that time?

Q. Would you any time write to two different types of men in an important matter, would you write in identical phrases?—A. Probably not. I would try to treat
3040 each one according to their character.

Q. Just so. But this was an unpleasant, uncomfortable duty you had to perform to write them?—A. That is right.

Q. One of the reasons that it was unpleasant was that you were not sure yourself, you were in doubt?—A. If it had been left to me to decide what the National Lead Company should do, I would not have made that agreement—I mean the agreement of 1933.

Q. So then going back to the testimony, "So, my intention was to put the responsibility on Beschorman and National Lead as much as possible. You see what I mean?" That was the important thing with you, wasn't it, that National Lead and Beschorman did this and had their own reason for doing it, and they were to carry the responsibility—A. Yes.

Q. But it was not the point that at that moment he wanted to pursue, because he says "I understand all that. But you did say in you letter that the views expressed in Mr. Beschorman's letter, 'as to the future cooperation' are the same views which were verbally expressed to you by Mr. Rupprecht," and the next question says, "Was that the truth?" and you answered, "I hope so, but I can't recall."—A. Yes.

3040-A Q. That was late in the afternoon, and as you say, you were a little bit tired. This morning you have said that the truth was that you hoped that that would turn out to be so. That is the same thing you meant yesterday afternoon, isn't it, when you said "I hope so" in answer to his Honor's question; not "I hope that was the truth"

but "I then hoped it would turn out to be the truth."—A. Yes. I mean there is a difference there.

3041 Q. And what would you say was right as to the word "hope"?—A. Well, that is too—I mean, it depends upon the connection. If I got you right, in the one case I am talking about what I hope will be the result in the developments, isn't that so?

Q. Yes.—A. In the other case it was a question of whether I said "I hope so whether I conceive the truth or not."

The COURT. You hope generally you are a truth-telling citizen?

The WITNESS. Yes.

Q. It does not go further than that?—A. No.

Q. Finally the question of his Honor is: "You did not intend to tell other than the truth when you wrote your letter of July 21st?" And your answer was: "No. I would not say that."

Now what would you say about what you intended to tell in your letter of July 21st?—A. Isn't that the same as I said several times, that as far as I am concerned I am willing to go ahead and take the chance in the matter?

Q. In other words, to sum it all up, when you, as a business man in this difficult position, as you called it, between these two points of views were writing to the Germans, it was not a simple question of truth or falsity, was it, but it was a question of accomplishing a business

3042 objective; putting off the evil day while in doubt but still in hope and planning for future developments, ~~is that~~ right?—A. Quite right. To put it more explicit, hoping that as years went on, as one got to know each other better we will get the du Pont Company in line.

Q. Right. Now I am leaving that. Years did go on, and eventually you came over to America in the summer of 1938 particularly in relation to this precise subject, did you not; that is to say, the relationship with Krebs?—A. Well, incidentally that was taken up. I don't remember that that was one of the specific purposes of my coming over.

Q. Now when Mr. Dixon was examining you about that you said, "At the time really I was very dissatisfied with the development of the relations with du Pont." That was a correct reflection of your view at the time of that coming to America?—A. Pardon me?

Q. Were you, when you came to America in 1938, very

dissatisfied with the development of the relations with du Pont?—A. I certainly was.

Q. Now you arranged to make a trip to Wilmington, did you not, to see Mr. Rupprecht?—A. Yes.

Q. And you had Mr. Kaegeben with you?—A. Yes.

Q. And Mr. Hancock was there?—A. Yes.

Q. And then thereafter did you go to lunch with
3043 some of the other du Pont officials?' A. Yes, with Dr. Sparre. I recollect him.

Q. He was the head of the development department?—A. Yes.

Q. And a high official of the du Pont Company, was he?—A. Yes.

Q. And a Norwegian by origin?—A. Yes.

Q. Or at least a Scandinavian?—A. No. He was a Norwegian. I was very interest in meeting him because we had acquaintances and friends in common.

Q. Sparre is an old Swedish name that cross the border line, wasn't it?—A. Yes, very much so.

Q. Will you give us the best of your recollection of what was said as between you and Mr. Rupprecht in the morning and as to what was said at the luncheon? You were not asked that yesterday. You were asked a great many other things, but I would like to do what you call take a chance.—A. The talk without question was more or less repetition of what du Ponts said several times. There is a memorandum which recorded what I——

Q. Will you forgive me. I want you to try to tell us, as you sit there this morning, throwing your mind back, and I think his Honor would be willing to give you a minute or two to try to remember what you now remember may or may not have been said, even if it is just scraps.—
3044 A. If you take exactly what I remember now, that is from the meeting itself with Rupprecht and lunch, there is very little in my memory left, because it was of the same character as the previous ones. You never got to the grip of things. I had one object particularly in mind and that was the following: During the years that had passed when we negotiated these license agreements it was a very tedious thing for me. Things were negotiated with Kaegebehn over here and everytime Mr Hancock got something in his mind, I believe it was Hancock or somebody down there,—he wanted to change some of those agreements and Kaegebehn wrote over to me if he was not able to talk Hancock out of it, and I was not in a position to say "yes" or "no". I had to go back to the

Germans and the English, in view of the 1920 agreement. It made the whole thing a very tiresome process, and what I wanted was to get some kind of an understanding or agreement on a standard form for license agreements if and when such were to be exchanged, to make it clear to Rupprecht and Hancock we could not go on with this eternal and tedious correspondence about these matters, and I wanted to have left that clearly into their minds. Naturally at the same time I discussed the matter in general again, as I had done before, trying to enforce the principles, or rather to get them—enforce is not the
3045 right word—but to try to get Rupprecht into line again—not again, because he had never been in line.

Q. You mean try again?—A. Yes, try again to get him in line and there was that same—in other words the same kind of evasions. If I remember right when I left I thought we had got Rupprecht and Hancock to accept this idea of trying to standardize this license agreement form if and when we agreed upon licenses, but I think the following correspondence did not bear that out—as usual with Rupprecht.

Q. Perhaps we are getting a little away now, because the thing I want you to remember is about what was said. Do you remember about the lunch?—A. Then we had lunch. We did not talk business during the lunch, but leaving, and going down the elevator, there is one thing which I remember very distinctly because it shocked me. It gave me a little shot, so to say. I said to Dr. Sparre in the elevator that what I am aiming at, Dr. Sparré, is to get as close cooperation as possible between du Pont and our companies," and he said, "Not too close, Dr. Jebsen; not too close." And I was puzzled somewhat at the same time about it. But that was all, and I left to take the train.

Q. Did you see Dr. Sparre or Rupprecht again on that visit?—A. I have never seen Sparre since then.
3046 I may have seen Rupprecht since that visit.

Mr. WHITNEY. Thank you.

Mr. WEBSTER. No redirect.

Recross examination by Mr. DIXON:

Q. Dr. Jebsen, you are very precise in your manner and habits, are you not?—A. Well——

Q. That is to say, you like things—A. Don't ask me.

Q. You like things to be precise?—A. Yes.

Q. Is that correct?—A. Yes.

Q. And you did not like any deviations from, well, say the 1920 agreement?—A. Yes.

Q. And all of the companies associated with the Titan groups under the 1920 agreement entered into written agreements with each other under your 1920 agreement form, did they?—A. You mean the European associates?

Q. Yes—A. Yes.

Q. And of course that would be National Lead during the Titanium Pigment Company originally, and then—A. Titan Company, Inc.

Q. Yes, and so all of the associated companies were committed by written agreement to follow the general principles, as you have called them, of cooperation set forth in detail and at length in the 1920 agreement? That is a fact, isn't it?—A. I did not get the first part of it. Excuse me.

3047 Q. (Read.)—A. Yes. In other words, Article XIV?

Q. Yes.—A. Yes.

Q. And you did not want anything that was not in writing that might deviate from the general principles of that agreement or from any of the other provisions of the agreement, did you, Doctor? In other words, you wanted it to be precise?—A. I do not quite get your question.

Q. When you discussed the 1933 agreement with Mr. Rupprecht I believe you testified generally that he told you that he could not become a party to the 1920 agreement, is that correct?—A. No. I don't think that is correct, because I did not—we had only talked—I talked about the principles there. I never showed him, for instance, the 1920 agreement.

Q. Well, did he say to you that he could not make any agreement in writing of any kind with the Titan Company?—A. I do not think he said he could not make any agreement of any kind but he evidently did not want to make any agreement.

Q. What you wanted in your discussions with Mr. Rupprecht was, if possible, a written agreement between Krebs and the Titanium Pigment Company which would be like the agreements that the other companies made with the associated companies? That is what you really wanted, wasn't it, Doctor?—A. I wanted an agreement with

3048 du Pont Company respecting Article XIV of the 1920 agreement.

Q. You wanted it in writing, didn't you?—A. Certainly. If you could not get it in writing what would it be worth?

Q. If it were possible to get it. And it would have been a matter of considerable concern to you that such a written agreement could not be made by Krebs? Was that not a fact?—A. But why say that "Such an agreement could not be made." We did not get anywhere anyhow, whether written or otherwise.

3049 Q. Did not Mr. Rupprecht say to you, or didn't he, that he could not make any written agreement with your company such as the other companies had—A. I do not think he specified "written" in that connection.

Q. So that you did not even get to a point of talking about a written agreement such as the other companies had, complying with the 1920 agreement?—A. No.

Q. Now you did, however, testify that after these conferences, or after this conference—there was only one, that is correct, isn't it?

The COURT. In 1933?

Mr. DIXON. In 1933 with Mr. Rupprecht——

A. Yes.

Q. ——that you were satisfied that the cooperation would be eminently satisfactory, or words to that effect, between the du Pont Company and the foreign associates?—A. I would not say I was satisfied.

Q. Now, Doctor, let me ask you this very fair question——

Mr. WHITNEY. I object to that, your Honor.

The COURT. He recommends it.

Q. When you testified you were not satisfied you meant that you had to take a chance that perhaps Krebs would not live up to these assurances which Mr. Rupprecht gave you orally at this meeting? That is what you were dissatisfied about, isn't it?—A. No. I don't think that

3050 is quite the expression. First of all, I cannot remember when you talk about the oral things, and I think when I say I was dissatisfied it was because there was nothing more to really hold onto than this agreement between the National Lead Company and the du Pont Company. All the rest was——

Q. And these assurances which Mr. Rupprecht gave you at this meeting that everything would be all right for the foreign associates—in other words—— A. No, I don't think you can say everything would be all right. What does that mean, Mr. Dixon?

Q. Well, as you put it in one of your letters, "It seems to me that a cooperation can be looked to which will be of important benefit to TG". In other words, Doctor, you did not like an oral arrangement, did you, or oral assurances from Mr. Rupprecht because you felt he was rather slippery and hard to pin down, is that right?—A. He was hard to pin down to the 1920 principles.

Q. And you would have been much more satisfied if he had come out and made a written agreement or put something a little more definitely in writing at this meeting, isn't that a fact?

Mr. WEBSTER. Your Honor, the objection is the questions are argumentative.

The COURT. I will let him go a reasonable distance.

3051 Mr. DIXON. That is all I ask, your Honor.

The COURT. Go ahead.

(Question read.)

A. Do you mean when you say "an agreement"——

Q. Do you understand my last question?—A. Please repeat?

(Question read.)

A. Does that not assume that there was an oral——

Q. That you were assured, Doctor, by Mr. Rupprecht.—A. Assured of what?

Q. That everything would be eminently satisfactory to yourself.—A. And that could mean compensation in one way or another; in some way we would get a benefit.

The COURT. In your mind the one problem was territorial limitations?

The WITNESS. Rupprecht had emphasized the patent situation and having licenses under those patents.

Q. He had also written this letter to Mr. Beschorman, that is on June 28th, in which he said, "Well, we cannot export or sell outside the territory specified in the 1933 agreement", hadn't he?—A. I think so, yes.

Mr. WHITNEY. Well, just wait a minute until we look at that letter. I would like to check it. What is the exhibit number?

Mr. DIXON. 267.

3052 (Question read.)

Mr. WHITNEY. Your Honor, I think if he is going to cross-examine the witness on an exhibit he should show him the exhibit. My objection is it misrepresents it. It says, "As you are aware, the antitrust laws of this country definitely prevent this corporation from mak-

ing any commitments respecting the territories of Titangesellschaft."

Mr. DIXON. If the Court please, I ask that my question and answer stand. The witness has answered my question.

The COURT. All right.

Mr. WHITNEY. I object to the question and move to strike out the answer on the ground that it misrepresented an exhibit in evidence.

The COURT. Very well. Motion granted. If you want to call his attention to specific language in the exhibit you may do so.

(Previous question and answer re-read.)

Q. Well, you have seen this letter, I believe, from Mr. Rupprecht to Mr. Beschorman of June 28th, hadn't you, Doctor, before you conferred with him?

The COURT. You have been all through this before.

Mr. DIXON. I understand, Judge, but the question was objected to.

The COURT. We were all through it yesterday.

3053 A. Yes.

Q. Did you have any discussion with Mr. Rupprecht about Article II of the Krebs-Titanium Pigment Company proposed agreement?—A. What does Article II say?

Q. I hand you the letter to refresh our recollection (handing).—A. Have you got the Article II itself?

Q. Yes. If you would like to read it. I do not know as it would help you.—A. I cannot remember that we discussed these things in detail in that conference with Rupprecht at all. I think I said that yesterday, too.

Q. Now, Doctor, you testified under cross-examination from Mr. Whitney that you were dissatisfied after this conference. As I understand your testimony you were dissatisfied because you wanted, first, if possible, Krebs to come in 100 per cent under the 1920 agreement which this did not do? That is correct, isn't it?—A. Yes.

Q. And, second, you wanted something that you could indicate to your associates abroad, BTP and Titangesellschaft, or what TG wanted with respect to the territories of TG, that they would be respected by Krebs? You wanted that?—A. I would have liked to have got it.

Q. And you got the letter or saw the letter that Mr. Rupprecht had written to Mr. Beschorman with reference to that before you went to the meeting with Rupprecht, didn't you?—A. Probably so, yes. I suppose.

3054 Q. And were you satisfied with what he said about territories in that letter before you went to the Rupprecht meeting?—A. Well, I cannot remember what happened or how I felt about it at that time.

Q. Well, if you were not satisfied with it, having seen the letter, now can you state to the Court in what respects you were not satisfied on that point?—A. No, I can't. The only thing which I can state in that respect was that it was strongly pointed out that as long as du Pont was working under licenses from the National Lead Company, under licenses under the patents, the same patents as we had abroad—when I say "we" I mean the Germans and English and the various companies—that they could not very well send over any material to those countries. We had the patent protection——

Q. Well, there were countries in which you did not have patents, were there not, Doctor?—A. Yes, but they were not of too much importance.

Q. In what respects? Getting back to my question were you not satisfied when you went away from the meeting with Mr. Rupprecht with respect to the territorial part of your 1920 agreement or were you satisfied on that point in so far as oral assurances could be given you?—A. I cannot remember there were given any additional oral assurances; additional and beyond what I have

3055 said here with regard to the patent situation.

Q. Then the thing which you were not satisfied with after you left this conference with Mr. Rupprecht was that there would not be an automatic exchange of patents between Krebs and the Titan Company? Is that one of the things you were not satisfied with?—A. That there would not be an automatic exchange?

Q. Of patents and applications between Krebs and the Titan companies.—A. Yes, that was one thing.

Q. And that was one of the things which was made a matter of negotiation in the 1933 Krebs agreement, wasn't it? It was left open?—A. It was left open, and therefore——

Q. And was that one of the things that you wanted to bring Mr. Rupprecht in line with, the 1920 agreement, when you had your conference with him?—A. I was afraid——

Q. Can you answer that question?—A. I wanted to bring him in line, yes.

Q. On that point, namely the exchange of patents between your companies?—A. Yes.

Q. And Krebs?—A. Yes.

Q. And in that respect you were not satisfied by your conferences with Mr. Rupprecht?—A. No.

Q. Now what about the technical exchange provided for in the 1920 agreement? Were you satisfied on that after you left Mr. Rupprecht's office or conference?—A. No.

3056 Q. But there was an exchange, or at least visits made after this meeting?—A. Yes.

Q. Between Titan and Krebs. Now what more than that would you want that you were not satisfied of after you left Mr. Rupprecht at this meeting?—A. Particularly with regard to this exchange of licenses. I was afraid somewhat that there would be a question of compensation, in cash.

The COURT. Royalties?

The WITNESS. Royalties or whatever it was. He had said only outstanding patents, outstanding inventions patented should be a subject of royalties or of compensation. But I was somewhat in doubt as to what could be considered outstanding patents, outstanding inventions.

Mr. WEBSTER. Your Honor, Mr. Dixon is trying to force the witness to a point where he breaks in on practically every answer. I think he should be allowed to answer.

The COURT. Do you feel you are being given ample opportunity to answer?

The WITNESS. Yes, but the interruptions are somewhat——

The COURT. All right. I will ask Mr. Dixon to give the witness a chance.

Mr. DIXON. I thought I was.

The COURT. I thought so, too.

3057 The WITNESS. If I may continue explaining that situation?

Mr. DIXON. I did not interrupt. Go on, Doctor.

Mr. WHITNEY. You are interrupting now.

A. (Continuing) As I say, what are outstanding inventions? That was left open. And later on I had a disappointment in that respect.

The COURT. Do you want him to go into that? If you want to, you can stop him.

Mr. DIXON. No.

The COURT. All right.

Q. So that was one of the matters, that if the Krebs Company had been brought in line, as you call it, with the

1920 agreement you would have been satisfied with it, is that correct?—A. Yes, if they were both in line.

Q. So when you say that you were dissatisfied and hoped to bring du Pont in line, you mean you wanted them to come in, 100 per cent, with all of the obligations of the 1920 agreement? That is what you wanted, didn't you, Doctor?—A. Yes.

Q. And that was what you hoped to get from Mr. Rupprecht when you had this conference with him in July of 1933?—A. Well, I would not say my hope went quite so far, but I was hoping to get him somewhere anyhow in that direction.

3058 Q. So there were still some matters that, under the 1920 agreement, such as exchange of patents between the parties, was not closed after you left the Rupprecht meeting in 1933?—A. It was not solved to my satisfaction.

Q. And you had to wait until 1938 before you got an exchange of patents between Titan Company and the du Pont Company as you would have gotten them ordinarily under the 1920 agreement?—A. Well, I did not get it in 1938 either.

Q. Mr. Whitney has asked you about the 1938 meeting with Mr. Rupprecht. At that meeting I think you testified that you wanted to work out a general arrangement, is that correct, to handle the exchange of the patents between Titan companies and du Pont?—A. No. I did not say a general arrangement. I said to work out a standard form in the case there was an exchange of patents.

Q. In other words, you were dissatisfied again about the arrangements then in effect whereby Mr. Kaegebehn and you had to conduct extensive correspondence between Titan and the Titan companies about the patents and patent applications of Krebs? That is what you were dissatisfied with?—A. I had to go every time to the Germans and to the English and to the French and get their approval for anything which might drop into the head of Mr. Hancock.

Q. That is right, but you did not like that because it was a lot of extra work for you?—A. Yes. And it seemed to me unnecessary work.

3059 Q. And after your meeting with Mr. Rupprecht in 1938 that was worked out, was it not, so that the patent applications of du Pont Company were forwarded regularly to the Titan companies to see whether they wanted to take out patents in their territories on the du

Pont patents?—A. No, pardon me. There you are coming onto something different, because there you are talking about patent applications, and not the question of the conditions of the license agreement—what comes in there is a matter of exchange of information regarding possible patents. That is a different thing.

Q. I understand. But I am talking, Doctor, about the exchange of patent applications between du Pont on the one hand and the Titan companies on the other.—A. Well, I thought we were talking about the standardization of licenses and license agreements and——

Q. All right. Just a moment. I will go back to the technical information. You were not satisfied on the exchange of technical information between the parties after you left Mr. Rupprecht, were you?—A. No. That is a different question and that part of it, keep in mind, there the intention was, the rule was, it should go through the National Lead Company, so it was a matter between the National Lead Company and du Pont Company—this arrangement.

3060 Q. In other words, being a man of precise characteristics, you wanted the methods of exchanging that information to be exact so that you could tell all of your associated companies how it would work out?—A. I don't remember. It didn't interest me so much, this question of exchange of information, at that time.

Q. You mean at what time?—A. In this 1938——

Q. 1938?—A. At that meeting. We are talking about that meeting, I understand.

The COURT. We are talking about the 1938 meeting at Wilmington.

The WITNESS. Yes. And the question of technical exchange was a matter between the National Lead Company and du Pont. There was one incident which came up there. I think Dr. Booge wanted some particular information. It happened when I was down there, but I can't remember that we worked out any different rules there. The thing had become rather complicated because in 1937, that was the year before, when Dr. Booge was over in Europe, he talked about certain arrangements which had been made between the National Lead Company and du Pont as to exchange of information, of which I was not informed. And I wrote about it to National Lead Company—I am telling you this with a certain amount of reservation, that, in the details it may not be en-

3061 tirely exact; but the main point was that the exchange of technical information was to go between

du Pont and National Lead Company. That some could go on a personal visit.—That is natural. After all, you get together then and if the chemists get together and exchange. That is a different thing.

Q. I think we understand now, Doctor, but—— A. But my purpose was, one thing I had in mind which I remember very strongly, was to get these license agreements, when it comes to license agreements,—to get the form of those standardized.

Q. In other words, you would have liked to have had a general provision in a written contract which would obligate Krebs to give to Titan their patents and Titan to give to Krebs their patents, the same as all the other companies had—— A. No, not at that time.

Q. (Continuing) ——in the 1920 agreement?—A. No, not at that time. We had—pardon me. Not at that time. We were working under the 1933 agreement where we had the first call. Naturally, if I could have obtained others, so much the better. But that didn't come up, because that was more or less what you call buried.

Q. Well, that was one of the things you were dissatisfied with—A. Yes, but I don't think we took that up at that time.

3062 Q. You stated that you were dissatisfied with your relations, that is the Titan Company's relations, with du Pont in 1938, when Mr. Whitney examined you. Now, were you dissatisfied with them on account of the technical exchange principle?—A. No, not particularly on that part of it.

Q. Will you state to the Court precisely, if you can, in what respect you were dissatisfied with your Titan-Krebs relationship in 1938?—A. In principle I was of course dissatisfied as long as I could not get my 1920 agreement principles accepted. That is one thing. And another thing is what especially occupied my mind in 1938 when I was down there, and what made the relations unpleasant as far as I was concerned, was the very tedious work which developed each time we had agreed to make—to exchange licenses.

Q. Well, had Krebs ever broken the frontiers of the titanium empire outside of the Western Hemisphere from 1933 to 1938?

Mr. WEBSTER. I object. I think we have been all over this a number of times.

The COURT. Objection sustained.

Mr. DIXON. No. We are trying to find out what he was dissatisfied with.

Mr. WHITNEY. Why don't you ask him in so many words.

Mr. DIXON. I will conduct the examination.

3663 The WITNESS. I think I have told that many times.

The COURT. I would like to ask you to expedite your cross-examination, but go ahead.

The WITNESS. I think I have been very explicit, Mr. Dixon.

Q. Well, in any event had the du Pont Company or Krebs ever exported into the territories of the Titan companies to your knowledge?—A. You asked me about that before once, and I answered you too. I said there had been some importation here and there, a little bit. I don't know whether it was ascribed to the du Pont or to the National Lead Company.

The COURT. But as far as you know, du Pont did not engage in a policy or practice of exporting to markets of the European associates?

The WITNESS. No.

The COURT. We know that.

Q. So that from that point you were not dissatisfied, for that was one of the principles of the 1920 agreement; isn't that the fact?—A. Yes, but there was no—I was satisfied up to that time——

Q. Up to that time that principle—— A. Up to that time the chance we had taken had proven to be justified.

Q. In other words, up to 1938 this risk that you didn't want to take in 1933 had proved justified?—A. I

3664 took it in 1933.

Q. Yes.—A. I took the risk.

Q. And the 1939 meeting with Mr. Rupprecht then, as you have testified, was not with reference to any dissatisfaction on your fundamental principle of the 1920 agreement, was it, Doctor?—A. I don't think that subject matter was taken up, if I remember.

Q. There was no occasion to discuss it?

Mr. WEBSTER. Your Honor,——

Mr. WHITNEY. Let him answer it. There was no occasion to discuss the——

The COURT. Just a minute.

Mr. WHITNEY. Well, let the question be read.

The COURT. All right. But we can only have one counsel on the floor at a time.

The WITNESS. Three, weren't there?

The COURT. The question is?

(Last question read.)

The WITNESS. There was no—that is, no occasion, what I said——

(Last two questions read.)

Mr. DIXON. I will withdraw the question.

The COURT. I think he changed the word "that" to "the" and that is what changed the effect of the question.

The substance of the question was whether there
3065 was any occasion to consider the territorial problems at the 1938 conference.

The WITNESS. I was rather amazed what you had put down there, because it didn't seem to——

The COURT. He changed the word "that" to "the". It was changed from "that" to "the," meaning "the territorial"——

The WITNESS. Yes, but I did not talk about the general principle——

The COURT. That general principle, instead of the general principles.

The WITNESS. That—general principles of territorial. No special occasion.

Q. No occasion at that time to be dissatisfied with respect to any chance that you took with Krebs on that principle.

The COURT. Objection sustained. I think we have covered that four or five times.

Q. Now, just one more question. When you wrote the letter of July 21, 1933, to Weber Andreae—— A. On July 21, 1933, I see.

Q. (Continuing) ——did you have any intention at that time, Doctor, of doing anything other than reporting to the German companies the facts with reference to your conference with Mr. Rupprecht in July of 1933?

3066 Mr. WEBSTER. I object to that. He is covering ground that was fully covered yesterday and two or three times today.

Mr. DIXON. There is a reason for it.

Mr. DIXON. What is the answer to the question?

(Question read.)

A. My intention with that letter was to tell whether Weber-Andreae and Kuhne that, as far as I am concerned, I am willing to take the chance in this matter.

Q. You did not say that in your letter, did you?—A. Well, as I said here, I think that is what it conveys.

Q. Just point out to the Court if you can——

The Court. No, you will have to do that yourself. That is what he said was his intention. If it is not expressed in his letter you will call it to my intention on your argument.

We will suspend.

(Recess to 2:15 p. m.)

3067 Afternoon Session

Gustav Adolf Jebsen, resumed the stand.

The Court. Are you going to have very much more, Mr. Dixon?

Mr. Dixon. I adhere to my statement, your Honor. I have no further questions.

The Court. Very well. The witness is excused.

(Witness excused.)

Graham W. Corddry, called as a witness on behalf of defendant National Lead Company, having been previously sworn, testified further as follows:

(Defendant N-L Exhibit 68 marked for identification.)

Direct examination by Mr. Webster:

Q. Mr. Corddry, where do you reside?—A. 217 North Mountain Avenue, Montclair, New Jersey.

Q. What is your profession?—A. I am general sales manager of the Titanium Pigment Corporation.

Q. Had you had a technical education?—A. Yes.

Q. Of what character?—A. I was educated in St. Johns College, Annapolis, Maryland, majoring in chemistry.

Q. Since what date have you been general sales manager?—A. Since June 1, 1940.

Q. Prior to that what was your occupation?—A. I was eastern sales manager from 1935 until 1940.

Q. And prior to that?—A. From 1932 to 1935 I

3068 was a salesman with the Titanium Pigment Corporation.

Q. Now, before that were you employed by another company?—A. Before that I was employed by Devoe & Raynolds Company, a national paint and varnish manufacturer. At the time I left that company I was director of laboratories.

Q. Briefly, what sort of work did you do in the laboratories for the Devoe & Raynolds Company?—A. I originally formulated paint and varnishes, and later directed the formulation of all the paint and varnishes manufac-

tured by that company, in charge of their laboratories in Brooklyn, Newark, Malden, Chicago and Louisville.

Q. How many persons are now employed under your direction in the sales department of the Titanium Pigment Corporation?—A. Well, we have 21 salesmen and approximately 12 employees in the office.

Q. Have those salesmen been selected with reference to any particular professional or technical qualifications?—A. Yes. They have all been selected because of their technical knowledge of the paint and varnish industry or their technical knowledge in the rubber or paper industries.

Q. Are they men educated in chemistry or related subjects, to a large extent?—A. Yes.

Q. Is that entirely true or just partly true? I mean, as to the number of men.—A. That is entirely true.

3069 We might have one exception within the 21 men.

Q. To what extent has the number of salesmen employed by the Titanium Pigment Corporation increased since your connection with the company?—A. Roughly, I would say they have doubled.

Q. I show you National Lead Exhibit 8 for identification and ask you to state, if you know, what that is.—A. This is a handbook prepared by the Titanium Pigment Corporation and has been distributed to all of our customers for use by technicians for the furtherance of our—in order that they may have available data to increase the use of our products.

Q. Are there any secrets in this book?—A. No.

Q. Now you have a number of Titanox products, have you not?—A. Yes.

Q. And, roughly, those are classified as Titanox-A, Titanox-B and Titanox-C; is that correct?—A. Yes.

Q. Are there certain variations of those products that are known to you?—A. Yes.

Q. Is there any difference between Titanox-A and Titanox regular, or are they the same?—A. Titanox-A is our designation for all pure titanium pigments. We have been prefixing the designation "Titanox-A" to designate the different titanium oxides or titanium oxides designed for different purposes.

3070 Q. The description of Titanox-A contained in this book and the statements concerning the use of Titanox-A, are those accurate statements of the composition and use to which that product may be put?—A. Yes.

Q. You have a product called Titanox-AA. What is the nature of that, as distinguished from Titanox-A itself?—

A. Titanox-AA is a semi-non-chalking pigment which was designed primarily for use in exterior house paints, to reduce the chalking or fading of those finishes when formulated with regular Titanox-A or Titanox-AMO.

Q. Titanox-ANC, what is the difference of that from Titanox-A?—A. That is a pigment with still greater chalking resistance, the letters NC designating "non-chalking," and was designed for automotive finishes or for house paints, tinting base house paints where the optimum in chalking resistance was desired.

Q. What is the purpose of Titanox-AWDL?—A. They are water dispersing pigments produced for the paper industry, so designed that they will disperse readily and easily in aqueous solution, or water.

Q. Titanox-B, what is the chief characteristic of that?—A. Titanox-B is a so-called composite pigment composed of 30 per cent titanium oxide and 70 per cent of barium sulfate, and is used in the paint industry, the rubber industry and paper industry.

3071 Q. Does Titanox-B also have certain variations in manufacture?—A. Yes.

Q. Are those variations intended to meet particular conditions?—A. Yes.

By the COURT:

Q. These titles, Titanox-A and B, are they trademarks under which they are sold to the general public or——A. Yes.

Q. ——or only to the manufacturing trade?—A. We sell only to manufacturers.

Q. You do not sell to the retail trade?—A. No, sir.

Q. Under those labels?—A. No, sir.

Q. The manufacturer packs it in his own container and if he wants to sell retail he sells it under his own brand name; is that the idea?—A. Our pigments aren't ever sold retail as pigments; they are used in the formulation or manufacture of other items.

The COURT. I see.

By Mr. WEBSTER:

Q. For that reason your business is chiefly with what kind of customers?—A. It is entirely with manufacturing concerns. It is principally in the paint industry.—We also sell to paper, rubber, manufacturers of white shade cloth, floor covering, and many other industries.

3071a Q. With whom in these companies that buy Titanox products do your men maintain contact?—

A. We maintain contact with the chemists, plant superintendents, purchasing agents, and as far as possible with the management within these companies.

3072 Q. Do you have any contact of an appreciable sort with the ultimate users of paints?—A. No.

Q. Now, what is the outstanding chief characteristic of the Titanox-C pigments?—A. Titanox-C is a calcium base pigment used primarily in interior finishes, flat wall paint, enamels; and a newer grade of Titanox-C is now used in exterior paints.

Q. What grade is that?—A. That is Titanox-RC.

Q. What is the chief characteristic of Titanox-RC?—A. It is a—I will put it this way: it is the first calcium base pigment that was capable or had the properties which would allow its use in exterior house paint, and was the first calcium base pigment used in such finishes.

Q. Does this handbook contain data concerning United States Government specifications of various sorts?—A. Yes.

Q. What is the reason for putting that in the book?—A. So that paint formulators would have available these Government specifications and the products of our manufacture which meet those specifications.

Q. Does the book also contain formulae for house paint and other forms of paint?—A. Yes.

Q. What is the purpose of that?—A. Well, we have written into the handbook data developed by our company at our testing station at Sayville, Long Island, on

3073 the formulation and study of exterior house paints and exterior house paint primers, and this data has been disseminated to all of our customers so that they can benefit from the knowledge which we have developed. It is basically sales promotional data.

Q. Did all of the technical data in here come from your own research organization or is it based upon the experience of your own research in testing laboratories?—A. Yes.

Q. Now with reference to the research and laboratory work, what sorts of laboratories or testing laboratories does the company maintain?—A. We maintain a research laboratory which is purely for the study of pigments themselves in research into pigment manufacture and properties. We maintain a paint and varnish department laboratory that studies the formulation of paint and varnish products; a laboratory which studies the use of titanium pigments in the rubber industry and one which studies the

properties of our pigments in paper.

Q. Are these all maintained under the same roof?—A. No.

Q. Or at various locations?—A. The research laboratory is at the plant at Sayreville, New Jersey. The paint, rubber and paper laboratories are at 99 Hudson Street, New York. Besides that, we maintain the
3074 Sayville, Long Island, testing station.

Q. What is the nature of the work done at the testing station?—A. That is testing the exterior paints and enamels of our own formulation or formulation of other companies.

Q. Do the technicians employed in these laboratories go outside the laboratory in connection with their problems?—A. Yes.

Q. Where do they go?—A. At times, and before the war periodically, we would travel, one or more of our technicians, with or without our salesmen, in various territories, so that these technicians can bring firsthand data which they have developed to our customers.

Q. And I gather from what you previously said that when they do that they work with the customers and technicians in the customers' employ; is that correct?—A. Yes.

Q. Have you in mind any particular problems that have been worked on in that way?—A. Well, we have worked on many particular problems all over the country. The customer has a problem of formulating his paint or is now formulating it with a company's product, and they wish to have that formulated over to the use of our product. And we send a technician in to work directly with that manufacturer until the problem has been solved.

Q. In your opinion, and based on your experience,
3075 has that sort of cooperation been effective from a standpoint of sales?—A. Yes, quite.

Q. Has it also been effective from a standpoint of improving the customer's own product?—A. Yes.

Q. Have you from time to time published booklets containing information concerning investigations and studies relating to the manufacture and use of pigments?—A. Yes.

The COURT. You are referring to "you" as the company, or "you" as referring to the witness?

MR. WEBSTER. I mean the company.

(Defendant National Lead Company's Exhibits NL-9 to NL-22 inclusive, marked for identification.)

Q. I show you National Lead Exhibits 9 to 22 inclusive for identification and ask you to go through those and simply indicate what each of those publications contains, the date of publication, and the purpose of publication, just stating your remarks in rather brief summary.

The COURT. Mr. Webster, I don't want to divert you from your line of examination, but I am having trouble in following the precise target at which you are aiming. I mean, I have not interrupted you because I have been finding it rather interesting from an educational point of view. But just how would it help me decide any of the issues which the complaint and the answers in this
3076 case present? Give me an idea; you don't have to elaborate.

Mr. WEBSTER. The claim as I understand it in this case is that there was an agreement between the du Pont Company and the National Lead Company in restraint of domestic and foreign commerce, and the purpose of this is simply to lay a foundation for additional information which will be offered through this witness to show that there was the most active——

The COURT. Competition?

Mr. WEBSTER. Competition.

The COURT. Between du Pont——

Mr. WEBSTER. Between du Pont and the National Lead Company.

The COURT. Let me ask you this. I don't know whether this will work out, but I am going to make the suggestion. Suppose you put the question bluntly, and I suppose you will get an affirmative answer, then let Mr. Dixon try to tear that down on cross-examination—even if he does, maybe he is not contesting it, but if he doesn't, he will come back and then I will give you full opportunity on redirect. It would be a rather extraordinary procedure but I think we may save some time.

It may be that Mr. Dixon is only concerned with a few departments of competition, in which case we will
3077 really need to know only so much. If you feel it is important, you know your case, I won't interfere with you.

Mr. WEBSTER. I do not believe that that would be satisfactory because Mr. Dixon has already introduced material and indicated that, in his stipulation, he will introduce additional material on the basis of which argument may be made now or later that there isn't active competition between these companies. I think it is quite essential.

The COURT. All right, go ahead.

Mr. WEBSTER. And I will abbreviate this——

The COURT. No. Take all the time that you need within reason. I have not seen this final stipulation which was supposed to have been presented as part of the Government's case.

3078 Mr. WEBSTER. I think it is still in process of gestation, and is not yet ready to be presented.

Q. If you will, please just state briefly what the purpose of each of these documents is, referring to the exhibit number and then to the title, with a very brief statement as to the purpose of each of these studies.

The COURT. Now the question has been put, Mr. Dixon: I did not want you to object in the midst of the question.

Mr. DIXON. That was not the purpose for which I arose, your Honor. I was about to answer the question you put with regard to the stipulation, and that is that the stipulation the Government submitted was under discussion between counsel which, I cannot say, we have agreed to, subject to submitting it to Mr. Webster, and the only reason that has not been done is because Mr. Rea is ill—that is one of the reasons; and the second reason is that it has not as yet been typed in final form.

The COURT. Very well.

A. National Lead Exhibit 9. The purpose of this booklet was to show the extent of our laboratories and study of the use of our pigments in the various consuming industries, showing our research in it.

The COURT. What you would call prestige advertising?

The WITNESS. Yes.

3079 The COURT. All right.

A. (Continuing) Exhibit 10 is the technical announcement of Titanox-RC and Titanox-RCHT, which were two new products we put on the market on January 10, 1941.

Exhibit 11 was a paper delivered by our rubber chemist, Mr. Breckley, on his study of the flexing characteristics of Buna-S compound, synthetic rubber compound formulated or pigmented with titanium pigments.

Q. Please give the dates as you go along.—A. That was dated June 11, 1943.

Q. Exhibit No. 12 is a paper by two of our chemists on the method of testing the hiding power of paints, published in June, 1944; a very complicated technical study.

Exhibit No. 13 is a booklet on the physical study of two-coat paint systems, which data was developed by our

Sayville station in conjunction with the research laboratory.

Exhibit No. 14 is another booklet on exterior house paints and primers which covers some three or four years' work at Sayville.

Exhibit 15 is a booklet entitled "Hiding Effects in Flat Wall Finishes," written principally around Titanox-C in comparison to other white opaque pigments, particularly lithopone.

3080 Exhibit 16 is a booklet on exterior house paint formulations with chalk-resisting types of titanium oxides, which were then comparatively new on the market. It is dated March, 1940.

Exhibit 17. This is a booklet on titanium pigments and their use in the paper industry. It comprises several papers, developed by our paper laboratory. (February, 1937.)

Exhibit 18 is a paper written by Mr. Breckley of our rubber laboratory on research conducted on the use of titanium pigments in white sidewall tires.

Exhibit 19 is a study by the paint and varnish laboratory on the conservation of oil which was written in Houston, Texas, on June 9, 1943, following the oil restrictions required by the War Production Board.

National Lead Exhibit 20 is a study on prospective post-war paints, dated May 15, 1944, and outlines our study principally into water or emulsion type of finishes.

Exhibit 21 is a booklet which was printed in Portugese and was distributed throughout South America except Brazil——

The Court. Except Brazil?

The Witness. This is just the wrong way around.

The Court. I should be surprised that they published a paper in Portugese, and distributed everyplace

3081 except Brazil.

The Witness. Yes. I have forgotten which language they speak in each of those countries.

The Court. It is Portugese there.

The Witness. This is distributed throughout South America, except in Brazil, and printed in Portugese, introducing——

The Court. Printed in Spanish. The one that was distributed throughout South America, except in Brazil, was printed in Spanish, was it not?

The Witness. That is right.

(Continuing)—introducing our company and our pigments and their uses to the South American market.

The COURT. The date?

The WITNESS. 1943.

A. (Continuing) And Exhibit 21 was a booklet—that is one we have covered.

Exhibit 22 is a booklet which was printed in Portugese and distributed throughout Brazil for the same purpose as Exhibit No. 21.

Q. Now referring to the papers of a technical character, to whom were those distributed, that is the pamphlets and papers of a technical character?—A. To technicians in the industries covered by the paper.

Q. Have you ever made any effort to issue a pub-
2682 lication to stimulate an interest in Titanox products to consumers of paint and rubber and other articles of that sort?—A. Not maybe as far back as the actual consumers themselves. We have issued one booklet which was distributed to architects and also to manufacturers of white footwear or paint, which was then distributed by those manufacturers to their customers, which would be a paint store or a footwear store.

Q. Now, is that exhibit National Lead's 9 for identification with reference to the "Service Behind the Emblem"?—A. Yes.

(National Lead Exhibit 23 marked for identification.)

Q. Mr. Corddry, have you prepared or had prepared under your direction a chart showing the tons of Titanox products in terms of TiO_2 compared with prevailing prices for your products for the period 1920 to 1944?—A. Yes.

Q. I show you National Lead Exhibit 23 for identification and ask you if that is the chart you refer to as having been prepared by you?—A. Yes.

The COURT. Does that show sales by TPC or by everybody?

Mr. WEBSTER. Well, I will ask the witness in just a minute.

Q. What was the course of the information that was used to compile this chart?—A. Our own sales rec-
3083 ords in the case of sales and our records within the sales department or the accounting department as regards prices.

Q. So far as this shows sales of Titanox products in terms of TiO_2, those of course are sales by the Titanium Pigment Corporation, are they not?—A. Yes.

Q. And do not purport to include any sales by any other company or companies?—A. No.

Q. And likewise the prices are your own prevailing prices for the period shown on the chart?—A. Yes.

Mr. WEBSTER. Now I think the chart speaks quite adequately for itself, but just so that there can be no question about the identification later, I want to ask two or three questions about the chart.

Q. What does the chart show with reference to your sales for, say, 1921?—A. Approximately 500 tons.

Q. Now I note that there was an increase in sales from 1921 to 1937. Will you direct your attention to that point in the chart, please?—A. Yes.

Q. And that there appears to have been a recession of sales in terms of volume during the year 1937; is that correct?—A. Yes.

Q. Can you explain the reason for that?—A. I can explain it as being a general condition at the time and merely due to the depression.

Q. How about inventories? Did they have any-
3084 thing to do with that or was it purely a depression factor?—A. As far as I know, the inventories did not have anything to do with it.

Q. Now, directing your attention to the point to which the sales volume rose in 1941, what does that show with reference to sales of Titanox products in terms of TiO_2 at that time?—A. A little better than 68,000 tons.

Q. Now there appears to have been a recession from that point to a point in 1942. Can you explain that?—A. Well, that was due principally to overbuying in 1941, and a consumption of inventories in 1942, and the fact that the paint industry itself declined in the same year.

Q. Since that date the curve shows a continuous rise running outside the chart; is that correct?—A. That is correct.

Q. Now, Mr. Corddry, the chart indicates that the price at which sales began in 1928 was 40 cents. What is the reason for not having any price shown with reference to the period prior to 1928?—A. The price from our records could not be definitely shown. Since this chart was prepared, nevertheless, I think that the accounting department now has sufficient evidence to prove that the price, the year prior to this chart, the price in 1926, the first sale was made at 50 cents rather than at 40 cents.

Q. To what point had the price dropped by the
3085 middle of 1939?—A. 13 cents.

Q. To 13 cents?—A. Yes.

Q. Now, this is a composite chart, is it not, in the sense that the prices represent the prices in terms of TiO_2 content of all Titanox products?—A. No, it does not. It represents the prices of pure titanium oxide, the curve that I am referring to.

Q. Whereas the other curve represents the increase in volume in terms of TiO_2 content?—A. That is correct.

Q. Volume sale.

The COURT. Are you offering it in evidence?

Mr. WEBSTER. I thought I would wait and offer them all.

If the Court please, I think I will at this time offer in evidence National Lead Exhibit 23 for identification which is the chart just described by the witness.

The COURT. Without objection it will be received.

(NL Exhibit 23 for identification received in evidence.)

3086 Q. Mr. Corddry, have you prepared or had prepared under your direction a chart showing the annual sales in tons of Titanox pigments, compared with other white opaque pigments?—A. Yes.

(Chart marked Defendant's Exhibit NL-24 for identification.)

Q. I show you National Lead Exhibit 24 for identification and ask you if that is the chart that we have just referred to and as to which you gave your answer?—A. Yes, sir.

Q. From what source or sources was the information on that chart obtained?—A. The information regarding the Titanox pigment was obtained from our own sales records. Information regarding white lead, zinc oxide and lithopone was obtained from the Bureau of Mines.

The COURT. That is the Department of the Interior?

The WITNESS. The Department of the Interior.

Mr. WEBSTER. I offer that in evidence, if your Honor please.

(Defendant's Exhibit NL-24 for identification received in evidence.)

Q. May I ask if there are any sales shown on this chart other than sales of the products of the National Lead Company, or the Titanium Pigment Corporation?—A. Yes.

Q. I mean—— A. It shows lithopone and zinc

3087 oxide, which we do not manufacture.

The COURT. He means the Titanox pigments. Any Titanox pigments manufactured by other concerns than your own.

The WITNESS. No.

Q. Now with reference to the lithopone sales and the zinc oxide sales and the white lead sales, are those the total of the United States sales?—A. I think yes; I think so.

Q. So that the comparison here is only a comparison between sales by the Titanium Pigment Corporation and all sales of those other products, is that correct?—A. Yes.

By the COURT:

Q. Do I understand, Mr. Corddry, that the solid lines represent pure TiO_2 and that the dotted lines represent composite pigments?—A. No. The dotted line represents all pigments, the composite and the pure pigments, whereas the solid line is the TiO_2 content of all pigments.

(Chart marked Defendant's Exhibit NL-25 for identification.)

Q. Mr. Corddry, have you at my request prepared a chart showing the increase in use of titanium pigments in various industries, that is, the paper, welding rods, rubber and leather industries, for the United States, in terms of TiO_2 content of your pigments from 1933 to 3088 1943?—A. Yes.

Q. I show you National Lead Exhibit 25 for identification and ask you if that is the chart that you refer to?—A. Yes.

Mr. WEBSTER. I offer that in evidence, if the Court please.

(Defendant's Exhibit NL-25 for identification received in evidence.)

Q. Now just to make sure about the lines, what is the use made of titanium pigments in paper? You said it was used in paper.—A. It is used in two ways. It is either added to the paper or in some way incorporated in the paper itself, or for coating purposes for greater opacity or brightness or both.

Q. And has the use of titanium paper been an increasing use?—A. Yes, very decidedly.

Q. Now what is the use indicated by the words, welding rod coatings, what is that use?—A. Welding rods, for a higher grade of welding, are coated with titanium oxide for very highly technical reasons. It makes a better weld, if that is a sufficient answer.

Mr. WEBSTER. Yes.

Mr. WHITNEY. Mr. Webster, just for clarity, is this just your company or the whole industry?

Q. Will you answer that question, Mr. Corddry?—
3089 A. It is our sales only.

Mr. WHITNEY. It does not say so, and that is why I asked.

Q. You have not attempted on any of these charts to include any estimates of sales by any other company or companies, is that correct?—A. No.

(Chart marked Defendant's Exhibit NL-26 for identification.)

Q. Mr. Corddry, have you at my request prepared a chart showing sales of Titanox-A, Titanox-B and Titanox-C, in or to Canada, for the period from 1929 to 1944?—A. Yes.

Q. I show you National Lead Exhibit 26 for identification and ask you if that is the chart you refer to?—A. Yes, it is.

Mr. WEBSTER. I offer it in evidence, if the Court please.

(Defendant's Exhibit NL-26 for identification received in evidence.)

Q. Mr. Corddry, from 1933 until say 1937, did Titanox pigments tend to replace or supersede lithopone in the manufacture of paint?—A. Yes.

Q. Can you explain the reason for that?—A. It replaced lithopone because it was of greater dollar value to the paint manufacturer than lithopone.

Q. Now can you just translate into terms of cost per square foot of hiding power, or the pigment cost per square foot of hiding power?—A. Well, for 1000 square feet of hiding power an enamel, for instance, pigmented with Titanox-RC-HT, would cost 40 cents per 1000 square feet, whereas lithopone would cost 60 cents and cover that same area.

Q. Can you give that same example in terms of square foot of hiding power per dollar?—A. I do not know that I can.

The COURT. That is an arithmetical calculation and with a piece of paper we can all do it. I don't think you need trouble the witness about that. 2500 feet for a dollar, isn't that right?

The WITNESS. As I remember, you get 2550 square feet for Titanox-RC-HT per dollar, and 1600 for lithopone.

Q. Do your products duplicate, or tend to duplicate to some extent, products of your competitors?—A. Yes.

Q. Is there any reason for that?—A. Well, the basic reason is that we must have pigments of equal value to those of our competitors in order to enjoy business, in order to sell our pigments.

Q. Apart from pigments which are accepted by consumers for similar uses, do you have varieties of pig-

ments that are different, that is, entirely different,
3091 from varieties offered by your principal competitors?—A. Yes.

Q. Can you indicate examples of that?—A. Well, there have been times when we have manufactured and placed on the market a pigment different from that manufactured by competitors and also they have from time to time produced and marketed pigments different from those which we had on the market. I could mention Rutile non-chalking pigment now produced by one of our competitors that we still do not manufacture. And we also manufacture lead titanate which was never manufactured by any competitor and they have manufactured colored titanium oxides which we have never manufactured.

Q. Do you and the du Pont Company sell your products to, or endeavor to sell your products to, substantially the same list of customers?—A. Yes.

Q. Do you make any effort to allocate customers with the du Pont Company?—A. No.

Q. What is your effort in that respect?—A. Well, we use our best effort to sell any and all customers.

Q. Do you and the du Pont Company have any arrangement with reference to the division of customers in respect of territories of sale?—A. No.

Q. And are the salesmen in your department engaged in pushing Titanox products all over the United
3092 States?—A. Yes, sir.

Q. Now do you from time to time lose customers to the du Pont Company?—A. Yes.

Q. And do you from time to time get customers away from the du Pont Company?—A. Yes.

The COURT. Undoubtedly more frequently in the reverse?

The WITNESS. Oh, entirely so.

Q. Have you an account called Timeproof Paint Products Company?—A. Yes.

Q. Is that an account of yours?—A. It is now, yes.

Q. Is that a customer that formerly purchased from the du Pont Company?—A. Well, that company originally purchased from us. Then due to some inconsistencies in our products we lost the account to a competitor, and then in 1941 or 1942 we regained the account.

Q. Is that a substantial account?—A. Yes.

Q. Now have you an account called the Margate Manufacturing Company?—A. Yes.

Q. Has that always been your customer?—A. Margate

was our customer, one hundred per cent, for many years, and in approximately 1940 a competitor offered them a grade of pigment which we did not then manufacture and they took the account away from us and unfortunately still have it.

3093 Now what is the situation with reference to the Cook Paint and Varnish Company?—A. The Cook Paint and Varnish Company up to 1935 purchased their pure titanium oxide from a competitor and their composite pigments from us. In about 1935 a competitor for the first time offered composite pigments in the market and the account changed to the competitor and then purchased their entire requirements from the competitor up to about 1941, at which time we manufactured and placed in their hands a grade of pigment which they preferred to that which they were buying from the competitor, with the result that we now have their entire business on composite pigments and a portion of their business on pure pigments.

Q. Now tell us how about the case of the Kuhn Paint and Varnish Works of Houston, Texas, what is the situation there?—A. Kuhn had always bought from a competitor, and in 1938 or 1939, or it may have been later than that, it may have been 1940, we appointed a sales agent in the State of Texas and through that agent and through having a local representative who knows and is intimate with the customers in that area, we have been able to gain most of the Kuhn Paint Company's business, probably 95 per cent.

The COURT. I think these are intended to be illustrative, isn't that so?

3094 Mr. WEBSTER. Yes, that is true.

The COURT. You are not trying to prove each one of these individual transactions?

Mr. WEBSTER. No, your Honor.

The COURT. Do you think we have had enough illustrations?

Mr. WEBSTER. Yes, I think we have.

Q. There are other cases of that sort where business has been taken away from your competitors and where they have taken business away from you?—A. Yes.

(Short recess.)

Q. Mr. Corddry, in your description of those cases of customers gained from and lost to the competitors, the competitor that you referred to was the du Pont Company, was it not?—A. It was either the du Pont Company or their agent, the R. T. Vanderbilt Company.

Q. And that was true in all the cases you described?—A. Yes.

Q. Now you spoke of having employed an agent in Texas. Was that a customary arrangement or an unusual arrangement?—A. It is unusual. Our general policy is to sell through our own representatives. We have only three agents throughout the country. This agent in Texas was one of those.

Q. Where are the other agents located?—A. On
3095 the Pacific Coast.

Q. Is there any particular reason for maintaining agencies instead of engaging in direct selling on the coast?—A. One of our agents on the Pacific Coast is the National Lead Company, Pacific Coast Branch, who represent us in the States of Oregon and Washington. In California we have an agent who was particularly qualified to represent us and to get business for us which we considered would take a long time by direct selling because of their intimate contact with some of the major accounts in California.

Q. Now in terms of percentage of sales, could you estimate the percentage of sales that are made through agents, as distinguished from direct sales by the company itself, just roughly?—A. Roughly I would say it would be less than five per cent.

Q. Now what is your method of making sales to South America in countries other than the Argentine?—A. Did you say what was the method?

Q. The method.—A. We have appointed Binney & Smith Company as our sales representative in South America, except in Argentina, and Uruguay.

Q. What is the nature of the business of the Binney & Smith Company?—A. They are principally lamp and carbon black manufacturers and they also maintain an export department, exporting many commodities to South America.

3096 Q. Do they have a sales organization in South America?—A. Yes.

Q. And was that the reason for appointing them as exclusive agents, or one of the reasons?—A. That was one of the principal reasons, yes.

Q. What other reasons are there?—A. Another reason was that we wished to select a reputable and honest company and one with that reputation in South America to represent us.

Q. Now there is a difference, is there not, in your representation in the Argentine?—A. Yes.

Q. Through what agency do you distribute in the Argentine?—A. National Lead Company, S.A.

Q. Is that a subsidiary of the National Lead Company?—A. Yes.

Mr. WEBSTER. May I interrupt a second to offer in evidence National Lead Company Exhibits 8 through 22 inclusive.

The COURT. Only on the stipulation that if this record has to be printed, you are not going to ask to have them incorporated in the printed record?

Mr. WHITNEY. What are these?

Mr. WEBSTER. These are all pamphlet publications. That is a stipulation I shall be glad to make, your Honor.

3097 The COURT. All right. Otherwise I won't receive them.

Mr. WHITNEY. I assume that we will have reasonable access?

The COURT. Oh, yes. Of course they are exhibits in the case if they are received in evidence. I would not burden any appellant, whoever it may be, with the necessity of printing any of that material.

Mr. WEBSTER. No. I think that is a very proper limitation, your Honor.

(Defendant's Exhibits NL-8 through NL-22 for identification received in evidence.)

Mr. WEBSTER. That is all, your Honor.

Cross examination by Mr. DIXON:

Q. Mr. Corddry, in 1928, by referring to Chart No. 23, I notice that the price of Titanox-A was listed on the chart as 40 cents a pound, is that correct?—A. Yes.

Q. Now at that time National Lead Company made some composite pigments, Titanox-B and Titanox-C, that is correct, is it?—A. I don't know whether Titanox-C was on the market in 1928.

Q. Well, it would appear to be from the chart, if I read your chart correctly?—A. Yes.

Q. Now the Titanox-A was the pure TiO_2, so-called?—A. Yes.

Q. And the B and C were the composite pigments, is that correct?—A. That is correct.

3098 Q. And those were the three grades made by National Lead Company at that time in 1928?—A. Yes.

Q. Now coming to 1933, say from the period of 1928 to 1933, January 1st of 1933, those same general grades were made, namely, a TiO_2 or pure pigment and the two grades of composite pigments?—A. Yes.

Q. And what percentage of the total sales of the National Lead Company were represented by those three pigments at that time; in the pigment field, of course, of National Lead—all of it?—A. I do not understand the question.

Q. Well, did you manufacture any other type of pigments other than the Titanox-A, B and C on January 1, 1933?

The COURT. Referring to Titanium Pigment Corporation or the National Lead Company?

Q. Titanium Pigment Corporation was your manufacturing concern at that time, was it?—A. Yes.

Q. And the only one?—A. Titanium Pigment Company at that time.

Q. Yes. That is right. As a matter of fact did the Titanium Pigment Company manufacture any other grades than the A, B and C?—A. No.

Q. And did they manufacture any other grades than the A, B and C up to and through the year 1936, if you recall?—

A. I do not know when they manufactured for the
3099 first time lead titanate. It was probably, if my recollection is correct, it would be 1935 or 1936.

Q. Well, would you say it was a fairly reasonable statement, I mean a fairly correct statement, to say that substantially all of the production of the Titanium Pigment Company and National Lead Company through 1936 was in those three grades of pigments?—A. That is correct.

Q. Now, was there any other company in the business at that time selling either a pure pigment or a composite pigment?—A. Yes.

Q. What other companies were there?—A. There was Krebs Pigment & Color Company.

Q. Was that the only company?—A. As I remember it that is correct.

Q. And up to January 1, 1933 what product was Krebs Company manufacturing?—A. The pure pigment.

Q. That is just the TiO_2?—A. Yes.

Q. Now do you know what grades Krebs manufactured through the year 1936—from 1933 to 1936?—A. I believe it was in the middle of 1935 that Krebs first manufactured Titanox-B and Titanox-C or the equivalent to B and C pigments.

Q. That is the commercial equivalent of your Titanox-A and Titanox-B?—A. No, B and C.

Q. And the commercial equivalent of your Titanox A was the Ti-Pure Krebs product?—A. Yes. That is correct.

3100 Q. That was the trade-mark for their TiO_2, is that correct?—A. That is right.

Q. So that through the year 1936 the Krebs Company was manufacturing, the latter part of 1935 to the end of that year if I understand your testimony correctly, substantially only a TiO_2 or what they sold under the trade name of Ti-Pur?—A. That is right.

Q. And your commercial equivalent for that product was Titanox-A?—A. That is correct.

Q. Now by referring to this chart I notice that during the years 1933 through a portion of 1936 that the price of your Titanox-A was very steady at 17 cents a pound. Do you know what the price of the commercial equivalent product of Titanox-A sold by Krebs was during that period?—A. No.

Q. Do you have the records to indicate what it was, as sales manager of the National Lead Company?—A. I don't know whether we have specific records as to what other prices were at the time.

Q. Well, do you have any way of stating to the Court, from your experience as sales manager of National Lead Company and Titanium Pigment Division, from your records what the prices were of Ti-Pur during the period of time that I have mentioned, namely, from 1933 through the latter part of 1936 when your chart shows the

3101 price of Titanox-A at 17 cents a pound?—A. I have difficulty in whether I should answer that by memory or whether I must refer to some specific records. If you wish me to answer by memory——

By the COURT:

Q. You knew your price was 17 cents a pound down to 1936?—A. Yes.

Q. I assume that any sales manager keeps himself abreast of his competitive prices?—A. That is correct.

Q. You try to find out by one way or another—— A. That is correct.

Q. You may not always get precisely correct information but you try to get as close to that as you can, is that so?—A. That is so.

Q. So you must have some recollection whether you

were at that time selling at a premium above it or whether you were selling at a disadvantage of Ti-Pur or whether the prices were exactly the same?—A. Oh, I have that very definitely, but I thought I might have some factual proof——

Q. Oh no.—A. My recollection is that they were sold at exactly the same price.

By Mr. DIXON:

Q. Now say from January 1, 1937 on—I am just taking an arbitrary date now, Mr. Corddry—were there any other grades other than those that you mentioned,
3102 Titanox-A, B and C, put onto the market by National Lead Company?—A. We put on the market a product called Titanox-L, or lead titante.

Q. Is there a corresponding product manufactured by the du Pont Company, or was there at that time?—A. No.

Q. Is there today to your knowledge?—A. No.

Q. Is there any product in the nature of Titanox-M manufactured by the du Pont Company?—A. Yes.

Q. What is the name of that product?—A. Ti-Sil.

Q. Is that product commercially comparable or equivalent to your Titanox-M?—A. Yes.

Q. And what is the price at which your Titanox-M is sold?—A. We have discontinued Titanox-M for the last three years.

Q. What was the price before you discontinued the sale of it, do you recall?—A. I think it was 5½ cents per pound.

Q. And what was the price of the corresponding commercial equivalent product of du Pont?—A. The same price.

Q. What percentage of the total sales of the National Lead products represented pigments, I am speaking of now titanium pigments, is represented by your grades, Titanox-A, B, C and M?

The COURT. And L? Or don't you want L?

Mr. DIXON. I believe the lead titanate, I under-
3103 stand, is a little bit different, your Honor.

The COURT. All right. You want to know the percentage of their total sales represented by A, B, C and M?

Mr. DIXON. Approximately.

A. 99 plus.

Q. In other words, that represents pretty close to 100 per cent of your entire sales.

Now, Mr. Corddry, the price of Titanox-A, as I understand it, according to this chart was——

Mr. WEBSTER: Is that Exhibit 23?

Mr. DIXON. Yes.

Q. —was 17 cents a pound in 1937, is that correct?—A. I cannot recall the price by year, but the chart is correct to the best of our ability.

Mr. WEBSTER. Shall I show him the chart?

The COURT. Yes. Go ahead and show him the chart.

Mr. DIXON. I thought he had the chart. Really I am sorry.

(Exhibit handed to witness.)

The WITNESS. The price was 17 cents.

Q. What was, if you know, the price of the corresponding commercial equivalent du Pont product, Ti-Pur?—A. That was the same price. That is from recollection.

Q. Yes. I understand.

3104 Mr. WEBSTER. I think, Mr. Dixon, in 1937 the price according to the chart was 16 cents. I don't know that it matters for your purpose.

The COURT. The witness says it was 17. I will take the witness's word for it.

The WITNESS. That is correct.

Q. Will you state to the Court what the price of Titanox-A was in 1938?—A. It was 16 cents.

Q. What was the price of Ti-Pur, the corresponding commercial equivalent product, at that time? The same?

The COURT. If we are going to get the same for all the years we can point them all in one question: Is the price of Ti-Pure and the Titanox-A of National Lead running the same right down the line?

The WITNESS. Yes.

Mr. WHITNEY. Not to interrupt any cross examination, but just to say that all these prices are in evidence already.

Mr. DIXON. I knew the National Lead, but not du Pont.

Mr. WHITNEY. Yes. Both of them, so this is really testing credibility.

The COURT. All right.

Q. What is the commercial equivalent of Titanox-B?—A. Ti-Bar.

3105 Q. And Titanox-C?—A. Du Pont Ti-Cal.

Q. And has there been any differences in the prices of those commercial equivalents of National Lead as against du Pont's corresponding equivalent products?—A. No.

Q. Now Titanox-L, is there any corresponding commercial equivalent product manufactured by the du Pont Company?

The COURT. The witness said no a long time ago.

Q. I believe you mentioned, Mr. Corddry, that you had lost some of your customers to du Pont. Did you ever lose any of them on account of price?—A. No.

The COURT. Manifestly no. He says the price was the same.

Mr. DIXON. That is all, your Honor.

Cross examination by Mr. WHITNEY:

Q. Mr. Corddry, when you say that a product is commercially equivalent you do not necessarily mean that is chemically identical, do you?—A. Not necessarily, no.

Q. Or physically identical?—A. No.

Q. And presumably it will accomplish most of the objectives that a consumer might have that the other product will accomplish?—A. That is right.

Q. But not necessarily all the objectives? One
3106 might accomplish something that the other one would not accomplish?—A. Yes.

Q. Now you are aware, aren't you, that, taking Ti-Pur for example, du Pont has at least four different types of Ti-Pur, HH, HHK, HHW and YCR?—A. Yes.

Q. And those have different, maybe not greatly, but to some extent different qualities?—A. Those four du Pont——

Q. Yes.—A. Yes.

Q. So that when you are answering that Ti-Bar is commercially equivalent to Titanox-B you mean in a general sense rather than in any precise sense, isn't that so?—A. Ti-Bar and HH, for instance, are similar commercially to Titanox-B-30. The du Pont Company would manufacture a grade, or it manufactured a grade of Ti-Pur, YCR, which is equivalent to Titanox-AA, so that each grade of Ti-Pur is equivalent, commercially, to a grade of Titanox-B-30, but not in groups.

Q. Then there are several different grades of Ti-Bar produced by your company, are there?—A. Yes.

Q. So that to that extent it would be right to say that when you were responding to Mr. Dixon's inquiry about Ti-Bar and Titanox-B you only meant in a general sense they were equivalent, because there are different qualities within each?—A. Yes.

Mr. WEBSTER. You do not mean to say there
3107 were several grades of Ti-Bar produced by both companies?

Mr. WHITNEY. Ti-Bar or Titanox-B.

Q. Now the same is true to an even greater extent as among various grades of Titanox-C or Ti-Cal, is it not?—A. Yes.

Q. I am told that du Pont has at least seven grades. I would just like to ask you whether, on the whole, you would agree there is grade R-20 that is a general purpose rutile calcium pigment for all kinds of architectural finishes—I am not asking you to agree that it is correctly stated, but it is a du Pont product—— A. Yes.

Q. And R-21 is more readily disposable and designed for gloss paints and enamel, is it not?—A. Yes.

3108 Q. And R-25 retains the superior properties of R-21 but it is less affected by water and humidity?

The COURT. The witness need not commit himself on that.

Q. (Continuing) Well, that is superior in the sense that the R-21 is superior to R-20?—A. Yes.

Q. That you would not disagree with. And R-30 has high flat hiding rutile type and has thick consistency and minimum in flats, is that right?—A. Yes.

Q. I won't burden you or his Honor any longer, except would this be fair to say that there is a very great variety of products between various companies within this 99-plus per cent?—A. Yes, sir.

Q. Now, not merely do you make lead titanate, which du Pont does not, but you have other products, do you not, too? That is merely an example of the products that you make that du Pont does not make?—A. Yes.

Q. For example you have—I do not know how to pronounce it—phthalate-treated products, do you not?—A. No longer, no. We did have that at one time—phthalate-treated products at one time.

Q. And other products similarly?—A. Yes.

Q. And has du Pont had really a great number of products that you have not seen fit to go along with or you have not had the equivalent of?—A. Well, I

3109 will say several.

Q. Well, I have a list here of over 20.—A. Well, they have been holding out on me.

Q. Who has been holding out on you? I like that answer. Who has been holding out on you?—A. I could not recall 20.

Q. I want you to answer my question, Mr. Corddry: who has been holding out on you?—A. No one.

Q. You meant that in humor, didn't you?—A. Yes.

Q. Now whenever du Pont would reduce or increase a price in respect of a product for which you considered that you had a commercial equivalent product, in the sense in which you have used "commercial equivalent" here, you would immediately reduce or increase your price in order to meet the competition, would you not?—A. Yes.

The COURT. How do you meet competition by immediately increasing the price?

Mr. WHITNEY. For the present let us take only a reduction.

Q. You would immediately reduce?—A. Yes.

Q. And vice versa, if you reduced du Pont reduced. As a matter of fact, how many increases of the price, for example, of Titanox A, have there been prior to the war?—A. None. Well, there was one.

Q. I think there was an increase in 1941, was there 3110 not?—A. An increase January 1, 1941.

Q. Then there was a second increase in the same year, was there not?—A. Yes.

Q. But no increase further until 1941?—A. That is correct.

Q. Which party first instituted that increase; National Lead or du Pont? Do you remember?—A. No, I don't remember.

Q. Wasn't that a price that was approved or recommended by the War Production Board?—A. No, I do not think so.

Q. Now, did there ever come a time when either company would produce an important product of different grade from that of the other company?—A. Will you repeat it?

Q. Did there ever come a time when either company produced a product that you would call improvement that had not theretofore been produced by the other company?—A. Yes.

Q. And would it be true to say that in each instance the other company promptly sought to match the product for quality?—A. Yes.

Redirect examination by Mr. WEBSTER:

Q. Mr. Corddry, when you said that the Titanox-A was the commercial equivalent of a du Pont product, did you mean to say that you and your salesmen would concede that the du Pont product was as good as Titanox A?—A. (No answer.)

Q. To put it another way: There were always differences, were there not, on the basis of which, —technical or use conditions—on the basis of which you and your salesmen made an effort to sell the Titanox product at the expense of the du Pont product?—A. Yes, that is true.

Mr. WEBSTER. That is all.

Recross examination by Mr. WHITNEY:

Q. In January, 1940, in respect of Ti-Pur, first is it not true that you heard that du Pont reduced the price one cent and that you thereupon followed suit immediately as soon as you could get your cards ready to give notice to your salesmen? Do you remember that example of the first reduction of price?—A. On the one grade of pigment?

Q. Yes.—A. No, I do not recall.

Q. I do not think we have to press it. And then in respect of the 1941 increases, isn't it true that your company announced early in December, 1940, that there would be an increase and then du Pont followed and issued an announcement to the same effect and price a few days later?—A. I do not recall whether we announced the increase prior to du Pont having anounced it, or whether they announced it prior to ours.

Mr. WHITNEY. I think, if the Court and Mr. Dixon will permit me to say it, I am not trying to put it onto you or saying du Pont originated it. I would be just as
3112 happy the other way.

Q. But it was the fact on these two increases in 1941 that it was announced by one of the companies and then the other one followed up?—A. Yes.

The COURT. Without prior arrangement?

The WITNESS. Yes.

Redirect examination by Mr. WEBSTER:

Q. Inasmuch as Mr. Whitney has brought up a price change in January, 1940, I would like to give you a copy of a letter dated January 16, 1940, taken from the files of the National Lead Company purporting to be a memorandum from Mr. Hagar to Mr. Edgerly, or Mr. Edgerly to Mr. Hagar, and ask you if that refreshes your recollection (handing to witness)?—A. It does not refresh my recollection, no. It is a statement of fact.

3113 The COURT. Mr. Dixon.

Mr. DIXON. I wanted to ask Mr. Corddry a question from this chart 23.

The COURT. Will you let the witness have 23, Mr. Webster?

(Handed to the witness.)

Recross examination by Mr. DIXON:

Q. By referring to the chart, 23, National Lead exhibit for identification, I notice a slight increase in the price of Titanox-C pigments in 1937. Do you recall that, Mr. Corddry?—A. Yes, I recall a slight increase in price.

Q. Do you recall whether a corresponding increase was made on the same day by the du Pont Company with their corresponding commercially equivalent product?—A. No, I can't recall that it was made the same day.

Q. Was that the time that the price was raised from 5¾ cents to 5⅞ cents?—A. Yes.

Q. You say you don't recall whether the Krebs or du Pont prices increased on the same day?—A. On the same day, no, I can't recall.

The COURT. Did you operate in those days on a strictly uniform basis or did you operate on a different discount basis with different customers?

The WITNESS. No. We operated on a uniform basis, with price cards printed and distributed to all cus-
3114 tomers, the terms the same to all customers.

Recross examination by Mr. WHITNEY:

Q. It would be a fair summary of your evidence to say that the competition between you had been on the basis of trying to sell quality, that your quality was better than du Pont's?—A. That has not been the principal basis on which we have sold our pigments. Our pigments have been commercially equal in value and we have recognized that fact, and we have had to use other means, generally speaking other means, to sell in competition to du Pont. That is, by knowing our customers intimately, by technical service, and using our best efforts to sell. Incidentally we bring in differences in grades or properties that we felt our pigment had over those in competition.

Q. And the adaptability of the customers' use needs as studied by you?—A. Yes.

Q. And then servicing him in respect of the needs?—A. Yes.

Q. So that he got not merely the product but he also got the service within the price of the product?—A. Yes.

(Witness excused.)

3126 FLETCHER W. ROCKWELL, called as a witness on behalf of defendant National Lead Company, being first duly sworn, testified as follows:

Mr. WEBSTER. If the Court please, we have prepared in one volume printed copies of certain correspondence taken by the Government from the files of the Lead Company relating largely to the Zirconium Corporation, and I think that if the Court will accept it it would be more convenient from every standpoint simply to introduce that printed volume in lieu of introducing each of the
3127 individual photostatic copies of letters, subject of course to comparison and correction.

The COURT. Is there any objection to that course? There is none. You may offer it in that form. As a single or multiple exhibit?

Mr. WEBSTER. As a single exhibit.

The COURT. Very well.

Mr. WEBSTER. I offer in evidence pages 1 through 107 of a page proof of certain correspondence dated at the top "January 20, 1945 Ad. Press".

(Marked Defendant National Lead Company Exhibit NL-28 in evidence.)

Mr. WEBSTER. There is a separate document at the end that I am going to offer separately.

Mr. WHITNEY. It may be helpful in the future, your Honor, if all agree, that the page numbering stay, otherwise there would be no way of referring to the respective documents.

The COURT. Very well, the pagination will remain.

Mr. WEBSTER. At the end of this volume there is a printed copy of an agreement between the Glidden Company, the American Zirconium Corporation and the National Lead Company, running from pages 108 through 112, which I simply ask to have marked for identification at the present time.

(Marked Defendant National Lead Company Exhibit NL-29 for identification.)

3128 Mr. WEBSTER. If the Court please, my plan, if I may, is to make certain comments concerning these documents and also, I believe, go through the documents, where it seems appropriate, and ask Mr. Rockwell certain questions about transactions referred to in the documents.

The COURT. Very well, you may proceed.

Direct examination by Mr. WEBSTER:

Q. Mr. Rockwell, where do you reside?—A. 277 Park Avenue.

Q. Are you the president of the National Lead Company?—A. Yes.

Q. How long have you held that position?—A. Since January 1938.

Q. How long have you been connected with the National Lead Company?—A. 48 years.

Q. In what capacity were you first employed by the National Lead Company?—A. As superintendent of a Western plant.

Q. How long did that employment continue?—A. 25 years.

Q. What was your next position with the company?—A. I came East to become production manager of the company.

Q. In what year?—A. In 1920.

Q. How long did you serve as production manager?—A. Until 1938.

3129 Q. How is the National Lead Company organized with reference to its branches or divisions?—A. We have companies and divisions and subsidiaries over the country all under local management.

Q. What are the principal divisions of the National Lead Company?—A. Well, there is the Magnus Metal Company.

Q. What is its business?—A. They make railway journals, journal bearings. There is the Titanium Division. They make titanium products. There is the Baroid Sales. They make weighting mud for well drilling.

Q. How about the American Bearing?—A. The American Bearing, well, they make journal bearings for Diesel engines. And there are a number of subsidiary companies, like American Lead. They are refiners of secondary metals. There is quite a number of smaller divisions.

Q. How about magnesium manufacture? Does the company engage in that?—A. Well, the magnesium, we don't do much with that.

Q. You have a plant, do you not, for the manufacture of magnesium?—A. Oh, that is down in Luckey, Ohio. That is a Government plant but we operate it.

Q. Is your organization set up so that the president has overall responsibility for the management of the company?—A. He has overall responsibility, with the management divided, that is, in charge of the local branches and subsidiaries.

3130 Q. When did you first familiarize yourself with the interests and operations of the company in con-

nection with European matters?—A. That was when I became president in 1938; and really, in the summer of 1938, when I went abroad, was the first time I had taken much interest in the foreign matters.

Q. Did you have occasion at that time to go into those matters in detail?—A. Not much.

Q. When did you first begin to take what might be called a detailed interest in the European matters?—A. Well, that was the time when the Department of Justice wanted to go through our files, and that was in 1942, I think it was.

Q. At that time did the Department of Justice cause a subpoena duces tecum to be served on you for the production of books and records?—A. Yes.

Q. What did you do about that?—A. I called up our counsel, Mr. Williamson, and talked with him about it.

Q. What did you decide to do about it?—A. Decided to let the Government have access to the files.

Q. Was anyone instructed to cooperate with the Government?—A. Mr. Kaegebehn was authorized to cooperate with them in every way he could, and spent quite a good many months with them while they were going through the files.

Q. Mr. Rockwell, when did you first become ac-
3131 quainted with the business of the company related to the American Zirconium Company?—A. In June 1938, I think it was. June 1938 I was elected a director.

Q. Do you recall now how long you served as a director?—A. Until, I think it was, 1943. That is matter of record here.

Q. I want to go through certain of these documents contained in National Lead Exhibit 28 and comment on some of those and then ask you certain questions about it.

Mr. WEBSTER. Page 1 and following, if your Honor please, are minutes of the American Zirconium Company for a meeting held December 20, 1939. The minutes show that Mr. Rockwell was present as a member of the board of directors.

In the middle of the page it is said that the royalty agreement dated January 1, 1935 with the Krebs Pigment & Color Corporation was brought up for discussion, there being brought to the board's attention the substantial amount of royalties which had been paid under this agreement to Krebs Pigment & Color Corporation during the year 1938 and this year. Also in this connection, atten-

tion was brought to the marked decrease in the profits of the corporation this year as compared with previous years; that a larger production seemed necessary to remedy the situation.

3132 And then there was adopted a resolution appearing at the foot of page 1 and carried over to the top of page 2, in which the president of the corporation was directed to confer with Krebs and to insist upon a modification of the agreement with Krebs by the elimination therefrom of all limitation as to quantities of titanium oxide which may be produced and, further, to take such steps as may be necessary to procure such elimination.

Q. Mr. Rockwell, do you recall that matter coming up?—A. Yes.

Q. Did you vote in favor of that resolution?—A. Yes.

Q. Was there any restriction of the sort referred to in those minutes in the license from the National Lead Company to the American Zirconium Company?—A. Not that I know of.

Q. There is in evidence a letter dated June 16, 1939 signed by you and addressed to Dr. Jebsen——

The COURT. Exhibit number?

Mr. WEBSTER. I am sorry; at the moment I haven't the number.

Mr. DIXON. It is Exhibit 382, your Honor.

Q. ——in which this sentence appears: "You know the Glidden Company has a license from us to produce up to 6000 tons until 1941; then they step up to 9000 tons which they are preparing their factory to turn

3133 out when the time arrives."

Do you remember that letter?—A. Yes.

Q. Is that an accurate statement?—A. No, that was in error because we had no restrictions, as I found out, on the quantities to be produced.

Q. In these minutes of December 20 there is also reference——

Mr. WEBSTER. If you will just follow this on page 2.

Q. ——to the purchase by the Zirconium Company of a towboat and certain other equipment; do you recall that?—A. That was equipment for operating the plant, getting material around, and so forth.

Q. You were recorded as voting in favor of that?—A. I was.

Q. Also at the end of page 3 there is a reference to a preferred stock dividend. By whom was the preferred stock of the Zirconium Company held?—A. The Glidden Company.

Mr. WEBSTER. If the Court please, the next letter, on page 4, dated November 6, 1939, refers to a different subject, on which I should like to comment.

The first letter in this series, from Mr. O'Brien to Mr. Garesche, is a letter stating that the Glidden Company would like to make arrangements to use the so-called micronizer, which is the apparatus heretofore
3134 described, used in the manufacturing process on which the National Lead Company held an exclusive license from the Pulverizer Corporation.

The next letter, page 5, is a response from Mr. Hagar, general sales manager, in which he says:

"We anticipate that there will be no difficulty in working out arrangements whereby your company can investigate the process in which you are interested and go farther with respect to a license should that be desired."

On page 6, Mr. Garesche, in a letter dated November 29, advises Mr. O'Brien of the Glidden Company that:

"We will be very glad to give you full information regarding the operation and installation of this equipment."

And he suggests that someone from the Glidden organization call upon Mr. F. J. Shirley, the superintendent at Sayreville:

"Who will be pleased to furnish you with full details."

He then says:

"You appreciate, however, that we cannot permit your representatives to view the equipment in operation, for reasons which have been previously explained to
3135 you."

I think the Court will recall that Mr. Garesche took the position that he was obliged not to permit a full inspection of plant operations at Sayreville.

On the next page, 7, Mr. O'Brien, in response, advises Mr. Garesche that it is his understanding

"that the license arrangement will be the same as Krebs, and that the minimum guaranty of 4000 tons will be split equally between National Lead, Krebs and ourselves or that we will pay a royalty of 50 cents a ton on one-third of 4000 tons or 1333⅓ tons. On any tonnage produced above this the royalty will be 25 cents per ton as per Krebs license."

Of course, the evidence also showed that the National Lead Company incurred considerable expense and applied considerable technical skill and energy to developing this micronizer for use in its titanium pigment business.

And then, also, Mr. O'Brien says that he will in the

future direct Mr. Rhodes of his company to interview the proper party to go into the details of operation, and so forth.

Mr. Rea suggests that I should bring out that National Lead Company was not receiving anything from
3136 Zirconium by way of royalty; that it was required to pay this royalty to the Pulverizer Company.

The COURT. So I observed in the letter.

Mr. WEBSTER. Then on December 20, page 8, an assistant secretary, a Mr. Cobb of Zirconium, wrote to Garesche and said that he had been informed that the micronizer "is in the process of installation" and that he assumes that under the circumstances American Zirconium will commence to report royalties just as soon as titanium dioxide has been treated in the mill.

And then on page 9 he simply accepts Mr. Garesche's comments as to the first 4000 tons and the method of handling the royalties and says that Mr. Garesche's statements would be carried out.

On page 10, in a letter to Mr. Garesche from Mr. O'Brien, reference is made to the exchange of technical information between the two companies, and Mr. O'Brien, on page 10, refers to Article VI and sets that forth verbatim.

Article VI, as your Honor will recall, relates only to the imparting semi-annually of technical information and contains that proviso at the foot which limits the obligations of the parties in that respect where there are prior commitments which would interfere with the full exchange.

3137 Then at the top of page 11 he refers to another article, namely Article VIII, which relates to exchange of copies of application. He refers to the fact that this Article VIII requires exchange of applications two months after filing.

Now the reason for that is shown in the next letter from Mr. Garesche, in response, dated May 23, 1941, on page 12, where he points out that

"The purpose of specifying in Article VIII * * * that you should send copies of your patent applications to us two months before filing is not in order to inform us of what you are doing, but is for the purpose of enabling us to forward the applications abroad * * *."

Then in the next paragraph he takes up this matter of the exchange of semi-annual reports and says:

"It appears that the reason for this was that we are so bound by prior obligations that it was virtually impossible

to prepare such reports without including information which we had no right to give."

And then goes on to say:

"Nevertheless, whenever we could, we have endeavored to inform you fully on whatever matters were of interest to you and which were strictly our own to give. For instance, you will recall that we furnished you
3138 blueprints and even the services of one of our engineers in connection with the installation of the Washburn tank. Another instance which might be mentioned is in connection with the Micronizer——"

Then at the end of that letter on page 13 he suggests:

"as a way of meeting the obligations of Article VI that both companies prepare and submit semi-annual questionnaires to the other, covering points of particular interest to each party and that we exchange such questionnaires and answers."

Mr. DIXON. May it please the Court, I don't want to interrupt Mr. Webster, but I rise to inquire as to whether we will follow the same procedure that we have followed heretofore on these documents, that counsel will be given an opportunity to comment after the entire series is completed or shall we interrupt as we go along? It is immaterial to us.

The COURT. What is your wish in the matter, Mr. Webster?

Mr. WEBSTER. It is immaterial to me. I think it is a matter of convenience of the Court. If you prefer to complete the examination I think it might perhaps be the more orderly way of dealing with it.

The COURT. I have no desire to keep Mr. Rockwell on the stand indefinitely and, of course, if we do cross-
3139 comment on each exhibit during the time he was on the stand we would be bound to run into that difficulty. Is it your understanding that you want Mr. Rockwell on the stand during an analysis of all of these exhibits?

Mr. WEBSTER. Yes, your Honor. There are some other exhibits coming up on which I want to ask him certain questions.

The COURT. Then perhaps we had better wait until Mr. Rockwell has concluded.

Mr. WEBSTER. Now the next letter returns to the business as such of the operations of Zirconium. There is a letter dated June 5, 1941, from Mr. Rockwell to Mr. Rogers, Secretary of the American Zirconium Corporation.

Q. Have you got that letter before you, Mr. Rockwell?—A. I have.

Q. Will you please describe to the Court your reasons for writing that letter?—A. There had been a good deal of discussion about wanting to increase the financing of the company so as to increase the capacity of the plant which we were not in accord with for several reasons, as I set forth in the latter part of the letter at the bottom of page 15, where I give some solutions or suggest some, because we didn't feel that the plant was being operated to the best of economy and that, therefore, we were not in favor of putting more money into the operation.

3140 That had been the matter of discussion before several board meetings and resulted in my letter to Mr. Rogers, who is secretary of the company.

Q. Now at the top of page 15 you suggested a reduction of the management fee from $25,000 to $10,000 per annum. Was the Glidden Company receiving a management fee at that time?—A. Yes.

Q. Was Mr. Joyce connected with the Glidden Company?—A. He was the president of the Glidden Company.

Q. Did you have a reason for thinking that the $25,000 management fee was excessive?—A. The fee was not excessive but they were not getting results.

Q. I notice you also suggest a reduction of selling commission from 5 per cent to 3 per cent.—A. That was because that fee——

The COURT. Who was getting it?

The WITNESS. The Glidden Company.

A. (Continuing) That was above what is ordinarily paid for commissions of that kind.

Q. Were these matters covered by a contract between the Glidden Company and the Zirconium Company?—A. Yes.

Q. Do you happen to recall how long that contract had to run?—A. No.

Q. But it was for a term?—A. It was for a term.

Q. You also suggest a reduction of the interest

3141 on the 600,000 preferred shares from 7 per cent to 4 per cent. Was there some reason for that?—A. There was a good reason for that, because the Glidden Company owned all of the preferred stock and was getting the dividends from that, whereas the common stock was paying nothing.

The COURT. Who held the common?

The WITNESS. The Glidden Company.

A. There were three: Glidden, Metal & Thermit, and National Lead.

Q. Now on page 15 you comment on the proposal for changing the process of the Zirconium Company to a rutile type pigment, and then go on to say that the National Lead Company had not brought out a rutile pigment but only a C pigment of high tinting strength containing the rutile crystal type. Will you tell us what that proposal was and what you opinion was as to that?—A. Well, that was very clear because right in this connection,

3142 where I said that we lacked confidence in the management, they were constantly wanting to change to something, and they were much interested in the rutile type of pigment which had not been produced by the National Lead to any great extent, and to change over on an undeveloped pigment would cost considerable money, not knowing how much. That is why I objected to the rutile type of pigment that then had not been very extensively put on the market; it had been an experiment, to get into it, and it would have cost an unlimited amount of money; untold amount of money, to develop it.

Q. As the representative of a stockholder, was it your position simply that it was bad business judgment for them to go into that pigment?—A. At that time.

Q. You say "at that time." Why?—A. Because it had not been developed; it would have cost a lot of money to develop it.

Q. Does the fact that this proposal was made in the middle of 1941 instead of at some other time, affect your opinion about it?—A. No.

Q. Now on page 15 you requested additional information from the management regarding the proposal for the rutile process and also an estimate of the cost of changes and an estimate of the production cost of new pigment.

Had you been able to get adequate information

3143 from the Zirconium Company about these matters?—A. No, and that is brought out in the last line where it says that I asked them not to give a hurried estimate, which was what Mr. O'Brien kept submitting—it was a hurried estimate. We wanted a detailed consideration of it.

Q. In the last paragraph you refer to a discussion which you had with Dr. Hirschland. Who was Dr. Hirschland?—A. I think he is the president of the M. & T. Metal & Thermit Company. He was also a director of the company.

Q. Of the American Zirconium?—A. Of the American Zirconium.

Q. What is the business of the Metal & Thermit Company?—A. Oh, they refine tin, recover tin from various articles, doing a great deal of the recovering of tin from tin cans during the war.

Mr. WEBSTER. On page 17 there is a copy of the minutes of the board of American Zirconium Corporation, of a meeting held June 25, 1941, at which Mr. Rockwell is reported as attending. In the middle of that page the minutes indicate that the ilmenite situation was referred to and discussed at length, and Mr. O'Brien stated that "the supply on hand at the present rate of consumption would last until some time in December, but that he hoped that an additional source of supply would be found,
3144 but he could not give definite assurance to the board" about that.

Q. Do you recall that matter coming up, Mr. Rockwell?—A. Yes.

Q. What was the situation at that time with reference to supplies to ilmenite?—A. Ilmenite was getting scarce, we could not get it from India any longer, where we had been bringing it from, on account of the demand of the Government on boats for other purposes; so not only they but we were getting short of ilmenite.

Do you care for me to speak about the McIntyre development which preceded this?

Q. No, I will come to that in just a moment.—A. Pardon me.

Q. Other than the McIntyre development, was there any other well established source of ilmenite at this time?—A. No.

Mr. WEBSTER. On page 18 the minutes report that the president referred to his letter to the directors, dated May 15, 1941, regarding the need of additional capital. And then later on in that paragraph it is stated that Mr. Horsburgh——

Q. Who was Mr. Horsburgh?—A. He was the secretary I think he is both the secretary of The Glidden Company and was also the secretary of the American Zirconium.

3145 Mr. WEBSTER. (Continuing). "Mr. Horsburgh, after making a rough estimate, stated that with additional capital of $300,000, the loan of the New York Trust Company and the advance of The Glidden Company of $100,000 would be paid off and that the other obliga-

tions could be met from the results of operations, * * *."

He was asked to prepare a budget setting forth the estimated income and the obligations, and Mr. O'Brien was asked to prepare a statement answering certain specific questions, asked him by Mr. Rockwell, as to what is being done to assure a supply of ilmenite, whether the use of domestic ores would affect, and the extent, the output of the plant and the cost of operations and necessitate the installation of additional equipment, and what he estimated the quality of domestic ores which could be used, and also those asked by Dr. Hirschland.

Q. With reference to that matter of additional capital, do you recall that matter coming up, Mr. Rockwell?—A. Yes.

Q. What was your position about that?—A. Our position was the same as it had been, that we did not care to put up extra capital for operating the company in whose management we did not have confidence.

Mr. WEBSTER. Now on page 20, if the Court please, there is a letter from the American Zirconium
3146 Corporation to Mr. Rockwell and Mr. Rogers, dated September 8, 1941, giving notice of a meeting to be held September 12:

"To discuss the proposition of the National Lead Company regarding the development of a supply of ilmenite in Essex County, New York, and decide whether the American Zirconium Corporation wishes to take a participation.

"To discuss and arrange for adequate financing of the American Zirconium Corporation.

"To discuss the plan of increasing the productive capacity of the American Zirconium Corporation to 9,000 tons per annum * * *.

"To discuss the matter of purchasing ilmenite for the manufacturing operations of the American Zirconium Corporation from The Glidden Company."

Then on the next page, 21, reference is made to a communication that Zirconium had from OPM who, according to this letter, insisted that the Zirconium Company must have a meeting to come to a decision regarding its participation in the National Lead Company proposition.

Then in the next paragraph Mr. Joyce reports that he explained to the OPM that the Glidden stockholders are extremely anxious to increase the productive capacity from 9,000 tons, but that the directors representing the

Metal & Thermit Corporation and the National
3147 Lead Company are reluctant to make the necessary additional investment in the stock to enable American Zirconium Corporation to properly carry out such plans. "They have stated that they are doubtful of a supply of raw material, etc."

Q. Now first, Mr. Rockwell, at this time, did you have under consideration the development of the McIntyre property?—A. Yes.

Q. Did you then know or have an opinion as to when the property would come into active production?—A. We did.

Q. What was that?—A. That was in July 1942, and it so developed that we were able to get going by that time, I think it was 1942. It was the next year. We got producing at the time that we predicted we would.

Q. That is, in the summer of 1942?—A. Yes.

3148 Q. Do you recall the discussion at this meeting or at the meeting referred to in Mr. Joyce's letter about the property of a man named Rhodes, down in North Carolina?—A. Yes.

Q. Did you make any investigation of Mr. Rhodes' property?—A. Yes.

Q. Will you describe what you did?—A. We sent some engineers down there to look over the property, although we had been pretty well advised before that there wasn't the ilmenite down there that was reported to be, and it would cost considerable money to get it out. It was a narrow vein, and while there was some quantity there we could not operate to full extent to get it out in the time required that we would need it.

Q. You say you sent some engineers down. You mean National Lead?—A. The National Lead.

Q. Did you have any opinion as to the propriety of the Zirconium Company taking over that North Carolina property or the wisdom of its taking it over?—A. No, we had no objection to their taking it over if they wanted to develop it.

The COURT. It actually was taken over by the Glidden Company?

The WITNESS. By the Glidden.

The COURT. Not by Zirconium.

3149 The WITNESS. In fact, it shows that Mr. Joyce took it over.

Mr. WEBSTER. That is right. And that is brought out on page 22, as I think your Honor has observed. The

arrangements were made by the Glidden Company to purchase the machinery and equipment and take over the lease from Mr. Rhodes and engage Mr. Rhodes as general manager of the mining proposition.

And then on page 23 there is reference in Mr. Joyce's letter to his willingness to supply ilmenite to the American Zirconium Corporation in a sufficient quantity to take care of its requirements for a 9,000-ton production, this to be supplied at the market price.

Q. Now, Mr. Rockwell, will you refer to the memorandum on pages 24 to 28 of this exhibit? Have you that before you?—A. I have it, yes.

Q. Is that one of the memoranda submitted pursuant to your request for more information about the Zirconium Company in connection with this meeting?—A. Yes. That was the financial statement.

Mr. WEBSTER. This memorandum, if the Court please, contains rather full data about the capitalization of the company and the investment. It refers to the fact that in addition to the stock which the Lead Company had obtained in exchange for the license agreement, it
3150 had made a $20,000 cash investment in the stock of the Zirconium Company.

Q. Do you recall that, Mr. Rockwell? Do you recall that investment of $20,000?—A. I recall it, although it was before I had any connection with the company.

Mr. WEBSTER. At the foot of page 25 reference is made to the fact that the company had operated at a loss during 1940. Then the situation regarding dividends and the five per cent sales commission to the Glidden Company, and the management fee is summarized at the top of page 26. And reference is made to the fact that the Glidden contract with Zirconium would terminate December 18, 1943.

Q. Now, Mr. Rockwell, will you turn to page 29, please. Do you recall that there was a meeting on September 11, 1941, at which the matter of the participation of the Zirconium Company—— A. That was the meeting of the National Lead board.

Q. Oh, yes. The National Lead Company. These are minutes of the National Lead Company of September 11, 1941. Do you recall taking up these problems with your own board?—A. Yes.

Q. And do you recall that you were instructed not to vote with reference to the proposal that the Zirconium Company participated in the McIntyre development?—A.

Yes, sir.

3151 Q. And also that you refrain from voting with reference to the proposal for taking over Mr. Rhodes' North Carolina property?—A. Yes.

Q. Do you recall reporting to your own board of directors your own opinion about the business and management of the company?—A. Yes.

Q. And do you also recall, referring to page 31, this reference in the minutes:

"It was further felt that the company should not refuse any reasonably fair offer for the purchase of its interest by other stockholders, should such an offer be made"?

A. Yes.

Q. Was your reason for that the same as you have expressed with reference to these other matters, that you had no confidence in the management?—A. We were anxious to get out in some way.

Mr. WEBSTER. If the Court please, on page 32 and following there are minutes of the meeting of the Zirconium Company at which was considered the proposal for participation in the McIntyre development, and that the matter was fully presented, that the estimated cost of participation by Zirconium would be about one million dollars, and that Mr. Rockwell stated that production and

3152 delivery from the mine was not likely to occur before July, 1942. Then there is also a discussion or reference to a discussion of the proposal with reference to the Rhodes property.

The minutes wind up with a recommendation, page 34, that the American Zirconium Company purchase 10,000 tons of ilmenite from the Glidden Company at $20 per long ton, and they show the corporation deciding not to avail itself of the offer of the National Lead Company, and that the National Lead Company be so informed.

On page 35 they state that Mr. Rockwell desired to be recorded as not voting on the resolution.

The COURT. Did the Rhodes plant ever go into operation?

Mr. WEBSTER. That is next.

On page 35 there is a resolution authorizing the officials of the company to accept the offer of the Glidden Company for 10,000 tons ilmenite, shipment to be made when the ilmenite is available from the Yadkin Valley Ilmenite deposit.

Q. Is that the deposit in North Carolina?—A. I think that is another deposit.

Q. That is another deposit?—A. As I understand it. (Mr. WEBSTER. (Continuing) The price to be $20 per long ton, and there again Mr. Rockwell is recorded as wishing to be recorded as not voting.

The COURT. What were you paying for ilmenite?

3153 The WITNESS. Ours is more than that, Judge. I think it was about $28.

The COURT. Was this 10,000 tons ever delivered?

The WITNESS. Well, I don't recall that it was delivered, because I get out of the Glidden Company and haven't followed it; but they had to put a great deal of equipment down there, and I have reason to believe they never did. But that was a small operation then after that.

Mr. WEBSTER. On page 36 it appears that the matter of increasing the production of the plant at Baltimore to 9,000 tons as well as the matter of financing were discussed, and then the memorandum which has previously been referred to is brought out.

Dr. Hirschland stated in behalf of himself, Mr. Rogers and Mr. Smith, that they were prepared to approve the issuance of the 4,888 shares of treasury stock and its offer for sale pro rata to stockholders at $30 per share.

Then in the next paragraph:

"Dr. Hirschland stated that in his judgment a sale of the 4,888 shares of treasury stock at $30 per share would produce sufficient funds to care for the company's present requirements."

Q. Do you recall having an opinion about that yourself, Mr. Rockwell?—A. That brings out very clearly that both Dr. Hirschland and ourselves had no confidence

3154 in the management. They had not been able to get up to 6,000 tons in any one year and yet they wanted to extend the plant and expend more money. And that is the reason we objected to putting up more money.

Mr. WEBSTER. At the foot of that page Mr. Horsburgh is reported as stating that the corporation's note for $275,000 held by the New York Trust Company fell due September 18th next, and that he positively refused to ask the New York Trust Company to renew it; further, he objected to the secretary making such request of the New York Trust Company.

Q. Do you recall who Mr. Horsburgh was?—A. Who he was? Horsburgh was the secretary of the—I said he was secretary. I beg your pardon, because Mr. Rogers was

secretary of the company. But he was one of the vice-presidents of the Glidden Company.

3155 Q. Do you remember why he refused to ask the New York Trust Company to renew the note?—A. He was just trying to force the note to be paid by others, and he said he would not go to the bank again for it.

Mr. WEBSTER. At the top of page 37 it is stated that:

"Dr. Hirschland stated that in view of the unsolved plant problems and the uncertainty as to the supply of ilmenite he was not prepared to approve, at this time, the increase of the plant to 9,000 ton production and the expenditure incident thereto."

Q. I gather that was your opinion also?—A. It was.

Mr. WEBSTER. If the Court please, the next document in here is a copy of a letter from the Office of Production Management, delivered in August 1941, though the date does not appear on the face of the letter, to Mr. Rockwell with reference to the McIntyre project.

Mr. Nelson says:

"In view of the fact that it is desirable to cease importing ilmenite ore from India into this country, in order to release shipping space for other critical and strategic materials, it is the wish of this office to open up domestic production in this country to the point where all

3156 necessary titanium dioxide can be supplied from such sources."

Then below:

"We understand that you are planning to operate an open-cut mine in Essex County, New York, with a proposed estimated capacity of some 180,000 gross tons of concentrates per annum, estimated by you to be about 45% titanium dioxide, to supply your own requirements."

Q. Did you go ahead with that development, Mr. Rockwell?—A. Yes.

Q. Did your company finance that development?—A. Yes.

Q. What is the approximate amount of that investment?—A. About $10,000,000, but, you understand, all the others were given an opportunity to come in.

Q. Yes, I am coming to that in just a moment.—A. Pardon me.

Mr. WEBSTER. At the top of page 39 Mr. Nelson states:

"We feel that it is desirable in the interests of national defense and in the interests of increasing the amount of titanium dioxide available for civilian uses, for you to make ilmenite ore available to such other manufacturers of

titanium pigments as may desire to obtain the same from you."

Then, below:

3157 "Accordingly, we direct you to offer, for reasonably prompt acceptance, each of the other producers of titanium pigments in the United States the right to participate in the said mining operations by purchasing their ilmenite requirements from you, to such extent as they may indicate, not exceeding, however, a total of approximately 180,000 tons per annum additional estimated capacity. You will make the ilmenite available either by setting up additional units or by allocating a portion of the output of one of your units, in order to supply their requirements.

"We direct you to offer to supply such ore for a period of at least ten years at an over-all cost which shall include the cost of extraction and treatment of the ore,"

and so forth.

Now at the top of page 40 Mr. Nelson says:

"We understand and appreciate that, to secure participation at this time, you will make no charge for profit, and that you cannot renew any offer on this basis subsequently."

And then, in the middle of page 40:

"In order to avoid any undesirable increase in the price of raw materials going into paint, we
3158 direct you to charge your share of the cost of development against the price of titanium pigments over a period of not less than five years.

"In your contracts with the participants, you will give each participant the same privileges with respect to the time of payment of his share of the cost of the development. You will also give each participant, not in default under its contract of participation, the right to suspend purchases of ore for such reasonable period or periods as he may desire, or to discontinue purchases entirely, upon six months' notice in writing."

And then on page 42:

"Since your arrangements with the participants may include further provisions not inconsistent with the foregoing, you will submit to us for clearance, prior to final execution, all contracts between yourself and other participants relating to their participation in this mining operation."

And, finally:

"For your information and files, we enclose herewith

copies of the correspondence between the Honorable John Lord O'Brian, General Counsel of the Office of Pro-
3159 duction Management, and the Honorable Francis Biddle, Acting Attorney General of the United States, concerning this proposed mining operation."

And then, at the foot of the letter, the enclosures are:

"Copy of letter from General Counsel, OPM;
Copy of letter from Acting Attorney General;
List of manufacturers of titanium pigments."

Then on page 43 we find a letter from Mr. O'Brian, dated August 7, requesting the Attorney General to approve this program.

And on page 44, the first letter from the Attorney General, stating that:

"In my view this program, if carried out in the manner described in your letter and in the documents which accompanied it, would not raise any questions under the Federal antitrust laws."

Then on page 45 is a list of "Other Manufacturers of Titanium Pigments" enclosed in the letter.

Q. Mr. Rockwell, you did carry out that program by making the offer to the other companies listed on page 45, did you not?—A. To the letter, yes.

Mr. WEBSTER. Copy of Mr. Rockwell's letter in response to Mr. Nelson's is on page 46, and on page 48 is a copy of the letter offering participation in this
3160 to the other companies, dated August 14, addressed to the Glidden Company and also to the Sherwin-Williams Company, and on page 50 a similar letter to the United Color and Pigment Corporation, dated August 14, 1941, and at page 52 the same letter, dated August 14, addressed to the du Pont Company.

Finally in this series, on page 54, a further letter from the Attorney General, dated September 23, 1941, approving a relatively minor modification in the arrangement with reference to the du Pont Company, which I do not think needs to be gone into.

Q. Turning to another subject, on page 56, there are minutes of a special meeting of the stockholders of the Zirconium Corporation held September 30, 1941. Will you turn to that, Mr. Rockwell?—A. I have it.

Q. And Mr. Douglas N. Cole is reported as being present as the representative of the National Lead Company, that is, holding the proxy of the National Lead Company. Was Mr. Cole at that time an employee of the National Lead Company?—A. He was my assistant at that time.

Q. In the next paragraph you are referred to as being present as a representative of the National Lead Company. Do you recall being there?—A. Yes.

Q. These minutes relate to what is called a plan of reorganization of the corporation and contain a reso-
3161 lution authorizing this so-called plan of reorganization and authorizing a contract calculated to carry out the plan between the Glidden Company and the Metal & Thermit Corporation and American Zirconium Corporation. Mr. Rockwell, do you recall that matter coming up?—A. Yes.

Q. Just describe to the Court what that relates to and what was done about it, first, with respect to the Metal & Thermit and, second, in respect of the National Lead Company.

The COURT. Would you mind doing that when we resume after a short recess.

(Short recess.)

Q. Mr. Rockwell, just before the recess I had asked you about the plan of reorganization that was proposed at the meeting of the stockholders of the Zirconium Corporation on September 30, 1941; and had asked you to describe it, that is, to tell us about the proposal and why it came up and what your position was with reference to it. Will you do that?—A. The offer was made by Glidden to purchase the shares of the other stockholders by paying with Glidden stock. The American Zirconium accepted but we did not. We had 10 per cent——

The COURT. You mean Metal & Thermit accepted it?

The WITNESS. Metal & Thermit accepted the offer but we did not.

3162 Mr. WEBSTER. The Court will note on page 58 that the plan is simply for Glidden to exchange 22,700 shares of common stock of Glidden for the 6800 shares of common stock of Zirconium, and that on consummation of the plan, Glidden would become the owner of more than 80 per cent of shares of the common stock and all the shares of preferred stock of Zirconium.

Q. Mr. Rockwell, turning to page 61, what was your reason for not taking advantage of this proposal for a so-called reorganization of Zirconium which would have the effect of a sale of your stock interest in Zirconium to Glidden in exchange for shares of Glidden?—A. We felt that if we had a stock interest there it was more valuable than just the cash offer to take Glidden stock; that we were willing to go along with that if they had

terminated their agreement on any future information or know-how and so forth, but—

Q. Now this correspondence, beginning on page 61, related, did it not, to a dispute between you and Mr. Joyce as to whether you had agreed to go forward with the plan. Do you recall that dispute?—A. Yes.

Q. Just to summarize it, what was the position taken by Mr. Joyce and what was your position?—A. Mr. Joyce claimed that he had gone back to Cleveland, after the meeting, and purchased Glidden stock with
3163 which to buy out the other interest, but we had taken the position from the first that we would not sell on the present basis, so we saw no reason why we should reimburse him for the stock, the Glidden stock, he claims he bought.

Q. Did you have knowledge of the fact that he was going to buy Glidden stock to carry out the transaction?—A. No, because he was going to exchange Glidden stock. We did not know whether he had to buy, or how much he had in the treasury, in the Glidden treasury.

Q. But if he acquired Glidden stock in this connection, it was not the result of any encouragement he had received from you, was it?—A. Positively not.

Q. Did you take the position throughout this correspondence that the exchange of shares was connected in some way with the license arrangement between your company and the Zirconium Company?—A. Yes.

Q. What was Mr. Joyce's position about that?—A. Well, he thought we had something big up our sleeves and he wanted to take advantage of that, and that he was not willing to terminate the contract then for future arrangements. I assured him we had nothing at the present time, but that was the reason I was anxious to cancel those contracts and agreements with him so as to terminate the whole thing, at which we would have surrendered our stock gladly.

3164 Q. Just to be sure that your reason for this is clearly stated in your own words, I want to ask you a question: What was your reason for not wanting to terminate the license to the American Zirconium Corporation in the event that The Glidden Company came into possession of all or substantially all of the stock of the Zirconium Corporation?—A. Again I say that we had no confidence in their management.

Q. Referring to page 66, at an early stage in this dispute, namely, on October 9, 1941, did you resign as a

director of the Zirconium Corporation?—A. Yes.

Q. And the letter on page 67 shows that that resignation was accepted before October 13th. What was your reason for resigning from the board of directors?—A. Well, we did not care to be represented on their board. They owned all of the Zirconium stock, we had 10 per cent, and there was nothing that a 10 per cent stockholder could do, so I did not want to interfere with anything that they might have under way.

The COURT. Did you ever agree to enter into this exchange agreement?

The WITNESS. On our stock? Yes, only verbally.

The COURT. You had agreed orally?

The WITNESS. We had agreed to, orally.

Q. That was subject to your being able to work
3165 out a termination of the license?—A. That is right.

Q. And the purport of this correspondence, which I am not going into in detail, in the interest of saving time, shows I believe that that was a condition of your oral understanding, is that correct?—A. That is right.

Mr. WEBSTER. If the Court please, another subject is brought up on page 81. This memorandum of November 14 to Mr. Turner from Mr. Garesche relates back to that matter of imparting semi-annually information to the Zirconium Company, and the letter of November 14, on page 81, and the letter on page 82, from Mr. O'Brien to Mr. Garesche, dated October 30, 1941. The questionnaire, on pages 83 to 88, shows how that worked out, namely, the Zirconium Company did submit a very full questionnaire and the National Lead Company took steps to respond to it and did respond to it, and Mr. Garesche asked Mr. Turner to give consideration to the advisability of the Lead Company compiling a questionnaire to be answered by the American Zirconium Company, so that Mr. Garesche's previous suggestion as to a means of carrying out the exchange without infringing other obligations that he considered important was implemented in this way.

On page 89, if the Court please, there is another letter from Mr. Kolb, the secretary of the company, calling the
Lead Company's attention to a special meeting
3166 of the common stockholders of the American Zirconium to be held December 9, 1941 for the purchase of changing the stated value of the common shares to provide a capital surplus sufficient to eliminate the P and L deficit and reduce the net value of patents owned

by the company; to increase the common shares of the company and authorize the sale of the same in an amount sufficient to provide adequate capital for the operations of the company; and to increase the capacity of the plant at Baltimore to 9000 tons of titanium dioxide a year; and the securing of adequate supplies of raw materials; and the expansion of the research department of the company.

On page 91 Mr. Cole suggests to Mr. Rockwell that, on the whole, he thinks the National Lead Company's position would be better protected if they did not participate in the meeting by proxy or otherwise:

"by reason of our lack of information as to the exact effect of Proposal 2, our unwillingness to subscribe to any additional capital under Proposal 3 and the various uncertainties involved in the increase of plant capacity under Proposal 4."

But he winds up by saying:

"On the other hand I see no justification for our opposing any of the proposals."

3167 Q. Mr. Rockwell, in consequence of this dispute did Mr. Joyce make the claim that your company was obliged to either take off his hands these Glidden shares, which he had purchased, or to compensate him for the loss resulting from the decline in the market value of the shares?—A. Yes, he insisted upon that.

Q. Do you recall that that dispute was finally settled?—A. Yes, it was disposed of later.

Mr. WEBSTER. I call the Court's attention to the telegrams and correspondence beginning on page 92.

Telegram from Mr. Rockwell to Mr. Joyce, dated December 9:

"Telephone call at four thirty failed to reach you at office Garesche will telephone in morning at ten."

The connection of that telephone call and telegram is shown, I think, by the telegram on the next page, page 93, from Mr. Joyce to Mr. Rockwell, where Mr. Joyce says:

"YOUR MR. GARESCHE JUST TELEPHONED ME GIVING ME YOUR ENGINEERS REPORT ON OUR MINING OPERATIONS IN NORTH CAROLINA. HE STATES YOUR COMPANY WILL NOT LOAN US TWO THOUSAND TONS OF ILMENITE TO BE RETURNED NOT LATER THAN MAY FIRST UNLESS OUR COMPANY WILL CANCEL OUR CLAIM AGAINST YOUR COMPANY FOR LOSS ENTAILED

BY REASON OF YOUR FAILING TO CARRY
3168 OUT AGREEMENT MADE WITH MR. ROGERS CONCERNING ZIRCONIUM CORPORATION AND UNLESS OUR COMPANY AGREES TO CHANGE OUR PRESENT ROYALTY AGREEMENT."

And then he goes on to say that they are appealing to Washington for a priority order for sufficient ilmenite to keep the plant in operation, and that if the Lead Company persists in its position, the company will be forced to cease production of titanium dioxide amounting to 600 tons per month, and that Mr. Joyce does not understand the attitude of the Lead Company, and that he is preparing a full statement for submission to proper United States Government authorities. Just what is meant by the word "proper" does not appear in this telegram.

In the night letter on the next page, dated December 10, 1941, page 95, Mr. Rockwell tells Mr. Joyce that National Lead Company's ilmenite situation is precarious; the delay of ore production under Mr. Joyce's program raises serious doubts as to whether any ore loan can be returned; and then suggests that "if such delay is not actual you can yourself supply Zirconium requirements." Mr. Rockwell says under such circumstances he can recognize no obligation to accommodate Mr. Joyce "dur-
ing the pendency of the present dispute between
3168a us over Zirconium situation in which you have shown no concern for our reasonable interest."

And then he declines to accept Mr. Joyce's statement as to the nature of that dispute and the present solution, saying they are not fully or accurately stated in Mr. Joyce's telegram.

3169 On page 96 Mr. Joyce advises Mr. Rockwell that he has received 500 tons of ilmenite from du Pont and that Sherwin-Williams has loaned him 200 tons—oh, yes. In response to Mr. Rockwell's night letter or telegram, Mr. Joyce says:

"dupont has loaned American Zirconium five hundred tons ilmenite and Sherwin Williams has loaned two hundred tons to help plant operations,"

and then makes a further appeal for 1,000 tons for immediate shipment, with the understanding that Glidden will cancel the claim against the Lead Company for the loss on the Glidden stock, to which Mr. Rockwell replied, on page 97, in a telegram dated December 11th:

"Glad to accommodate you with one thousand tons returnable not later than May first next upon the understanding stated,"

and he asked him to wire shipping instructions.

Mr. Joyce then replied on December 11th, on page 98:

"Many thanks please ship one car per day for five days starting tomorrow"

and so forth.

Then Mr. Joyce wrote Mr. Rockwell a letter dated December 11th, which appears on page 99:

3170 "Referring to our exchange of telegrams today, I am very glad to know that we have arrived at an amicable understanding."

And then goes on to comment on the shipments and confirms the understanding that the Zirconium Company or the Glidden Company is to return this ilmenite not later than May 1st next.

The next pages, page 100 and page 101, contain a recapitulation of the most recent exchange of telegrams, and winds up by Mr. Rockwell stating to Mr. Joyce:

"It is a satisfaction to me to have our dispute out of the way and have given instructions that ore shipments go forward as nearly as possible in accordance with your instructions. • • •

"Yours very truly."

The letter on page 102, from Mr. O'Brien to Mr. Garesche, and the letter on page 104, from Mr. Garesche to Mr. O'Brien, dated July 24, 1942, relate to the return of the ilmenite that was loaned and borrowed under the conditions that are described in the previous correspondence.

Q. Mr. Rockwell, do you recall that when this matter of a sale of the Lead Company's shares in the Zirconium Company to the Glidden Company came up, that Dr. Jebsen was in New York?—A. Yes.

3171 Q. Did you ask Dr. Jebsen for a report on the situation or for comment on the situation?—A. I asked him to review it and give me a synopsis of it.

The COURT. Isn't that memorandum already in evidence as a Government exhibit?

Mr. WEBSTER. It is in evidence.

Q. Had Dr. Jebsen had any previous connection with American Zirconium matters?—A. No.

Mr. WEBSTER. In passing, Dr. Jebsen felt that if the National Lead Company was to take a position with reference to the transfer of this license from Zirconium to Glidden, it should be stated that the license was not transferrable, so that there would be no basis for any claim that Glidden had been misled.

The COURT. I think that memorandum is already in evidence.

Mr. WEBSTER. It is in evidence, your Honor.

Q. Subsequent to this correspondence, Mr. Rockwell, in the spring of 1944 did the Glidden and Zirconium companies suggest to you that all the arrangements existing between those companies and yourself be terminated?—A. Correct.

Q. I direct your attention to page 108, which is marked National Lead Exhibit 29 for identification. Is that a copy of the agreement, dated March 9, 1944, terminating
3172 the agreements with the Zirconium Company and the Glidden Company?—A. Yes.

The COURT. It is?

The WITNESS. It is.

Q. In addition to this agreement, did you make any statement to the Zirconium Company concerning their rights to operate under the existing patents of the National Lead Company?—A. Yes, that is rather a gentleman's agreement, there will be nothing done about the past information and patents they have. It will continue operating.

Q. You will not take any action to stop infringement?—A. No.

Q. With reference to the existing patents?—A. Existing patents.

Mr. WEBSTER. If the Court please, I offer National Lead Exhibit 29 for identification in evidence.

The COURT. Does that go for Glidden or only for American Zirconium?

The WITNESS. American Zirconium.

The COURT. This free license?

The WITNESS. That would be transferred to Glidden now, that information. Let us see, there is a detail, I am not quite sure about—yes, that would be.

Q. You told Mr. Joyce that so far as the American
3173 Zirconium Company is concerned they could operate without fear of infringement?—A. Yes.

Q. Under the existing patents, is that correct?—A. That is correct.

Q. And the American Zirconium Company is still in existence, is it not, so far as you know?—A. So far as I know, yes.

Q. Mr. Re[illegible] suggests one item with reference to the return of this ilmenite which was referred to a moment ago. Was that ilmenite that was borrowed from you ever returned?—A. It was not.

Q. Mr. Rockwell, after the investigation by the Department of Justice commenced in the summer of 1942, did you do anything about your arrangements with respect to the British company?—A. Yes.

Q. Just tell us what you did.—A. After talking to Mr. Williamson and learning, really, what the matter was all about, I urged him, so far as he could, to try to develop without foreign interests a situation that would correct what the Attorney General's office was complaining of. Now, that has been very largely accomplished with England and about ready to straighten out with Canada.

Q. Have you been able, as a consequence of that, to arrive at a basis of agreement with the English company?—Yes.

3174 Q. Have they indicated to you and have you indicated to them that you are prepared to enter into a new form of agreement with the British companies?—A. Yes; and they have indicated to us that they are willing to modify their agreement.

Mr. WEBSTER. I ask to have this marked for identification.

(Marked National Lead Exhibit 30 for identification.)

Q. Mr. Rockwell, I show you National Lead Exhibit 30 for identification, which appears to be a form of agreement in blank as to date between the Imperial Chemical Industries, Ltd. and Imperial Smelting Corporation, Ltd., Goodlass Wall and Lead Industries, Ltd., Titan Company, Inc., British Titan Products, Ltd., and National Lead Company, and I ask you if that is the form of agreement on which you, that is you, the National Lead Company, and the British companies have come to a conclusion?—A. Can I accept your statement that this is the agreement we worked on?

Q. Yes.

The COURT. You ought to know Mr. Webster by this time.

The WITNESS. May I appeal to the Court? If that is so, why, I will say Yes.

3175 Q. I think you can accept my statement that this is the form of agreement prepared by your attorney, Mr. Williamson.—A. Yes.

Q. And are you ready to execute this agreement at a convenient time?—A. Yes.

Mr. WEBSTER. If the Court please, I offer this form of agreement in evidence.

The COURT. If there is no objection, it will be received.

Mr. DIXON. We haven't even seen it, your Honor.

Mr. WEBSTER. Excuse me. I will give you a copy in just a second.

I think our competitors are probably entitled to see it, being parties to the case. We are showing them things we haven't shown them before. There is some delicacy about it.

(Marked National Lead Exhibit 30 in evidence.)

Q. Are you at the present time engaged in discussions with the Canadian Titanium Pigment Company and its representatives and C.I.L. with reference to a similar revision of the Canadian arrangements?—A. Yes.

Q. Do you recall, Mr. Rockwell, giving your attorneys any suggestions concerning a revision of the arrangement between your company and the International Pulverizing Corporation, relating to the use of the micronizer?

3176 —A. Yes.

Q. Has that been reduced to the form of a new agreement with the International Pulverizing Corporation?—A. I think it has.

Mr. WEBSTER. I ask to have this marked for identification.

(Marked National Lead Exhibit No. 31 for identification.)

Q. Mr. Rockwell, I show you National Lead Exhibit 31 for identification and ask you if that is a copy signed by Mr. A. M. Stackhouse, president, on behalf of the International Pulverizing Corporation, and by yourself as president of National Lead Company, dated October 20, 1944, being an agreement between International Pulverizing Corporation and National Lead Company?—A. I will accept that.

The COURT. What is the substance of the agreement?

Mr. WEBSTER. The substance of the agreement is, if the Court please, a revision of the license arrangements so as to give the National Lead Company only a non-exclusive license.

The COURT. Are you offering it in evidence?

Mr. WEBSTER. Yes, I offer that in evidence.

Mr. DIXON. If the Court please, an examination of this document indicates that it has been executed on

3177 October 20, 1944, which was certainly subsequent to the date of the filing of the petition. I haven't had a chance to examine it, but, to that extent, we feel it would be objectionable at this time.

The COURT. A decree in equity, you know, speaks as of the date of the decree. Consequently, as far as admissibility is concerned, regardless of what other consequences

it may have, as far as admissibility is concerned, I think it would be admissible if he produced an agreement of the morning of the day the decree is about to be entered. Admissible.

(Exhibit NL 31 for identification received in evidence.)

Q. Mr. Rockwell, did you take advice of your attorneys or counsel in respect of the agreements between, or involving your company and certain German and French and other foreign companies?—A. I have taken counsel, but I think that is a legal question I cannot speak for.

The COURT. You have taken their advice? At least you have consulted with them?

The WITNESS. Yes, I have consulted with them.

The COURT. That is what I understand the question to mean.

Mr. WEBSTER. That is all.

The COURT. Chances are you talked to nobody but
3178 lawyers in the last couple of weeks.

Q. Have you been advised that the agreements with the German company, for example, have been terminated by virtue of the war?—A. I would understand that.

Q. Have you, may I say, discounted your investment in the stock of the German company?—A. 100 per cent.

Q. Have you taken a similar position with regard to your stock in the French company?—A. No.

Q. You think that there is some prospect of the French company being able to revive after the war?—A. May be.

Q. Now how about the investment in the Japanese company—have you written that down to some extent?—A. That will be in the same category with the German.

Q. Have you any intention of resuming after the war any of the territorial restrictions contained in any of the foreign contracts?—A. No.

Q. Have you any intention after the war of granting exclusive licenses under patents?—A. No.

Q. For use in foreign countries?—A. No.

Q. Or exacting exclusive licenses for operations in the United States from any of your former foreign associated companies?—A. No.

Mr. WEBSTER. It has been suggested, if the Court please, that in order to save some time and to give a very accurate statement of the setup of National Lead Company
3179 and the manufacturing interests it has, the branches and the nature of its production both in the pigments field and outside, that I have marked in evidence pages 18 to 22 of the report of the company for the year ending December 31, 1943.

The COURT. No objection, is there?
(No response.)
The COURT. Very well.
(Marked Defendant NL Exhibit 32.)
Mr. WEBSTER. No further questions.
The COURT. To what extent is the public interested?
The WITNESS. You mean stock interest?—A. 100 per cent.
The COURT. Generally distributed.
The WITNESS. Yes.

Cross examination by Mr. DIXON:

Q. Mr. Rockwell, I take it from your examination or answers to Mr. Webster's questions that you are rather familiar with the operations of the American Zirconium Corporation?—A. Fairly.

Q. Just how much time other than attending the directors' meetings of American Zirconium did you have occasion to spend investigating the operations of the plant of American Zirconium Corporation?—A. Not much.

Q. Did you ever visit their plant in Baltimore?—
3180 A. No.

Q. Were you familiar with the license agreement which your company had with American Zirconium Corporation?—A. Only in a very general way.

Q. Do you recall where you first got your information that there was a restrictive provision on the production of American Zirconium Corporation?—A. I got that from the American board meetings, where they began to want to get an increase in their plant.

Q. Do you recall when those discussions for an increase in the production of Zirconium first took place in the board meetings?—A. If I could refer to this record I could give it to you exactly.

Q. Yes, I will be glad to have you do that.—A. The meeting of December 20, 1939, or the meeting before that, is the first that I knew of that.

Q. You say that is the first time you knew of the restrictions on American Zirconium's production of pigment, titanium pigment?—A. Yes.

Q. About how much money did National Lead actually have invested in this company, if you recall?—A. $20,000.

Q. And they had received some dividends, had they, on their stock?—A. Yes.

Q. Do you recall the amount?—A. No.

3181 Q. Well, the American Zirconium Corporation did pay some dividends prior to 1939 on their stock, didn't they?—A. Yes.

Q. Now you felt, however, that by inefficient management they were losing money; that was your position, wasn't it, Mr. Rockwell?—A. Yes.

Q. And it is a fact, is it not, that Mr. Joyce wanted to increase the production of the company to put it on a more efficient basis?—A. That was his claim.

Q. Now about the time these discussions took place in the board meeting of American Zirconium I believe there was a reference to Zirconium producing or wanting to produce a new rutile pigment. Do you recall those discussions?—A. Yes.

Q. And I believe from your position taken in the minutes you felt that some of this money that Zirconium wanted which would be used to create additional facilities to provide for the manufacture of this new pigment, should not be spent by the new company, is that correct—A. Yes. Not on new—you mean to be spent on new development?

Q. On this new rutile pigment.—A. Well, he never put in a figure sufficiently large enough for that.

The COURT. He suggested that it cost $300,000; you thought that was an inadequate figure?

The WITNESS. An inadequate figure. And you see in there this shows that that did not include the cost

3182 of equipment for rutile pigment.

Q. Was National Lead Company producing a rutile pigment at that time?—A. Only to a limited extent. It was what they call a composite pigment, not pure.

Q. That was being produced under the so-called Tilman patents?—A. I can't answer that. It is a technical matter.

Q. They were the new rutile patents acquired from TG; do you know anything about that, Mr. Rockwell?—A. No.

Q. Do you know whether the du Pont Company was manufacturing on the market any so-called rutile pigment at about the same time?—A. I understood they were.

Q. Under your license agreement with the Zirconium, that company was not to get any patent applications of the National Lead or Titan companies, was it?—A. I will have to plead ignorance on a good deal of that patent agreement matter.

Q. Did you ever inquire of any of the Zirconium officials to see whether or not the patents, that is the applications of the National Lead, were made available to Zirconium?—A. No.

Q. You never made it your business to find out whether they had access to those applications, did you?—A. No.

Q. You know as a fact of course that under the National Lead-du Pont agreement those applications were made available to the du Pont Company, don't you?

3183 —A. Not from actual knowledge.

Q. You say not to your knowledge?—A. No.

Q. Did you ever have occasion to examine the agreement between the National Lead Company and the du Pont Company in 1933?—A. No.

Q. So that you never made it your business, I take it, to inquire as to whether the facilities of the National Lead were available to Zirconium under its license agreement in so far as patent applications were concerned?—A. No.

Q. I believe you testified at some length about this McIntyre project and discussions had with the Glidden Company or the American Zirconium board members in 1941. Do you know whether under that project producers like American Zirconium Corporation were to be required to contribute any capital to that project?—A. Contribute capital or pay a certain amount for the material.

Q. And I believe you pointed out to the Glidden Company or the American Zirconium Company at the meeting that in July or thereabouts of 1941 it would require an expenditure of about a million dollars on the part of American Zirconium Corporation to go into that enterprise?—A. That is right.

Q. And at that time there was some discussion among the board members about methods of raising addi-

3184 tional funds which you had already discussed to continue the operations and to expand operations?—A. Yes.

Q. Do you recall whether any statements were made in the board meeting about the requests for Zirconium to increase its production having been made by the Government to American Zirconium Corporation?—A. That was a statement made by Mr. Joyce.

Q. You had no occasion to believe that it was not true, did you, Mr. Rockwell?—A. No.

Q. But this McIntyre project was not opened up until about July, 1942?—A. Yes.

Q. When did you first begin to get useful ore from that project?—A. I think it started in July, 1942. We started very close to schedule.

Q. And the Zirconium management thought they could get their ilmenite from other sources without having to

put up a million dollars prior to that time, did they not?—A. Yes.

Q. And it was also provided that if ilmenite could be acquired for Zirconium at prices equal to or lower than that at which the Glidden Company was willing to supply it, that such prices would be those charged by Glidden to Zirconium for any ilmenite given to Zirconium by Glidden?—A. I did not quite follow that question.

Q. In other words, if the Glidden Company was
3185 to supply Zirconium with the ilmenite, it would not charge for that ilmenite any more than any other producer of ilmenite in the United States would charge for a comparable product?—A. That was their claim.

Q. And that was their statement, was it not, in the record of their meetings?—A. Yes.

Q. I believe you testified that you wanted to cancel this contract with Zirconium in order to cancel the exchange of know-how, so-called, between the companies, is that correct?—A. On future——

Q. On future know-how?—A. For the patents in the future; know-how.

Q. You mean just the patents?—A. Yes.

Q. In other words, you did not want to exchange the future patents?—A. Any patents or agreements relating to the future.

Q. Up to that time the National Lead Company had been securing all of Zirconium patents and patent applications, had they not?—A. I presume so. I don't know. That would be a matter of record.

Q. There were several discussions between you and Mr. O'Brien about being able to witness a so-called Washburn attack at one of your plants, were there not?—A. Yes.

Q. You would regard that as falling within the scope of technical information, would you?—A. We sent our
3186 men to his plant to establish that.

Q. They wanted to see one of these operations, didn't they?—A. Yes.

Q. And you advised Mr. O'Brien that your obligations prevented you from enabling them to witness such operation, didn't you?—A. That is right.

Q. Can you state to the Court what those obligations were?—A. Just according to the agreement. I am not familiar enough with the agreement. But we took no one into the plant.

Q. What agreement now are you talking about?—A. I am talking about the titanium agreements that this whole case is predicated upon.

Q. You mean the agreement between National Lead and du Pont?—A. I would say the whole agreement; whether it is 1920 or 1933, I can't say, but it was the titanium agreement that was had between the various interests.

Q. You mean all of those agreements prevented National Lead from enabling Zirconium to witness the attack,—I mean, whatever is in those agreements?—A. Yes.

Mr. WHITNEY. I think I will have to object. These agreements are all in evidence. They are several hundred pages long.

The COURT. Yes. All I can let this witness say is if he was the one who objected to the inspection, as to
3187 whether that was the reason that was in his mind.

The WITNESS. That was—yes.

The COURT. You were the one that objected?

The WITNESS. I was not the one, because I had nothing to do with it. It is our local management.

Mr. WEBSTER. The record shows that Mr. Garesche, who was the manager of the Titanium Division, was the man concerned with these matters.

The COURT. Were you consulted on it?

The WITNESS. I don't know as I was consulted on that particular one, Judge.

The COURT. If you were, you took Mr. Garesche's statement that it was not all right to do it——

The WITNESS. Yes.

The COURT. And you said, "Well, in that case don't do it"?

The WITNESS. That is it.

Mr. DIXON. That is all.

The COURT. Your chief interest in the administration of the company lies in the production angle or——

The WITNESS. No. The production-financial, that whole end of it.

The COURT. You have not been giving very much attention, however, to these agreements?

The WITNESS. No. These are details that are
3187a handled by the various branches and departments.

The COURT. You have not concerned yourself with that?

The WITNESS. No, I have not.

The COURT. Any questions?

Mr. WHITNEY. No thank you.

Mr. WEBSTER. I have no further questions.

The COURT. You are excused, sir.

(Witness excused.)

3188 IMRIK DEVEGH, called as a witness on behalf of the defendant National Lead Company, being first duly sworn, testified as follows:

Direct examination by Mr. WEBSTER:

Q. Mr. DeVegh, where do you reside?—A. In New York City.

Q. What is your profession?—A. I am a consulting economist.

Q. Where did you receive your professional education?—A. At the Universities of Budapest, Hungary, Leipzig, Germany, and Cambridge, England.

Q. Did you take a degree at the University of Budapest?—A. Yes, I took a Ph. D. at the Faculty of Law.

Q. Was there any reason for your taking that degree under the Faculty of Law?—A. Yes. The University of Budapest was organized in the four mediaeval faculties, theology, law, philosophy and medicine, and the Faculty of Law gave the course on economics.

Q. Did you also take the course in law as well as the course in economics?—A. Yes, I did.

Q. When did you receive that degree?—A. In 1928.

Q. Then you went to Cambridge, England?—A. That is correct.

Q. What was the nature of your work at Cambridge?—

3189 A. I went to Trinity College at Cambridge to get a Ph. D. in economics from the University of Cambridge. I spent a year there and then I had an opportunity to come to this country, and then I abandoned my further Ph. D. ambitions and came to the United States.

Q. Of what country are you a citizen?—A. Of the United States.

Q. How long have you been a resident of the United States?—A. Since 1931. I became a citizen in 1937.

Q. Have you practiced your profession in the United States since your arrival here in 1931?—A. Yes, I worked for ten years with an investment counsellor firm, Scudder, Stevens & Clark, in New York, and then in Boston. I worked in their research department. For the first seven years that I was there I did all their foreign research, which consisted largely of the following of operations of American corporations abroad, foreign subsidiaries and participations, and world business trends in general, questions of foreign business organizations and large enterprises in western Europe, Canada, and Latin America.

Then for the last three years that I was there, from 1940 to 1942 inclusive, I was in charge of general economic research and business forecasting. They had a very substantial research budget and that meant that I was the central coordinator for their research, economic research that is.

3190 Q. I think most of us know, but for the sake of the record, what is the nature of the business of the firm of Scudder, Stevens & Clark?—A. Investment counsel. In other words, they advise large investors on their investment portfolio. They are the oldest and largest firm in the country.

Q. Subsequent to the ten-year period with Scudder, Stevens & Clark, what did you do?—A. I became assistant to Mr. Charles E. Wilson, then Production Vice-Chairman of the War Production Board.

Q. What was the nature of your work with Mr. Wilson?—A. Research work, economic research work on various aspects of the war program.

Q. When did that connection terminate?—A. I left the War Production Board in July 1943.

Q. And since then?—A. Since then I have had my office in New York.

Q. Are you a member of any professional societies or organizations?—A. The American Economic Association, the Econometric Society, and the American Statistical Association.

Q. Have you written articles for professional publications on economic subjects?—A. Yes.

Q. Are you the author of the book entitled, "The Pound Sterling," that was published in New York in 1939?—

3191 A. That is right.

Q. Are you the author of an article entitled, "Imports and Income in the United States and Canada," in the Review of Economic Statistics for August, 1941?—A. That is right.

Q. Can you name several other papers of a professional or Technical character that you have written or presented?—A. Yes. I have written several papers for the American Economic Review which is the periodical of the Economic Association. I had a paper on "Savings-Investment and Consumption," at the Annual Meeting of the Association in 1940. Then I was asked to do a paper on the Keynes Plan called the "International Clearing Union." That was in the September 1943 issue.

Then I have another paper in the March 1945 issue on

the Bretton Woods Agreement. That will be in the March 1945 issue. Well, I recall one in the Investment Counsel Annual for 1941, I think, or 1940, I will say, on income distribution. In other words, they are largely either on international trade, or international payments, or on income distribution questions.

I don't know that I have to state more, but that is about the substance of it.

Q. Have you made a study of current publications in the United States on the so-called cartel problem?—

3192 A. Yes. I am familiar with that. I am familiar with the TNEC material, the Kilgore Committee material, the Murray Committee report last month about the post-war economic questions. I have not read of course all the TNEC hearings, but I am substantially familiar with the monographs. For instance, Monograph No. 40 is on foreign business practices. There is also a monograph on competition and monopoly in American industry. Then there is at least one volume of hearings on cartels. There are also several other volumes of hearings I think on patents, but I am not sure, I don't remember that.

Q. Have you read the monograph by Mr. Corwin D. Edwards of the antitrust division, Department of Justice, entitled "Economic and Political Aspects of International Cartels"?—A. Yes, I have.

Q. Have you read the Hearings before a Subcommittee of the Committee on Military Affairs of the United States Senate relating to scientific and technical mobilization and particularly to monopoly and cartel practices?—A. I believe so. I think there are several volumes of these. I am not sure which volume you are referring to.

Q. Have you examined a book entitled "Cartels", by Mr. Wendell Berge?—A. Yes.

Q. Published in 1944?—A. Yes.

Q. Have you been asked by me to make a study

3193 of foreign trade and industrial organization with reference to particular questions in connection with this case?—A. Yes.

Q. Now before that had you familiarized yourself as an economist with the literature concerning the organization of industry in, say, England and Germany?—A. Yes.

Q. Since my request to go into these matters have you made a further study of that literature?—A. Yes.

Q. Now I wish you would please explain to the Court or describe to the Court the literature relating to the organization of British industry, first for the period prior

to the first World War. Will you do that?

The COURT. How far back do you want him to start?

Mr. WEBSTER. Well, I simply asked him to describe the literature which I think will not——

The COURT. I say, that literature goes back a very long time. I don't know how far back you want him to go.

Mr. WEBSTER. I just asked him the question to——

The COURT. All right, I will take it.

A. Well, the most comprehensive and most fundamental history, economic history of England, of industrial England, is J. H. Clapham's work, which is called "Economic History of Britain," and part 3 deals with the period 1887-1914. That is a very bulky volume,
3194 about 600 pages, but it contains in substance most of the relevant information with respect to the organization of British industry. Its point of view is evolutionary rather than organizational. It deals with history, at its title says, rather than questions of organization as such.

The literature of the organization or combination movement, if you will, begins with Nacrosty's books—one is called "The Trust Movement in British Industry," and the other is called "Trusts and the State."

Then D. H. MacGregor wrote two books, one on "Industrial-Combination," in 1906, which is rather a theoretical book, and then another one, "Enterprise—Purpose and Profit," in 1934. But both of those are more theoretical.

The final book on industrial organization before the war is Herman Levy's "Monopoly and Competition," which was published in 1911.

Q. Do you happen to know whether Mr. Levy is still alive?—A. I do not know. He must be a very old man. He was then professor at the University of Heidelberg. I think he fled to England when the Nazis came in, because he published a book there in 1936. Otherwise, I don't know. This book on "Monopoly and Competition," was republished in a revised edition in 1927. And then he wrote a book on "Industrial Germany" in 1934, I
3195 believe, which was published in England—or 1935, possibly; I am not sure of the date. This is in substance the most important. There are, of course, numerous minor treatises, sometimes quite revealing.

Q. Mr. DeVegh, based on your study of these materials and your professional consideration of them, are you in a position to summarize the organization of British industry at various periods?—A. I believe so.

Q. Now will you please summarize as briefly as you think the subject permits, the organization of British industry prior to the first World War?—A. Well, the industrialization in England goes back further than in the United States and Germany. England was the low cost industrial producer of the mid-nineteenth century and developed along highly competitive patterns. There had existed monopolies before, and of course cartels have existed in England. Before there was a very famous English coal cartel which ran from 1770 to 1844, called the Newcastle Coal Vend. But essentially, in the mid-nineteenth century and during the third quarter of the nineteenth century England was, English industry was more competitive than any others. This was generally attributed to the effects of free trade and to the fact that British costs were very low, and a very large number of enterprises sprang up in every industry during the
3196 period of rapid development. England was the pioneering country in industry in the nineteenth century and that pioneering was rather exuberant in all directions.

In the first decade of the present century, however, there began to develop some very large combinations and mergers of existing enterprises and also increasingly numerous cartel agreements. These were partly prompted by technological considerations, namely, the compelling advantages of large size in production, and they were partly defensive against supposed German and American competitive pressures.

The authors most frequently quote the cases of the whiskey trust and industrial alcohol cartelization and the combination of wall paper manufacturers, which is a virtual monopoly, the associated Portland cement manufacturers' combine and various others.

Levy in his book describes some fifteen such combinations in great detail which he considered most typical.

Robert Liefmann, who is the principal author on German cartels, in one of his earliest papers published in 1897 on combinations of entrepeneurs, lists some forty international cartels which existed before 1896, and in twenty-two of them German and English industrialists participated. In other words, to that extent international
3196a cartelization had already made substantial progress in England.

The COURT. Is this a convenient place for you to pause?

The WITNESS. Yes, sir.

The COURT. We will suspend now.
(Recess until 2:15 p.m.)

3197 AFTERNOON SESSION

IMRIE DEVEGH, resumed the stand.

Direct examination continued by Mr. WEBSTER:

Q. Mr. DeVegh, just before the noon recess you were discussing the organization of British industry before the first World War. Will you please complete that and then describe what occurred during and as an aftermath of the first World War?—A. I mentioned a number of the cartels and trusts that were listed and discussed in some detail in the book by Herman Levy, and I think I only ought to add to that two quite different developments which antedated somewhat Levy's book. In 1893 George Elliott, the coal owner, wrote a letter to the London Times, which at that time was considered sensational, suggesting the establishment of a national coal monopoly. While nothing came of that at the time, in 1896 D. A. Thomas, later Lord Rhondda, one of the Welsh coal barons, put out a second proposal. I will read its title because it is quite characteristic and rather long:

"Some notes on the present situation of the coal trade with a plan for prevention of undue competition and for maintaining prices at a remunerative level," and discussed at length, but nothing eventually came of it, and the coal trade remained unorganized.

3198 By 1914, however, the organization movement in British industry had gone very far, so that Clapham actually made some very sweeping statements and said:

"By 1914 there was hardly a British trade in which there did not exist an association of some kind", and from the viewpoint of terminology, I think I ought to add that I do not believe that he meant purely trade associations; in other words, I mean, the word "association" I think in Clapham's mind, so far as I read the book, means association of a regulatory kind.

The reasons why this should have been done are rather complicated. The essential argument why British industry was not susceptible to monopoly and cartelization was that free trade permitted competition from abroad and competition from abroad would prevent the rise of cartels and monopolies.

This had been undoubtedly the case in a number of in-

dustries, but the result of appearance of competition from abroad almost invariably subsequently was the imposition of either special legislation or tariff protection. We are going to come to that in discussing the developments of the 20s.

In certain industries British costs were decisively the lowest in the world and, therefore, foreign trade was not a threat towards the end of the Nineteenth
3199 Century and only because a threat during the Twentieth Century.

This whole question of the transformation of British economy from the world's industrial monopolist as a nation freely competitive within that framework, to a position when the English have lost their monopolist position as an industrial country, but then tried to compensate for this loss, compensating by rapidly increasing organization of British industry and the rapidly increasing exploitation, as it were, of the domestic market, is really the substance of this evolution from 1890 odd until 1914.

Well, then, from 1914 to 1919 there occurred a very dramatic change or, rather, a further development which is very fully described in the famous report of the Committee on Trusts, which came out in 1919.

The British Ministry of Reconstruction in 1918 appointed a committee to study the trust problem, as they called it, and this committee wrote the report in 1919, which is the fundamental source of information of what happened to British industry up to that time and what the situation in British industry was at that point.

The report of the Committee on Trusts says in substance that the necessities of the war have caused every industry to form trade associations, where none
3200 existed before, and to strengthen associations that were already in existence; that the Government agencies found it much simpler to deal with trade associations rather than with individual war contractors and that, consequently, a well entrenched trade association network was created very much under Government prompting and with Government encouragement; and that this was very comprehensive. And the report itself says that, although the associations were created under pressure of war, there is little doubt that they will continue after the war for entirely different purposes.

The main body of the report describes the trustification and cartelization of the British economy under the war

exigencies in some detail, and there is a very interesting addendum to it, which was written by the four liberal—well, "liberal" is the wrong word, because there was a liberal party in England. Let us say the four radical, or four leftist members of the committee, namely, Mr. Ernest Beven, who is now a member of Mr. Churchill's Cabinet, Sidney Webb and J. A. Hobson, the economist, and a Mr. Watkins—I don't know who he was—and those four wrote an addendum in which they said that they had signed the main report because they completely agreed with everything it says, and then they go on and say that this, however, is not enough; the report does not state

3201 the facts of the case nearly strongly enough; the fact is, as they say, that free competition has practically disappeared from British industry. Moreover, they say that this result is not disastrous; that after all free competition produces waste and is even uneconomic and unsound, if you will, I forget now the exact wording, but the important thing is, that the public interests should be better protected than they are under the present system and that, therefore, the committee should have made further recommendations with respect to the protection of the public interests.

The COURT. A perfectly logical position for a man of Sidney Webb's socialist philosophy.

The WITNESS. Yes.

A. (Continuing) That addendum was followed by other papers of which two are particularly interesting, one by Mr. James Hilton—I forget now whether it was John or James—but, anyway, Mr. Hilton, secretary of the committee, and the other one by Mr. Percy Ashley, now Sir Percy Ashley of the Board of Trade, who then go on to describe in some detail the actual extent of cartelization of British industry, analyze a number of cases, and interpret them as a fairly general and all-inclusive movement.

I have the report with me, but I do not think

3202 that there is any point in my reading any of it.

Q. I just wanted to mention, without interrupting the course of your discussion, do you remember there are comments on the factors causing combination under a subtitle called "Influence of War Conditions on Combinations" in one of the addenda?—A. Yes. I don't remember now exactly what they said, and I would much rather produce the document and read it, if I may.

Q. Tell us about the first decade between the two wars.

1920 and 1930. What was the situation in England industrially during that period?—A. During that period the most interesting fact is the relative industrial decline of England, the stagnation after the depression from 1921 on, and the resultant very strong intensification of the tendency to cartelize, to organize industry, and to promote even State-sponsored monopolies. There was the Railroads Act of 1921, which merged compulsorily all the railroads of England into four systems. Then in 1923 the Committee on Civil Aviation recommended merging all civil aviation enterprises into a monopoly, the Imperial Airways. In 1920 the Dyestuffs Import Quota was imposed and in 1926 Imperial Chemical Industry was formed, very strongly encouraged by the Government. The enterprise was completely privately owned but the Dyestuffs protection was maintained, and I think
3203 there are numerous statements to the effect that the measure was encouraged by the Government, viewed by the Government with favor, especially because of the importance of dyestuffs, and this came out also in the League of Nations World Economic conference papers on the description of the chemical industry.

Q. Do you mind pausing just a moment to describe or to indicate the principal sources of information about this period in England?—A. First of all, there are the various statutes themselves, the Railroad Act of 1921, then the report of the Civil Aviation Committee, that I mentioned, then the report of the committee on the coal industry in 1926, the Coal Industry Act of 1930, the British Sugar Subsidy Act of 1925, which organized the beet sugar industry, then, of course, tariffs in the various finance acts. In 1915 England introduced the so-called McKenna duties which were the first duties on manufactures. I will come back to that later on.

Then in 1921 came the so-called Key Industry duties. I think there are numerous books on the subject, Fitzgerald's "Industrial Combination in England," published in 1927; then Plummer's "International Combination in Modern Industry," published in 1934, republished in 1938. "Alfred Plummer, International Combination in Modern Industry."

3204 Then, in part, I think there is material in TNEC monograph No. 40, but I think that is only about coal and cotton.

Q. Do you recall the liberal industrial inquiry?—A. Oh, yes, the Liberal Party in 1928 published a report called

the "Liberal Industrial Inquiry"—called "Britain's Industrial Future," sub-title being "The Liberal Industrial Inquiry," and this was the official pronouncement of the labor party, which had been challenged by both its conservative and its liberal opponents about what Liberalism can contribute to the solution of Britain's very serious industrial problems.

As we recall, England did not share in the world recovery and was the first industrial country to develop chronic unemployment.

It has a section on "Industrial Combination," where it says that, of course, the public interest should be protected but this protection of the public interest does not mean that combinations should be made unlawful and that, in fact, wasteful competition and all the other evils of competition have to be checked, and that, essentially, all that is necessary is publicity for cartel agreements and other, well, trade association moves. Then it goes on to say that

trade associations in particular should be super-
3205 vised by the Board of Trade and should be formed whenever 50 per cent of an industry wants them, and when 75 per cent of an industry wants a certain rule to be enacted by this trade association, then, subject to the sanction of the Board of Trade, the trade association should be able to compel 100 per cent of the industry to take the required measure.

And I think that this is, as a matter of fact, a very interesting document because it goes to show to what an extent the orthodox liberal thought had relinquished its original free competitive position by 1928 which, after all, was still the high point of the liberal come-back in economics, I mean, it was the peak year of European recovery after the first World War.

The British Government, however, was not controlled by the Liberal Party at any time after the fall of Lloyd George in 1922 and did not give much consideration to what might be described as philosophical conceptions with respect to competition. It went ahead and organized as best it could every industry that it thought required organization. I have already mentioned the sugar industry, the coal industry, the cotton industry, the iron and steel industry, civil aviation, chemicals, and I think I ought to mention now the import duties that were imposed very definitely with the idea of protecting the home market and developing in the home market new
3206 industries for defensive or other purposes.

The first industry tariff was the McKenna tariff

in 1915, which put a rate of 33⅓ per cent on automobiles, cycles, musical instruments and flat rate on films. I think that was the entire list. There may have been something else too, but, in the main, that was duty to exclude luxuries in war time, but then they were maintained after the war, and a very large number of additional items were added in the Key Industries Duties Act, or words to that effect, of 1920 or 1921. I am not quite sure now whether it was 1920 or 1921. There a large number of items, specified types of machinery, were placed on the protective list with the rate of 33⅓ per cent, optical instruments with a rate of 50 per cent, magnetos, I think, also with a rate of 50 per cent, and these industries then, under this protection, did develop quite fast.

There is a book by Mr. Frederick Benham called "Great Britain Under Protection," which was published in New York in 1941 and gives full detail regarding this evolution. There is also a book published by the Cambridge National Economic Research Bureau, that is, Cambridge, England, not to be confused with the National Bureau of Economic Research in this country, although it is the English equivalent, that was called "Trade Regulations of the
3207 United Kingdom," which came out in 1943 and gives a complete list of both the changes in tariff regulations and special treatments for special industries, like the dyestuffs industry, which I mentioned before, and also a list of commercial treaties, quota agreements and so forth entered into.

Both those books are much more important, of course, from the point of view of the 1930s, when the integration of British industry along more concentrated lines proceeded.

Q. Will you go on into that discussion with regard to the facts about the concentration of the 1930s?—A. The great difference between the 20s and 30s is that the 20s were the decade when privately-controlled combinations completely entrenched themselves in British industry and where correct behavior, which means correctly non-competitive behavior, became a very well established matter in British industry.

The British Government only took action in those, maybe, dozen special cases that I have mentioned, and with respect to tariff protection.

In the 1930s this went very much further. In the 1930s, first the impact of the great depression and during recovery considerations of rearmament impelled the British Govern-

ment to take much more active part and to encourage industry to organize as best it could.

3208 The so-called May Committee report on the steel industry in 1932, I believe, advised very completely the rationalization. The tariff was enacted in 1932, in the spring of 1932. A flat rate of 10 per cent on everything, except raw materials and manufactures. On manufactures the flat rate was 20 per cent except for machinery, chemicals and other items considered important, on which the rate was 30 per cent on iron, and steel. The Ottawa agreements, followed this tariff legislation, giving the British Government, I mean, British industry, rights of considerable exclusiveness within the Empire.

The Import Duties Advisory Council was also set up in 1932, which was a committee to advise the Treasury on how to handle the tariff and pretty much how to act in trade negotiations, and its advice is, I believe, generally followed.

With respect to steel, the case is very famous and very well known. The Continental Steel Cartel was granted a quota of 600 odd thousand tons imports into England for the year 1934 and a smaller quota for 1935, and British steel makers were, I believe, given special tariff protection of 50 per cent in order to be able to rationalize without interference from the imports.

I have the steel reports here with me, if any more detail is needed, but I think that is sufficient.

3208a I think I ought to mention that the first international cartel in which the British Government participated or, which was sponsored by the British Government, rather, was the Stevenson rubber plan, which went into effect in 1922 and was a major innovation of the previous decade.

3209 During the 1930's these became quite numerous; I mean, the tin cartel of 1931, the rubber cartel of, I think, 1933 or 1934, the tea cartel, the cocoa cartel—I mean, all of these were British-sponsored—and the interesting thing in that connection is, I mean, the British Government has been very strongly accused by liberals in England of being under the influence of the large corporations and moneyed interests.

There is a book by Mr. Simon Haxey, called "Tory M P", which describes, among other things, how 181 Conservative members of Parliament hold 775 corporate directorships, and how Sir Patrick Hannon, the first vice-president, that is the executive head of the Federation of British In-

dustries, the industrial supercartel, if you will, is also a member of Parliament; and it pointed out that a number of Cabinet Ministers had a number of directorships in corporations, which they relinquished for the time of their tenure of office, and, of course, the book draws certain unflattering inferences with respect to the business influence on Government during the Conservative era of the 1930's.

Q. Are you familiar with the expression "terms of trade" as used by the British?—A. Yes.

Q. And what does that mean?—A. Well, "terms of trade" is a technical term in economics, and it means
3210 the relationship of import prices to export prices.

It has been always a matter of great concern in British discussions of British economic policy that the terms of trade should be as favorable as possible for England, that is to say, that imports should be bought at the lowest possible price, and exports should be sold at the highest possible price, so that the relationship of export prices to import prices should be as favorable to England as possible, and this has been a very strong motive in British Government action with respect to international trade.

The question of elasticity of demand comes in very strongly, namely, where demand is inelastic, prices can be raised very substantially without loss of volume; and in this connection it is also important, I think, that from the British point of view, rubber, and tea, and cocoa and other colonial raw materials, are, in substance, exports from England, because the costs of production are all paid in sterling or its equivalent in British colonial areas, and the proceeds are dollars or French francs, or marks, or whatever the case may be.

The climax to this industrial reorganization of England was the Dusseldorf conference in March—on March 15th and 16th, I think—1939, which is described in the Kilgore Report, Part II, in which the delegations of British and German industrialists, specifically, I think, of the
3211 Federation of British Industries and its German equivalent, Reichgruppe Industrie, held a meeting in which an agreement was drawn up, but which never became operative because of the outbreak of the war, purporting to divide up the world industrial markets between English and German interests and to the exclusion of third countries—of competition from third countries.

Q. Have you examined the current literature with reference to the organization of British economy with a view

to forming any opinion as to what the attitude of the British is going to be in this respect after the war?—A. Well, that, of course, to some extent is prophecy, but the current English literature suggests that they mean to have a very strong, centrally organized economy. I think that the Committee for the Study of the Organization of Peace here in New York put out a pamphlet in December, 1943, summarizing published plans of British industrialists, every one of which envisage the creation of industry-wide organizations for each industry with coordinated production and selling.

The British delegation at the International Chamber of Commerce meeting at Rye, New York, last November, and also took quite a strong stand in this respect, which was reported in the papers.

3212 The Attorney General, Mr. Biddle, made a speech in Boston, I think, last Wednesday, where he stated that he expected all British industry would be cartelized after the war. I do not have the original text of his speech. I have written for it, but I haven't got it yet. I have only the newspaper report, but that was the substance of it.

And the white papers on post-war employment and land utilization also very strongly indicate that the British Government is going to play a very active part in the organization of post-war industry.

Mr. Geoffrey Crowther the editor of the Economist wrote an article in the Yale Review for I think this last issue, the winter of 1945, about British industrial organization after the war in which he apparently describes but also advocates a system of government control, cartelization in part and in part actual government operation of large industries. I have the documents here. I don't know how far you want me to go.

3213 Q. I don't think there is any need to go into that any further. I want to ask you the same questions about the organization of industry in Germany and I would like to have you take us through the period before 1914 just as quickly as you think you can without leaving out any important matters.—A. Well, before 1914, in Germany, cartelization was fairly widespread. The official source of information is the report of the Cartel Commission published in 1905, of which I unfortunately do not have a copy, but which is fully described by authors on German cartelizations, including TNEC Monograph 40, and Mr. Robert Liefmann's subsequent book on "Cartels, Combines and

Trusts," which was published in New York in 1932, of which I have a copy here. That book also offers relevant documents after 1923 which we will refer to later.

The substance of it is that cartelization first began in Germany in the 1860s or 1870, had a slow start but flourished from 1890 on, and was accepted as a form of organization of industry. This government inquiry of 1905, I think, lists 385 cartels which they had investigated at that time. The units in German industry were much larger than in Britain, in the British industry. From the start, you see, the development of German industry coincides in point of time with the development of
3214 American industry. Modern American industry began with the Civil War. Modern German industry began with the wars against Denmark, Austria and France in 1870–1871. The development was very rapid, in fact the fastest, except for the United States, and the size of the enterprises was also the largest, except for the United States.

There is an excellent American publication, as a matter of fact, on monopolistic combinations in the German coal industry by Mr. Francis Walker, which was published by the American Economic Association in 1904. And I think the United States Industrial Commission in 1901, a study by Mr. Jenks, on "Combinations in European Industry." I don't have the Jenks, but I have the Walker here.

Anyway, German industry was fairly extensively cartelized by 1940, and the Government on the whole didn't look upon it with disfavor because the Germans were a nation of technicians and technical efficiency was obviously permitted by these large undertakings, coordinated production and so forth. The political leaders of the Reich thought that such an organized growth was preferable to haphazard fluctuation even from the view of military economy.

During the war, again I think we can go over that
3215 quite fast because the situation has changed in Germany so much, during the war they had the same.

The COURT. You mean the first chapter, the present war?

The WITNESS. No, I am talking about 1914 to 1919.

A (Continuing) The same thing happened in Germany that happened in England, only very much more so, namely, trade associations were formed right and left. Walter Rathenau was Minister of Economics or possibly the title was Minister of Economic Warfare, but I think

it was Minister of Economics, he I think in 1916 drew very extensive plans for the wartime realization of German industrial resources, and, as a matter of fact, it was in 1916 that a very large part of the German chemical industry was merged in a so-called community of interest which is now known as I.G. Farbenindustrie.

When the war was over and the Socialists came into power, Von Moehllendorf; who was I think Under-Secretary of State in this Ministry of Economics, although I am not quite certain, anyway he was one of the Under-Secretaries of State, he proposed a very extensive plan for the trustification and State control of German industry. This was opposed, I believe, by industrial interests, and came to nothing. This was in 1919. And then
3216 came an extremely disorganized period in German industry, where all the old cartels broke up under the strain of inflation. There was no sensible way of allocating markets, fixing prices or anything under the conditions that prevailed in Germany between 1919 and 1923. On the other hand, enormous mergers took place in a very senseless way because everybody was going into real assets, fixed assets, and particularly haphazard corporate giants were created which after 1923 had to be broken up and reorganized.

I think that is really all that need be said about it.

Q. What was the difference in the attitude of Germans toward cartels during the liberal regulation of cartels between 1923 and 1933? That was a very different form of attitude than the attitude that developed later, was it not?—A. Oh, yes. In 1923 the first cartel ordinance was published, in 1923, which regulated cartels. The text is reprinted in Liefmann's book which was published here in New York in 1932; so it is easily available. It was a system of Government supervision of cartels, but otherwise it did not hamper their freedom of movement and freedom of organization. And at that time I believe it was semi-officially estimated that there were something like 2500 cartels in German industry. And under this system cartelization of course spread, I mean this was very favorable climate for cartelization and it spread
3217 fairly extensively.

From 1926 to 1930 the German Government held a major inquiry which had a very peculiar name, which was called the Enquete, which means inquiry, into German industry. It published findings of voluminous proportions which are briefly summarized in TNEC Monograph No. 40,

which I mentioned several times. And also I think in the TNEC hearings, although I don't remember now whether it was an exhibit there or not.

Q. I was going to ask you, and I have gotten to a point where it would be appropriate to do so, about the French attitude during this same period.—A. Well, in France, the old code was very strict in prohibiting all forms of combination and agreement, both of employers and of employees, and the first breach in that was some time in the Nineteenth Century, I think in 1886, when trade unions were recognized. But while the French legal situation remained very obscure with respect to cartelization, the idea itself spread very strongly and in the Twenties the French ideas of cartelization played a very important part in Europe. In 1924, Mr. Jouhaux, a French Socialist, who was one of the leaders of the French Socialists—he was the head of the C.G.T., which was the French labor organization—proposed an international conference for the reorgani-
3218 zation of European industry. Mr. Louis Loucheur at the League of Nations meeting in September 1925, made this an official proposal, and Mr. Loucheur was a representative of French heavy industry, and as a result a world economic conference was called by the League of Nations in 1927.

Of course publications of this conference, the publications prepared before the conference and then at the request of the conference afterwards, are a very important source of material with respect to the degree of cartelization and what was expected of it at that time. And the expectation was that it would help to cure the economic ills of Europe created by the World War.

Now this might seem strange approach to us, but the fact is that both the French and the Germans at that time felt that that was a way to pacify Europe. The argument ran something like this: that the war created a number of new frontiers and industries fell within these new frontiers in a completely haphazard, unplanned way; none of them were fitted for the country in whose borders they found themselves. The only way to break through these walls of nationalism was to form international industrial agreements. And, as a matter of fact, Mr. Briand in his plan for a united Europe and the plans he worked out with Mr. Stresemann in the late Twenties were all to some extent inspired by these conceptions
3219 which were also at the center of the 1927 conference.

A very famous example was the steel cartel and the steel agreement between France and Germany which antedated even the World Economic Conference. Prior to 1918 Lorraine shipped iron ore downstream through the Ruhr, and the Ruhr shipped coal upstream to the Lorraine, and that was a two-way traffic which was economically very sound because the same parties carried traffic both ways. And the very rapid development of Lorraine and the Ruhr industries was connected with this two-way traffic.

When Lorraine went back to France there was a frontier and the tariff wall that stopped this traffic, and as a result the French had too much iron ore and not enough coal, and the Germans had too much coal and not enough iron ore. And that was the economic foundation of the first French-German steel cartel after the war.

In the Hapsburg Empire this kind of case was quite typical. I mean, the industries of Bohemia were originally built up for a market of fifty million people and then they found themselves with an empire of thirteen million Czechoslovakians for their domestic market, and had to somehow find a way of making a living. Now, on the other hand, new competitors within the new frontiers did, naturally, everything to exclude the old, big competitors who now happened to have fallen on the other side
3220 of the frontier, and this led to some of the fantastic economic complications and uneconomical methods of production that were so characteristic of Europe during the '20s, even more so during the '30s.

And this, incidentally, was also a considerable incentive for German industry to seek cartel agreements in all directions towards Eastern Europe. Poland was a very thoroughly cartelized market, Czechoslovakia was a very thoroughly cartelized market, so was Austria. The Czechoslovakia cartel law of 1933 required a cartel register, so we know exactly how many cartels they had, and how extensive they were. And the same is true of Poland, although I don't remember now when the Polish cartel law dates from—I think it also dates from around 1932. I think Reichert's books on cartels, a German book published in 1935—it is called the cartel law—that I referred to—or something like that—also gives the dates.

Q. This period prior to 1933 was a period characterized to a large extent by voluntary combination and cartelization?—A. Certainly. This was wholly a private economy; the Republic was under the control first of the Socialist

pa. ty and then the coalition of Liberal parties under Mr. Stresemann until 1930, and then Chancellor Bruenning came into control in 1930, and they had no organization principles with respect to economy. I mean, they were ideological Liberals and to the left of the Liberal.

3221 Q. Have you reached a point where you can describe for us what happened after 1933?—A. Yes. I just want to mention that in 1930 the cartel ordinance was revised, the 1923 cartel ordinance was revised, in the light of the results of the Enquete. Well, when the Nazis came into power, which was at the end of January, 1933, the whole situation completely changed, because they had very positive ideas as to how they meant to run the state and the German economy, and they put that very speedily to effect.

The first thing they did was to proclaim a large make-work program, I mean, the first philosophy, at least as stated, the first philosophy of the large Government expenditures was essentially the idea with the WPA; you generate a large body of public works, and that creates re-employment.

Then in July, 1933, they published a decree authorizing the Government to compel cartelization in industries where they felt it desirable, and then very shortly afterwards they changed their base and said what they are interested in is not to create employment, but to create national defense. And from then on the whole economic direction of the Reich was subordinated to military requirements.

This was of course very expensive right from the start.

In February, 1934, they published a decree, a law,

3222 rather, for the reorganization of the industrial economy in which they gave themselves very extensive powers, and they used those powers in a series of subsequent decrees putting the whole of the German industry into compulsory cartels. And this was the decree of November, 1934, amended in 1936. There was a super-cartel, the Reichsgruppe Industrie, and under it every industry was combined both horizontally and vertically; a regional organization was created in regional chambers of industry which covered the entire German economy, and the Government made no bones about it. They stated very openly that the purpose of this was to subordinate industrial production and the organization of industry to the political purposes of the Reich.

Q. Have you made a study of I. G. Farben and the com-

petitive situation in the German chemical industry?—A. To some extent, yes.

Q. Will you just describe that to us, please.—A. Well, I. G. Farben originated in cartels in the chemical industry, some of which go back to the turn of the century; several component companies had various syndicate arrangements from 1902 and 1903 on. Then the six largest chemical companies were merged in a community of interest in 1916 and the present enterprise was created in 1926, when one of these six merged enterprises absorbed the others
3223 and rechristened itself the I. G. Farbenindustrie A.G.

This company had a capital stock of about 720,000,000 marks, plus some 250,000,000 marks of bonds. In other words, it was a billion mark corporation. I think it was the largest enterprise in Europe, except England. Imperial Chemicals is larger in terms of total assets. I mean, I think that as of the late 20's the total assets of Imperial Chemicals were about £100,000,000, that would be about $500,000,000, and I. G. Farben would be about $400,000,000. That is the order of magnitude of these two corporations. I do not have a reliable or accurate estimate of exactly how large a proportion of German chemical production was concentrated in the hands of I. G. Farben, but I believe that it was of the order of between a third and a half of total output and a considerably higher proportion of total export trade in chemicals.

Q. Have you any basis for an opinion with reference to the conditions that an outside chemical company would face in endeavoring to compete with the I.G.?—A. Well, my opinion is that it would be very difficult. First of all, the company was very large. In the second place, the company was a very efficient producer. The two greatest chemical inventions of this century are both associated with I. G. Farben, namely, the development of
3224 synthetic nitrogen and the development of hydrogenation of coal. These are by a very wide margin the most spectacular developments, and both were completely I. G. Farben-developed. In other words, their technical excellence in the 20's is not subject to doubt, I think. Moreover, the general business management of I. G. Farben I understood was always extremely efficient. They had a very complete sales organization. They controlled the German market very completely. They had cartel agreements with everybody within Germany. They had a number of agreements of course also with their foreign competitors. And, lastly, they were close to the Government.

The I. G. Farben, I understand, used to finance indirectly the Frankfurthe Zeitung, which was a liberal newspaper. It was the leading internationalist corporation in Germany during the 20's as opposed to the steel industry, which was the leading nationalist industry. They had very far flung international interests and they meant to protect them, and that always was a two-way street. One was that they reached out into international markets, protected their own domestic markets, and the other was that they were very close to the German Government, and, therefore, I imagine would have very substantial influence with the German Government with respect to policy as it affected chemical imports and trade in chemicals generally.

3225 The COURT. Taking the European or the Continental situation as a whole, over the period you have described you moved from competition to combination and from combination to cartelization, and from cartelization on a voluntary basis to cartelization with the benign approval of the government, and from that to compulsory cartelization in many instances.

The WITNESS. Just about that. Or, rather, the adoption of cartelization as an instrument of national policy. I would say that was the——

The COURT. I am surprised you have not moved further eastward and pointed to the monolithic organization of industry in the U. S. S. R.

The WITNESS. Partly because I have not been asked the question.

The COURT. That is a very good reason.

Q. There is in evidence, Mr. DeVegh, a letter in which the I. G. Farben in 1933 expresses some concern about the possibilities of competition in Europe on the part of the du Pont Company. Have you any views as to why the I. G. should have or expresses such feeling?—A. Well, the imputation of motives is always a difficult matter, but I think we have several very tangible clues. One was that in 1933 the dollar was depreciating, while it was the official policy of the German Government to maintain

3226 the mark at parity. Now that meant that if ever at some future date German exchange control were abolished and German import controls were relaxed, which of course in 1933 were very strong, then the cost reductions due to dollar depreciation, which were cost reductions in terms of marks, mark equivalent, not actual reductions in dollar costs, might become great enough to make American costs competitive with German costs.

Then, as I said, it is my understanding that I.G., up to 1933 at least, was the leading internationalist combine in the German sphere of influence, although it was naturally very completely coordinated by the Nazi Government and used to the utmost for the furthering of their own purposes subsequently. And I should imagine that under such conditions they would feel that, as in 1933, there is nothing to fear because import controls alone make any import from the United States, competition from du Pont, nonsense, because they can always go to the Government and prove that chemical imports from the United States are superfluous, whether from an employment point of view or technological point of view or any other point of view, and the Government, which was very hard pressed for dollar exchange anyway, would certainly accept that reasoning. But if the management felt or hoped that eventually they would be rid of the Nazis and a freer
3227 regime set in, then the situation might be very different.

Q. You have mentioned the exchange problem. Do you consider that that affected trade between the United States and Germany and the United States and England in the 30s?—A. To a very considerable measure.

Q. Will you please give your opinion and your reasons for your opinion upon that, but first, if you will, discuss it in terms of the dollar shortage during that period.—A. Yes. Well, the best source as a matter of fact on the subject of the dollar shortage is a study put out by the Department of Commerce, Economic, Series No. 23, by a Mr. Leary, which discusses the balance of payments of the United States over two decades. His essential argument, I mean of that pamphlet, is not really subject to controversy. I believe every author on the subject accepts it. As a matter of fact, some of my own papers and my book are very much along the same line. I just thought it would be preferable to refer to a Government publication rather than to my own personal opinions.

The argument in substance is this, that the imports of a nation will go up and down with its own national income because naturally the bigger the national expenditure the more will be spent on total consumption and more will be spent on imports; conversely, when national income and expenditures go down, imports go down.

3228 During the 20's the United States were very prosperous, imports into the United States were very high as compared to subsequent figures. Our imports

used to run into four billions a year, and subsequently they dropped as low as a million and a half, a billion and three-quarters at times. Secondly, during the 20's the United States was the principal source of international lending for the revival of world economy. This meant in reverse for the foreign countries that they had a very plentiful supply of dollars which they could spend right and left as they wanted, and which they did spend right and left.

The COURT. Mostly "left" as we now see it.

The WITNESS. Yes, your Honor.

A. (Continuing) Well now, in 1930 this golden era came to a very abrupt end. Foreign loans became completely unsalable in the United States. As a matter of fact, American lenders began to pull in their previously extended loans and at the same time the onset of the depression made our imports toboggan, and there was a very sharp reduction in imports.

The COURT. Simultaneously the Smoot-Hawley Tariff Act went into effect.

The WITNESS. And the Tariff Act clinched the deal.

A. (Continuing).

3229 So, in 1931 the foreign exchange situation in Europe became very critical and its essential manifestation was a desperate dollar shortage. They could not find enough dollars to pay for their imports from the United States and to pay the claims of American short-term creditors as they were maturing. As the result, there developed a run first on Austrian and then on German banks, and all banks in Germany were closed I think on July 13, 1931. And from then on a very strict regime of exchange control went into effect in Germany.

Then two months later, a little over two months later, September 21, 1931, Great Britain abandoned the gold standard, and while no exchange control was imposed the depreciation of the pound automatically made imports from the United States 33 per cent more expensive.

I think I had better follow through very briefly each country separately rather than jump from country to country if I may.

Q. I will be glad to have you do that. A. In Germany what happened was that the Government then decreed a base period of foreign exchange ration and the foreign exchange ration of each company was its foreign exchange supply for commercial imports from July 1, 1930 to June 30, 1931, which was already substantially depression level,

significantly below pre-depression, and there was a
3230 rigid control of exchange transactions imposed which steadily grew in complexity.

Now for the Germans the depreciation of the pound was a very serious blow because that made exports to England very difficult and exports from England to third markets very attractive to the third markets as compared to German exports. So, in May 1932 they cut the basic quota in half. So, from then on the industrial enterprise was only entitled to 50 per cent of the foreign exchange it had during the base period 1930-1931. The Nazis stuck to this for a while, and then in February 1934, in several very rapid steps, reduced the basic quota from 50 per cent to 5 per cent and imposed a complete import prohibition without Government license on really everything of any industrial interest or importance, the purpose avowedly being to import only things that were necessary for national defense or, rather, for rearmament.

And from then on they were in constant hot water foreign exchangewise and progressively defaulted on more and more of their foreign obligations because they were inflating the domestic price structure, making German production more and more domestically centered and relatively high priced so that their imports were only—the exports were only competitive if they gave subsidies in
many instances. Certainly, they were importing a
3231 vast amount of materials for ultimate war purposes. That is really the whole story there.

In England the story is much more varied because the dollar shortage there only lasted until 1934, after the depreciation of the dollar when, paradoxically enough, our stabilization and our paying $35 an ounce for gold bailed them out because, substantially, the British Empire substantially produces something between two-thirds and three-fourths of the world's yearly gold production, and there was a billion dollars a year in their laps. So, from 1934 to 1937 certainly there was no major dollar shortage in Great Britain.

In 1938 the dollar shortage began to appear again because of rearmament requirements and the renewed slump in the United States. In the fiscal year 1936-1937 the United States actually had a small import surplus on merchandise account because our national income recovered and that attracted imports, while our exports stayed down because of the exchange restrictions abroad that locked them out from foreign countries.

This situation lasted until the fall of 1937 when a new domestic slump in the United States lopped more than a billion dollars off our imports, so that in 1938 we had a billion-dollars export surplus exclusively because of
3232 the drop in imports, not because we boosted our exports. And the result of that was a renewed sterling crisis. Pound sterling dropped from $5 to $4.66. At the time of Munich and of course when this war broke out, and from Munich until the outbreak of the present war the pound sterling was again a weak currency where dollar payments were a problem where there were informal restrictions on capital movements and so forth. As soon as war broke out very complete exchange restrictions hit the sterling area. In the gold standard countries the same situation with respect to the dollar shortage existed until 1936 when they abandoned the gold standard and then there was a period of relief either in 1936 or 1937, and the renewal of the dollar shortage in 1938 due to rearmament abroad and to our lack of imports into the United States after the slump in the fall of 1937.

All countries, in substance, with the exception of 1936 and 1937, it was only a temporary alleviation, had their rigid exchange controls chiefly aimed, if I may generalize now, at an exclusion of imports and substantially the exclusion of imports from the United States. This is brought out very neatly by some charts that the Department of Commerce published which showed that the share of the United States in world trade dropped very much more than the share of other countries, clearly indicating
that the dollar shortage was the real problem. But
3233 when countries like, oh, any country in the Balkans, or the Baltic countries or Poland or Czechoslovakia or any others imposed exchange controls their first consideration was that they did not have dollars, and their imports from the United States always dropped considerably more than their imports from Germany, England, and so forth.

Of course, with this regime of exchange control, exchange clearing arrangements also became very frequent. That meant that two countries, first sometimes two industries in two countries and then two countries as a whole will reach an agreement that all their mutual payments would be canalised through specialized accounts. The British had a large number of these agreements from 1933 on; the Germans of course excelled in them and had the largest number of them. The system there was, that

they first ran into, that by over-importing from a smaller country and then turning around to a smaller country and saying, "You have to buy from us what we want to sell you."

I think that in substance the main importance of these exchange restrictions is twofold. One, the exclusion of imports from the United States, and the other, that in order to operate such a system efficiently you have to cartelize your industries because you have to allocate imports.

3234 You are not allowed enough to satisfy each one, they have to be allocated, and the allocation has to be based on some kind of quota in the domestic market.

Q. In your opinion, would it have been feasible for an American company engaged in selling a chemical product, specifically a pigment for paint, to engage in exports to an appreciable extent to Germany or England during the period of the 30s?—A. Not to an appreciable extent. I should imagine that a can of paint can always be exported. I mean, trifling amounts. I think if more than trifling amounts were involved in something that is so patently domestic, consumer product, at least as long as it is aimed at the consumers' market and not to some war use, of which I have no knowledge, I think it would be quite out of the question.

Mr. WEBSTER. Your Honor, I am going to turn to another subject. Perhaps this would be a good time to take a recess.

The COURT. We will take a short recess.

(Short recess.)

Q. Mr. DeVegh, this case relates in part to the efforts of an American company to promote a relatively new product internationally. Now based on your survey of the cartel situation in England and on the Continent, and also the matter of exchange control that you have just described, how would you as an economist describe the

3235 competitive problems of such a company, that is, a company engaged in attempting to promote a relatively new chemical product, namely, titanium pigments for paint?—A. Well, I do not know anything about the titanium pigment industry specifically. Taking the situation more anonymously, as any new industrial product or any new patented product or something like that, I would say that the competitive condition during the 1920s would already have been a very considerable difficulty and during

the 30s, for all practical purposes, well, if not insurmountable from the outside, at least very close to it. And I think that they would have two very marked features, and one is that there exists a very high degree of imperfection of competition in manufacturing, and specially in the manufacturing of chemicals, and the other is that the behavior of foreign enterprises and foreign governments would be very strongly monopolistic or not competitive, according to our standards, and very strongly aimed at exclusion or at such unfair practices as to result in very much the same thing.

Q. I wish you would describe, if you will, each of those features and then point out its bearing on a company engaged in the sort of enterprise that I refer to, and I would like to have you describe those two phenomena rather briefly.—A. There is really a problem
3236 in describing it. One can visualize competition in industry as going all the way from an imaginary and impossible extreme of perfect competition to an equally imaginary and impossible extreme of perfect monopoly. Now perfect competition and perfect monopoly are very accurately described in any text book on economic principles, and the perfect competition of the economist has a large number of requirements beginning with perfect knowledge of the market, perfect independence of each buyer and seller, such a size distribution of buyers and sellers that not one of them can by his action influence the price,—in other words, for any one of them the price is given,—perfect homogeneity of product, so that the product of one seller can be substituted for that of the other, and perfect mobility of the factors of production. In other words, you can go into the market and come out of it at will.

Now, this is a theoretical abstraction which is a very necessary tool for economic analysis but which every economist realizes does not exist and is not even translated.

The COURT. As rare as a Euclidean triangle.

The WITNESS. Yes. If I only knew what the Euclidean triangle was I could say. I have been trapped, your Honor; I wish to withdraw my "Yes."

3237 Q. Well, go ahead.—A. Well, the point is that manufacturing invariably requires some plant investment and especially in chemicals a very considerable plant investment which in itself makes competition imperfect in

the terminology of the economist, meaning that the conditions of perfect competition do not exist. That does not mean that imperfect competition is less competition. It can be more competition. Just as a ride on a lame horse might be very much more painful than a ride on a very healthy horse. Both are horses.

In fact, I should imagine that the correct way to describe the imperfect competition of the economist is that that is free competition of the law. It implies nothing with respect to the behavior of the competitor in any way. The degree of imperfection of competition can be measured possibly by the number of sellers. I mean, an industry would be more—the competition in an industry would be more imperfect if there were a fewer number of sellers or if a larger percentage of the total industry were controlled by one seller or a small number of sellers. Competition would be more imperfect if the product differentiation between individual producers increased, so that Chesterfields would not be substituted for Lucky Strikes and vice versa.

But these degrees of imperfection are I do not
3238 think in any sense degrees, of themselves, degrees of competitiveness. They do have one very important effect, namely, that they make competition very much more dangerous than the competition of theoretically perfect conditions, because the price in perfect competition is the price needed to bring the highest cost seller still needed to satisfy the demand. Up to that point everybody's costs are taken care of. In imperfect competition there is absolutely no telling whose costs will be taken care of. And because of the capital investment necessary in most modern industries this has the important effect that after each upswing, after each period of expansion, whether restricted to the industry or universal in the economy, when they are making a down-swing there will be a vast amount of excess capacity in certain industries. That excess capacity has given prime costs and on top of that large overhead cost and depreciation. As long as the price stays above the prime costs it pays to keep the excess capacity running even at a loss. And of course it has been considered good industrial policy in the past at times and under conditions of depreciation to sell even below prime costs in order to keep the good will of the customer and keep the organization together, and similar points of view. This is a very major

competitive hazard and the hazard itself is perfectly
3239 objective. It does not of itself represent anything with respect to the behavior of competitors, except that a company independently wants to get as much of the market as it competitively can. This represents a very much greater hazard for something that is beginning in the face of established businesses, that is to say, it is a greater hazard for the small plant than it it for the large plant. It is a greater hazard for the small plant than it is for the large plant; although all such generalizations have their own imperfections, exceptions can be construed to everything. But this is essentially true.

The other factor that has a great deal to do with this aspect of the imperfection of competition is at the monopoly end. It is the fact that in modern industrial technology there are substitutes for almost anything. I mean, the village hardware store is a monopolist for a small segment of the market. The International Nickel Company is a monopolist for a segment of its market but it is not a perfect monopolist in any sense because the moment you move a little further away from your central monopoly area you run into the competition of a substitute product or a substitute supplier, and the range of modern industrial substitution especially in the chemical field is extremely great. So that each product within a very narrow range is monopolized. Then
3240 in a twilight zone it is a competitive product. Then, beyond that zone it ceases to have economic competitive value. For a specialized enterprise, for a small enterprise there are difficulties in this fact of substitution because, after all, the substitutes are owned by somebody, and if the owner of the substitutes is large and powerful and well diversified it can go very far in endangering a new venture, and this endangering, still at the present level of discussion, does not imply anything unfair on the part of the large enterprise.

To make it quite concrete, a small factory if it can hold its own with respect to prime costs or its cost of production, including depreciation, has not yet solved its competitive problem because the large enterprise may have such a tremendous advantage by way of advertising, nation-wide advertising, nation-wide sales organization or a sales organization distributing a very large number of products so that the incremental cost of selling the new product is very small; whereas the new organization would have to apply its entire sales overhead on its one

new product and it starts with a very substantial handicap.

3241 Then I think that the question of resistance to business fluctuation is very important. A new product, an untried product, is very much more vulnerable than—a single product is much more vulnerable—than a diversified business where various products can offset one another. The loss on one can be absorbed by the other, or absorbed in income tax, and even out fluctuation in earnings and so forth.

Then there is a second major aspect of this competitive problem and that is concerned now not with the theoretical qualities of imperfection and the hazards created for small companies by imperfection, but with the hazards created by the effect of what I might describe as monopolistic behavior, or behavior in that exclusion, which is an entirely different phenomenon, where the local or national interest uses methods aimed at preventing competition from materializing on the part of the new venture or new product.

Especially in the chemical field, it is notorious that national governments in Europe have considered the chemical industry a war essential industry and have taken steps to safeguard it, to build it up and to prevent it against outside competition so as to create the strongest possible industry, both in the case of England and in the case

3242 of Germany. I referred to the organization of a chemical industry here. Similar developments have taken place in a number of minor European countries.

Invariably the point of view is, since this is a strategic industry, the arts of the chemical industry should be stimulated, native chemical engineers should be encouraged, the industry should be made financially strong, independent from foreign competition, and whenever necessary, I believe, very far-reaching legislative enactments have served to exclude competitors from abroad.

Q. I think you have already touched on the effect of this combination movement abroad on new products. I just want to ask if there is anything that you have said with reference to the imperfections of competition and what you have called monopolistic practices, that is, restrictive practices in Continental countries or in Europe, whether or not there is any particular aspect of that that is important or emphasized in the case of a new development attempting to find a place for itself in a European or English market?—A. Well, I would say that the implication

for a new development was that either it came to terms with people within the fart, or else it would stay out. In other words, the alternative is to come to terms or not to trade.

Q. Getting down to a somewhat more precise application of this discussion and of your opinion, have you,
3243 first, an opinion or do you know how the various ways in which an American company, desiring to engage internationally in the promotion of a relatively new product, would go about doing that; and then, after you have stated that, I wish you would give your opinion, if you have one, as to the advantages and disadvantages of each of those means of access to foreign trade in that form?—A. Well, the various obvious ones are exports, or wholly owned subsidiaries, or partly owned foreign subsidiaries, or foreign licensees. I cannot think of any other way of doing it. Each one of these has, so to say, its own anatomy, if you will.

The export trade, that is to say, the promotion of a new product in foreign markets by exports from the United States, has been, before the first World War, the most frequent, and, of course, at that time our industrial technology was not as developed as it subsequently became, but nonetheless manufacturers were a steadily increasing proportion of the total exports from the United States. Yet even then they ran into all kinds of problems, and the realization that there existed very particular problems in the field of exports led to the Webb Act, which permitted a limited form of cartelization for an American corporation engaged in export trade.

The problems were envisaged, I believe, as essen-
3244 tially competitive problems, and the idea, as far as I can see, of permitting exporters to combine was to strengthen their bargaining position abroad by not having to compete against each other.

I believe that the Federal Trade Commission gave an opinion in its famous Silver letter, which is quoted in TNEC Monograph No. 6 in full, to the extent that these Webb associations can combine with foreign associations with respect to division of territory, I think, and that their effect on domestic price is all right, I mean, if their effect is to raise the domestic price, that is all right, so long as it is incidental to the main purpose, but, as I say, this is all in the Silver letter in TNEC Monograph No. 6. I think it is page 125 to page 127.

It is a very significant document from the viewpoint of

the approach and the problems that came up relatively early in the life of that piece of legislation.

Now, the problems that were foreseen and perhaps somewhat uncertainly grappled with in the Webb Act and by the Trade Commission in the early period became very marked subsequently and very marked, of course, with every development and specialization in industrial technology, the trouble being that the easiest way for anybody to get rid of competition is to go to its own national government and say that they want a protective
3245 tariff because that tariff will help employment, and that tariff will help the dollar shortage and so forth.

The result of this has been that the scope of American exports during the 1930s has been strikingly restricted and especially in industries, as I have had occasion to point out just before, that are infected with a genuine or a spurious national interest from the viewpoint of the foreign producers, the method of breaking into a market by exports from the United States is one that is steadily diminishing in importance. The exports move from the United States when they are liberally supported by credits or when we are a monopolist and the export cannot be obtained elsewhere—monopolist in a real economic sense. I mean, for instance, in machine tools in 1938; in 1938 and 1939 the world machine tool industry was operating at capacity. If the French or German or English or Japanese wanted additional machine tools for their own rearmament, they had to buy them from the United States, and so they came and bought from the United States. That is what I mean by being a monopolist seller in a given situation, you see. Then, of course, when they have to buy, they will have to buy, but when there are domestic substitutes, of course the question does not arise, and the tariff protection is only the least of it.

3246 I mean, whenever they can tie up a small company or a new product in patent litigation, by developing a set of incomplete patents, and then carrying it through their local courts, obviously that is, for all practical purposes, another method of excluding a competitor or making life difficult for him.

Therefore, the other alternatives have become rapidly more important during the past quarter of a century. Direct investment of American corporations abroad represents a very substantial capital investment and a very substantial source of income, and by direct investments are meant foreign subsidiaries of American corporations.

They are fully dealt with in the Department of Commerce publications on the balance of payments of the United States and foreign capital investment of the United States. There are a large number of them. In these cases, the major alternatives are wholly-owned subsidiaries abroad or partly owned subsidiaries.

3247 I also mentioned the third alternative, namely, the licensing of foreign producers, which is a somewhat enfeebled case of American interests in producing abroad. But, in some respects, belongs in this discussion.

The wholly-owned subsidiary is, in a sense, from the viewpoint of well-knit, well-organized industry, like many British industries, a Trojan horse, an enemy within the walls. Of course, very many American companies have wholly-owned subsidiaries abroad and many of them have had a very prosperous and successful existence, but wherever there is a domestic trade, that has preexisted, in other words, wherever the new product is a substitute product for something for which well entrenched interests are well equipped, the breaking in of the wholly-owned subsidiary is a very difficult thing. I mean, "Buy British" is going to be a very much louder cry against a product that is produced by that American factory, that factory that is wholly-owned by an American parent company, when there is already an entrenched industry on which this new American-owned factory is trying to, if I may say, "muscle" in. They view it as an unfair poaching on their preserves.

The method that has been very frequently employed by —I mean, a number of methods have been employed to get around these double difficulties of being able to export at will and having difficulties in running

3248 a 100 per cent owned foreign subsidiary and pretending that it is a foreign company, I mean, domestic in the foreign country, one of which was partial manufacture of export products abroad, which eventually developed into full manufacture of the export abroad and ultimately develops into the sale of a part of the foreign company, foreign subsidiary, to local interests.

The increasingly preferred case is that of American companies forming subsidiaries abroad and taking in local interests so that the foreignness of the enterprise is diluted, and so it appears in the foreign market represented by domestic interests strong enough to protect the venture against other domestic interests in the foreign country that are hostile to it.

The cases of this are really extremely numerous and are rather increasingly so, even in countries like Latin America, where local interests are quite difficult to draw into an enterprise because of great differences in background and corporate experience.

These mixed ownership propositions are very popular in England, France, Germany and the Scandinavian countries, where technological knowledge is very similar. And vice versa, I mean, take the cases of mixed ownership, such as the Shell Union, which is partly owned by Dutch interests, and I don't know whether the British still
3249 have an interest in American Viscose, which they had, and S-K-F is largely, but not entirely, foreign-owned; there are a number of instances in this country where the mixed form exists.

Thirdly, there is the alternative of the licensing of wholly-foreign-owned manufacture.

Q. And the alternative, of course, is not doing anything at all?—A. Well, that definitely is implied in what I said, unless you have a friend in court as it were.

Q. I think now that we have got near the end of this if your Honor will permit me to ask you a guess question, namely, have you any guess as to what will be advisable in the case of an American company of the sort I have described to you in the future, after the war?—A. I think that from the viewpoint of the economic situation abroad and the institutional organization abroad, the answer is implied in what I said, in other words, you either produce in alliance with native interests in the foreign countries involved or else you do not get a share of the market.

The COURT. I was rather impressed by the extremely high degree of correlation between the increasing number of economists and the increasing barriers to foreign trade. I don't know whether it is purely accidental, but the graph shows a very strong degree of correlation.

You may examine, Mr. Dixon.

3250 Mr. DIXON. No questions.

(Witness excused.)

3252 Mr. WHITNEY. I think Mr. Dixon has a stipulation before we proceed.

Mr. DIXON. May it please the Court, we wish to read into the record the following stipulation entered into between the parties to the proceeding as follows:

(Stipulation as corrected.)

Stipulation as to certain facts

It is hereby stipulated between the parties to this action, by their respective attorneys:

(1) That an appropriate official of du Pont, if called by the plaintiff, would testify that du Pont sold 124 tons of pure TiO_2 to Virginia Chemical during the period from August 5, 1937 to December 1, 1944.

(2) That an appropriate official of National Lead, if called by the plaintiff, would testify that National Lead shipped 100 tons of TiO_2 to Chemical & Pigments Company, St. Helena, Maryland, in 1939; that 25 tons of TiO_2 were shipped to Chemical & Pigments Company, St. Helena, Maryland, in 1940; that 70 tons of TiO_2 were shipped to Chemical & Pigments Company, Collinsville, Illinois, in 1940; and that 80 tons of TiO_2 were billed to The Glidden Company, Cleveland, Ohio, and shipped to Chemical & Pigments Company, St. Helena, Maryland, in 1943. He would further testify that The Glidden Company sells the pigments of Zirconium, using Chemical & Pigments Company, a subsidiary of Glidden, as the selling agent.

3253 (3) That an appropriate official of du Pont, if called by the plaintiff, would testify that du Pont sold to Zirconium and/or its affiliate The Glidden Company, the following specified tonnages of pure TiO_2 for the years indicated:

Year:	Tonnage
1931	118
1932	440
1933	635
1934	306
1935	202
1936	62
1937	61
1938	84
1939	331
1940	452
1941	510
1942	1739
1943	953

(4) That an appropriate official of Virginia Chemical, if called by the plaintiffs, would testify (a) that Virginia Chemical produced only pure TiO_2 under its license from du Pont dated August 5, 1937 (Exhibit L); (b) that

3254 Virginia Chemical produced during the period from August 4, 1937, to June 30, 1944, the following net tons of pure TiO_2:

Year:	Tonnage
1937	300
1938*	2896
1939	4014
1940	5024
1941	5499
1942	5755
1943	6437
1944 (six months)	3647
	33,572

and (c) that said tonnage was all of the pure TiO_2 produced by Virginia Chemical during said period and constituted the entire production of titanium pigments produced by Virginia Chemical during said period.

(5) That an appropriate official of Zirconium, if called by the plaintiff, would testify (a) that Zirconium produced only pure TiO_2 under either its license from du Pont dated January 1, 1935 (Exhibit I), or its license from National dated May 6, 1935 (Exhibits H, H-1, and H-2); (b) that Zirconium produced a total of 523.895 tons of pure TiO_2 from January 1, 1935 to May 6, 1935, and produced 33,662 tons of pure TiO_2 from May 6, 1935 to July 1, 1944;
3255 (c) that Zirconium produced during the period from January 1, 1935 to July 1, 1944, the following net tons of pure TiO_2:

1935	2206
1936	3053
1937	3316
1938	4403
1939	5281
1940	4829
1941	6568
1942	1796*
1943	236*
1944 (six months)	1974
	33,662

* No production from October 1, 1942 to September 30, 1943, inclusive.

and (d) that said tonnages were all of the pure TiO_2 produced by Zirconium during said periods and constituted the entire production of titanium pigments by Zirconium during said periods.

(6) That du Pont's response to Paragraph 17 of the subpoena served on it by the plaintiff on October 30, 1944 is that it has no corporate records showing that either du Pont or any of its controlled subsidiaries filed any suit

alleging infringement of any titanium pigment patents of du Pont or of any such subsidiaries.

(7) That National Lead's response to Paragraph 17 of the subpoena served on it by the plaintiff on October 30, 1944, is that it has no corporate records showing that either National or any of its subsidiaries filed any suit alleging infringement of any titanium pigment patents of National or of any such subsidiaries.

(8) That Titan Co., Inc.'s response to Paragraph 17 of the subpoena served on it by the Government on October 30, 1944, is that it has no corporate records showing that Titan Co., Inc. filed any suit alleging infringement of any of its titanium pigment patents.

(9) That du Pont's response to that portion of Paragraph 19 of the subpoena served on it by the plaintiff on October 30, 1944, calling for "the original records or books * * * showing the manner and method of arriving at" its price lists is that it has no such corporate records.

(10) That National Lead's response to that portion of Paragraph 19 of the subpoena served on it by the plaintiff on October 30, 1944, calling for the "original records or books * * * showing the manner and method of arriving at" its price lists is that it has no such corporate records.

(11) That an appropriate official of du Pont, if called by the plaintiff, would testify that the entire stock interest of Commercial Solvents in Krebs was purchased by du Pont on December 31, 1934, and that from 3257 and after said date until dissolved, Krebs was a wholly-owned subsidiary of du Pont.

(12) That an appropriate official of Titan Co., Inc. if called by the plaintiff, would testify that Titan Co., Inc. never granted a sublicense pursuant to the licenses received by it from du Pont under the license agreements dated July 27, 1937, June 20, 1938, April 21, 1939, May 10, 1940 and June 23, 1941, respectively (Plaintiff's Exhibits M, N, Q, R and S), on a cash royalty basis and therefore never paid to du Pont any cash royalties under said license agreements.

(13) Plaintiff's Exhibit 42 (page 209 of the transcript herein to the contrary notwithstanding) should not be deemed in any way to indicate royalties paid by du Pont (since there were none) under the du Pont-Titan Co., Inc. license agreements dated July 27, 1937, June 20, 1938,

April 21, 1939, May 10, 1940 and June 23, 1941, respectively (Plaintiff's Exhibits M, N, Q, R and S). Said Exhibit 42 refers solely to royalty payments made under the agreement of January 1, 1933, between Titanium Pigments and Krebs (Plaintiff's Exhibit E).

(14) That National Lead does not sell any titanium pigments which are commercially equivalent to the following titanium pigments which are, or have been, sold by du Pont:

3258 TiPure LG.
TiPure WR.
TiPure SI.
TiPure 33.
TiPure R 300.
TiPure R 510.
TiPure R 610.
TiBar O.
TiBar HHK.
TiCal R 25.
TiCal R 30.
TiCal R 31.
TiCal R 35.
TiCal HO-NS.
TiTint LG.
TiTint DG.
TiTint LB.
Titone L.
Titone 178.
TiTone J.
TiTone P.
TiTone NR.

(15) That du Pont does not sell any titanium pigments which are commercially equivalent to the following titanium pigments which are, or have been, sold by National Lead:

3259 Titanox L (Lead Titanate).
Titanox A (Phthalate Treated).
Titanox A 24-NO.

(16) That an appropriate official of du Pont, if called by the plaintiff, would testify that the price lists contained in Plaintiff's Exhibit 42 are accurate; that the prices and terms of sale indicated on such price lists are the actual prices and terms of sale established by du Pont and were in effect from the effective dates indicated on such price lists until the effective date of the next succeeding price list; that such price lists include all of the titanium pig-

ments sold by du Pont during the period when such price lists were in effect; and that such price lists and the prices therein contained were announced on some occasions prior to their effective date and on other occasions subsequent to their effective date and not necessarily concurrently with price announcements made by National Lead.

(17) That an appropriate official of National Lead, if called by the plaintiff, would testify that the price lists contained in Plaintiff's Exhibit 24 are accurate; that the prices and terms of sale indicated on such price lists are the actual prices and terms of sale established by National Lead and were in effect from the effective dates in-
3260-61 dicated on such price lists until the effective date of the next succeeding price list; that such price lists include all of the titanium pigments sold by National Lead during the period when such price lists were in effect; and that such price lists and the prices therein contained were announced on some occasions prior to their effective date and on other occasions subsequent to their effective date and not necessarily concurrently with price announcements made by du Pont.

(18) That an appropriate official of Zirconium, if called by the plaintiff, would testify that neither National Lead nor any of its subsidiaries received any royalties from Zirconium under the license dated May 6, 1935, granted to Zirconium by Titanium Pigments.

(19) That an appropriate official of National Lead, if called by the plaintiff, would testify that the files of National Lead contain a draft of Plaintiff's Exhibit G on page 1 of which appears the following handwritten notation: "Left by Dr. Jebsen July—1933—FMC-WCB".

(19a) That an appropriate official of the defendant
3262 du Pont, if called by the plaintiff, would testify that du Pont received no royalties from the National Lead Company or Titan Company, Inc. for licenses granted Titan Company, Inc. under plaintiff's exhibits M; N; Q, R and S, respectively, and that the du Pont Company paid no royalties to the National Lead Company or Titan Company, Inc. for licenses granted the du Pont Company by Titan Company, Inc. under plaintiff's exhibits Q, R and S, respectively.

That an appropriate official of the National Lead Company and Titan Company, Inc., if called by the plaintiff, would testify that neither of said companies paid any royalties to the du Pont Company for any licenses granted Titan Company, Inc. by the du Pont Company under

exhibits M, N, Q, R and S, respectively, and that neither of said companies received any royalties from the du Pont Company for any licenses granted the du Pont Company by Titan Company, Inc. under plaintiff's exhibits Q, R and S, respectively.

(20) This stipulation is made for the purpose of saving the time of the Court and counsel on the trial of this case and it may be set aside or modified by agreement or by direction of the Court in the event that such action may be deemed necessary or desirable in the interest of justice.

(21) The matters agreed to herein are for purposes of this action only.

3343 JOHN F. DALEY, called as a witness on behalf of defendant E. I. du Pont de Nemours & Company, Inc., being first duly sworn, testified as follows:

Direct examination by Mr. GESELL:

Q. Mr. Daley, you are employed by the du Pont Company, are you not?—A. That is right, sir.

Q. In what capacity?—A. General manager of the pigments department.

Q. How long have you been employed by the du Pont Company?—A. Thirty years.

Q. Will you state briefly what positions you have held in the company during the last thirty years?—A. Well, I started in 1915 in smokeless powder production work; went from there, after the war, into the chemical part of the business, stayed in production work, manufacturing, in charge of various processes, aluminum sulfate, paint and varnish, and then into pigments, going into the pigment department in about 1925. I was plant manager for the pigment department at their Newark plant for some time. I became production manager——

Q. When did you become production manager?—A. About 1931 or 1932, and I stayed as production manager for a matter of close to ten years, and I was director of sales of the department.

Q. Now, you were production manager for ten years?

3344 —A. Yes.

Q. That brought you up to about 1942?—A. No. It was probably about eight years, because I was sent under sort of lend-lease arrangement to the explosives department to start up the first smokeless powder plant that the United States Government directed for this war out near Louisville, Kentucky.

Q. During what time were you on that assignment?—A. Well, that was from November, 1940, until June, 1942.

Q. During that period you were technically production manager but on an assignment to an explosives plant job, is that right?—A. That is right.

Q. What happened in 1942?—A. I came back and was assigned to the job as director of sales, and I stayed there for four months.

Q. Of the pigments department?—A. Of the pigments department.

Q. At the end of that four months what did you do?—A. Well, the War Department of the United States Government asked for my services as—well, it was deputy field director of ammunition plants for the Ordnance Department of the Government, and I worked with them in a sort of supervisory capacity over production of all the ammunition for the War Department.

Q. Until when?—A. Until June of 1944.

3345 Q. You returned to the du Pont Company then?—A. Yes.

Q. In what capacity?—A. Came back as sales director.

Q. How long were you sales director?—A. Probably about six weeks, because we had some illness in our higher management and I became an acting assistant general manager for about a month or so.

Q. That would be about when?—A. July of 1944.

Q. When were you made general manager?—A. September or October; probably October of 1944.

Q. And you have been general manager since that time?—A. Yes, sir.

Q. When did Mr. Rupprecht die?—A. September.

Q. 1944?—A. Yes.

Q. Now the pigments department, as I understand it, is one of a number of departments in the du Pont Company, is that right?—A. That is correct.

Q. How many are there?—A. There are ten major or manufacturing departments in the company.

Q. And then certain service departments?—A. There are probably another ten service departments, engineering, legal, publicity or public relations, and various others of that kind.

Q. What is the scope of the activities of the pigments department?—A. The pigments department has full jurisdiction over any matters pertaining to pigments as

3346 manufactured or sold within the du Pont Company.

Q. What are the principal products that the pig-

ments department handles?—A. Your titanium products, lithopone and dry colors are the three major divisions of the pigments department.

Q. And there are certain other pigments that you sell?—A. No. Well, we re-sell zinc oxide and a few items of that kind. They are more or less minor.

Q. How is the department organized internally? You are the general manager; and how many employees do you have?—A. Probably 1200 employees in the department, as a total.

The COURT. That includes manufacturing personnel?

The WITNESS. Yes, sir. We have four plants, and that includes the people at the four plants and in our main office.

Q. How many of those are engaged in the sale of titanium pigments?—A. In the sale?

Q. Well, in the titanium pigments operations.—A. About 700.

Q. And how many plants does the du Pont Company operate for the manufacture of titanium pigments?—A. Two.

Q. Where are they located?—A. Baltimore, Maryland, and Edge Moor, Delaware.

Q. And when were they built initially?—A. Well, 3347 the Baltimore plant was acquired from the Commercial Pigments Corporation in 1931.

Q. Since that date it has been expanded, has it not?—A. Yes, sir.

Q. When was the other plant built?—A. The other plant was built, I think, in 1935. That was its initial operation.

Q. Approximately how many customers does the pigments department have for titanium pigment?—A. I had that figure checked up by the Trade Analysis Division. In 1944 we sold to one thousand separate customers.

Q. And approximately how many different titanium pigment products does the division sell?—A. Roughly 40, currently active ones that is.

Q. As general manager to whom are you responsible in the du Pont Committee?—A. The executive committee of the company.

Q. Is that a committee made up of certain directors of du Pont Company?—A. No. That is a committee made up of eight vice-presidents of the du Pont Company.

Q. And in what respect are you responsible to that committee?—A. Well, the regulations of the company require that certain matters, prescribed items, must be referred

to that committee for any kind of a definite or final decision. That would include requests for new
3348 construction in excess of a certain amount of money which must be submitted to them; any matters involving patents or licenses must be submitted to them through the legal department or the committee on patents. I could not think of them all offhand, but there are other matters of broad company policy which might have some effect on another department of the company that you would normally recognize as a matter you should clear with them before making any commitment for the company.

Q. What, if any, commitments and agreements made by your department must be submitted to that committee?—A. Any purchase contract, for instance, in excess of a given amount, or covering more than a certain period of time, and likewise with a sales contract of similar specified values or duration; commitments as to patents or patent licenses.

Q. Commitments as to technical information?—A. Yes, any commitment which would involve giving away something which you might regard as the property of the company, such as would be the case with technical information.

Q. How often does the committee meet?—A. The executive committee meets regularly every Wednesday.

Q. Are the reports made to the committee in writing or by personal presentation?—A. I think invariably everything taken up with the executive committee is in
3349 writing. That is a requirement.

Q. Do you ever appear before the executive committee in your capacity as general manager?—A. Oh, yes.

Q. In what connection would that be?—A. Well, in addition to those other matters that must be referred you must submit a monthly report to the executive committee of the progress in your department, the performance for the month, and once every four weeks, or once every month you must go up and discuss that particular report, in addition to going up on any other submission which you have filed with them with request for authorization for any discussion they might want to have on it before they pass on it.

Q. In other words, you make a written submission on one of the matters that comes within the scope of the work as you have described, and, if they want to talk to you about it, they call you up?—A. That is right.

Q. How many members are there of this committee?—A. Eight.

Q. And it is responsible, is it not, to the board of directors of the company?—A. Yes.

Q. Now I believe you said that you had approximately a thousand customers, is that correct?—A. That is right.

Q. What type of person are those customers?—A. Well, they are largely in the major fields which we sell to; that is paint, paper, printing inks, floor covering, rub-
3350 ber—they are probably the five largest fields—welding rods.

Q. They are all manufacturers, are they not?—A. That is right.

Q. And they purchase titanium pigments for what purpose?—A. For further processing into the particular product which they, in turn, sell to direct consumers.

Q. You have no sale of titanium pigments, as such, to an ultimate consumer of those products other than these manufacturing customers?—A. I do not think so, no; none at all.

Q. Now will you indicate what sort of sales force you have, the type of men you employ as salesmen, what their training is, and generally what the field of their activity is.—A. Well, to start with, in the pigment business you have got to realize the consumers' problems in selling pigments. The pigment business is rather along the lines of drug prescription business. That is what it currently has developed into, at any rate. Let us take, for instance, our major outlet, which is the paint industry. There are probably 12 to 15 hundred paint manufacturers in the United States. They represent every kind of an extreme with respect to size of the outfit, the size of the company, the type of equipment which they use, the different paint consuming fields which they in turn cater to or sell to, the type and extent of the technical organization which
3351 they have within their own organization, the type of formulations which they employ. Paint manufacturing is something like baking a cake. If you ask ten women to bake a cake they will ultimately bake ten cakes and you might like the chocolate, but they are all good cakes, but they are not made the same way. Neither do paint manufacturers make a paint for outside house paint all the same way, and all these conditions go in there. To meet these conditions that exist in these paint manufacturing establishments, you have got to have a techni-

cally trained man to sell your pigment, because he must appreciate the differences in the problems with the separate paint manufacturers. The type of paint generally referred to as a mountain district type of paint is different from the paint made in Philadelphia or Boston, generally speaking, or in the Middle West. The paint you have made for use in Florida or in your southern seaboard states is quite different, or should be, than the paint made for consumption in Illinois or Indiana.

The paint manufacturers will use stone mills, pebble mills, or roller mills, just depending on what the particular man elected to put in. Now any one pigment ground in the separate types of mills will give different results and may give different results as to gloss, as to fineness, which is your level, your smoothness of your film. There
3352 the difference is created by the conditions within the paint plant. You have to know that and to know what that particular paint manufacturer wants and the type of trade he is trying to sell to, whether it is a refrigerator manufacturer who wants a blue-whiteness, and the highest degree of gloss and the greatest degree of smoothness. He is willing to sacrifice some other property if he gets them. Now, your type of salesman must go in there if he can and find out what type of customer the paint manufacturer is that his product is for; what properties he emphasizes; what vehicles he uses with the pigments.

Q. What do you mean by "vehicles"?—A. I mean the oil, the liquid part of the paint. At one time you had linseed oil and China wood oil and the fish oil and turpentine, and that is all. But now you have a thousand separate vehicles available to the paint manufacturers and thus with your highly technical, big laboratory organization you must understand and know the different properties of the various vehicles and what they will do in the paints, and you must be up with that, and he must know it, so you have to have these technical salesmen to bring us in that kind of a story if we are going in to replace a product by a competitive titanium manufacturer.

Q. Now those differences in uses and the different problems you meet within the paint field, are they
3353 also met within the other fields to which you sell titanium pigments?—A. Yes, sir; they are identical problems; but the general number of problems and the degree of problems are present in rod manufacturers, or

paper or printing inks—the field really makes no difference.

Q. And I take it from what you said your salesmen are all technically trained so that they know how to advise the manufacturer to whom they are selling?—A. Well, we still have a number of salesmen, a few, I should say, of our older men, who are still with us who started years ago in selling of lithopone and took over part of the titanium sales trade. But any salesmen whom we have put out, and that would represent three-quarters of our sales force I would say, in the last fifteen years has been a technically trained man.

3354 Q. Well now, would you give us a typical instance of how a salesman might get and retain a particular titanium pigment account?

The COURT. What kind of fly and what kind of reel?

A. Well, normally the salesman has created some goodwill, or at least he is allowed in the door, he is allowed to talk, and he finally, we hope, reaches the point, or we will assume he reaches the point where he says, "Won't you try my stuff? It will give you some advantage over what you are using." He may have by that time through a number of visits been able to figure out that he is a man we would like to have, the type of trade he is selling; "We would like to have a better gloss"; and "I have something that will give you a better gloss. Will you try it out?"

And he may get the agreement of the paint manufacturer to try it out in competition with the material he is using. And, normally, that will be probably in a laboratory scale. And he will be told that it doesn't give any improvement in gloss and, therefore, they don't care to upset their factory conditions by trying it out on a larger scale. And he will then try to get the permission to bring a technical service man in with him, somebody who can get the detailed problems of this paint manufacturer
3355 and probably samples of his vehicles and his grinding conditions and take them back to our laboratory and work with the research crowd back there to find out why our material didn't give the expected improvement in gloss that we thought and hoped it would.

And he will go back and say, "Now we can prove it," and proves it again in the laboratory. And the man says, "All right, I will try that again." And he tries this out in the plant, and you may get an order. You try it out in the plant and it may or may not give you the degree

of improvement on this full plant scale equipment. If it does not, again you have to have your technical service men stay there in that paint manufacturer's plant to watch and figure out why it didn't give you this degree. Perhaps we can come back with enough information to again go to work in the laboratory and again correct the conditions—and I am covering a period normally of six or eight months—and finally you get in with a product which gives that man that advantage which is the important advantage to him in the type of trade which he serves.

Q. Does that involve presenting to the prospective customer technical comparisons of the properties of a du Pont titanium pigment and the competitive pigment of another manufacturer who is trying to sell the customer, or who has the account?—A. I don't quite get your question.

3356 Q. That is a little involved. Let me ask you this question.—A. These people depend on physical results. Now you necessarily have to discuss with that manufacturer, and depending again on the man's organization—you will find today that most of your paint plant superintendents are technically trained men, and then they also have the old super-doctors over in their laboratories; so your man necessarily has to discuss the technical side of the product. He would love to be given the opportunity if they will listen, he will fill out the order if they just listen. That is just making character and selling. And, normally, that is what happens. In addition to the physical tests to demonstate the quality that you are after.

Q. Now in this process do you meet competition of National Lead?—A. Oh yes.

Q. How would you characterize that competition?—A. I would characterize it as plenty tough. They have got their good, big share of the business and very good products.

Q. Do you also meet any competition from Virginia Chemical and American Zirconium?—A. Yes, sir.

Q. Well now, how does evidence of this competition come to your attention?—A. It comes to our attention through our salesmen, the salesmen making regular calls; and according to our system, our so-called trade record system, a salesman sends in a written report on a

3357 prescribed form of each call, reporting whatever information he can get at that plant with respect to what the customer is now using, what particular grade

of competition he is using, and what efforts he made to sell, and what is to be done, what help he might get from the laboratory in helping him sell that particular account.

Q. Do your salesmen and technical people call upon and solicit the business of National Lead accounts?—A. Regularly.

Q. Do they call upon and solicit the business of the Virginia Chemical and Zirconium accounts?—A. Regularly.

Q. I believe you said you met competition of Virginia Chemical and American Zirconium.—A. Yes, sir.

Q. How would you characterize that competition?—A. How would I characterize the competition? I would characterize it like any other competition, that is tough; and they have the regular line of titanium products of good quality.

Q. Have you taken customers from time to time from National Lead?—A. Yes, sir.

Q. And from Virginia Chemical?—A. Yes, sir.

Q. And from American Zirconium?—A. Yes, sir.

Q. Have they taken customers from you?—A. They have, all of them.

Q. Have you any information as to the extent to which there is a shifting of customers as between you and
3358 National Lead?—A. Well, I had occasion to have that investigated, and our records—our trade record analysis shows that during the years 1935 to 1941, I believe that was the period covered, we lost—or we gained on the average 25 accounts per year and lost on the average of seven accounts per year. And during that period our peak gain in any one year was 53 and our peak loss was 12.

Q. When you say gain and loss you refer to gain and loss from National Lead?—A. That is right.

Q. In selling titanium pigments do you meet the competition in the market of any other form of white pigments?—A. Well, we meet lithopone and white lead particularly. They are the two outstanding pigments.

Q. What companies are the principal manufacturers and sellers of lithopone?—A. New Jersey Zinc, Glidden, Sherwin-Williams, Eagle Picher. I believe they are the four.

Q. Are those large or small companies?—A. No; they are all large companies.

Q. Who are the principal sellers of white lead?—A. National Lead, Eagle Picher. They are the two that I can think of at the moment.

Q. Now when you say you meet competition of lithopone

and white lead, what do you mean by that?—A. You are selling in competition with those two pigments. Now you have got to have a product which to the customer
3359 represents better money value or better quality. And we compete with those other products on that basis. That is what I say.

Q. Do some of your customers use these various forms of white pigments in combination?—A. Oh, yes. The average outside house paint, for instance, will carry both titanium and lead and zinc oxide, for instance.

The COURT. All mixed in the one can?

The WITNESS. Yes, sir.

Q. Will you describe briefly the nature of the research organization which the pigment department of du Pont Company maintains in connection with titanium pigment activities?—A. Well, we have laboratories at our Baltimore and Edge Moor plants, to start with, and a central research work pigment laboratory at Newport, Delaware, which is detached from either of those two plants. Altogether, we have about 80 chemists doing research work on white pigments.

Q. Has the research work grown or diminished in the years since 1940?—A. Since 1940? I don't believe I could answer that accurately. I was out for such a period there that I don't know exactly what the comparison between 1940 and 1944 would be.

Q. Well, over the period—— A. Our research expense has been on such an ascending line—I go back to a period of 15 years now, that I just can't visualize a reduc-
3360 tion, except for the possible war effects of some sort.

Q. Will you describe briefly how you develop a new titanium pigment product?

The COURT. How you develop it?

A. How you do it or why you do it?

Q. Well, both. Perhaps, why you do it.—A. Well, we have those 80 research chemists to tell you the "how." But with our contact with the consuming industry, with 20 or 25 technically trained men, we are being constantly advised of the deficiencies of our pigment, both from the standpoint of the things that the consuming manufacturer, the paint or paper or what not man, would like himself to do as an improvement from time to time wherein we are deficient to competition.

Now we will take that sort of information and after proper discussion back and forth with our technical de-

partment, we will determine whether or not that is a fit subject for a research project, and if it is it will be fitted into the program and research work will be done on it. And, on top of that, we have a regular monthly meeting within the department of our New Products Committee which would include representatives from research, production, and sales, sifting over new possibilities, suggestions and so on which we encourage from various sources.

3361 Q. I meant to ask you when you were discussing the organization of the pigments department whether or not it was the practice of the department for the various managers of different divisions and various key men to meet together frequently?—A. Yes; for several reasons. I mention one of them there, and in that group would be the management. Another one would be the monthly discussion of costs in which research and management and production and sales are all interested, naturally. Another one would be forecasting. We have——

Q. Forecasting sales?—A. We have to forecast our sales every three months and forecast it for the next twelve months, and at certain intervals to make a so-called more high spot, longer range forecast for three-year periods.

Q. Do you have such meetings to discuss production and planning problems?—A. Oh yes. Well, your sales forecast will necessarily lead into a consideration of more capacity, and then you plan as to how to arrive at that, what additional equipment you will have to put in, what improvements, process improvements your research organization in the interim have been considering, and when would be the proper time to turn it over to the engineering design division for detailed study, and so on.

Q. You have had those meetings of this type with your staff during the time you have been general manager and acting general manager, have you not?—A. Yes, sir.

3362 Q. Did Mr. Rupprecht have such meetings while he was general manager?—A. Oh yes, regularly.

Q. You attended those meetings as production manager or as sales manager, whichever your position was?—A. That is right.

Q. Now, Mr. Daley, I want to direct your attention to a chart which has been marked for identification by the clerk as du Pont Exhibit for identification 94. Do you have a copy of that chart before you? It is entitled "Du Pont Productive Capacity and Sales of Pure TiO_2, 1932-1944."—A. Yes, sir.

Q. Was that chart prepared under your direction and supervision?—A. Yes, sir.

Q. What was the source of the information contained on the chart?—A. The production capacity information is the official record of the pigments department as submitted by the production department as to their ability to produce, with such figure always being approved by the management. The sales information is the actual official records of the trade analysis section of the sales department.

Q. And this chart was prepared from that information?—A. Yes, sir.

Q. Now do I understand correctly that the horizontal line which appears on this chart in heavy black straight lines is plant capacity for pure TiO_2?—A. Yes, sir.

3363 That is the official rated capacity.

Q. What do you mean by "rated capacity"?—A. Well, that is regarded as the maximum amount that the plant can produce per month.

Q. And the jagged line shown in somewhat lighter width on the chart shows actual sales per month; is that correct?—A. Yes, sir.

Q. Now from time to time that jagged line rises above the horizontal production line and the area is shown in heavy black on the chart. Do you notice those situations?—A. Yes, sir.

Q. What do they represent?—A. The jagged line below the horizontal capacity line——

Q. I was talking about above, Mr. Daley; the blacked in portion.—A. The blacked in portion above represents periods where sales were in excess of current capacity.

Q. Where the jagged line is below, that represents, I take it, where sales were less than rated capacity?—A. That is right.

Q. The chart covers the period from 1932 to 1934, does it not?—A. Yes, sir.

Q. Why was it started in 1932?—A. That is when we started in the titanium dioxide business.

Q. Now examining the chart for the period 1932 to 1939, will you describe what it shows, as a trade produc-

3364 tion man?—A. It shows that we started in the business, and I said that is when we started in the business, that is when our first accurate sales records were available; it showed in our early stages in the business, in the year 1932, we were selling at below the then rated capacity of the plant and that in 1933 we went very sharply above our capacity with the requirement of expanding our

plant of the same year, and about the time we got that finished in 1934 we again oversold that. So we expanded again to a greater percentage all of our then existing capacity, and then a year after we completed that we again oversold it and made another small expansion, carrying us into 1935; and we immediately oversold that, and then made a very substantial expansion in the early part of 1936.

Q. That was soon exceeded, I gather, in 1937?—A. Again, in 1937 we exceeded that. And then took a period of 18 months or so of a depression period when we were undersold, but before the end of 1939 we were back up again in an oversold position and have practically stayed there ever since.

Q. When you say "depression period," you mean a period of general economic depression?—A. Yes, sir.

Q. Not just for du Pont's titanium pigment business?—

3365 A. No. I might point out if I may, Mr. Gesell, that each one of these periods, each one of these expansions is a matter of something that happened, materializes let us say, about a year or more after you do your initial planning.

Q. So that during this period you discuss there was just a constant scramble as to whether sales would be ahead of capacity or capacity ahead of sales?—A. I was in production exclusively at the time and I remember that sales were ahead of capacity or were forecasting that they very soon would be, and I was scrambling for a period of eight solid years. That is my vivid recollection.

Q. Mr. Whitney points out the big dip that took place in 1942, below the line. Have you some explanation for that?—A. Well, in 1941 it appeared as if every buyer of pigments decided that he would never again be able to buy pigments—that was the general conception, because it was something akin to a buyers' panic, because in 1942 we had customers that didn't buy anything for eight or nine or ten months, they had way over-bought in 1941, and on top of that the paint business itself took a sharp curtailment in 1942. So you had the cumulative effect of over-buying and under-consumption which accounted for that dip in 1942.

Q. Well now, will you turn briefly to the chart which has been marked——

The COURT. Are you offering that in evidence?

3366 Mr. GESELL. I was going to identify them both and offer them both, your Honor.

Q. ——du Pont's Exhibit 95 for identification. Do you have that in front of you, Mr. Daley?—A. Yes, sir.

Q. That is a similar chart. I want to reflect the relationship between capacity and actual sales of Ti-Bar and Ti-Cal in the period from 1935 to 1944.—A. Yes, sir.

The COURT. Those are the extender pigments?

The WITNESS. Yes, sir.

Q. Why does this chart start in 1935?—A. Well, that is when we first entered the extender titanium pigment field.

Q. It is made on exactly the same basis and from the sources as the previous chart?—A. That is right.

Q. Will you comment briefly on the relationship between actual sales and capacity for the period 1935 through 1939, as indicated on that chart?—A. Well, we started in this business in the middle of 1935 and were able to make some substantial initial sales during that first half-year. Before the end of the second year we hit a peak period of two or three months of approximately 95 per cent of our capacity. Then after dropping back down again for a period of nine months we did the same thing again in the following year, and then a second peak that same year which sold our entire capacity. Then by the end
3367 of the third year we were substantially oversold, requiring an expansion in the fourth year.

Q. Then, from then on through 1941 you were constantly in an expanding production situation, with sales in excess of capacity most of that time?—A. Yes, sir.

Q. Now referring to both charts, will you explain the situation briefly as it has existed since 1940? I refer particularly to the fact that there have been constant sales of TiO_2 in excess of capacity for that period, whereas there have been few sales in excess of capacity of the extender pigments could switch to lithopone, which in the and our inability to get a continued supply of ilmenite from our regular sources, we had to use other grades of ilmenite which curtailed our total production of TiO_2 and which at the same time greatly increased our production costs.

Now, we elected to take the TiO_2 and sell it as such rather than produce it and consume it in an extender—to make the extender pigment. Now, the consumers of extender pigments could swith to lithopone, which in the early part of the war was available, and could switch to white lead, which was available, more readily than they could switch—than could the consumer of titanium dioxide.

Q. So you automatically put a self-imposed ceil-
3368 ing on production of extender pigments?—A. That is right.

Q. As indicated by the dotted line which appears in the years 1941 to 1944 on the chart, identified as du Pont Exhibit 95 for identification?—A. That is right.

Q. And that permitted you to take care of these excess sales of TiO_2 in that period, as shown on Exhibit 94 for identification?—A. That is right.

Q. What is the rough ratio of the Ti-Bar used in the extender pigments to the ultimate product? Two to one? Three to one?—A. No. We consume—our rate of capacity let us say consumes 30 tons of TiO_2 in extender pigments, and 110 tons for sale as such.

Q. So that to take care of these sales of TiO_2 which extend above the production line on Exhibit 94 for identification, it was necessary to make a larger drop below the production line on Exhibit 95 for identification to account for that ratio?—A. Yes. 40 tons a day of extender pigments is 12 tons a day of TiO_2. That shows your relationship for those differences.

Mr. GESELL. Now at this time, your Honor, I would like to offer these charts in evidence.

The COURT. No objection. They will be received.

(Du Pont's Exhibits 94 and 95 for identification received in evidence.)

Q. Mr. Daley, I show you du Pont Exhibit 19,
3369 being a letter of Mr. Rupprecht to you under date of November 15, 1933, and ask you whether you carried out the instructions contained in that letter?—A. Yes, sir, we did.

Q. Will you state what the practice has been with respect to the subject matter?—A. The practice has been to show on the shipping container the patent numbers under which the product is manufactured.

Q. Now, Mr. Daley, some reference has been made in this case to the fact that the sales contracts used by the pigments department contain the words "for the buyer's own consumption." Do you recall that those words appear on the sales contract forms that are being used?—A. Yes, sir.

Q. Have you made any investigation to determine how long that phrase has been used on the sale contract forms employed by the titanium pigment division?—A. Yes, sir.

Q. What are the results of that investigation?—A. We found a contract which was signed in 1932 and the form

was printed in 1931, as shown by the printer's data on the form itself. That is the oldest one we could find; anything prior to that had been destroyed. We found that one.

Q. Is this the form I show you, the one that has been marked 96 for identification?—A. Yes, sir.

3370 Q. Now state, if you know, what the practice is generally in the chemical business in respect of the utilization of this phrase on sales contracts of this type.—A. I would say that it is generally used throughout the chemical industry.

Q. Mr. Daley, what percentage of your business is sold on a requirement contract basis?—A. Well, in normal times——

Q. I mean, prior to the war.—A. That is what I mean. Better than 95 per cent of our business would be on a requirement contract basis.

Mr. Gesell. I offer du Pont Exhibit 96 for identification. Not the printed matter on it, Mr. Dixon.

The Court. It will be received. There is no objection.

(Du Pont Exhibit 96 for identification received in evidence.)

Q. Mr. Daley, have you caused an inquiry to be made into the records of the du Pont Company, and specifically the pigments division department, to determine whether or not at any time the du Pont Company has refused to license anyone under any titanium pigment patent?—A. Yes, sir, I did.

Q. What is the result of that investigation?—A. We have never refused to so license anyone.

3371 Q. What is your understanding at the present time of the obligations of the du Pont Company toward the National Lead Company?—A. I did not follow that.

Q. What is your understanding of the obligations of the du Pont Company towards the National Lead Company as to patents?—A. We have currently an agreement to notify the National Lead Company not later than six months after filing of any patent application and to license National Lead Company under any patent.

Q. Is that obligation contained in the agreement of 1933, as amended?—A. Yes, sir.

Q. Do you have any other understanding or agreement of any kind or form with the National Lead Company?—A. No, not at all.

Q. What are your obligations toward the National Lead

Company, if any, in respect of the exchange of technical information?—A. We have none.

Q. Have you any understanding or arrangement with that company in respect of plant visits by them of your plants or you of their plants?—A. No, none at all.

Q. What are the obligations of the du Pont Company as you understand them toward the so-called foreign associates of National Lead Company as to patents?—A. We have no obligation to the foreign associates of the National Lead Company, other than as provided to give them refusal of any patents that we have when we care to offer.

3372 Q. You are referring again to the provision in the agreement of 1933, as amended?—A. Yes. That is what I thought you meant.

Q. What are your obligations toward the foreign associates of National Lead, if any, in respect of technical information?—A. None at all.

Q. What are the restrictions, if any, with respect to du Pont's right to sell titanium pigments outside the United States?—A. We have no restrictions other than might be covered in any patent matters.

Q. By that you mean you are free to sell in any part of the world?—A. Yes.

Q. What are the rights of others as far as between the du Pont Company and them as to selling in this country?—A. I don't know of any restriction.

Q. Are there any obligations of any kind in respect of titanium pigments between the du Pont Company and the so-called Blumenfeld interests?—A. No, not at all.

Q. Mr. Daley, have you had any discussions or conferences of any kind with any representatives of the National Lead Company in respect of manufacturing capacity or production at any time?—A. No, sir.

Q. Had you had any discussions or correspondence with the representatives of the National Lead Company at any time in respect of price policy and price changes?—

3373 A. Will you excuse me a minute? On that previous question you said, did I ever have any——

(Previous question read.)

The WITNESS. In the early days when the original agreement was made with the National Lead Company I attended a couple of so-called technical meetings and went to visit the St. Louis plant of the National Lead Company.

Q. But other than that you had no relations?—A. No.

Q. Have you had any discussions or correspondence of

any kind with any representative of the National Lead Company in respect of price, price changes or price policy?—A. No, none at all.

Q. Have you had any such discussions or correspondence in respect of terms and conditions of sale?—A. No, sir.

Q. Have you had any discussions or correspondence of that character in respect of territories in which you sell?—A. No, none at all.

Q. Or could not sell?—A. No, sir.

Q. Any discussions or conversations at any time with representatives of National Lead in respect of solicitation of customers?—A. No.

Q. Or any such conversations or correspondence in respect of restrictions upon customers?—A. No, sir.

Mr. GESELL. That is all.

3374 Cross-examination by Mr. DIXON:

Q. Mr. Daley, do you know Mr. Corddry?—A. No, sir.

Q. You don't even know who he is?—A. I know the name as a sales manager or technical manager for National Lead Company.

Q. Have you ever met him at all?—A. No, sir.

Q. You have never spoken to him?—A. No, sir.

Q. Now, you were production manager, as I understand it, for the Krebs Company from 1932 to 1942, excluding the time that you were working for the Government?—A. Yes, sir.

Q. What were your duties as production manager? Were you in charge of the operation of the two plants of the du Pont Company that were manufacturing titanium pigments?—A. Yes, sir.

Q. Where was your office located during those years?—A. In Newark, New Jersey, and Wilmington, Delaware. And I say that because our management was at the two places and I was part of the management group.

Q. It was your duty to see that the two plants in particular, insofar as the titanium pigment branch of the business that might operate was concerned, operated smoothly and turned out the product they were supposed to produce; that was your job, wasn't it?—A. That was part of the job, yes.

Q. When did you first take over sales or have anything to do with the sales of pigments? That was in the year 1942, wasn't it, for about four months?—A. I believe it was 1942, yes, sir.

Q. Mr. Daley, do you know Mr. Corddry?—A. No, sir.

3375 Q. Well, up to that time you had not had anything to do with the sales branch of the titanium pigment business, had you?—A. The office in which I was located as production manager for that period was more or less between the offices of the general manager and the sales manager; and your everyday conduct of the business of the department necessitated your regular contacts with sales.

Q. Who was the sales manager of the company during that period of time?—A. G. A. McCorkle.

Q. But you were production—— A. G. A. McCorkle.

Q. You took over his duties, did you, in 1942?—A. Yes, sir.

Q. And you acted as sales manager and production manager for about four months, did you?—A. No, sir.

Q. What position did you hold during that four-month period in 1942?—A. I was director of sales and I relinguished my production duties entirely, and Mr. McCorkle stayed as sales manager under me.

Q. So that you sort of became sales director over the previous sales manager?—A. That is right.

Q. You held that position for about four months, as I understand it, and then went with the Government on special work, or for the Government, for about two years?—A. Yes, sir.

Q. Until you recently returned; and are now
3376 manager of the pigment division of the du Pont Company?—A. That is right.

Q. Well now, I take it that from your positions which you have held with the company that until recently you did not have very much to do with the actual sales of the du Pont Company in the tifanium pigment business; is that correct? A. No, I didn't have anything to do with the actual sales. I had to do—I had a rather close knowledge of the departmental policies with respect to sales, necessarily.

Q. Well, you were not directing the sales force, that is what I mean, of the du Pont Company?—A. Correct. That is right, sir.

Q. How long had you been directing the sales force of the company?—A. I did it for that four months' period.

Q. Yes.—A. And I did it for another month or six

weeks in 1944, that is as director of sales; and since then, the overall management responsibility.

Q. When you were sales manager during the period that you have mentioned, did you yourself go out into the field to conduct sales solicitations of any particular customers?—A. No.

Q. So that all of that work was done by your salesmen, is that correct?—A. Yes, sir.

Q. So, as far as any direct knowledge or experience in the field is concerned, you have no such knowledge,
3377 other than what we may have come to you from such salesmen as represented the du Pont Company in the field; is that correct?—A. I don't think I quite follow that.

Q. (Read.)—A. Yes, that is correct.

Q. So that when you made the statement that Virginia Chemical, for instance, or Zirconium was tough competition, you meant that that is what the salesmen had told you; is that correct?—A. That is evident from the—what I mean is, it is stressed in their regular reports on calls on customers.

Q. Now, as a production man of costs can you tell the Court what relation there is to production and production cost, in so far as the quantity of the product produced is concerned?—A. The effect of quantity on cost?

Q. That is right.—A. Volume.

Q. Quantity production on costs.—A. Generally speaking, increased volume will tend toward making lower costs.

Q. We are talking now about titanium pigments.—A. Yes. You asked the question then with specific reference to titanium.

Q. That is right.—A. Well, you will get your benefit of course from a certain part of your costs which constitutes the top management and some selling ex-
3377a pense and items of that sort which you prorate over a given volume and with your direct costs being a less influence we will say.

3378 Q. Let us refer only to production costs as distinguished from sales costs. Can you state to the Court from your experience as a production manager in the titanium pigment plants of Krebs, what that relation is between increased production and lower costs, if there is any?—A. I couldn't give you an offhand yardstick on it, no, sir; it couldn't be done without referring to some quite involved figures.

Q. Is it a fair statement to make that as the production increases ordinarily the cost of production will be reduced proportionately?—A. Yes, sir, in this way, if I may amplify that.

Q. Yes, certainly.—A. Your raw material costs, usually, no; your direct labor costs, maybe a little bit; your plant overhead costs, yes, to a greater extent. Now you have got to get your relationship of your three and your sum total, and what not.

Q. Your problem as production manager from the time you held that position for du Pont, I take it, was trying to keep your productive capacity ahead of the sales; is that correct?—A. Yes, sir.

Q. And that was during the period say roughly from 1932 to 1940, when you were in that position?—A. Yes.

Q. Now, Mr. Gesell asked you about Exhibit 19, where these patent numbers were put on containers. Do you know any particular reason why they were sup-
3379 posed to be put on containers?—A. Not specifically, except that we already had been doing it and we were told to include these particular numbers——

The COURT. You don't know the legal consequence?

The WITNESS. No, sir. I couldn't tell you offhand.

Q. In other words, you were just following the instructions to put the process numbers on the packaged product?—A. That would be right, sir.

Q. Now, have you ever examined or read the agreement between National Lead and the du Pont Company?—A. This so-called 1933 agreement?

Q. As amended in 1941.—A. Yes, sir.

Q. Do you know whether there are any restrictions in that agreement on the sales of products by the du Pont Company, as to where they might be sold?—A. There are no specific statements in there on restricting du Pont about selling, no, sir, as I recall.

Q. In other words, under the 1933 agreement, as amended in 1941, you state that there are no restrictions on the right of du Pont to sell in any particular territory; that is your recollection of that agreement?—A. Yes, sir.

Q. When did you first read the 1933 agreement as amended in 1941?—A. In July, 1944.

Mr. DIXON. That is all. Thank you very much.

Cross examination by Mr. WEBSTER:

Q. Mr. Daley, who are the largest lithopone
3380 manufacturers, according to volume of production?—A. Well, I am sure that New Jersey Zinc is the

largest, I believe that is. Now, just where du Pont and Sherwin-Williams and Glidden fall in there, I don't know. But du Pont is either second or third, I believe, according to our best estimates.

Q. And Sherwin-Williams is either second or third or fourth?—A. I believe so, yes.

Q. Are you testifying that the second, third and fourth positions are uncertain, or that you just don't happen to know the facts?—A. I just don't happen to know for sure which is the larger. I know that New Jersey Zinc is the top one.

Q. And then either du Pont or Sherwin-Williams is second?—A. Yes, sir.

Q. And, then, who is the third or fourth?—A. Glidden.

Mr. WEBSTER. That is all.

Mr. DIXON. If the Court please, I would just like to ask one question if I may.

The COURT. Yes, of course.

Further cross examination by Mr. DIXON:

Q. You testified, I believe, Mr. Daley, that the 1932 contract form which you had found had the language on it "for buyer's own consumption". Do you know why that language was put in the contract?—A. No; but I have inquired. I have asked, I have investigated, and I
3381 think I can tell you.

Q. But you don't have—— A. Let me put it this way. We have other contracts which I found dated 1918 by other departments of the du Pont Company which carried the same wording. I have gone back as far back as 1918.

Redirect examination by Mr. GESELL:

Q. That is the 1931 form executed in 1932 that Mr. Dixon is talking about, is it not?—A. Yes. It was printed in 1931, by the printer's dating.

The COURT. You are excused, Mr. Daley.

(Witness excused.)

3388 The COURT. What page is Exhibit 1229 on?

Mr. DIXON. It is not printed, your Honor; it is a separate exhibit I believe.

We wish to make it clear that Exhibit 1229 not only includes a list of the patents but also the patents themselves listed therein. In the event any one of them may become material we thought it advisable to have the——

The COURT. Copies of the actual patents.

Mr. DIXON. That is right.

We also ask leave of the Court to withdraw present Exhibit 24 for the plaintiff which is an official list of the prices of National Lead Company for their pigments and to substitute therefor a different schedule prepared by National Lead which contains the same information and which is in little more readable form than the present exhibit.

The COURT. Why not simply substitute the new paper for the old paper Plaintiff's Exhibit 24, marking
3389 the new paper "Plaintiff's Exhibit 24"?

Mr. WEBSTER. That is agreeable. As a matter of fact it was stipulated that that might be done when it was offered.

The COURT. I recall so.

(The schedule referred to was then substituted and marked Plaintiff's Exhibit 24.)

Mr. DIXON. I believe that completes the exhibits, your Honor.

Mr. WEBSTER. I do not think there is any point at this stage in commenting in any detail on these memoranda that relate to exchange of technical information, except possibly to say this, that we produced here pursuant to subpoena several file cabinets full of information that was generally described perhaps as know-how and this is evidently the essence that has been squeezed out of that bulky material.

Mr. DIXON. I want to add a comment to that, that these exhibits were selected because of the date of the exhibits rather than particularly because of the contents of the material because, as Mr. Webster has indicated, the know-how file or material submitted to the Government pursuant to the subpoena contains several drawers full of material which, obviously, we have sampled and, some of which is already in evidence, and it would be mere
3390 duplication to put in any more of that kind.

The COURT. All right.

Mr. WHITNEY. Your Honor, I think I ought to comment briefly. The first set of exhibits, as Mr. Dixon says, are to show that there was an exchange of know-how in the summer of 1932, that it began in the summer of 1932. In other words, it began in connection with the plant visits and during the course of the negotiations. That carries to Mr. Dixon a significance sufficient to warrant its being the principal subject matter of his rebuttal case.

I suggest to your Honor that it again illustrates the absence of any serious case here. We all know from

common experience that when large concerns negotiate important agreements the negotiation goes on for a period of months, frequently years, before there is a form of signature. And if the agreement is beneficial, and of course our defense is that this was at that time, in this brand-new art, they begin to operate under it at once, while they are negotiating. And so here this exchange of information started during the negotiation instead of waiting for a formal execution. In fact, the fact that the Government attaches importance to that is to my mind evidence that they misconceive what their case ought to be, if they had any.

3391 Also, I attach great significance to the fact that in their rebuttal testimony they have gone back to the period prior to November 1933 for their entire evidence. In this court of equity that seems to me to represent practically an admission that they have no case.

Now the next is that there are two exhibits, at pages 3713 and 3714, relating to Blumenfeld. They have this significance, your Honor: As he says, they filled out the file by providing letters in September 1933 and November 1933, written by Blumenfeld after the conference, about which we had such extensive direct examination and cross examination, in the summer of 1933. They are full letters in which Blumenfeld is pouring out his heart about what is interesting him, and there is no references at all to territorial matters. The subject matter is entirely the exchange of information.

And, finally, Exhibit 122-A on page 3716 is an ICI letter. The only significance I can see in it is that they show that they have no idea about what du Pont's position is in these matters. At page 3717, in the middle:

"It may be that, in view of the du Pont interest in the other Travacore Company, any broad general move to consolidate the raw material position would
3392 have to await a more complete understanding between National Lead and du Pont."

But that is merely speculation as of the autumn of 1932 and was before the English agreement in which, in any event, we had no part.

So, far from objecting to these exhibits I think that they are of no importance either one way or the other.

Mr. Gesell says, now that they are here perhaps for clarity of the record we ought to know who signed the exhibit at pages 3633 and 3634. It is not shown. I think L.E.B. would be Barton, at page 3634. And at page

3633, is that Washburn to Kingsbury?

Mr. WEBSTER. That is probably what it is.

The COURT. Is it Kingsbury to Washburn to Kingsbury?

Mr. WEBSTER. Apparently it is Washburn to Kingsbury, on page 3633, your Honor.

If the Court please, there is one other matter of mechanics that I might bring up. I was permitted to offer in evidence, and there was received, some research and sales material which was quite bulky, and I thought the Court put a very proper limitation on that in respect of possible future printing in the event that the Government is required to take an appeal in this case. I think that in the case of these patents it might be well
3393 to have the same understanding in advance.

The COURT. I think it is entirely in order to have the same understanding and unless I hear something strongly asserted to the contrary I shall assume that such is the understanding. That is expensive material to reproduce.

It usually contains documents and charts. I do not see any occasion for doing so.

Mr. DIXON. I might say the reason we felt obliged to put it in, your Honor, was in view of the rather complete exhibit by Mr. Kaegebehn of certain patents, expressing his opinion thereon concerning them. And it is purely for reference work that they be made part of the file.

The COURT. Very well.

Mr. DIXON. Obviously, we are not interested in having them printed in full.

3712 United States District Court Southern District of New York

Civ. 26-258

UNITED STATES OF AMERICA, PLAINTIFF

vs.

NATIONAL LEAD COMPANY, TITAN COMPANY, INC., E. I. DU PONT DE NEMOURS AND COMPANY, DEFENDANTS

Before Hon. SIMON H. RIFKIND, District Judge

NEW YORK, *October 1, 1945; 10.30 a.m.*

APPEARANCES

John F. X. McGohey, Esq., United States Attorney, for the Government; William C. Dixon, Esq., Special Assistant

to the Attorney General, Ephraim Jacobs, Esq., Special Attorney, of Counsel, Bethuel M. Webster, Esq., and Clifton P. Williamson, Esq., Attorneys for National Lead Company and Titan Company, Inc.; Bethuel M. Webster, Esq., Clifton P. Williamson, Esq., Edward L. Rea, Esq., and Milton Handler, Esq., of Counsel. Cravath, Swaine & Moore, Esqrs., Attorneys for E. I. du Pont de Nemours and Company; William Dwight Whitney, Esq., John Logan O'Donnell, Esq., and Gerhard A. Gesell, Esq., Nestor S. Foley, Esq., of Counsel.

3713 Mr. WEBSTER. May it please the Court, before any matters in connection with the decree are taken up I should like to advise the Court we decided that it would be very helpful to us, and we thought it would be helpful to the Court, to ask Mr. Handler to associate himself with our presentation in connection with the decree, and we have done that. We would like to have your Honor accept his appearance as one of counsel for the National Lead Company and Titan Company, Inc.

The COURT. I would be glad to do it. I understand there is to be an application for an adjournment, or is that abandoned?

Mr. WEBSTER. Well, having in mind our conversation with your Honor and with Mr. Dixon and Mr. Whitney, we went as far ahead as we could and we felt the matter of adjournment might swing to some extent on what your Honor's plans are and what we are able to accomplish.

The COURT. I won't know those plans possibly before the end of the day.

Let me indicate I have received first a page proof of the findings of fact and conclusions of law. I have received from the United States a proposed decree under letter date of September 14, 1945. I have also received from the United States a memorandum entitled "Trial Memorandum No. 9," and I have received from National

3714 Lead two copies of a memorandum in opposition to the proposed decree. If anybody else has sent me any matter which I have not mentioned you had better call it to my attention now.

Mr. WHITNEY. We did not send any papers, but we might as well give them now. I appreciate your Honor may well wish to include all in one decree, but for convenience at least we thought we would make up a draft decree against du Pont as if there were to be separate decrees, and maybe your Honor will conclude they will be separate decrees.

Mr. WEBSTER. If the Court please, there is one further matter of a preliminary sort that might be taken up now. At the last meeting in connection with the proposed findings it was suggested that the De Vegh memorandum might be included by stipulation. We have a stipulation signed by counsel for the United States, du Pont and ourselves providing for approval by the Court.

The COURT. Very well. If you will hand it up I will endorse it. You can have it marked so there will be no question because there were two drafts of it. Let it be marked as NL Exhibit 34. The stipulation can be filed. You may leave it with the clerk to be filed.

Now with respect to the findings, have you gentlemen all agreed upon this proof, or are there corrections to be proffered?

Mr. GESELL. There were one or two matters from
3715 our side we want to take up on the findings, two to be exact. The first is at page 55. In the second full paragraph you will notice the words "as a practical matter" which appear in the findings. The Government I believe desires to have those words stricken. That suggestion was not discussed with your Honor at the time. We would like the words to stand. That is one matter that is open between us.

The COURT. All right. Let us dispose of that.

Mr. DIXON. May I indicate, your Honor, that we believe the findings as found by your Honor do not contain the words "as a practical matter," at least from the copy of the final findings which was turned over to us at the time of the completion of the hearing.

Mr. GESELL. Oh, well, that arose from this situation, your Honor: You will recall the Government handed your Honor pages containing their suggestions and those pages did not reflect omissions and on that page these words had been omitted,—I am sure by oversight,—so we never had this matter up before.

The COURT. Do I understand those words did occur in the draft of the findings which I transmitted to counsel?

Mr. GESELL. They did.

The COURT. But at a subsequent hearing at which we considered changes, the omission of those words was not called to anybody's attention so it was not considered?

3716 Mr. GESELL. That is the situation.

The COURT. All right. What is the argument on that, Mr Dixon?

Mr. DIXON. Well, we regarded the words "as a practical matter" at the time of making the changes as being immaterial in a sense, and also as indicating what we felt was not of import in connection with the finding. In other words, we feel that the finding was or should be that TP was assured by DP that there would be no exports.

The COURT. Is it inconsistent with analysis of the relations between DP and NL which is embraced in other findings?

Mr. DIXON. Well, we feel that it is, your Honor.

The COURT. In what respect?

Mr. DIXON. In this respect, that it tends to indicate that there was a qualification to the statement by du Pont in connection with the assurances given that was not warranted by the subsequent action of du Pont, not only at the time of this finding but from their conduct thereafter, and that the words "as a practical matter" are not justified from the subsequent conduct, not only of du Pont in not actually exporting, but also in connection with the other findings which had been gone into at length which we submit shows the cooperation of du Pont with the combination.

The COURT. This finding is addressed to the nature of the understanding or intelligence exchanged between
3717 du Pont and the other parties conspirators in the situation at the time of the making of the agreement and the time of the exchange of the communications between du and TG via NL. That is what we are talking about?

Mr. DIXON. Correct.

The COURT. As to what was said and done at that moment the subsequent events may serve only as possible evidence if we do not know what was said and done at the time. But if we do know what was said and done at the time, then the subsequent conduct may or may not be related to what was said and done? I will hear Mr. Gesell on that.

Mr. GESELL. Well, we feel, your Honor, that the words "as a practical matter" should remain because they are consistent with your Honor's opinion indicating that what at that time was said to National Lead was the intention of du Pont Company with respect to exports, and particularly inasmuch as it appears in the paragraph where the finding is that du Pont did not agree it helps to indicate the meaning of the words there.

The COURT. All right. I will allow the language to stand.

What is the next point?

Mr. GESELL. The next one and only other one has to do with the famous finding 57 on page 36. That is the finding with respect to Canadian prices.

3718 The COURT. How did we leave it at the time of the last session?

Mr. GESELL. At the time of the last session we expressly left it open, I believe, your Honor, and your Honor said we would be in a position to submit additional facts bearing on that question. You will remember the American Producers' letter of Mr. Beschorman, and the question that arose at the time was whether or not du Pont had in fact maintained the 10 or 15 per cent differential on prices charged in Canada and there was no evidence in the record to show what prices du Pont had charged in Canada, and the record was also silent as to whether or not CIL had later sold the titanium pigments it purchased. I have worked out with Mr. Dixon a stipulation covering the du Pont facts which we would like to file in the record for the purpose of completing the record as to what du Pont charged, and when your Honor has had a chance to glance at that I can perhaps summarize it and indicate our reasons why we think the finding should be modified to exclude any reference to du Pont.

The COURT. On the basis of the stipulation are you prepared to make any modification of finding 57, Mr. Dixon?

Mr. DIXON. No, your Honor.

The COURT. You feel the stipulation does not warrant any change?

Mr. DIXON. That is correct.

3719 The COURT. Let me read the finding and then I will read the stipulation. The discussion is no longer as vivid in my mind as I wish it were but I think it will be refreshed as I see some of this material.

Mr. GESELL. I hand your Honor the stipulation.

The COURT. What was the percentage mentioned in the Producers' letter?

Mr. GESELL. 10 to 15 per cent, your Honor, Mr. Beschorman's telegram said.

The COURT. All right. Now I will hear you on it.

Mr. GESELL. If I may I will review the facts and point out what we deem of significance to the stipulation. In connection with the transactions involving BTP and Laporte, your Honor will recall there were some telegrams

and letters exchanged between Beschorman and, representatives of BTP in which inquiry was addressed to Beschorman as to whether or not American Producers would maintain a price differential of 10 or 15 per cent above the British price in Canada so as to facilitate British sales in Canada as opposed to American. Mr. Beschorman said American Producers will not sell at the British price but maintain a 10 or 15 per cent differential. Some time later CIL wrote to National Lead and said, "We don't like to keep maintaining this differential and isn't there something we can do about it?" National Lead's reply to CIL does not appear in the record. There is no evidence
3720 of any CIL communication to du Pont.

Now the facts as we now have them before turning to the stipulation seem to us to be that the evidence indicates that National Lead maintained a differential of 10 or 15 per cent in view of the CIL letter, and we are proceeding on the assumption that is what the record shows.

The first point to bring out is that duPont did not maintain any such differential. Its sales to CIL were slightly above the British price after CIL assumed the Canadian duty and excise tax, but the differential, as a mathematical matter, which does not appear here, is about .3 per cent. In 1937, however, when duPont sold to CTP the price that duPont charged CTP was less than the British price; 17.6 as against 18.4, so that during the period duPont's price was both below and above the British price and never at the differential and we assume always different from National Lead's price.

The question that your Honor asked at the time of the last hearing was whether or not the differential had been maintained. We think this shows it was not maintained. The other question your Honor asked was, "How do you account for Mr. Beschorman's letter?" We feel that to the extent we can account for it it appears in the existence of this Canadian duty on American titanium pigments, of 15 per cent as compared to the Canadian
3721 duty on British titanium pigments which were zero.

The COURT. You say Beschorman said, "'We will sell at a price which will, after adding duty"——

Mr. GESELL. Bound to leave this differential.

The COURT. Give the British the advantage of their Imperial preference system?

Mr. GESELL. Perhaps Mr. Beschorman also knew, except for those few sales in 1937, which were then quite in

the distance, that DP was selling entirely to CIL and CIL was not reselling, and therefore if those sales were not to be considered in Canada in the usual sense we were not participating in the Canadian market, therefore there was no necessity of doing anything with respect to getting an assurance from duPont.

The COURT. So that Beschorman was doing a favor to CIL? I should not say CIL but rather BTP in that he was announcing a policy which would facilitate a private deal between BTP and Laporte?

Mr. GESELL. Right, and which did not comprehend DP.

The COURT. And duPont's participation at all?

3722 Mr. GESELL. Right, and we think that these figures and the details as to the pricing which we now have, showing the complete absence of any maintenance of the differential are conclusive on that point.

The COURT. One of the considerations which was raised for consideration was that it seemed to me unlikely that N. L. being in competition with D.P., would in effect exclude itself from the Canadian market by agreeing to charge a price in Canada which was higher than du Pont was charging to Canadians.

Mr. GESELL. The figures indicate that N. L. had substantially greater sales in Canada than D. P. during the period. N. L. had a lower price before C. T. P. was formed and thereafter C. T. P. purchased almost exclusively from N. L., and only in one year purchased a small amount from D. P., and D. P.'s price to C. T. P. was higher than N. L.'s price.

The COURT. I see that is what you have now demonstrated, but at the last hearing I could not quite understand why N. L. would agree unless it also had the cooperation and understanding of du Pont that it would keep its price at a differential which would not leave N. L. at a serious competitive disadvantage, which you say in fact did not occur.

Mr. GESELL. Yes, sir, and in fact D. P. was not

3723 very active in the Canadian market, selling almost exclusively to C. I. L., its affiliate, if you will. Perhaps the explanation for that is the lack of rights of D. P. in Canada under the Blumenfeld patents. In any event they did not attempt to enter or exploit that market before or after this agreement.

Mr. WEBSTER. I am in entire agreement with Mr. Gesell's analysis of this from the standpoint of du Pont

and I think this can be added as a footnote indicating that the entire finding should be removed. It now develops that what Mr. Beschorman was talking about was the normal differential based upon the Canadian tariff. He also had in mind the anti-dumping provisions of the Canadian law, so that when he made the statement that American producers would sell at ten to fifteen per cent above he was talking about the tariff situation as he then saw it and understood it.

Now this is another fact not of record, but something that has been looked up since, just to check this, and that is, the actual price was never 15 per cent. It was either in some cases over 15 per cent or in some cases below 15 per cent, so that the operation of the agreement was more or less consistent with what you would expect under the Canadian tariff's anti-dumping provision.

3724 Mr. Dixon. May it please the Court, we have one other exhibit we wish to offer in evidence in connection with this matter which we will ask an exhibit number to be left blank for at this time because we won't be able until we consult the record to tell just what it should be unless we can give it an additional number. I do not recall offhand. Perhaps the defendants can tell us what the last exhibit was.

The Court. Is there any objection to the offering of the exhibit before we get to the number? There seems to be none. Very well, it will be received and a number retained for the purpose of receiving this exhibit.

Mr. Gesell. The stipulation has been received, has it not, your Honor?

The Court. The stipulation is a stipulation and of course I accept it as such and in that sense it is received.

Mr. Webster. It is a fairly long letter.

Mr. Dixon. I just want to offer it in evidence.

The Court. All right.

Mr. Dixon. And secondly, in connection with this question, I would like to offer a short memorandum concerning this Canadian situation, which will take only a few moments to read. It is Government's memorandum 10.

The Court. Government's memoranda?

Mr. Dixon. Yes.

3725 The Court. Suppose you proceed and tell me about it, or what you want to dispose of.

Mr. Dixon. Well, would your Honor care to read that first?

The COURT. Yes, all right. I shall read it first. I have read it and will you please talk to me about it now?

Mr. DIXON. Yes, sir. Now, if the Court please, the point involved here reads: that this agreement was one to maintain prices above the prices charged for titanium pigment manufactured by British companies in the Canadian market and sold by them in the Canadian market.

Now the only additional evidence which du Pont has submitted here is evidence of sales made to CIL during the years 1934, 1935 and 1936, and then the sales made by or sales made to CTP in 1937, at which time the report, as your Honor will recall, indicated that there was really another company selling in the Canadian market.

Now we have here a question similar in many respects to that involved in 1933 where assurances were necessary concerning what the American producers would do. That is what BTP was asking, and that is what Laporte wanted to know. They were not inquiring whether du Pont was selling in the Canadian market. It may well have been that they were making sales only to CIL, but, however that fact may be, it was also possible that
3726 they would make other sales to other persons other than CIL, because there is nothing in this record to indicate that Laporte had any knowledge of the fact of these agreements. They are referred to in the memorandum. So what was necessary was that the position of the American producers on sales, if any, in the Canadian market be made clear to Laporte.

The COURT. So that Laporte would know when it was getting a percentage of the market it was getting a percentage of something real.

Mr. DIXON. That is right; that it was not just something that would be cut down by du Pont coming into the market and selling against the Laporte product.

So these sales, and that is the only additional evidence that is offered by du Pont, are certainly not what I would term competitive sales in any sense of the term, but even regarding them as sales from one point of view, it is significant, as pointed out in the memorandum, that the sales made by du Pont to CIL were above the prices of the British Products. In other words——

The COURT. Let us get it clear what we are talking about, because we do not want to get lost.

Mr. DIXON. That is right.

The COURT. What you mean is, taking the net price to

du Pont and adding thereto the tariff and delivery charges, D. P.'s delivered price to CIL in Canada,
3727 was higher than if CIL had acquired the same quantity of titanium oxide from a British producer, or Laporte.

Mr. DIXON. That is right.

The COURT. Now, by how much higher? Mr. Gesell says it is some infinitesimal percentage.

Mr. GESELL. .3 is the percentage, your Honor.

Mr. DIXON. Well, it was above the British price.

The COURT. Well, the significance of that is this, and I do not want to lose you by interrupting you——

Mr. DIXON. That is perfectly all right, your Honor.

The COURT. If we had evidence of a proposed agreement "above," and we found .3 per cent increment above, that might justify the finding, but where you have an agreement which says ten or fifteen per cent, and that is the only evidence we have to support the findings of "above," and then the fact is that the evidence shows a percentage of .3 per cent, then have you got sufficient other facts which tie in with your evidence, and, consequently, does that justify the finding?

Mr. DIXON. Our answer to that is still yes, your Honor.

The COURT. And why?

Mr. DIXON. For the reason that the sales to CIL on the documents we have referred to in our judgment
3728 cannot be regarded as ordinary sales to a consuming member of the public in the Canadian market as such.

The COURT. Why not, if du Pont had not been selling, perhaps Laporte could have sold it, or BTP might have sold it.

Mr. DIXON. Well, under the arrangement existing——

The COURT. Assuming Laporte had not had any real hope of making the sales whilst D. P. were engaged in making the sales with CIL, nevertheless why isn't it a sale?

Mr. DIXON. You mean the sales from du Pont to CIL?

The COURT. Yes.

Mr. DIXON. Certainly I do not think even du Pont would disagree with the 1¼ per cent discount, and that is what it amounts to from the American price which they gave to CIL, and which was given to CIL because of the relationship between CIL and DP, and which would not have been available to any other person in the Canadian

market had du Pont been free to have sold in that market.

3729 The COURT. Well, we have the discount, and the discount does not explain the discrepancy between the 10 and 15 per cent and the .3 per cent. If it did it would completely clinch your case, that is, if the normal discount from du Pont to CIL was equal to the difference between the agreed upon differential and the actual differential, then your case would be clinched, but the unfortunate thing or fortunate thing is that it does not fit, because you must realize that when you have a fact, that if you really do not hit upon the truth the small elements do not tend to fit together. In other words, where we have only arrived at a partial truth, there is a condition existing where you do not have freedom from jagged ends, and this seems to be one of those jagged ends.

Mr. DIXON. Supposing, for example, that du Pont made no sales at all in Canada, what would have been the situation then?

The COURT. I don't know.

Mr. DIXON. We would still contend, as we have in our argument——

The COURT. Then it is possible that we would draw certain inferences from the general relationship between the writer of the letter and what occurred from the text of his letter and arrive at one or the other of those inferences, and then we would check against the avail-

3730 able material. It would be like a finding based upon scientific inferences where you had nothing to prove it. However, you have a fact which tends to disprove it.

Mr. DIXON. The question as we see it gets down to this, your Honor: Whether your Honor regards these sales to CIL as sales which were made in the competitive process by du Pont or whether they are to be regarded as isolated sales by du Pont to its Canadian partner, which, in our opinion, explains the reason for the discount, and which in turn explains the reason why the differential or the price actually paid by CIL was not within the 10 or 15 per cent markup theretofore agreed upon.

The COURT. Let me ask you this——

Mr. DIXON. Yes.

The COURT. Do you find evidence of NL sales in Canada?

Mr. DIXON. NL sales, your Honor?

The COURT. Yes, to other consumers in Canada.

Mr. DIXON. Through agents.

The COURT. Through agents, and the prices, the delivered prices of NL to its Canadian customers were 10 or 15 per cent above the British prices, is that right?

Mr. DIXON. You mean actual sales to the public now as distinguished from whatever relationship NL had with its Canadian agencies?

3731 The COURT. Yes.

Mr. DIXON. Concerning which we have no evidence except that it may have been that they were shipping on a consignment basis or any other basis.

The COURT. Well, on such evidence as you do have, does it show 10 or 15 per cent markup as against British prices?

Mr. DIXON. Yes, and it shows——

The COURT. Now is that reflected so that a man who bought on the American basis actually paid more money than on the British basis?

Mr. DIXON. That is correct.

The COURT. Assuming he had NL products?

Mr. DIXON. That is right.

The COURT. And to that extent the American producer was operating above the British producer?

Mr. DIXON. That is right.

The COURT. It gave them a private tariff price?

Mr. DIXON. That is correct.

The COURT. Now you do not find affirmatively that du Pont sold in the Canadian market on any such basis?

Mr. DIXON. Yes.

The COURT. So we can't get away from the affirmative evidence. That is A.

And, B, as I understand it now, you do find some sales by du Pont to a specialized class of consumer,

3732 to wit, CIL, which is at odds with this arrangement.

Now you say you can explain this "at odds" by saying there is a unique kind of customer, but you know that in an industrial product of this kind everything becomes more or less fungible which enters into the stream of commerce in some form or other, and if a gentleman can buy from CIL titanium which it bought from du Pont at a less amount than that which he or they bought from Laporte, the fact remains that you would expect a closer and more faithful application of this agreement, if it were

an agreement between du Pont and CIL, who were deeper in the British family than NL was, isn't that so, because they had several relationship lines running into CIL?

Mr. DIXON. Well, except that we find here that in 1936 CIL, the Canadian partner of duPont, is clearly expressing its accord with this agreement.

Now there again we submit it is immaterial whether CIL was selling the product, and if it bought from duPont or not, it was recognizing the agreement.

The COURT. There is no doubt about that. In fact, we have a subsequent letter which says in effect, "Let us quit. This is not producing. We no longer need it."

I have not any doubt in my mind that NL agreed to maintain a price differential in Canada; and I do not think that is disputed. The question is whether DP likewise
3733 agreed, and whether it agreed with NL.

Mr. DIXON. That is correct.

The COURT. I would be inclined to find as I did find, because of the absence in documentary evidence I would say that there was enough shown of a cooperative atmosphere here in an effort to play ball so that if NL agreed and NL acted as it did, it is not unwarranted that DP was involved, so that DP authorized it in some form or another.

Mr. DIXON. It seems to me, your Honor, that this exhibit that we offered explains or at least presents our point of view on this as well as we can state it ourselves.

The COURT. You mean this memorandum?

Mr. DIXON. This is an additional exhibit that we offer. We offer it only because it seems to us that it again is comparable in a sense to the statement by Ewing. It is a statement of the obvious.

The COURT. Let me see it, please.

Mr. DIXON. Yes, sir. We direct your Honor's attention to the last paragraph.

The COURT. This is 1931.

Mr. DIXON. That is right.

The COURT. Well, now, this agreement is supposed to have been made in 1935.

Mr. DIXON. Correct. That is our point, your Honor, that the whole understanding here as to whether
3734 assurances were or were not given cannot be regarded as an isolated transaction in the sense that you can take the sale to CIL and say that that was a sale

separated entirely from all these transactions. We explain that sale. We show the reason for it at that price, but we still say that that does not show and it is not evidence which would overcome a positive statement by a co-conspirator after the conspiracy has been in fact joined as to what the American Producers would do, and the statement there in that exhibit, again which we feel is the obvious, that duPont was making a deal or speaking for their Canadian customer or Canadian partner, and those assurances were recognized, as we have pointed out in the record, by CIL, and we can go no further than that to support our position, because obviously, as your Honor knows, there is no positive evidence or oral evidence that we could get in. Now, this actual understanding must be based on inferences.

Mr. GESELL. Of course, I would like to point out that when you are not a party to an agreement it is also hard to get positive evidence that you are not, and we did not have anything to do with it.

The COURT. Of course, this placed in the general background of the situation does not throw any light on the immediate problem, which problem is this: Where you have a general situation of this kind, it is true that you can draw certain inferences, and the general
3735 situation here I think would warrant the inference that duPont was included in an authorized way in the word "producers," but like all inferences of that broad character where you find something which throws very serious doubt upon it, there is then the logical line which snaps, and then you are left with just the broadest kind of situation, because DP and NL were involved in an agreement and, as a result, therefore, you can infer a great many specific agreements, which again, of course, is an inference and I do not think any system of logic would sustain it, as it gets too thin, and the mere fact that there was such an agreement does not warrant the inference that on a particular day they made a deal for a specific purpose to put X out of business.

Mr. DIXON. Well, we would be inclined to agree to that, your Honor. However——

The COURT. This is all it comes down to. We have a general situation which normally would warrant the inference that when they made an arrangement for Canadian prices, duPont and NL would both be in it, but we have evidence that in fact duPont was not in

it. Now I think we will have to strike or modify this finding. How do you want to modify it?

Mr. GESELL. Are you speaking to me, your Honor?

The COURT. I am speaking to Mr. Dixon. Maybe you want to retain the wording that NL did make this agreement with somebody, which, of course, is clear.

3736 Mr. DIXON. Well, as pointed out in our brief there was a Canadian price agreement, and it seems to us there is absolutely not even an open argument on the record to contradict that.

The COURT. Yes.

Mr. DIXON. Now the question is who made that agreement and with whom was the agreement made.

The COURT. You now have evidence that NL made the agreement with CIL, and made the agreement possibly with BTP, as to which you have documents, and I think that is obvious.

Mr. DIXON. That is right.

The COURT. And maybe as to Laporte, but I do not think you can put in Mr. duPont. How do you want the language modified? Do you want to say that in 1935 NL agreed with CIL and the other parties that you mention?

Mr. DIXON. CIL, BTP and Laporte.

The COURT. NL agreed with CIL, BTP and Laporte?

Mr. DIXON. Yes.

The COURT. To maintain prices on titanium pigments sold by NL in Canada above the prices charged and so on?

Mr. DIXON. Yes, your Honor.

The COURT. All right. Do you all have the change?

Mr. GESEL. Yes, your Honor.

The COURT. All right.

Mr. DIXON. May I for a brief moment sug-
3737 gest that we feel in view of the documents referred to in the memorandum, your Honor, that because of the relation between CIL and duPont, as clearly shown by these documents, requiring consultation and so on, that there should be some reference in this finding to the relationship or to these documents, which by your Honor's finding is completely written out of the record as of no import? We feel that it is important.

The COURT. You mean these findings do not reflect any kind of relationship between du Pont and CIL?

Mr. DIXON. Your Honor, the findings——

The COURT. I understood that there was not only questioned the relationship but there was given the precise percentage in four decimal percentages of their stock ownership.

Mr. GESELL. That is correct, your Honor.

Mr. DIXON. Yes, that is correct.

The COURT. And that ICI was the other partner and, of course, the record also shows that ICI was one of the important partners of BTP. If you want to rely on the consanguinity you have the story there.

Mr. DIXON. All right.

The COURT. Are there any other elements in this finding?

Mr. WEBSTER. I think if your Honor is disposed to retain the finding at all, the analysis that has now
3738 been made of it by your Honor would warrant changing it to read that in 1935 NL agreed with BTP to maintain prices on American titanium pigment.

The COURT. And not with CIL?

Mr. WEBSTER. And not with CIL or Laporte.

The COURT. I think one of the letters which was introduced in connection with CIL speaks about the agency.

Mr. WEBSTER. That was a long time later and did not relate to the arrangements which had to do with the new BTP situation.

The COURT. Well, wouldn't it warrant the inference that CIL knew about this arrangement and cooperated in this arrangement that NL made with BTP?

Mr. WEBSTER. Well, you are referring to the arrangement that was made in 1935, which was to facilitate the price agreement with BTP and Laporte?

The COURT. True.

Mr. WEBSTER. But CIL was the outlet of BTP in Canada. CIL knew about the arrangement, that is, it came to its attention at some time, and later it did write the letter that your Honor refers to.

The COURT. Well, I think that would warrant the inference that they participated in this agreement.

Mr. WEBSTER. If that were so, it might be more accurate to say that in 1935 NL agreed with BTP
3739 and perhaps with the knowledge of CIL.

The COURT. I think that is an over-refinement. The actual business here was conducted between them. In other words, this CIL never knocked at the door of NL and said, "Why are you charging me higher prices than I can get from BTP?" They certainly knew about it.

They acquiesced in it. Therefore, I think I will let it go at this.

Mr. WEBSTER. How about the reference to Laporte?

The COURT. Laporte, of course, was the beneficiary of this whole arrangement, and undoubtedly it was executed at the instance of Laporte.

Mr. WEBSTER. That is true.

The COURT. So I suppose they can be called partners to this agreement.

Mr. DIXON. Your Honor, I am wondering whether in view of your Honor's other finding with reference to the relationship between CIL and du Pont, you would consider adding to this finding, as we feel it is justified, the following:

"That in view of the arrangement between CIL and du Pont I infer that du Pont had knowledge of this agreement."

The COURT. What do you say to that?

Mr. GESELL. Well, I am not for it, your Honor. I think that raises the question that came up in our long conference on the findings, and where it was per-
3740 tinent to a finding to have it rest on that inference your Honor indicated he was so inferring. But where the finding here excludes du Pont, I see no need of referring to an inference which, after all, your Honor must take into consideration in connection with the finding.

The COURT. Mr. Dixon, how would this in any way affect the case against du Pont? Assuming du Pont did have knowledge of this agreement, how would it in any way vary the result?

Mr. DIXON. Well, it would give the Government certainly the argument from this finding that du Pont acquiesced in and to that extent aided in this price agreement.

The COURT. That you are not warfanted in finding, and if that knowledge would permit such an assumption, then I should deny it, because the reason why it was struck out was because of the fact that the evidence indicated that they did not aid.

Mr. GESELL. Your Honor——

Mr. DIXON. If I may interrupt for a moment——

Mr. GESELL. I was the one who was interrupting.

Mr. DIXON. ——the position that we are in is that we have the positive finding, or, I mean we have the positive language——

The COURT. No doubt about that.

Mr. DIXON. ——and we feel you cannot surmount
3741 the difficulties of presenting a positive truth here, but to say there was no inference of any discussion in view of the 1933 discussion between Rupprecht and Beschorman concerning the Canadian market and so on, that this matter was never discussed, that they have no knowledge of it, we believe that certainly such positive language should not be excluded.

The COURT. Well, let us skip all of that. I have not any doubt in my mind that du Pont knew about it.

Mr. DIXON. Well, that is all we are asking, your Honor.

The COURT. The one other thing, of course, is that they were in this business and of course they knew about what the market situation was, but the question, the only question between you or the one, rather, that I want you to address yourself to is why should I say so? In what way does it affect the result?

Mr. DIXON. Well, I believe, your Honor, I stated my position on that. At least it gives us the opportunity to argue for whatever value the argument may have in the event that it becomes material, that to that exent du Pont must have known about the arrangement and could not have been without knowledge of this instrument.

Mr. GESELL. Your Honor, he has that argument in any event, doesn't he?

The COURT. There is no doubt about it.

3742 Mr. WHITNEY. Could I recall what happened with respect to the major Canadian contracts?

The COURT. Yes.

Mr. WHITNEY. In finding 56 on page 34, your Honor there referred to the inference that du Pont had knowledge, and then went on to say that it obviously required proof to make that inference, but that there was no evidence as to whether that was proved or whether it was disproved, and perhaps that was proper to do in respect to a major contractual arrangement. However, as Mr. Gesell points out, here is a contractual arrangement which is so indefinite that we do not even know from the evidence how long it lasted.

The COURT. That is right.

Mr. WHITNEY. And it seems to me that Mr. Gesell's statement is proper, which he made in his argument, that an inference doesn't further the finding in any way.

The COURT. All right. I will leave it out.

Is there any other change proposed or are there any other changes proposed with respect to the finding?

Mr. REA. Yes, sir, one other minor change, page 12, second line. We would like to have inserted after "was cancelled" the words "by agreement".

The COURT. Page 12?

Mr. REA. The line at the top of the page.

The COURT. "The license from the defendant NL
3743 to Zirconium was cancelled on March 9, 1944."

Mr. REA. We would like to have inserted after the word "cancelled" on the second line the words "by agreement".

The COURT. That is after the words "was cancelled"?

Mr. REA. Yes, sir, after the words "was cancelled".

The COURT. Do you have any objection to that?

Mr. DIXON. I believe we did object to it at the time, and your Honor decided not to put it in.

The COURT. I do not recall it.

Mr. DIXON. Because of the inference that it was mutually satisfactory and so on that this agreement be cancelled.

The COURT. There was a formal agreement, wasn't there?

Mr. REA. That is right.

The COURT. And it has an exhibit number?

Mr. REA. That is right.

The COURT. What is the exhibit number?

Mr. REA. I can't tell you offhand.

The COURT. I will put in "was cancelled by agreement Exhibit blank," and you will fill it in. The reason I put that in is because if you write in the words "by agreement" it might mean some degree of mutual satisfaction of some kind, whereas what we mean is by an instrument.

Mr. REA. Yes, sir.

3744 Your Honor, if you will turn to page 18 in finding 42, the second from the last line, there the statement is made just as we asked for it.

The COURT. I said I am giving it to you with the words "by agreement, Exhibit blank."

Mr. REA. All right. There is no exhibit number given here, but that is all right. We are perfectly willing to put in the exhibit number.

The COURT. Let us not go back to that, as, I understand it, nobody is complaining about that now.

Mr. REA. Then we would like to make the same change on page 63.

The COURT. Where is that?

Mr. REA. In the second full paragraph.

The COURT. In No. 84?

Mr. REA. Yes.

The COURT. What more do you want there?

Mr. REA. Well, we want to say that the agreement was cancelled.

The COURT. There is a difference between cancelling a license which conceivably might mean a unilateral act and saying that an agreement was cancelled. That necessarily means a bilateral act. So you really do not need anything more there.

Mr. REA. All right.

3745 The COURT. Any other changes?

(No response.)

The COURT. I have not taken the trouble to read all this.

Mr. GESELL. We have done that, your HONOR.

The COURT. I am relying on the several very able lawyers here to do that for me, and with the two minor changes or several minor changes that we made this morning, if you will give me a final and complete copy I will sign it and file it.

Mr. GESELL. We thought, your Honor, we would try to get it out to the printer right away. However, there are some typographical errors——

The COURT. I would assume so.

Mr. GESELL. Mr. Jacobs, Mr. Foley and Mr. Rea have all been carrying on the work so that we could have it done immediately.

The COURT. I shall not reread the instrument. I am relying upon you to make any typographical corrections that are involved, and at the same time also make whatever other corrections are necessary so that such corrections will carry out the rulings I made at the last set of hearings, and I will ask the clerk to file this stipulation, and you will also please supply me with a number for this unmarked exhibit that we have spoken about.

Now we go to the decree. Have you gentlemen
3746 decided as to whether you are going to offer any evidence?

(No response.)

The COURT. I take it the answer is no.

Mr. WHITNEY. Your Honor, we did not feel like rising and talking at this particular moment and would not have done so but for a certain point suggested by Mr. Dixon, which with great respect to him is unthinkable as an issue or which may become an issue.

The COURT. Then you will want to be heard on it?

Mr. WHITNEY. I might like to put in a very small amount of evidence.

The COURT. All right.

Mr. WEBSTER. Well, inasmuch as a record is being taken here, I do not want to be put in the position of indicating by silence that we shall refrain from offering evidence in the event that it becomes material on the issue referred to by Mr. Whitney.

The COURT. Very well.

Mr. DIXON. I might add this word to what has been stated by counsel for the defendants: The Government also, depending upon the progress of this argument, reserves to itself if necessary the right to present further evidence.

The COURT. Yes. Will one of you please just do one thing for me: Call my attention to which paragraph it is of this proposed decree that provides for four corporations?

3747 Mr. DIXON. 9.

Mr. WEBSTER. 9.

Mr. DIXON. Page 5, Judge.

The COURT. Yes.

Mr. DIXON. I might add, your Honor, there is one slight error on page 5. The first paragraph, paragraph numbered 8 of the proposed decree, that should be paragraph 9.

The COURT. You mean the middle of that page?

Mr. DIXON. The middle of the page; it should be paragraph 9.

The COURT. It says paragraph 9, Counsel.

Mr. WEBSTER. It is 9 in the amended one.

Mr. DIXON. That is what I thought.

The COURT. Well, I do not have any amended one.

Mr. GESELL. I do not think you saw the first one, your Honor.

The COURT. All right.

Do you want a record made of the discussion which will be relatively informal from this point forward? It is up to you. If you want to pay the reporters you are at liberty to do it, but this is not a WPA project and you do not have to do it.

Mr. WHITNEY. Unless your Honor strongly opposes I would rather have it taken down. I think it may be helpful later.

3748 The COURT. All right.

Mr. WHITNEY. As I think I indicated, your Hon-

or, I do not think this is a case where there is necessarily going to be an appeal. I think much depends upon the course that the argument may now take on the statements which will be made, so that in reading over the minutes after the hearing is closed it might be a great help.

The COURT. Very well. As long as one of you want it I am sure the reporter will report it anyway.

Mr. WEBSTER. We are agreeable, your Honor, to having a stenographic record.

The COURT. Now, Mr. Webster indicated in a memorandum some of these provisions he had no objection to under the decision as rendered. If you will give me those numbers I will check those off and read them as a block or treat them as a block.

Mr. WEBSTER. Well, in general we do not now contest in connection with the framing of this decree paragraphs 1 through 7.

The COURT. 1 through 7?

Mr. WEBSTER. 1 through 7. We will suggest some minor modifications in paragraphs 1 through 7. We do oppose paragraphs 8 and 9 in their entirety. We will sug-
3749 gest some substitutions for paragraphs 10 and 11, and I believe paragraph 12.

The COURT. What about 12?

Mr. WEBSTER. Just a minute, please. I have forgotten what 12 is at the moment. We are suggesting a substitution for paragraph 10.

Mr. WHITNEY. Your Honor, we have some points on paragraph 1.

The COURT. I know. We will come to that in due time.

Mr. WEBSTER. We have some suggestions and additions concerning paragraph 11. We have a substitution to suggest for paragraph 12. We have a proviso that we should like to add to paragraph 13, and suggest that paragraph 13 subparagraph 2, be removed. We have some comments to make about paragraph 13, subparagraph 3.

We have no present suggestion about paragraph 14, which is the usual visitation provision.

The COURT. Mr. Whitney or Mr. Gesell, whichever one of you desire to be heard.

Mr. GESELL. Does your Honor want to hear us on all the paragraphs?

The COURT. No. I just want to get a general idea. If there are any of them which are excluded or any on which there is no dispute, you need not comment on those paragraphs.

Mr. GESELL. We have some problems on paragraph 1, the definitions.

3750 Mr. WHITNEY. I might say for convenience, your Honor, that it is apparent that paragraph 1 ties in to the later substantive items about licensing, and I think if we start at 1 we will be starting at the back end of the problem.

The COURT. All right. However, as I gather it the biggest problem here is going to be this divestiture problem, and maybe also the free royalty scheme, and the know-how, and perhaps this foreign divestiture business. I take it that those are really the three crucial points that we have under discussion. I take it, Mr. Dixon, that you will want to open up.

Mr. DIXON. All right, your Honor. I shall direct my remarks to the question of licensing first.

The COURT. Give us in a brief outline, please, the general scheme that you have envisaged by which you hope to attain the objections outlined, namely, the elimination of the restraint on trade and the achievement presumably of a competitive system in this industry. Now what is the general scheme as you see it?

Mr. DIXON. At the outset we feel that in view of the present position in this industry of the two defendants in which they have a capacity, as I understand it, of approximately 70,000 tons for National Lead and around about 50 for du Pont, it is necessary if there is to be any real competition restored or effected in this industry,

3751 that there be a divestiture of some if not all of the operating plants of the defendants which will make real competition a fact.

Now, this industry at the present time, as the record shows and as your Honor well knows, is completely dominated by the two defendants, who have 100 per cent of the business in the extended field and approximately 90 per cent in the pure field. The only other companies in the business, the two licensees of duPont, have plants which have a top capacity at the present time based upon the restriction in effect about or prior to the filing of this suit, of 9000 tons a year, for less than 10 per cent of the total production.

Now, with the two defendants operating as they do plants producing 100 per cent of the composite and 90 per cent of the pure pigment, the Government feels that there would be available the opportunity to con-

tinue the domination of this industry by the two defendants principally because of the present position which they enjoy in that industry, comparable we feel to a practical monopoly in fact and in practice.

To effect, therefore, any real competition and to enable even the present two companies, the licensees of duPont, to engage in both the composite as well as the pure field, it would be necessary in our opinion to bring them down to at least a comparable level in the sense that there is some kind of a balance among the
3752 companies that would then be operating in the industry.

The COURT. Let me ask you a question.

Mr. DIXON. Yes, sir.

The COURT. And this is purely reflection in response to your argument.

Mr. DIXON. Yes, sir.

The COURT. Let us hypothetically assume that at the close of this case we had found a situation, not the one we did find but that one company dominated the field, to wit, NL-DP; that this one corporation occupied one hundred per cent of the extended field and 90 per cent of the pure.

Mr. DIXON. Yes.

The COURT. Then let us suppose it was determined to break that up because it had been achieved by violations of the antitrust laws—maybe I am suggesting a situation akin to the Aluminum Company although not with respect to percentages. Then suppose the defendants had suggested that the company be split into two companies, each of whom would engage both in the manufacture of pure and extended pigments, of approximately equal size, say one to have about 45 and the other 55, or 50-50, or 47-53, and that appropriate steps were taken so that there would be genuine competition between those two companies in the sense that the directors of the two companies were completely separated, bringing about a split-up of the old board into new and
3753 independent boards and so on; would you think that would be regarded as a measure designed to carry out the purpose of the antitrust law? Do you have my question in mind?

Mr. DIXON. Yes, your Honor, and I think it goes right to the crux of the case assuming that there were no other companies in the industry, but, the point that I am arguing, is that the Government would specifically say

that we did not feel that would be sufficient for the reason that it would then allow either company to have about 50 per cent of the industry standing alone. True, there might be competition between those two companies, but from experience in other matters we found that 35 per cent in a given industry may be sufficient in and of itself to set the pace for everyone else in that industry.

The COURT. Where the others are 5%, 6% and 7%?

Mr. DIXON. That is right.

The COURT. But how about where the others are also 35 per cent?

Mr. DIXON. Where the others are of the same percentage, 35 per cent may not be enough assuming that you have, as we would have to assume here, fair and open competition. It might be sufficient, but it would depend upon the particular industry: the incentive that there might be for new capital to come into that
3754 industry under those circumstances, and I might add that the Government today in the aluminum case, to get back to that although that is not on all fours with our situation, but nevertheless the Government has found that even though the Court has decreed the possible dissolution—not at the present time, they want to defer the action—that there is an extreme reluctance to the point that there is practically no one who is interested today in going into the aluminum industry in the sense that they will buy or put additional capital into the surplus war plants formerly operated by the Aluminum Company. And the only explanation is that until the new capital feels that they have at least a comparable or reasonable chance of competing, that the size and the position of the company in the industry is sufficient to deter any new capital from having any interest in the industry, on those facts.

The COURT. Well, did you suggest in the dissolution of the Aluminum Company anything in the way of how many companies should be formed out of it?

Mr. DIXON. No, your Honor. It never reached, as I said, and has not reached the stage or the question as to what form dissolution will take, assuming that that is what the Court finally does, and in the opinion of the Government that will probably be the ultimate action that will have to be taken. Certainly it would not meet the views of the Government to break up
3755 the Aluminum Company into two companies leaving each company with about 40 per cent of the in-

dustry under its control.

Mr. WHITNEY. Might I interrupt a moment? I want to raise something in the nature of a jurisdictional point if Mr. Dixon will permit me.

Mr. DIXON. Certainly.

Mr. WHITNEY. And I think that the least I can do is to state in the nature of a warning the position I am going to take so he can address himself to it.

The COURT. Yes.

Mr. WHITNEY. I am going to take the position that we are now confronted with what I think is a genuine fraud on the part of the prosecution. I will put that on the record. This case was publicized as a perfect test case on international cartels. There is not one word in the press about divestment; there is not one word in the complaint; there is not one word in the record; there is not anything to this claim, and there is not the remotest justification that this Court, or any other court on appeal on this record would consider this question or listen to this argument.

The COURT. Well, your point has been made in Mr. Webster's memorandum, and it is unquestionably one of the problems we will have to struggle with.

Mr. WHITNEY. I charge fraud.

The COURT. We won't take that as the announce-
3756 ment of the institution of an action in deceit. So please go ahead.

Mr. WHITNEY. Your Honor, I want to suggest at the outset that your Honor should consider this as a jurisdictional matter, and I object to your Honor considering this question.

The COURT. I looked at the complaint and it says to take such measures as in the opinion of the Court would accomplish the purposes of the act, or some such very general language. I suppose it is broad enough to enable the Government to suggest most anything.

Mr. WHITNEY. That is precisely the point I want to argue, because I believe your Honor's supposition of it may reasonably be completely unfounded. In other words, I do not feel that that is the law, even in its most extreme and imaginative aspect, and I do not feel for one moment that the justices on the Supreme Court who dissented in the Hartford-Empire case would consider that equity has arrived to the point of degradation so that it would be represented by trying a case on a 51-page complaint, and then with seven specific para-

graphs of prayer, and then at the hearing on the decree, which is the point of the whole case, have it consist of a discussion of a completely different form and completely unrelated relief that can only be based upon a completely different charge in a completely different case in evidence, and justify it under the phrase that the plaintiff has such other and further and different
3757 relief. Now, your Honor, that is not distortion of language; that is murder of a language.

The COURT. Well, I did not hang that on that clause in the complaint.

Mr. WHITNEY. Will your Honor kindly assist me and state any other clause that is remotely related to it?

The COURT. If you will give me a copy of the complaint I will be able to read the complaint.

Mr. WHITNEY. I will raise the jurisdictional point.

The COURT. There is also a paragraph in the prayer which is rather broad, to put it modestly.

Mr. WHITNEY. Prayer No. 5, that the Court adjudge and decree that the defendant and so on.

The COURT. I am taking time to get the steam out of the semantics.

Mr. WHITNEY. You will not get the steam out of this, your Honor; it will stay there to the last minute. There will be no relaxation of the heat.

The COURT. Well, as far as the foreign divestiture is concerned, that is paragraph 5.

Mr. WHITNEY. Yes, sir.

The COURT. I assume that is paragraph 5.

Mr. WHITNEY. Yes.

The COURT. And as far as the royalty situation is concerned, I suppose that is paragraph 6 and paragraph
3758 7. I do not find any specific paragraph, but still I can't get excited about the prayer for relief. I do not think prayers for relief are very important elements of the complaint in any way.

Mr. WHITNEY. I agree with your Honor. I think that is so, but that is not the point I am making to your Honor.

The COURT. No, I understand your point.

Mr. WHITNEY. The point I am making to your Honor is that before the court introduces a judicial branch of the Government into the investments of thousands and hundreds of thousands of people and into an industry, the Court has to have some knowledge. Now your Honor may have great knowledge, knowledge that you may have acquired independently, but if the judicial process is going

to operate it has got to be upon a complaint and upon evidence introduced under the complaint. I am not talking merely about the prayer. That is just the most dramatic way to point it up, but there is nothing in the complaint about it and there is nothing in the evidence about it, and in addition there is no remote conceivable basis for your Honor to take action upon it.

In the aluminum case that was the problem. The Aluminum Company had by acquiring plants built up an alleged monopoly, and the question in the case was whether that should be broken up by divestment of plants, and that was the issue charged and that was the issue tried.

3759 Now, there has not been a word of evidence in this case along those lines and so your Honor has no basis upon which to consider the question.

The COURT. Very well.

Mr. WHITNEY. So that I am respectfully making a motion that this subject be barred from this discussion. It is a sheer waste of time, and it is a reflection upon our judicial system to even entertain it.

The COURT. Very well. That reflection may remain. You may proceed.

Mr. DIXON. I might state briefly that at the time of the opening statement of counsel——

The COURT. No. Please let us not go into that.

Mr. DIXON. All right.

The COURT. Let us hear the proposition on the merits.

Mr. DIXON. Now, that was the reason why the Government is asking for the type of divestiture suggested in paragraph 9 of the proposed decree.

This is, relatively speaking, your Honor, a young industry. The position which the defendants today enjoy in that industry is one resulting from, in the view of the Government, this combination, and for the reason I gave a moment ago if this industry is to be thrown open so to speak to companies who actually and sincerely desire to enter into this business, and I think the record

3760 clearly shows that this is a coming business in the sense that titanium pigments are rapidly and soon undoubtedly will effectively eliminate lithopone, for example, entirely from the market, so that if the position of the defendants is to be maintained, it would mean that they would have for all practical purposes between the two of them approximately 50 per cent of the production of the composite field, which is perhaps a field in which they are forging ahead, as the record shows, with those new type of pigments all the time, and not the pure pigment. The pure pigment, as your Honor recalls, is the basic pigment.

Now, what incentive is there going to be for any new enterprise to come into this industry? That is point one.

Point two is, what about the present condition of the two other companies, the only other two companies in this industry fettered and shackled as they have been in their capacity to expand by the du Pont restrictions?

I say that competition as we view it means some kind of an equal opportunity to compete upon a basis where the price or the cost of production and those other elements which enter into the determination of the ultimate price of that product to the consuming public are comparable for all competing companies.

Now from that arrangement, as I have indicated, the defendants, even assuming that these contracts are cancelled, are still going to be in the position in the industry in which they are today, and where they will continue
3761 to dominate and be in a position to dominate this industry, so that as a practical matter the Government contends that to meet that situation there should be competing companies created by the defendants in this industry where they each have the two plants, separate plants, which subjects itself to an arrangement whereby partial or complete divestiture of those plants could be worked out upon a plan to be submitted once the principle is established that that is to be done, so that if it were accomplished what we would have here in this industry would be six companies, four of which would be independent and would have at least a comparable productive capacity. They would still be ahead of the other two companies, the licensees, but that is a condition and a condition that we are taking into consideration in asking that the four companies be set up to make more certain the fact that when this industry is open that we will not have two companies with a capacity of 100 per cent of the composite, 90 per cent of the pure, or if you want to put it the other way, each one of them with 50 per cent of the composite, 45 per cent of the pure, and the only other two companies in the business being only in the pure field with a capacity of approximately 20 per cent of the present capacity of the defendant companies.

Now it might well be that——

The COURT. Let me see if I can understand your point.

3762 Mr. DIXON. Yes, sir.

The COURT. You visualize a situation in which your four companies would be created out of the existing two, and the two already in existence, so that would make

six companies, none of whom at the time they get started have anything more than about 25 per cent of the field?

Mr. DIXON. That is right.

The COURT. And you feel that with the six companies operating there will be a fair amount of competition, and the inequality in size will not be such as to stifle competition?

Mr. DIXON. Yes, sir.

The COURT. Now first let me ask you about a few premises that you seem to have accepted.

Mr. DIXON. Yes, sir.

The COURT. First, is there any particular advantage or is there any statute which says that the competition of four is better than the competition of two, or that the competition of six is better than the competition of three or four? That is No. 1.

No. 2: You seem to be under the impression and acting on the premises that a small company producing about 5 per cent or 10 per cent of the total consumption of a country is in an unequal position as compared with one which produces 50 per cent. Is there any evidence to support that, and I mean not only evidence in this
3762a record, but is there any economic history in this country or abroad which warrants an inference of that kind. The record in this case would tend to contradict that fact, because you do have these two companies which do seem to have a certain function. Also, I have not heard that either of them has gone bankrupt or was not enabled to compete effectively with the two large producers. Now, what about those two points?

3763 Mr. DIXON. First, to answer your first point, your Honor, there is to our knowledge no statute or yardstick, so to speak, that can be applied arbitrarily, as we view the situation. It is a matter of discretion to be exercised by the Court as to what it feels is essential and necessary to restore competitive conditions to this industry, and it is our view on that basis, based on what I have indicated, for example, is the aluminum situation, to get back to that for a moment, that effective competition requires certainly more than two companies in the business with the capacity of production.

The COURT. Is there anything in the statute or in any of the decisions which provides that a court may affirmatively establish conditions which will with reasonable assurance produce competition? My impression is at this moment that the statute and the cases simply reveal a

set of situations in which you remove obstacles which may exist in the path of competition. Those two things are not the same, and I thought that my opinion drew that distinction; that what the statute enjoins is the interposition of restrains on competition. But, I did not understand that the statute ever imposed upon a court the duty of so rearranging business enterprises in this country so that the opportunity or actual condition of competition would exist.

3764 For instance, let us suppose the setup of these six corporations that you speak of. Is there anything in the law which would prevent any one of those corporations from acquiring the assets of one of the other of those corporations the day after the decree?

Mr. DIXON. Well, we have anticipated that possibility——

The COURT. But you mean that you may by judicial direction prohibit them from so doing?

Mr. DIXON. That is right.

The COURT. I say is there anything in the law today, assuming you have six going corporations, and presumably the six corporations which this court would establish would be genuine competitors, is there anything in the law which would prevent one of them from acquiring the assets of another of them the day after the decree was signed unless I, by further decree, say "You cannot do that which the law permits you to do"?

Mr. DIXON. Well, I think the Clayton Act on acquisitions——

The COURT. I thought that had been stopped. I used the word "assets."

Mr. DIXON. I see. Acquiring assets. Well, we would take the position, of course, that there would be no real difference between acquiring assets and acquiring

3765 stock where the practical effect is to acquire the business.

The COURT. That is right, but is there anything in the law which would make such a transaction illegal, In other words, let me put it this way: Assume you have a business in which six equal competitors are engaged in the field and each of them enjoys 16⅔rds per cent of the business; is there anything in the law today which prohibits one of those six from acquiring the assets and the business of another of those six?

Mr. DIXON. Perhaps not, your Honor.

The COURT. Would the Attorney General have a right

to say anything about it, or any court? Maybe the answer is yes, but my impression is the answer is no. I may be in error about that. I suppose you might drive my argument further and say no, and I might ask you, would one of the five be able to acquire one of the others, and we would possibly come to a point at which the statute would interpose a direction. Maybe that is the point where this Court ought to stop its decree. I am speaking now as a purely reflective matter, and I don't want you to get any impression I have formed any judgment on this.

Now it is true that in framing a decree you may sometimes prohibit the parties from doing that which the law permits them to do. I did that recently and the
3766 Supreme Court sustained me. I said in one case they could not make fair trade agreements, although the statute says they can do so, but I said they cannot do it for six months, which is very different from saying they never can do it. I do not think we can deprive citizens from doing what is given them by general law in perpetuity, although you might restrain them in order to permit the normal relationships to establish themselves. The reason I ask that question is to get you to work backward. If I cannot do it after that condition has been created, have I the power to create that condition?

But the more fundamental question which I first pressed upon you, has the court power to rearrange businesses in such a way as to create, affirmatively create, competition, or is the court's function limited to the elimination of obstacles to the opportunity to compete? Now manifestly these agreements are obstacles to the opportunity to compete and they should be stricken down. Maybe patents handled as they were handled in this case, might constitute obstacles to competition which should be put under some form of regulation over and above the regulation of the patent laws. But have we got to the point where an equity court has to authorize stock issues and formulate capital structures and arrange bond issues and stock issues and determine their relative amounts,
3767 and select boards of directors, and then, having created business entities, order them to go into the market and compete? That is the basic question which I don't say I know the answer to, and I want very much to be enlightened on it.

Mr. Dixon. Well, your Honor, that was why, for instance, we submitted the rather short, brief memorandum

which to our point of view sets forth the power and the discretion which the court had——

The COURT. In other words your answer is "Yes," an equity court does have that responsibility and that power?

Mr. DIXON. Yes.

The COURT. All right. Go to the next proposition and find it in the statute, as you are dealing with the anti-trust statute. I do not expect you to find it in the language of the statute, but can you find it in the decisions and call to my attention where the court has undertaken such a responsibility?

Mr. DIXON. Well, of course, the Standard Oil case that we point to probably can be cited as a case where there was not anything except a breakup of the combination. The corporations involved there were already in existence.

The COURT. That is right, just as we are breaking up a combination here which we found to exist between National Lead and du Pont. At least on the evidence here we made a finding that there was a connection and
3768 the decree proposes that that be severed. Nobody is going to argue why that should not be done.

Mr. DIXON. We would perhaps go further in direct application of the principle of the Standard Oil case which we feel states that the combination must be effectively dissolved by coming to the premise that it cannot be effectively dissolved without the relief which the Government requests be granted here being given to this industry. In other words, the power of concerted action, so as to speak—of course the restraints can be dissolved in the sense that contracts, as such, can be dissolved, or the parties can be enjoined from doing anything further pursuant thereto—but we feel that where you have a condition in the industry such as you have in the titanium pigment industry, where the record shows that restraints on production were imposed, and the defendants have been enabled thereby to reach a position in the industry such as the defendants have in this instance, that to the extent that it is practicable and possible for the court to do so, and in the exercise of its discretion it may, in order to, first, effectively dissolve the combination, and this would without any question dissolve them, and second, it would accomplish not only dissolution of the combination but it would create a condition in the industry where free competition would certainly be an unchallenged fact.

3769 The COURT. I do no dispute that. I have no doubt that, assuming that the corporations were launched, and that they did stay in business, and that they competed with each other, there would be competition. I do not dispute that. The question is whether that is what the court should direct. Here is what I want to know. I take it from your comment that there is no precise precedent in which a court has taken a corporation and split it in two, or in four, where that corporation had not illegally become the product of four or three or more units. That does not put you out of court. It may be there is no precedent, because the event has not occurred. You would be in worse shape if such events had occurred and the courts refused on principle to do it.

You may argue that proposition, or argue that as a matter of reason and logic the court should do it; therefore that takes you back to the question, is there any case which says that it is the function of the court to create competition rather than to create opportunity for competition, or to eliminate the obstacles to competition.

Mr. DIXON. Offhand I can give your Honor no such case. In other words, in that sense, we are here asking your Honor on the broad grounds of discretion, to exercise your discretion——

The COURT. You are dealing with a matter of
3770 relatively first impressions.

Mr. DIXON. That is right, and that is our position here on this matter. In the Hartford-Empire case, for example, which was a combination of more than two companies, the court finally said it would rather not try the actual dissolution or breaking up of those companies into separate groups, and so on, but it tried the other end——

The COURT. Did not the Supreme Court disapprove of its choice?

Mr. DIXON. No; I have not read it recently, but I thought they moderated the directions of the District Court.

Mr. WHITNEY. It never arose.

Mr. DIXON. The Government asked for clarification of the first ruling as to whether that precluded the trial court from ordering dissolution, and the matter is still, even in the memorandum opinion of the Supreme Court in the Hartford-Empire case, not entirely too clear on that point.

The COURT. We are dealing with a matter which is more or less in the field of general history rather than a field which is one of the mysteries reserved for lawyers. We know we have had big enterprises in this country.

Take the United Shoe Machinery situation which went through the courts, did the court say "Carve it up"? Undoubtedly if it had the United Shoe Machinery split in several units perhaps an enterprise which Mr.
3771 Justice Brandeis might have looked with favor upon, and perhaps if the decree said, "They shall never achieve a capital size more than a million dollars so as to keep the size down," you would have had more competition, but the Supreme Court did not do that. How about the United States Steel Corporation?

Mr. DIXON. Those decisions, of course, referring to Brother Whitney's remarks here, were made several years ago. What the present court would do with regard to the trend of economic matters——

The COURT. I don't know.

Mr. DIXON (continuing). The Supreme Court perhaps does not know.

Mr. WHITNEY. They decided the case last year. How can we presume to say as lawyers the Supreme Court did not know what it was saying and Mr. Dixon does not know, although it wrote two opinions in the last six months on the subject. We are now in cuckoo-land again. We have some opinions to analyze.

Mr. DIXON. Their recent case is, I suppose, one which my friend Mr. Whitney may be referring to.

Mr. WHITNEY. The Hartford-Empire.

Mr. DIXON. And of course the Hartford-Empire, which I am, of course, well aware of——

The COURT. Did the problem come up in the Associated Press case in any shape, manner or form?

3772 Mr. DIXON. Not definitely as yet.

The COURT. Did the Government ask that the Associated Press be broken into several competing units?

Mr. DIXON. No; that the membership and facilities be made available——

The COURT. That is comparable to your royalty situation, but that is not the same as saying, (a) that National Lead shall not remain in the titanium business, in effect, because you are telling them to create two corporations and sell the stock of those two corporations—or am I in error about it?

Mr. DIXON. No; that is correct.

The COURT. So you are saying National Lead shall discontinue, as far as it is concerned, the business of manufacturing titanium or selling titanium at all. Of

course that might be all right except isn't that pretty compelling in character?

Mr. DIXON. Of course, to answer the question of the Court on that particular phase of our relief, or requested relief, we are not of course contending, and I am sure your Honor understands, that National Lead cannot engage in business under the requested form of relief. We are asking the court that they divest themselves of the business.

The COURT. Then they could start all over again?

3773 Mr. DIXON. That is right. In other words, they would be in the position where anyone else coming into this industry would be in at the present time.

The COURT. In other words, theoretically, after they sold these two corporations they could then go back in business. I suppose you would not let them sell to a company which would not compete, which would not be unusual in the sale of a business of this character.

Mr. DIXON. No, not under those circumstances. But I wanted to make it clear, of course, that the relief which the Government requests here—

The COURT. Does not contain such an expression of restraint?

Mr. DIXON. Yes, and we obviously would not ask for it and I don't want the impression to be created that we are trying to prevent National Lead from engaging in the business. What we are trying to do here is to assure competitive conditions for all in this industry and it might well be, perhaps, that a partial divestiture might accomplish that. This would still allow them part of their present business, providing it could be a completely separate unit. That is the problem and that is why we have asked for divestiture.

The COURT. Let me ask this question. I gather from the decree there is more than one plant in the NL picture. What would you have done if they had concentrated their manufacturing all in one factory instead of more than one?

3774 Mr. DIXON. We would have an extremely more difficult problem than we have here, your Honor.

The COURT. In other words, that would be a problem that would constitute a headache?

Mr. DIXON. That would be a problem, or your Honor would—I mean those facts——

The COURT. I asked the question for a purpose. If we had to deal with a situation of that kind, it would as a

practical matter to some extent circumscribe the scope of action the court could take. Why should not we take advantage of circumstances which tend to solve the problem in part? Now for instance you do have four corporations, and assuming that we can recreate a full and free competition, untarnished in any respect, why should not we take advantage of that? If we had one corporation we would feel that we accomplished something quite noble if we split it in two. Now we have two. Why not be content with that, forgetting the fact that we also have two little ones? If we had one corporation and succeeded in splitting it into two big ones and two little ones we would really feel we had made history in antitrust law? I say that simply because I may not find a case in which a court accomplished any such thing by decree.

Now here you have a situation in which we find four corporations; two big ones and two little ones; why
3775 should not we say "Blessed be He for what we have." I don't intend to be facetious about that. I am serious about it.

Mr. DIXON. Well, to get back to the first question that your Honor suggested, supposing there were only one plant here, I mean supposing du Pont and National Lead just had the one plant, and the situation were such that it would be impracticable, or otherwise impossible, to do what we contend can be done here; that would be certainly a factor which your Honor should, and the Government would naturally expect would be considered and which we would take into consideration in determining what relief we feel the court should grant to make what your Honor has indicated should be done here to make this industry open at least to whoever wants to come into it.

Now if you had just the one plant I say we would have a problem here. Perhaps I would still be arguing, or may still be arguing, for complete divestiture, and I would have perhaps a much stronger argument assuming there is any merit to that contention at all, for complete divestiture, if that were the situation.

The COURT. Whom would you divest of what?

Mr. DIXON. We would divest National Lead——

The COURT. And du Pont of that plant?

Mr. DIXON. That is right.

The COURT. Then whom would you invest with it?

3776 Mr. DIXON. Whoever——

The COURT. So you would have another mono-

polist in lieu of the former monopolist. That might accomplish a fine and a criminal penalty but would it accomplish competition?

Mr. DIXON. As I said, you would have a situation there where, as a practical matter, we would have a problem of arguing a little something different from what we are arguing here.

The COURT. That is right, because the circumstances would be such as to dictate the choices you were to make.

Mr. DIXON. Correct.

The COURT. So why should not we take advantage of the circumstances here in making our choices? We have four corporations. Why should not we say "That is one of them. That is much better than if we only had one. It has solved one of our problems. That monolith has been broken into four; two big and two little ones. We do not know which is better. We do not know the optimum size for competition. Here we have an opportunity for genuine experimentation; two big ones and two little ones. All we want to make sure is that there is no deal inside here which would destroy the effectiveness of the competition and we want to make sure that in future the door shall not be closed as it was in the past, and we want
3777 to make opportunity free." But you go further and you say "Not only should we make opportunity free, but we should—I presume in the single plant situation you would say that in some way—we should direct the parties, or the United States to raise the capital to establish a competing business."

Now maybe that is what ought to be done, but has it ever been done? What does the Congress say? Has any court suggested that would be within the scope of a judicial decree? I do not think so. At least I don't remember any such instance.

Mr. DIXON. No. I think your Honor is correct, and I hope I am making it clear to your Honor, basing our request here for relief of the type requested, namely, divestiture, on the ground of the exercise of a discretion by the court for the purpose of making certain that effective competition will exist, and can exist in this industry, regardless of whether anyone else comes into it, and that is a question——

The COURT. Would you insert the word "reasonably" in front of the word "certain."

Mr. DIXON. That is right.

The COURT. Then you come to the problem of where should you stop. Clearly, if we had ten or twelve corporations, we might have more competition than if we had four or six. Yet you do not suggest formation of
3778 ten or twelve because you think that would be an unreasonable fragmentation of the situation we have here. Why is not four an adequate fragmentation, and why is six so much superior to four when you have the advantage that the four are available breathing institutions, whereas the six you would have a situation where at least four of them would be newly born institutions?

Mr. DIXON. Well, to take the question of just having the four corporations, that would be the situation we would be in if your Honor did not give even partial divestiture.

The COURT. That is right.

Mr. DIXON. You have the condition which I urged at the outset, of the two companies enjoying the position which they now enjoy, and this is a practical and not an academic matter in this industry——

The COURT. They enjoy strength and magnitude and power.

Mr. DIXON. That is right.

The COURT. But does it follow that little Virginia Chemical cannot effectively compete with big du Pont, assuming that it was under no obstacles? Is that the fact? I mean I do not know. I have not read any economists who say that such is the fact. I have read some professors who say that but I have not seen that. Isn't it true that little corporations efficiently managed can effectively compete with big corporations?

3779 Mr. DIXON. Well, of course the Government is urging the position of small business.

The COURT. Don't forget as far as the Government is concerned, we are not concerned with whether they can make as much money as big ones. That is not the purpose of the Antitrust Law. It is a consumer statute, isn't it?

Mr. DIXON. Right.

The COURT. At least in part a consumer statute. Is there anything to indicate the consumer cannot get at least as efficient service out of the little corporations as well as the big ones?

Mr. DIXON. We have here in the record, of course, the experience of Zirconium with the limited production.

The COURT. Is Zirconium today out of the business?

Mr. DIXON. Well, they are in business.

The COURT. They are still manufacturing pure TiO_2?

Mr. DIXON. Yes.

The COURT. Under what? du Pont license?

Mr. DIXON. That is right.

Mr. WHITNEY. I think Mr. Dixon ought to tell your Honor, if he knows it, that the American Zirconium Company has bought a plant and is engaged in going into the business.

The COURT. In going into it? I thought they were.

Mr. WHITNEY. Not going into it, but on a larger scale expanding the business.

3780 Mr. WHITNEY. He might at the same time tell your Honor the record shows it is not the "little Virginia Chemical" but a division of the American Cyanamid Company and the War Production Board has authorized it to increase its business to three times the present size. If we are going into those facts let us try those facts. They happen to be completely diverting from the discussion that is going forward because unfortunately those companies are growing so rapidly that we won't have the benefit of these little businesses Mr. Dixon is hoping to install.

The COURT. I suppose "little" in any context is a variable as to size. In this context in the presence of NL and TF, Zirconium and Virginia Chemical were little. Of course, I was aware of the fact that all of them had assets of parents which are large.

Mr. WHITNEY. I am afraid the fact is they are not little in the context of National Lead and du Pont. They were in the business with plants all the way from the winter of 1936, '7, '8 and '9 up to the beginning of the war.

The COURT. It may be partly due to what is happening here, I don't know.

Mr. WHITNEY. The decree will be operating in the future.

The COURT. What I am trying to get at, if we are going to have a check-up that will limit size, as such,

3781 maybe the Congress should do that directly and not have equity courts determining what the optimum size should be for a competing business. I don't know the solution. I do not know that the courts are qualified to find the answer to it.

Mr. DIXON. Our position can be briefly summarized, your Honor, in the premise that your Honor has discretion to do what we have indicated and what we have asked you to do, and the reason we are asking it is because of two things, first, we feel that it is necessary to effectively—

effectively is the word I am emphasizing—dissolve this combination; second, that it is necessary in order to create an atmosphere here, if you want to use an extremely vague term, which will be susceptible to the exercise of free competition in this industry. Now if I am wrong in my premise, then your Honor is correct and you should grant no type of divestiture.

The COURT. I cannot be correct because I have not even stated a fact. I am only asking questions, and you must not arrive at the conclusion I have expressed a view. Even when I use declaratory sentences they are still questions.

Mr. DIXON. As I said, this is a practical matter and the Government has found from experience, and probably Mr. Whitney would say that it something we ought to offer evidence on, and perhaps if your Honor feels we ought to have that we can do it, that new capital, as such—we feel that that is essential here—will not venture into an
3782 industry where there is such a tremendous gap between the production capacity and the knowledge and everything else of the industry as exists here between the two defendants and the other two companies that it is true are in the business, and they are now making efforts to expand, and so is du Pont and National Lead, so whatever they may be able to take up, the gap will still exist and the competitive disadvantage, assuming now production capacity, gives them something on the competitive end, and we think that is sound, if we get into a question of costs why I think we could show that the greater the production the lower the cost.

The COURT. Within limits.

Mr. DIXON. Within limits, yes. And the defendants, unless there is a severance of part of their capacity, at least to a point where there will be something akin to equality of production would not enable, theoretically at least, the smaller companies to compete on a cost basis and we contend that the condition which exists here in this industry, which we know exists, as the result of this combination——

Mr. WHITNEY. Your Honor, surely that is not supported in the record. These are mere statements.

The COURT. Let him go on. You will be given an opportunity.

Mr. WHITNEY. I have to interpose an objection to the introduction of the evidence at the moment it is introduced.

3783 THE COURT. No evidence is being introduced.

MR. WHITNEY. But my friend is saying what he knows about this industry and which he confesses is not in the record. Surely there is some limit to oral argument.

THE COURT. Yes, there is.

MR. WHITNEY. And it has to do with the record, does it not?

THE COURT. Your objection is noted.

MR. WHITNEY. That is all I asked. That is very important, that you know it as it goes along because vice leads to vice.

Mr. DIXON (continuing). Is to enable these companies to continue to be and to have a distinct competitive advantage over not only the present companies but anyone else that might come into the industry.

We realize as a practical matter there are bound to be some competitive disadvantages. We do not expect to equalize them, but we are asking the Court to do, again within the exercise of what we feel is its discretion, and certainly under the cases we view he has the authority to do it, by making, for example, a partial divestiture that would make certain that even the two companies would not be at whatever competitive disadvantage there may be, by reason of their present capacity as compared with the present capacity of the two companies, and, of

3784 course, when you have competition cost is a matter of extreme importance in this industry as in any other industry—cost of production. And while we may dissolve the contracts, if we leave National Lead and du Pont in a position where with their present capacity they are able to produce at 8 cents, or whatever their cost may be, by reason of the advantages of their present capacity over the other companies, certainly that is a factor which, in our opinion, enters into a determination of the question of whether you are going to have effective relief or whether we are just going to have something here on paper which, while it dissolves the contracts, leaves the parties where they are, which position they reached because of this combination.

Now of course the defendants would argue to give what we ask is to penalize them. In other words, the Court is exacting a penalty of these companies by requiring them to divest themselves of either all or part of their plants. Now it is not a penalty as we view it. The purpose of it is to accomplish what we have sug-

gested should be accomplished and what we think the facts and the record here shows can only be accomplished providing you have those competitive disadvantages minimized insofar as it is possible to do so, and by any order that this Court may enter.

Now there are still going to be some disadvantages competitively speaking, even if your Honor were to
3785 do as we have suggested, but they are brought closer together where we are in a position to have what is akin to real competition from the point of view of the ability to compete of those companies. Now you may have four companies in the business. That does not necessarily mean that you are going to have effective competition.

The COURT. It does not. You might have twelve and still not have effective competition.

Mr. DIXON. Yes, but all we are asking the Court to do is, even with the four companies, put them in a position where they will be on as nearly an equal basis from the point of view of the ability to compete as is possible for this court to do, and then the newcomers that care to come in the industry will know they are not going into an industry that National Lead, having a capacity of 70,000 tons and du Pont 50,000, have the advantage, but at least they will have some fair chance if they want to construct a plant of 20,000 tons to get the benefit of that quantity production in their price costs.

The COURT. Is there any historical evidence to support the proposition that when two companies occupy a very important segment of the field that similar companies hesitate to enter it?

Mr. DIXON. Well, that is the experience, as I said, that the War Plants Division of the Government is
3786 finding at the present time with the aluminum industry, to go back to that, which is more nearly comparable.

The COURT. You are speaking still of little giants.

Mr. DIXON. That is right.

The COURT. Suppose you accomplish your purpose. You split these companies up in the way you suggest and then du Pont is out of the business, and let us suppose that Standard Oil acquires one of those companies and the other company is acquired by a new outgrowth of small private entrepreneurs. Standard Oil has a large chemical division, and great big laboratories and so on, and unlimited sources of capital, and pretty soon it has

extended its competitive capacity to three or four times its present size and it then occupies eighty or ninety per cent of the field. Is there anything you could do about it under the law?

Mr. Dixon. I think definitely there should be something.

The Court. What?

Mr. Dixon. If the business reached a point where Standard Oil Company controlled ninety per cent of the business, that, standing alone, would not necessarily be an evil. It would be very persuasive evidence.

The Court. Just let us suppose you had furious competition. I am assuming that the five other companies that will emerge out of this reorganization would
3787 be of Simon pure character and all be staffed by ex-officers of the Department of Justice with an eye single to the preservation of the pure competitive system. Now, nevertheless Standard Oil has tremendous capacity and it achieves a condition of eighty per cent of the industry. Is there anything you can do about it under the law as it presently stands.

Mr. Dixon. I would say no, your Honor.

The Court. Doesn't it follow then if you say Standard Oil can be getting away with it, if you say to du Pont, you cannot do it today, that you are penalizing du Pont?

Mr. Dixon. No, it does not seem to us that you are penalizing it.

The Court. What I mean by penalizing, you are prohibiting it from doing something which all other citizens may do—only in that sense.

Mr. Dixon. As I said, we are not asking the Court to decree that duPont cannot engage in this business.

The Court. But you do not let them go up to eighty per cent, or would you let them go up to eighty per cent?

Mr. Dixon. Yes. For example, your Honor, let me make our position clear; we are asking merely that the Court order what the government feels will put this industry at the present time, when it is accomplished on a basis where free competition will be assured to the country.

3788 The Court. You want to start them off right.

Mr. Dixon. That is right. They have never had a chance, in other words.

The Court. What about these four you create. They all start even but finally four of them control one hundred per cent of the business and a new fellow wants to come in, isn't he up against the same situation? Or do

you think there is some virtue in having four competitors rather than three or two?

Mr. DIXON. No. To answer your question, the Government is not interested nor concerned about the number of companies then in the business providing they have reached their position in the business by and through the exercise of what is commonly known as whatever they have in the free competitive system. If, however, any one of them had reached that position by indulging in practices which were in restraint of trade, the Government would very definitely, say five years from now if that were the situation, think that that was a condition to be dealt with.

The COURT. Well, of course, if they had engaged in practices in violation of the statute, and regardless of whether they succeeded in obtaining any position thereby, you would want to stop the practice.

Mr. DIXON. That is right.

The COURT. So it is not the attainment of the
3789 status that is the objective but the engagement in certain practices.

Mr. DIXON. That is right.

The COURT. You have a very difficult problem. I do not know the answer. I assume you are going to resume after lunch and talk about the European situation? Or are you not going to talk about it?

Mr. DIXON. We are not going to say much about it unless your Honor wants to hear our position as to the relations——

The COURT. I am troubled about how you are going to get the Europeans to import into the United States as against a tariff provision. That is number one. I also want to know how you are going to get National Lead and duPont to sell abroad since you are not suggesting that I do anything about British, German and Japanese patents.

Mr. DIXON. We have asked there on the patent angle a licensing of those patents so that whoever desires to use them will have the right to those foreign patents so they will have the right to utilize them if they care.

The COURT. But you are not going to give any American producer any BTP patents?

Mr. DIXON. No.

The COURT. You cannot do that.

Mr. DIXON. No.

3790 The COURT. So to the extent that the Frenchmen and Germans and British have the patents, the

Americans are still going to be at a disadvantage in exporting to those countries, and vice versa?

Mr. DIXON. That is right.

The COURT. We will take a recess now until two-fifteen p. m.

(Recess until 2:15 p. m.)

AFTERNOON SESSION

Mr. DIXON. I believe we were about to discuss, when we adjourned, the question of the relief requested by the Government as to the foreign patents involved in this proceeding, and as is indicated in the proposed decree, paragraph 10, your Honor will note that we are asking that the defendants be required to make available to all persons who desire to use them, the foreign patents under the control of or owned by the defendants.

Now here again we have a practical question and a practical problem as to what the Court can do to open up foreign commerce to this industry in view of the conditions found by the Court to exist. We feel that this is as far as the Court could go, by making the foreign patents owned or controlled by the defendants available to American users, to the extent possible. That will at least
3791 enable them to sell in the foreign markets the products manufactured under or arising out of the use of those patents.

Of course there is no way of forcing competition by either forcing the defendants or any other company to sell in the foreign markets, or the co-conspirators to sell in the American market, and that again is another one of the reasons why we have asked for the type of relief that we have asked the Court to grant in this case. We feel that it is all an essential part of and necessary to the creation of free enterprise and free competition in this country.

Now on the patent questions generally, or the question rather of licensing of the patents involved in this industry, your Honor will note that we are asking in the proposed decree for compulsory royalty-free licensing. I am frank to say that that request was made for the purpose only of preserving the rights of the Government upon that question.

The COURT. In view of the Hartford case?

Mr. DIXON. That is right. We recognize the status of the law on that question and the present ruling of the Supreme Court by a 4-to-2 decision, now a 3-to-2 decision,

on that question. However, insofar as it relates to the question of relief, it is perhaps another form of divestiture.

Mr. WHITNEY. Allow me to point out that the
3792 Standard Oil case, which you cited this morning, never existed at all because it is a nothing to nothing decision under this philosophy.

Mr. DIXON. At least I think the Judges are still in position to pass upon the question. I recognize Mr. Whitney's distinction but I think it perhaps may not have as much merit as most of his arguments usually have.

However, as I indicated, it seemed to us that bearing the Hartford-Empire case in mind, where the Government had asked for divestiture and the court had seen fit to defer that question giving royalty-free licensing until it could determine whether that was adequate to restore free competition to that industry, that as I stated, recognizes that in asking here for divestiture.

The COURT. Plus royalty?

Mr. DIXON. Plus royalty; our requests for relief are in the alernative. I mean I do not want the Court to understand that should it feel that it would be willing to grant some form of royalty-free licensing, that it would necessarily be the position of the Government that we would also require, in addition thereto, or ask the Court for, complete divestiture under paragraph 9 of the decree.

Now on the royalty-free requirements we do feel that in considering that as the requisite form of relief that the Court may see fit to do what it did in the
3793 Vehicular case where the Court was frank, in its supplemental opinion, to recognize that question as having been passed on by the Supreme Court in the Hartford case and holding that it would nevertheless, within the exercise of its discretion and within its jurisdiction, grant royalty-free licensing for a period of time until and upon the showing that conditions in the industry no longer required that type of relief.

In other words it was not, as was the original relief granted in the Hartford case, an out and out grant of patents on a royalty-free basis; it was, as Judge Leahy indicated in his supplemental opinion in the Vehicular case, granted until such time as a showing could be made that it was no longer essential to the restoring of a condition of free competition in that particular industry. So as I indicated, we are making these requests in the alternative and feel that some form of royalty-free licensing,

as laid down in the Vehicular Conveyance case, may well be granted by the court, and, in the alternative, some form of divestiture, either complete or partial, and if a preference were to be requested by the court it would be the request of the Government that some form of divestiture be granted for the reasons urged in the argument this morning, that the competitive disadvantages on the greater capacity to produce are, as we see this case and this industry, determinative of our reasoning for that type of relief.

3794 We have in addition to that asked for compulsory know-how or granting of technical information to the two companies now in the industry and such other companies as may in the future come into this industry, so that the disadvantage which would otherwise exist, and the preferred position which the defendants enjoy at the present time by reason of the exchange and of the combination, would be dissipated to the extent that it is possible by this court to make those instrumentalities of the combination available to other companies in the industry or anyone else who might desire to come into the industry.

So that, in substance, as your Honor indicated this morning, the Government is asking here, in order that there may be what we feel is effective relief to this industry the form of divestiture, either partial or complete, as requested in paragraph 9, or some form of royalty-free licensing of the patents to the industry within the limits as specified by Judge Leahy in the Vehicular Conveyance opinion, or possibly both; second, compulsory know-how, or technical information, available to anyone in the industry, or desiring to enter the industry.

The COURT. And not limited to the know-how related to the patents?

Mr. DIXON. That is right. As your Honor knows, the record is replete with the fact that plant visits and

3795 that sort of thing——

The COURT. All I wanted to know is, your proposal was not limited to the patents.

Mr. DIXON. That is right, your Honor. And as to those patents which have not yet issued, or as to which the defendants may acquire title within a period of five years from the decree, we are asking comparable treatment as to those patents, except that on those the court may fix a reasonable royalty in the event the licensees or parties who desire the use of those patents, are unable to determine or col. to some agreement on the royalty

itself; in other words, those to be licensed upon that reasonable royalty basis.

I think that, in substance, covers the principal requests——

The COURT. How about the sale of the foreign stocks?

Mr. DIXON. Well, that we feel is essential and necessary to complete divestment by National Lead from the co-conspirators who are not within the jurisdiction of the court. The problem there in any event is a most difficult one and where the co-conspirators are before this court the relief would not be so difficult. But certainly insofar as this court can go in cutting the knot and the tie to the co-conspirator not within the jurisdiction of this court, we feel that the only way that that can be
3796 done is to require the defendants having those interests to completely divest themselves of those interests within a period of time and on such terms as may be prescribed by the parties and approved by the court.

The COURT. You have no objection to the American producers engaging in foreign production?

Mr. DIXON. No, we have not, your Honor.

The COURT. Through subsidiaries?

Mr. DIXON. That is right.

The COURT. So assuming that National Lead sold its interest in BTP, you would have no objection to National Lead then acquiring a British manufacturing company?

Mr. DIXON. A British manufacturing company?

The COURT. Yes.

Mr. DIXON. No.

The COURT. Well, would you have objection to its reacquiring BTP?

Mr. DIXON. Well, yes, very definitely. I mean that is why we have prescribed in the next, I believe, to the last paragraph of our decree we would construe that action as one which would tend to recreate the very condition which this court has found to be illegal.

The COURT. Of course where you have a parent-subsidiary situation, complete parent-subsidiary situation, you do not have a problem of restraint of trade, do you?

3797 Mr. DIXON. You mean where it is one hundred per cent owned?

The COURT. Assuming that National Lead owned BTP one hundred per cent, there would be no violation of law in BTP agreeing not to compete with its parent.

Mr. DIXON. That is right. That, in substance, your Honor, sets forth the position of the Government as to the relief which we submit is necessary to accomplish the throwing open of this industry to a system where you will have, in fact, free competition.

The COURT. Have you considered the proposed revision of the agreements between National Lead and the British or Europeans?

Mr. DIXON. We feel, your Honor, that those agreements in and of themselves must be completely stricken from any consideration that the court will give here to the relief to be ultimately granted.

The COURT. I have not read those agreements, or if I have I have probably forgotten them, but anyway, you do not think they accomplish the degree of severance which you think should exist?

Mr. DIXON. Definitely not. As a matter of fact your Honor may recall, and as I said, the problem here, assuming that is done, is still going to be a most difficult one to establish a condition in fact where there may
3798 be competition, but through the course of Dr. Jebsen's testimony I think your Honor asked him the question as to what extent those relationships would be ignored by the companies even assuming there was complete severance by stock ownership, and as I recall it, I think Dr. Jebsen said something to the effect that the personal equation the court would realize is something hard to evaluate and eliminate.

The COURT. That is right.

Mr. DIXON. For that reason we are asking, to the extent it is possible to do so, that that cord be completely cut and even with the complete severance of that cord the condition will still, at least in our opinion, be anything but one in which there is liable to be fruitful competition arising by the present companies engaged in the business, but the problem is a practical one and to the extent we can sever that cord and impose other restrictions on the resumption of those relationships that we wish to do everything possible to accomplish that purpose in effectively dissolving the combination.

The COURT. Do you suppose its holdings in Titan Gesellschaft is salable?

Mr. DIXON. I have not been informed, your Honor, as to just what the present status of those stockholdings are. I would assume that there would be several factors to take

into consideration there, namely, the question first,
3799 as to whether that company is still in existence as one which could produce, and, second, whether there is anything salable, and, third, what will be the future policy of the Allied Powers with regard to not only this particular interest——

Mr. WEBSTER. If I may——

The COURT. Maybe they will be producing titanium on the Volga.

Mr. DIXON. It might well be, Judge, if they continue the present method, apparently, of taking reparations from Germany, it might well be that TG's plant will wind up somewhere in the Russian territory.

Mr. WEBSTER. If the Court please, when we received the Government's requested decree, we were really so astonished that we thought we would have to reread the Court's opinion to find out if there was anything in that opinion or in the findings that would justify any such relief as the proposed decree seemed to foreshadow.

The COURT. That is an ordeal you do not want to be subjected to.

Mr. WEBSTER. But we did look again, at least by process of reading, and we found that we had a case in which National Lead Company had entered into agreements found by the court to be illegal to divide the world into fields and imposed restrictions on the use of patents and on the use of products manufactured under patents. We
3800 do not find anything in the opinion which indicates that the Lead Company has ever made any improper acquisitions. We did not find any mergers or combinations or unions of any kind which might be criticized, or indeed which had been criticized, in the pleadings. We did not find any of the features of a case in which divestiture has heretofore been requested by the Government. What we found was a case of agreements and we assumed from what the court said in the opinion that it would expect those agreements to be effectively terminated for all purposes and for all time.

At the conclusion of the opinion in the next to the last paragraph,—the last paragraph was one for which Mr. Dixon and Mr. Whitney and the rest of us I am sure are very grateful for your Honor's generous recognition—in the next to the last paragraph that the Government shall submit an order to give effect to the Sherman Act, and plaintiff is entitled to a decree which will restore titanium to free competition. The means of preventing such a de-

velopment must be provided and the power to prevent it must be shorn from those who by combination have acquired it.

The COURT. You did not find any language there which says "and the Government with the aid of the court must establish competitive units of business"?

Mr. WEBSTER. No; we did not, your Honor. In fact the Government's first seven paragraphs seem in general
3801 to be so appropriate to carrying out what your Honor foreshadowed in that paragraph that we could scarcely believe that the divestiture provision had been seriously proposed. It seemed to be an addition which was thrown in here as a sort of trial balloon to see what would happen to it.

Now the first seven paragraphs, as I indicated this morning, subject to some clarification, are acceptable as being appropriate to the kind of decree which we believe this opinion indicates the court will make. In the first place, that part of the decree will terminate the 1920 agreements. It will terminate the assumption agreements under which National Lead became a party to the 1920 agreement. It will terminate the 1933 agreement with du Pont. It will terminate the agreement with IG, with reference to TG. It will terminate the British agreements.

The COURT. Or at least it will disable you from performing under them.

Mr. WEBSTER. It will terminate, so far as we are concerned, the Canadian agreements. I may say, in parenthesis, it goes even further because it proposes to terminate agreements made between European companies, namely the Agreement of Four and the Agreement of Six and Agreement of Deliveries, simply on the basis, I assume, that TINC was a party to those agreements. Just how the court can effectively terminate an agree-
3802 ment made and performable and performed in Europe is, I find, philosophically difficult.

The COURT. You say the most it can do is prohibit TINC from performing.

Mr. WEBSTER. Certainly it can prohibit TINC from performing under those agreements.

The COURT. And it would be up to TINC to stay out of this country so it would not——

Mr. WEBSTER. It puts TINC in peril of what may be done in the future. I don't think the risk is a vast one. I think your Honor's question as to what might happen

to TG and TG stock in the future, presents a condition which TINC may get some benefit from if at any time an attempt is made to enforce those agreements which I think is really academic.

The COURT. As a practical matter?

Mr. WEBSTER. As a practical matter. Now we would have liked your Honor to approve that proposed British agreement which was really a modification agreement and by its terms cancelled the old British patent licensing agreement but left the British 1933 agreements in force for certain limited purposes because of the contractual right, but this decree, as proposed by the Government, will terminate those British agreements and we will then have to see what we can do to salvage the stock in the British company.

Now to go on to the next phase of the decree,
3803 which seems to us in general an appropriate provision, is you have complete compulsory licensing of the patents, so far as this court can provide.

The COURT. Of all existing patents.

Mr. WEBSTER. Of all existing patents.

The COURT. Controlling the licensing for a period of five years thereafter.

Mr. WEBSTER. That is correct. Now we took it for granted that the court would require effective licensing and indeed if the court will adopt a suggestion for clarification which we propose to offer, it will go beyond what the Government has suggested. It will require reciprocal cross-licensing. To spell that out, if the American Cyanamid requests the du Pont Company and the National Lead Company to give it licenses under all of their patents, it would be required to give du Pont and the National Lead licenses under its titanium patents. We think that is essential and we think it is consistent with the spirit of relinquishment of restraints on patents.

Now we also would go beyond what the Government suggests in another respect: We would urge the Court to enable the du Pont Company and the National Lead Company to continue to cross-license each other under these patents. Strangely enough, the purpose of this case,
which in part was to strike down an agreement be-
3804 tween the du Pont Company and the National Lead Company in the terms now suggested by the Government, would forbid the execution of patent licensing agreements in the future between the du Pont Comapny and the National Lead Company which we believe would

create a situation not in harmony with freedom of trade and freedom of the use of patents, but inconsistent with that. In other words, if we are to have patent licensing we want complete unfettered unrestricted patent licensing. But as I say, we are prepared to acquiesce in a decree which will require us to grant licenses under patents taken out within the next five years.

Now again to discuss for a moment those provisions which are intended to create a condition in harmony with the law and to shear us of the right to prevent a development of a plan, development of a condition, consistent with the law, we think the know-how provision is appropriate and we would expect to have a decree in which we would be required to give know-how necessary to put to use patents that are licensed by our company. We think the Government's suggested provision goes far beyond that; that it would require us to become a sort of nursemaid, teaching the manufacturing skills, technological skills that are not related to the use of patents that would put us into their manufacturing business and that would lead to all kinds of controversy and disorder.

3805 The COURT. Isn't your suggestion, theoretically at least, equal to zero, because I was under the impression that a patent to be good, meaning valid, must sufficiently disclose the art so one skilled in the art could practice it without further instruction?

Mr. WEBSTER. Your Honor, that is a very interesting observation because we have just been discussing that very point together during the noon hour and Mr. Williamson made, at one point, substantially the same observation that your Honor has now made. We think that theoretically a chemist as skilled as the chemist who made the invention and applied for the patent, or one perhaps who was capable of becoming as skilled as that, would be able to take a series of patents and put them into use. On the other hand, as a practical matter, the know-how that we are talking about is the know-how that would enable a concern or a group of chemists not familiar with the manufacture under patents of titanium pigments, to put the patents into operation as a group to get started in the manufacturing business under the patents, and we think that is as far as it ought to go. We think it is difficult to define exactly what that is, but we are willing to take any amount of trouble to try to do that. We think that the line between that, and as I say serving as a kind of wet nurse

to the X Company's chemist or the Cyanamid Com-
3807 pany or the Sherwin-Williams Company or the Pittsburgh Plate Glass Company or the Zinc Company for a period in perpetuity, or during the life of the patents, is very impractical and very unwise and an unnecessary provision. Indeed, we think it is confiscatory so far as it requires us to devote our technical organization to the solution of the technological problems of those companies.

Now having said that which I have, I think it shows that it is our desire to work out a decree honestly in harmony with the law which will involve a complete dissolution of the combination under attack in this case; namely, the combination between the National Lead Company and its foreign associates, and between the National Lead Company and the du Pont Company. Having said that, I think it is almost unnecessary to say that we are not prepared to accept any provision which goes beyond the reasonable necessities of the case which was tried here. Indeed, if I may suggest again parenthetically, if it should develop conceivably that that issue, or those issues, should be gone into, we have notes which indicate that a case tried on those issues even if properly pleaded, would take a long period of time. There are many issues together with the acquisition and use of these properties and the uses to which they could be put in the future which would have to
be explored, which would have to be determined by
3808 the court. I think we are far from needing to go into anything of that kind because with the authority of my friend and colleague, Mr. Handler, beside me and the vehement statements of my gifted friend, Bill Whitney, behind me, there is no case in which dissolution or divestiture has been required where the acquisition of the properties has not itself been illegal. I think that was fully developed, and my friend, Mr. Dixon, conceded that when your Honor pressed him somewhat on the point. What he would do, however, would be to ask your Honor as a matter of discretion to go far beyond what any other judge as a matter of discretion has been willing to do.

The COURT. You would call it indiscretion.

Mr. WEBSTER. In fact, even in cases where divestiture was regarded and under the pleadings and trial of the case might be regarded as appropriate; namely, the Can Company case, and the Hartford-Empire case, the Towing Company case cited in our memorandum, the courts have declined to exercise their discretion under those circum-

stances to require a divestiture where they thought a condition in harmony with the law could be brought about or restored without dissolution, so that you not only have a situation in which no measure of dissolution is appropriate under the existing statutory and case law, but you have a situation in which even if it were appropriate
3809 we should argue under the facts of this case that the discretion should not be exercised.

Now I submit to your Honor a fortiori that the only basis on which the Government comes to you for this form of relief is on the basis that they want your Honor to go way out beyond anything that has ever been done before. They are asking your Honor a very unreasonable thing.

I am not going as far as my friend Whitney in saying that the point is exactly jurisdictional, but I think it is very highly discretionary, and that any exercise of discretion in that direction would certainly be excessive.

I would just like to go back a moment and take advantage of the remark made by Mr. Dixon. He spoke of this as a young industry, as a coming business. He spoke of the capacity of other companies. He used optimistic phrases, indicating what is in fact the case, that the industry is a flourishing industry. It is an industry in which the demand for pigments exceeds the capacity for production; it is an industry in which the opportunities to go into the business if the restrictions are removed are enormous, and it is an industry in which there are any number of companies with vast chemical technical know-how ready to enter into it the moment that this court's decree becomes effective, and Mr. Dixon knows that, and I say in frankness he should say so to your Honor, and I think he did say so when he said it is a coming business; it is a growing business, and so forth.

3810 Now I would like to say just a word about the foreign investments. It is no secret to any of us that as to the foreign interests, that that has been a source of concern and embarrassment and difficulty all the way through the trial and before the trial, and counsel were eager to do something to bring about a satisfactory condition. Of course, in the case of TAS, we own one hundred per cent of TAS, and, as your Honor now appreciates, TAS is no longer a manufacturing company: it is a sales company that also holds stock in a mining company in Norway. We own most of the stock of SIT, the French sales company. The remainder is held by small private interests and firms, and it seems to me that with reference

to those companies nothing should be done.

With reference to the German company and the Japanese company, which fall into a different class, Mr. Dixon and your Honor know quite as much about those as we do. All we know is what we see in the papers.

The COURT. Mr. Whitney might know more.

Mr. WEBSTER. They have been largely destroyed. The plants in the case of the German company are in the hands of the British Occupation Forces. The plants in the case of the Japanese company are presumably in General
3811 MacArthur's hands, and I believe within the last few days he has taken over all of the economic interests of the entire country, including those of the Emperor.

Nobody knows what those stocks are worth, or whether they can ever be sold, or whether there is anything to sell. So really, we come down to talking about just two major interests and no more.

The COURT. British and Canadian.

Mr. WEBSTER. British and Canadian, BTP and CTP. Our suggestion in that proposed agreement was that we reduce our interest in the British company from approximately 50 per cent, though we actually own 44 per cent, and it might be said that we control an additional 5 per cent held by Greef, making 49 per cent. Our suggestion in the proposed agreement was that that be further reduced so that the interest of the Lead Company would be equal to the interest of ICI, ISC and GW, and then there would be a 25 per cent interest given to each of the companies set forth in the proposed agreement, which would then remove all of the restrictions of all sorts, and let nature take its course. We think that is a practical arrangement.

We believe that in the present condition of our economic relations there should be a tolerance of that character for an effective American investment, and that we should
3812 not be required because of some quixotic application of the antitrust laws to foreign trade, to give up an investment just at the moment when the investment is beginning to look as if it had some real value, and then turn around and buy another company, or to try to buy competitive companies that I think would be very reluctant today to sell out to us, or finally to completely nationalize the National Lead Company and just stay within the confines of the United States and not to have to go out.

Maybe that is the thing to do, but I do not think it is a good thing from the standpoint of public interest, and I believe the same considerations apply to CTP.

Unless my colleagues have something they want me very much to add or perhaps modify what I have already said, I think that is all that need to be said by us, your Honor.

Mr. WHITNEY. If your Honor please, I may take a little more time than is necessary, but that won't be a new proceeding on my part. I feel that the case means so much that I know your Honor will permit, if necessary, a little more time, so that I may be sure that I put before your Honor all the thoughts that we think are material even if your Honor is already in possession of them by independent thinking.

Now I should like to begin with a five-minute re-
3813 view of the case as such. This is a lawsuit in which the plaintiff very properly under modern professional motions announced to the public that it is bringing a test case on international cartels. This was, as the phrase was used by one of the Assistant Attorney Generals whose name is on the brief, a textbook International Cartel to lay before the Court for a ruling thereon. Now to come from publicity to pleadings, the complaint was consistent therewith. I referred to it this morning, and there is no need to go into it at greater length. It is a complaint throughout which presents an issue as to an international combination and the existence thereof, an international combination based principally upon agreements as to patents, and therefore appropriately enough, it fell within a branch of the antitrust division of the Department of Justice that I believe was called the Patents and Cartel Division, and our friend, Mr. Berman and I had the pleasure of arguing the last case in the Supreme Court against each other, and he was put in charge of the division, and one of his most talented confreres, Mr. Dixon, has been with us from the first.

3814 Now, the case was a patent and international case. That is the case that the public was told about; it is the case that was pleaded, and it is the case that was tried and we can't have read the 1400-odd exhibits as we had to do or heard the speeches we had from the first moment without being aware of the obvious, and that I submit to your Honor governs the situation.

When the time came when we were at the end of the case and where we have the decision of your Honor, and

that is, of course, what governs us today, and whatever is in the decision we take as true for the purposes, of course, of this argument——

The COURT. Pro tem, anyway.

Mr. WHITNEY. Yes, sir. I just want to refer to three paragraphs of that.

At the bottom of page 59 is the only place that I can find in which your Honor made a finding, and it was in general language, to give National Lead and du Pont together domination and control over the titanium pigment business in the United States. I take it that the word "together" was an added word of art and represents when you add them severally, together. And your Honor found that that was the necessary effect of the agreement, Exhibit E, and of the du Pont assurances, and when you came to the final generic findings of fact you introduced them in paragraph 95 by saying, "The agreements and understandings entered into between the defendants
3815 and the other corporations herein named in finding 1 have had the following necessary effects, and I think the whole point in the decree that such evils as there are were found to be the necessary effects of certain agreements from which it follows under the principles of cause and effect can survive, for the way to dispose of the effect is to remove the cause; hence, to strike down the agreements, otherwise the findings are made meaningless and the evils are said to result from something other than the agreements, but that is not so.

Now the second point in the finding is that the principal paragraph relating to the domestic business, which, of course, was a minor and collateral incident in the case, is paragraph 78 at pages 57 and 8 of the print. And your Honor found that there was active competition between National Lead and du Pont.

Now I don't press these findings because I am going to hoist anyone with them. I am profoundly convinced that the evidence supports them. Mr. Daly answered on examination—I have forgotten whether it was direct or cross—that the competition with National Lead was plenty tough. The competition of Virginia Chemical and Zirconium likewise was, and then your Honor refers to the sales and repeated reductions in price, and finally you found that there was no selection of territorial customers, and under that thought business identity is the product of agreement or collusion.

3816 Now, in my brief experience if we were to go to the Supreme Court in this case from whatever decree was given, or if the Government were to go, there would be a heavy preponderance in favor of your Honor's findings, and the chance of any of us reversing any of the findings would be very small.

The findings are, if I may be allowed to say so to your Honor, reasoned findings and carefully reached findings, and the tendency of the Court would be to look at them and say, "What are the facts of this case?" Well, the classic instances of antitrust violations are, agreement upon price, division of territory and limitation of production.

Finding 78 answers that those are not present in the case. I think that would have a profound effect on the Court in passing upon the decree.

Now, the third point that I would like to call your Honor's attention to is that when it comes to the specific finding as to the Zirconium and Virginia Chemical, paragraphs 84 and 85 on pages 63 and 5, your Honor finds that the evidence does not warrant the inference that the licenses granted were pursuant to a common plan between National Lead and du Pont. Now, in other words, this comes for disposition as a case in which there have not been those agreements and practices in restraint of domestic trade which are characteristic of the typical combination between two or more seeking to restrain
3817 domestic trade except in that special class of case of which this is one where domestic trade is found to have been restrained by patent license agreements and those alone, and to the extent of that and to the unlawful clauses therein. For example, the quantity limitations. Therefore, it is a patent license case as far as we are concerned in addition to being an international cartel.

Now, if your Honor please, on the patent license side of the case, your Honor wrote an opinion with which it is going to be difficult for any of us to quarrel, and again if you will forgive me for pointing that way, and your Honor knows I am not trying to seem as if I were handing compliments up to the bench which does not mean much, but I only say that the opinion strikes me as one of those antitrust opinions that has strength within itself, because it is factual.

Now, as the opinion goes along it makes certain findings and draws certain inferences against duPont, and those findings and inferences relate to the activities of a Mr.

Rupprecht almost exclusively in the year 1933, but I quite agree continuing down in their effect at least to the forties, and there is a finding, to revert to the findings, that the exchange of know-how, for example, ended in April, 1940, and after that it was a question of the continuance of the license agreement and, as we all know, Mr. Rupprecht is dead.

3818 The result of that is that one does not have before him an opinion or findings which would lead any court to feel that it was dealing with a substantive intent toward wrongdoing in the titanium field, which is all we are concerned with, on the part of the DuPont Company.

The duPont Company is in the position that it has found that one of it managers did a postive wrong in joining an international conspiracy in 1933, and that certain necessary effects and consequences of that joining and the agreement represented thereby have flowed on down. That is the size of the case.

Now, your Honor was very fair again in pointing out that the duPont position was entirely different from the National Lead position. I do not need to belabor the phrases. They are familiar to all. Your Honor was so kind on our side of the case, so just as to point out in many different phrases that our agreement deviated sharply from certain other agreements, and that our position was in short contrasted to that of certain others and so on. Now, finally, as it has been abundantly pointed out this morning by your Honor, we are not here concerned with the type of case in which either the charge or the offense was of our growth as such. There is no charge and there was no charge ever that we had wrongfully acquired extra plants or absorbed extra companies and were on the road toward a monopolization or restraint of trade.

3819 Now with that background I come to the law, and I have I hope in good humor twitted brother Dixon once or twice during the trial about his reluctance to recognize the Hartford-Empire opinion, and I went away before lunch in order to give him ample peace and time to read it, but he has had the charming insouciance, to say to your Honor again that he is not very clear about what it means, but being reasonably clear about what it means I want to go briefly into it, because it is obviously the law on this topic and has been decided within the last 12 months. Before going into it, though,

I want to note this vital point: When the Hartford-Empire situation and this system of licenses and agreements in the glass industry was disclosed to this country in 1938 we were all, even those of us in dreadful Wall Street, profoundly shocked. It was a scandalous picture, and it was treated as such. It was a case that was immediately brought, the Hartford-Empire case, in order to pillory one with the worst examples, and then it came on to trial, and you can't read of a more arrant set of violations of the antitrust laws than are described in the opinion of the District Court for the Northern District of Ohio, and that opinion and those findings of fact were adopted by the Supreme Court of the United States and, as Mr. Justice Black said, "The history of this country has perhaps never witnessed a more completely and successful economic tyranny over any field of industry than that accomplished by these appellants."

3820 And Mr. Justice Rutledge wrote a separate opinion, as they were anxious to explain clearly their immediate positions in the case without indicating any easy going along together, so that they each had their own viewpoint and that is why they wrote separate opinions, but Mr. Justice Rutledge said, "This is a long adventure in monopoly and unlawful restraint of trade."

Now, it was because those two dissenting justices found that this was a scandalous case that they suggested that there ought to be particular remedies going beyond the duration and regular remedies applicable under the antitrust laws in this particular case, and here in our case we have just the opposite.

We have got in respect of du Pont at least an opinion and finding which show that although the learned district court judge has been satisfied that in substance and effect du Pont through Mr. Rupprecht did join the conspiracy, yet he has been at pains in justice to point out the moderate extent of the violation, and thereby making this the opposite kind of case from the Hartford-Empire case as a matter of degree, because Mr. Justice Holmes taught us all that all law at least ought to be a matter of degree.

Now, therefore, I am saying not by way of argument, but I sumbit to your Honor that the decree in this case in respect of du Pont ought to be definitely and

3821 measurably milder than the decree against the Hartford-Empire Company. Now with that background I come to the Hartford-Empire opinion and the majority opinion for the Court. Although one of the most agreeable

intellectual pursuits I have had since I got back last week has been reading your Honor's opinion about doing business as the result of solicitation, and having had occasion to appear before the learned justices who sit on appeal in these cases, I think your Honor turned over backward because I think perhaps you could put a few more in. But however that be, I do not fear very much such an intellectual adventure in respect to the present constituency of our Supreme bench when it comes to reviewing an effort by these earnest young men within 12 months to overrule or bespatter its last year's decision. I am not afraid of that. However that may be, here was the decision: Now, at pages 4 and 5 of the opinion we are told that there were a group of exclusive licenses, the critical distinction between exclusive and non-exclusion, and we have not had exclusive licenses exchanged with National Lead. We did unfortunately and you have found it to have been wrong in doing so granted some exclusive licenses abroad, but we had no exclusive licenses inside the United States. But in this case, describing Mr. Justice Roberts' outline, there was an exclusive right to manufacture milk bottles in the Thacher Company, and there was an exclusive right for fruit jars in the Ball Company, and in effect the
3822 Owens Company had exclusive use of certain types and methods of manufacturing.

Now, that was a profoundly different situation from that in our case and merited very much more severe treatment. Then in addition Mr. Justice Roberts points out that the defendants had pooled the efforts of their legal staffs and contributed equally to the purchase of patents and the expenses of litigation except for one patent purchased back in 1934, the Leuchs patent. They had not anything of that sort in this case.

Then when it came to the commercial features, on page 8 Mr. Justice Roberts points out that the parties assigned production quotas. Your Honor has found just the opposite here. They allotted production in one field, in one company, and in turn to other companies.

The production and the manufacture and the sale of machinery was suppressed and prices were maintained by agreement. Then he points out at page 13 the distinction between legitimate use of patents and the prohibited abuse of the restrictions incident to the ownership of patents, and refers again to the suppression of competition and the employment of the joint patent position to allocate fields of manufacture and to maintain prices, the same points again exactly.

Now, it was against that background that the majority of the courts proceeded to review the decree and to enter the reversal of what had been done before.

It stated the principle on page 50 that we may not
3823 impose penalties in the guise of preventing future violations just like your Honor said this morning, that the theory of the equitable jurisdiction under the anti-trust laws is not to punish and put the defendants in a different non-competitive position with others. The Court said in the Hartford case that you may not place the defendants for the future in a different class than other people, the "in a different class from other people" being in itself quoted from prior opinions, I believe, of Mr. Justice Holmes in the Swift case.

Now, the practical applications of those principles so far as we are concerned occurs first at page 19, or pages 18 to 21, and I will summarize it in this way: On 18 the Court is considering the vital paragraph 24 of the decree of which A provided for royalty-free licenses under existing patents and, B, for licenses at a reasonable royalty under future patents and, C, that the defendant should make available the knowhow; that is to say, should make available under A and B at cost plus a reasonable profit all drawings and patents relating to the machinery or methods used in the manufacture of glass where embodied in the license invention.

Now, then, the cost as it were applied a subprinciple to this specific principle and said in effect that it goes beyond what is required to dissolve the combination and prevent future combinations of like character.

3824 Then turning over to page 21, the Court ruled on what was required, and as to A they said that as to existing patents the decree should be modified to permit the reservation of reasonable royalties. As to B they said that a defendant hereafter acquiring a patent must be entitled to a satisfactory price if it is used by others electing to use it, or refused as a license and so forth.

Now as to C they said that this paragraph 24-C should be deleted.

The COURT. That is the knowhow provision?

Mr. WHITNEY. That is the knowhow provision.

Now, if your Honor please, when the time came to have a rehearing on this a few months later the court, as courts generally do on rehearings, adhered to its position. Of course, I pointed out to the Government only a few comparatively minor changes such as where the words

"standard royalty" were changed to "uniform reasonable royalties." The other provisions of the decree to which I have made reference stood as they were and that one, of course, stood in substance, and I cannot avoid having a little humor mixed with my sympathy for Mr. Dixon when he says in effect that the Court did not know what it was doing.

Now he has been very fine about it. He did not go as far as his brethren did in the vehicular case, which, if your Honor wants to read a special pleading in a des-
3825 perate cause he would read the type of argument to Judge Leahy, that in effect Judge Roberts did not know what he was talking about, because he thought he was talking about rentals all the time, and must have been surprised after the rehearing because he was still using the word "royalties" when all the time he was talking of leases and rentals. The only reason I mention that is because today Brother Dixon still comes here and talks about what Judge Leahy really wanted to do. Well, Judge Leahy does not say really that he wants or wanted to do anything different from the Supreme Court. He just makes a flat decision. He just says, "The Government now urges that a provision for royalty-free licenses must be inserted in the decree, and if defendants object the objection will be sustained because I am unable to agree with the Government's reading of the Hartford-Empire case. I am unable to agree that the Court has power to mandate a royalty-free license where the patent has been used as an instrument in violation of the antitrust laws. If the Court could permit such a provision it would obviously be tantamount to cancellation of the patent." He goes on to say that the patent is not to be cancelled by making it royalty-free because it was once used as a device to violate the antitrust laws and so on.

The one possible explanation I can think of concerning Mr. Dixon's extraordinary theory is that perhaps when he is telling a district court judge about a certain
3826 decision by higher authority, that it must be read with the thought in mind that he does not agree with the higher authority instead of meaning simply that he is practicing a judicial function in accordance with the age-old Anglo-American tradition.

Now, if your Honor please, you will find that case or you have probably read it, but it is in the C.C.H. Trade Regulation Service at page 57,935 in their delightful way of paging, the issue of September 13, last month. It has

not yet come out in the reports, so far as I know, and it being the only District Court case up to date on this weighty issue——

Mr. WEBSTER. There is another decision, your Honor, which is referred to on page 35 of our memorandum, a decision by Judge Wyzanski.

Mr. WHITNEY. Well, the Standard Oil case, it came in sort of indirectly, and Judge Wyzanski's opinion I do not have here, but it is consistent.

Now the result of my submission to your Honor is that the only serious problem in this group, and before any court after all we must consider this as if your Honor had been removed to some higher sphere, I mean on the earth, and after finding these facts and writing this opinion, and a new judge came on as the appellate judges do, and said, "Now, here is the situation," and I respectfully submit that the only question for the Court in that posture would be what if any should be the modification of the
3827 Hartford-Empire decree comparable to duPont, or beyond what was comparable to Hartford-Empire.

Now in substance we are prepared to accept most of the Hartford-Empire decree. We have only suggested a few modifications and very mild ones, because we have a certain deference to the injured feeling of the Government, and we want to show a decent modesty even though we think we are entitled to more.

After all, we agree to royalties that we think we can competitively live under or that are fair. Curiously enough, we do not always see eye-to-eye with Mr. Webster, and I might explain those differences in principle so your Honor will have them clearly in mind. We generally, of course, take the same line he does, although we are not involved as he is with the foreign contracts and agreements.

We agree first, of course, that the agreements must be struck down in their entirety, as they were the cause of the whole thing. I would be quite prepared as a lawyer to make an argument that I think would be an honest and a sound one to your Honor that the decree in this case should stop there. Now, why?

Under the patent law as Congress has refused to amend it a patentee is free to grant licenses or to withhold licenses as he sees fit, and the wrong here being the entry into certain agreements, and those agreements being
3828 struck out it would seem that that should end the matter in accordance with the subject of decrees under the antitrust law.

For example, the Antitrust Division in January, 1938, published this little blue book. They have not published one since. It is the most admirable summary of the 428 cases up to that time under the antitrust laws. True, upon reading it you will find that excluding the indictment cases and excluding the equity cases where the facts were not heard on the merits, the form of relief was uniform through literally upwards of hundreds of cases. They were the elimination of the practices complained of; they were enjoining combinations; they were declaring illegal and perpetually enjoining its operations and so forth and so on in every case. That was the standard and uniform interpretation of preventing and restraining, and this case, I respectfully submit to your Honor, comes to its proper end as far as du Pont is concerned after you cut us free entirely from any existing National Lead agreements.

Our manager, Mr. Rupprecht, got us into something in 1933, and your Honor said consequences have flown from it of a serious character, and your Honor has it in your power to cut us free from that, and when that is so then we go on in competition, and I respectfully submit that that is the only decree that ought to be entered.

However, in deference to the wishes of perhaps
3829 more practical associates of mine we have submitted to your Honor a draft of a decree in which we have gone considerably further and quite specifically after making a definition which is slightly different from the Government's definition, very slightly. For example, we have changed "construed" and we have eliminated "and compounds" after "pigments". We have undertaken to concede that there should be given a direction to us that we must as in the Hartford-Empire case give a license on uniform reasonable and non-discriminatory royalty terms, and that is paragraph 5, on page 3 under our existing patents, and they are listed in appendix A, schedule A, to the draft.

Now, we don't see any reason at all why we should be compelled to license as to future patents. We have been free of the exchange of information with National Lead for five and a half years, and we are perhaps developing inventions of our own, and doubtless Cyanamid and Glidden and National Lead may be developing patents of their own, and so may outsiders. Indeed, if I might copy Mr. Dixon's freedom of slightly going off the record,

outsiders are doing it, and there are very large companies filing applications, and indeed we are pretty frightened about some of them.

Now, Mr. Gesell points out that we have in our appendix the existing applications as well as the existing patents, everything that has yet been filed. And that I submit to your Honor is the maximum to which
3830 your Honor ought to go in respect of du Pont, having judicial regard to the Hartford-Empire case. They say royalty-free, no uniform royalty. That infers that there be reciprocal licenses to the other parties. That is to say, if any party licenses it must be on the other party's reciprocal licensing.

The COURT. I am curious about that. Does that other case, the Hartford case, require reciprocal licensing?

Mr. WHITNEY. I do not think it has any, your Honor. It has been in the general run of consent decrees, and I think the explanation of Hartford-Empire was——

Mr. DIXON. Only as to parties that are party-defendants to the present time.

Mr. WHITNEY. I beg pardon?

Mr. DIXON. Only as to parties that are party-defendants to the present time.

Mr. WHITNEY. Yes. I think the Hartford-Empire situation was peculiar in that the Hartford-Empire Company was exclusively a licensing company, and what it had done was try to monopolize all the licensing, and so it was visualized that the one-year brand license by Hartford-Empire, which, after all, was to escape the dissolution and every other thing that was hanging over it. But we think if the point is going to be, and I hope it is going to be, to throw open the industry so that everybody can license each other, and each man charged whatever is a reasonable royalty, and people can
3831 refuse to take a license or decline to take it, that then at least the cards would always be stacked against us, and if we were compelled to license people who refused to license us back, that would mean that we would be sued by those people at the very moment that we were licensing them.

I now come to a point at which we diverge we regret from Mr. Webster, and that is it seems to us that the logic of the decision must be that National Lead and we do not go off exchanging royalty-free licenses, but that we have to respectively make sure of the order that we were licensing from each other and, if so, we would have

to pay whichever one of us took the license a royalty, or if both took it we would have to pay cross-cutting royalties.

I notice your Honor never misses a point like this, and, so——

Mr. WEBSTER. Your Honor, it seems to me——

Mr. WHITNEY. ——rather than hide it I would say it looks as if we both have to take licenses from each other, and maybe we would make a little bit of change if——

Mr. WEBSTER. Your Honor, it seems to me, so that there won't be any confusion about this, that I should state that we are not suggesting that there should be royalty-free licenses in respect to du Pont. We are simply saying that the decree should be so drawn if we are on the same footing——

The COURT. I understand.

3832 Mr. WEBSTER. In respect of du Pont.

The COURT. Yes, I understand.

Mr. WHITNEY. I misunderstood it. Thank you.

Mr. WEBSTER. And this provision for reciprocal licensing is not a case in which the Court requires reciprocal licensing.

The COURT. I understand.

Mr. WEBSTER. It simply provides for compulsory licensing on condition.

The COURT. On condition. I understand that.

Mr. WHITNEY. Well, your Honor, that really brings us into harmony, as previously we did not quite understand it.

Finally, if your Honor goes against us and wants to impose something in respect to future penalties, why, then, I would suggest something like six months, which is the formula your Honor could use or perhaps alternatively until the effects of the conspiracy shall have been dissipated.

Now the difficulty I think with the second one is that despite its theoretical soundness it does not seem to me very practical, because it makes us come back to your Honor, and then we have the question as to what is the conspiracy, and obviously we ought not to have to answer in our domestic field for the effects of these international negotiations which may go on for years, and that has been the essential conspiracy in this case, so that

3833 I think I am being fair in suggesting the compromise with the Hartford-Empire doctrine, that we be made to give royalties under our existing patents if your Honor will have in mind any existing patents and appli-

cations filed up to five years after the ending of our exchange of knowhow with National Lead.

The COURT. Yes.

Mr. WHITNEY. I appreciate that your Honor has found that we have an unreasonable advantage over competitors by this exchange, but whatever advantage we had in the way of enabling us to make inventions, patentable inventions, and file applications thereon, must have been exhausted well within the period of five years. In effect, as I submit to your Honor, a true cutoff date would be as of that date, April, 1940, and then in effect we are putting in the future inventions for five years thereafter, thereby meeting with what we think to be the reasonable side of the Government's five-year suggestion by taking patents as of now instead of patents as of April, 1940.

The COURT. Let me ask you just one question which occurs to me.

Mr. WHITNEY. Yes, sir.

The COURT. Assume a situation whereby that was extended for a short period of time beyond this date, wouldn't that simply lead to a condition whereby the filing of the new application would be deferred until the expiration of that time, or is there some
3834 risk involved in such deferment which I am not aware of?

Mr. WHITNEY. Yes, your Honor, there is a big risk involved in it, because you have got to file promptly after conception, and then you may have to prove your conception.

The COURT. And if somebody else files in the interim?

Mr. WHITNEY. Yes, so that it would not be a practicable thing to dodge around it.

The COURT. It might if it were a very short period; say if it were three months.

Mr. WHITNEY. I can only say this, your Honor: I do not claim to be a patent lawyer, but I have dealt a good deal in patent matters, and it is a terribly dangerous game.

The COURT. To delay it?

Mr. WHITNEY. Yes.

The COURT. All right.

Mr. WHITNEY. Now the thought that I would like to leave with your Honor is that five-year thought, which I think is an unusual one because it is quite a unique thing where in fact the exchange did happen and terminates more than five years.

The COURT. Yes.

Mr. WHITNEY. Now, then, as to the knowhow, your Honor, I think the Supreme Court obviously thought very strongly about it because it just said no. It is
3835 very curious to realize that it said no in respect of the true octopus, but I think the very real reason was the reason that has been missed by some of my friends. It is the reason that your Honor had hold of when you spoke of the fact that a patent ought to make a disclosure sufficient to enable it to be worked.

Now at some point there comes the ending of the disclosure of the invention and the commencing of the more mechanical technique of working it out. Of course, I am going on the theoretical basis that the patents are real patents.

Now it is really in restraint of competition in the true sense of the word to have any one or more companies telling all the other companies all about how to do everything, because there has got to be some reward for originality and ingenuity in working things out. It may be precisely because we got a better mechanical technique that we got ahead, or the others perhaps got ahead of us because of their better mechanical technique, but if the District Court is going to set any value of our respective disclosures it is going to take on a task from which perhaps the Supreme Court would recoil. After all, it was originally one judge who had the knowledge to realize that he could not issue a mandatory injunction, but it was a new doctrine when he announced it in 1857 or whenever it was, and it may well be that the Supreme Court knew very well what they were doing.
3836 I think we have to always assume when they have done something clear that they knew what they were doing, and that is that it was not any use for courts of equity to embark upon further extending the patent conception by mandatorily ordering companies to tell each other the way they operate, which would really open the way to all sorts of devious withholdings of information back and forth, and all sorts of charges and countercharges. Let them each go as best they can and see what the other fellow has done as soon as the product comes out, and let them use their own ingenuity in trying to find a way to get at it.

Of course, it is not always realized in that fashion, though. These are great corporations and there are still incentives to ingenuity, because the individual man gets

a higher salary or gets additional pay if he finds a new way of doing it, and if his company has to give it right away to the competitors, he is not going to get those rewards. Now, therefore, he is going to have that much incentive.

Now, of course, in this case, five and a half years ago we cut off this exchange of knowhow, and now we have to start in again pro tanto to putting an end to the competition. Of course, at all events, I think it is better to stand on the Supreme Court opinion. I am only citing a few suggestions as to why they gave the opinion they did.

Now, finally, I think that applies to everything
3837 of substance except this matter of divestment, and I am so bold as to have drawn the impression that your Honor this morning realized the wrongness of that, and the only thing I would like to say is this, and I want to say it in quite an informal way if I may, your Honor. Mr. Dixon speaking off the record, and I protested as usual or as it is my duty to do or my conception of my duty, and I only want to say that I can bring evidence here on that issue. I can bring actual witnesses about the prospects of expansion in this industry, and Mr. Dixon can cross examine them, or I can put in applications to the War Production Board that are official records and can prove by the War Production Board, due to the happy circumstances that some time results even out of the worst situations the fact that people have applied for priorities, and at least as they are our competitors and we are their competitors, and these people, as I have said, have applied for priorities and are proposing to double their capacity, and it is no doubt public knowledge.

3838 I have no doubt that the Supreme Court, and I suppose your Honor, would accept a citation to it in a brief almost but we are reluctant to point the record on that sort of thing for merely prudential considerations, that is to say, merely a matter of time. In other words, if it is not necessary we do not want to go into it and of course I realize that if your Honor says, "No, I am not going to answer your question, Mr. Whitney,"—because I must accept your Honor's answer and then confer with my colleagues and then make a request—but would your Honor consider it unfair if we were to ask you whether you might indicate whether you are ruling with us or against us on that issue, because if you are ruling with

us I do not think we would have to write a brief, and, of course——

The COURT. I do not know the answer now, but I think it is perfectly fair for me to say I will tell you in sufficient time to give you the opportunity to do that if I think it becomes necessary.

Mr. WHITNEY. Well, I thank you, your Honor, because I think the Government will be pleased with that.

And the only final thing I want to say about that is on the law and it has already been well said by Mr. Webster and I doubt the advantage of saying it again but I will just summarize it. As I see it, and I have made a considerable study of the antitrust laws, there have broadly been two types of cases; the first is what we might
3839 call the big glamour case the public generally thinks about and actually the Senators and Congressmen were thinking about when they passed the Sherman Act. Those are the cases of a single big company which has acquired additional plants and builds itself up into a great big classification like the Standard Oil or, as Mr. Dixon referred to, the tobacco, steel and aluminum industries and in the Circuit Court of Appeals, but in between a number of others like Reading where they have spread into other fields, coal as well as railroads, and so on. Now, in those cases the gist of the wrong is the acquisition of the additional properties and the additional companies and therefore the dissolution of the combination involves the divestment of the additional properties. The other class of cases, which was not much in the mind of Congress I dare to think when the Act was passed, but which has provided the heavy majority of the cases, have been cases in which two companies made an agreement between them, which agreement was of a character objectionable under the antitrust laws, and there the uniform system to which I think Mr. Dixon is not disagreeing this morning when your Honor called for authority, has been to strike down th agreement. Now of course to people whose minds run more largely to the left wing or who perhaps are more forward looking than backward looking it has tended to say, "What is the use of a system of law
under which you only stop what is being done.
3840 There ought to be a little punishment added on too." But what I think they have overlooked is that the Sherman Act provides for punishment if the Government wishes it, and I think the reason it has developed into equity under the Sherman Act and they simply strike

down the agreement is it is recognized there can be both kinds of suits in the situation, and indeed there are both kinds in this situation.

That also is of aid in discerning the difference between two defendants. Mr. Webster's client may be as beatific in reform as we were, but I think he will have to agree it was a naughty boy originally.

Now insofar as a statute is to have any element of punitive application as distinct from purely remedial application, then it becomes an important judicial function to measure the punishment to the crime. Obviously whenever there has been a conspiracy in the criminal courts and two or more have been convicted they get different sentences depending upon their respective participations. So that if there be any punitive element to come into this, whatever there should be, there should be a divergence reflecting the divergence in the guilt, but if it be remedial then it stays remedial.

Now we have passed out of the 17th and 18th century logic in the law and I am quick to concede there is something in the nature of a punitive element in our present antitrust decrees. I say in the nature of it because I
3841 think what it really serves is that where the Court is certain that a certain result will not be achieved by a certain kind of decree than it may give more which looks to the outsider like punishment but really is a greater remedial act. It is very interesting that neither Mr. Justice Black nor Mr. Rutledge came out and said even those people ought to be punished. What they said was, "These people were so bad that we do not think you can cure their wrongdoing by your kind of a decree." And the majority said, "We will give them the worst decree we can short of confiscation," and the majority certainly recognized that the problem was not A, B, C, because the majority were all the justices who participated in affirming your Honor's decree to which you referred this morning, and they recognized that you want in a bad case like the Hartford-Empire to go beyond the mere technique of striking down existing agreements, not because you were punishing; not even Mr. Justice Black and Mr. Rutledge, but because you were giving full relief.

Now here I submit to your Honor that more than full relief would be given by requiring us to open on a uniform royalty basis to the whole world our existing patents, because more full relief or full technical relief would be given by striking down our contract between ourselves and National Lead.

The COURT. The thing that troubles me about divestiture, Mr. Dixon, is this: Where you have a case where company A and company B have been joined together and the Court orders them disjoined, you know company A once had an independent existence and conceivably might carry on in the future as an independent enterprise. Here you have one company and you start dividing it. Let us assume it has two equal plants but it has not got two chief chemists. It may only have one chief chemist. It has only one board of directors. It has only one chief executive, one sales manager, and so on. All of those constitute, of course, the company. Would not the Court be taking a very grave risk, in effect, to say that we will take a certain fund of capital which does not belong, of course, to the management at all—it belongs to the stockholders and creditors presumably—and that we will set it aside and sever it and then we are going to—I do not know by what method—set up the various personnel organizations in the two enterprises and hope that each of them is going to become a living business enterprise. It takes more than just a plant and a fund of money to constitute a business. Now of course the only precedent I know where dissolution was used in a difficult case—it was used only in a minatory way—was when Solomon ordered the child divided, but he did not mean it. I am afraid we may slice the child up if we did that. I do not know. Those are thoughts running through my mind and I want to think about that.

3842

I take it Mr. Dixon will want to have some more things to say and I also assume we may want to go in an actual reading of the text of the decree, but I think it might perhaps be useful if I had a chance to read some of this material. However, I will do it either way you want. We will resume tomorrow or resume after a few days. Which do you prefer?

3843

Mr. DIXON. Speaking only first for the Government, we would prefer, since we are here, if it is agreeable to the Court, to resume tomorrow.

Mr. WHITNEY. Your Honor, my colleagues came from Wilmington and Washington and they will be agreeable if we can move along as quickly as we comfortably can, whatever you think best, so we can sort of keep moving along and we do welcome the opportunity, when your Honor comes to lay down to us what the substance of the decree is, if we could have a last opportunity because some time a word slips in here and there.

The COURT. I will give you the same opportunity on the decree as I did on the findings so we can safeguard that.

Mr. WEBSTER. I think we have gone along so far today in thrashing out the general principles involved that it would be desirable to proceed tomorrow anyhow if your Honor is prepared to do so.

The COURT. I am.

Mr. WEBSTER. In that connection we have some suggested substitutions I might hand up to your Honor (handing).

Mr. DIXON. I am not certain whether your Honor has readily available, and if not I will be glad to present
3844 to you, copies of the Hartford-Empire case—the two opinions of the Court in that case.

The COURT. I will be glad to take them. I have no doubt they are in my chambers, but if you have them in convenient form I will take them.

Mr. WEBSTER. In addition to what we have today, your Honor, in typewritten form we suggest that paragraph 13, sub-paragraph 2, be removed entirely as unnecessary as simply covering ground otherwise covered.

The COURT. All right. Then we will resume tomorrow morning at 10.30 and we will try to move along as rapidly as possible and any points that I find impossible for reaching agreement on I will tell you so we can get to actual drafting at as early a date as possible.

(Adjourned to October 2, 1945, at 10.30 a.m.)

3845 UNITED STATES OF AMERICA

vs.

NATIONAL LEAD COMPANY, ET AL.

New York, October 2, 1945; 10.30 a.m.

Hearing resumed.

The COURT. The exhibit which we received yesterday is now marked Government's Exhibit 646-A.

And these documents which you have handed up are the final print of the findings?

Mr. GESELL. That is right, your Honor.

The COURT. I shall sign one of them and have it filed.

Mr. Dixon, are there any general remarks you wish to make this morning?

Mr. DIXON. Yes, your Honor. May it please the Court, first I find that I inadvertently yesterday overlooked the

fact, when discussing the patents, that the Alien Property Custodian had vested title in 32 of the patents involved in the litigation, so that when the final decree is worked out that fact, of course, would have to be kept in mind insofar as those particular patents are concerned.

Now I wish to briefly comment upon the defendants' proposals as submitted to the Court yesterday as to the relief which they are suggesting the Court grant the Government in this case. At the outset, as I understand
3846 the position of duPont from their argument yesterday, they take the position that this is only a patent licensing case and therefore the relief involved should only go to such type of remedy as the Court can give concerning the patents involved. We do not in any sense of the term concur with that limitation upon this case. In our opinion this is definitely a combination case and it is no better demonstrated than the findings of the Court, particularly those which point out the necessary effects of the combination. In finding 59, for example, where the Court has found that the necessary effect of it has been to give duPont and National Lead joint domination and control of this industry.

We are dealing here with a practical situation, and as I looked over and listened to the proposals made by the defendants as to the type of relief concerning patents which they were suggesting the Court grant, I am frank to say that I was wondering who had won this lawsuit, and in a sense that if the proposals which the defendants are apparently seriously making here are accepted by the Court, I don't think it takes more than even a cursory analysis to see that the defendants would be much better off in every way with this lawsuit over.

The COURT. Well, I have not any doubt about it. That is the object of the lawsuit; to put all these defendants and all other producers of titanium in what the statute regards as a superior position. I suppose if it is true,
3847 as the statute says, that the competitive system is superior to the regulated commercial system, then the fact that we create a competitive system should benefit not only those who heretofore were with it but those who were not, and naturally I would suppose they would make more money, produce a better product at a cheaper price and serve their stockholders with greater dividends. That would not prove that the decree is bad. That would indicate that the decree had achieved perfection.

Mr. DIXON. Perhaps I created the wrong impression with the Court. I meant to indicate that the defendants would be better off in the sense that they would be securing not only patents from each other which they now have on a royalty-free basis, but they would be receiving royalties on those patents which they are not now receiving and, secondly, if serious consideration is given at all to the proposals, cross-licensing of patents and know-how as submitted by the defendants, we would find that the other companies in the industry, for example, would be required as a condition of the receipt of any license from the defendants to give to them licenses of their patents.

The COURT. Now let me put this question to you——

Mr. DIXON. Yes, sir.

The COURT. ——and I am reacting only to your suggestion without any previous reflection on this problem.

Mr. DIXON. Yes, sir.

The COURT. Let us suppose that upon any particular day in the course of this year, without analyzing a condition affecting titanium, there having been no lawsuits, no indictment or anything, and we had found the following conditions to prevail: That there were two companies in the field in active competition with each other; that the policy of each of those companies was to offer licenses upon all their respective patents to anybody who applied to them at uniform and modest royalties; that in response to this general invitation several companies had applied and had received such modestly priced license agreements; that it was one of the conditions of such license agreements that persons so taking advantage of this general offer open to the whole world was to extend a similar and reciprocal opportunity to the offerers, and that as a result of that these several companies that had taken advantage of those offers had for modest royalties licensed these two companies, and the result was that we had four or five or six companies in the field; that each of them enjoyed access to all the patents in the industry; that all of them were, therefore, able to make use of the most advanced art in the industry and that the product consequently had been much improved over a short period of years; that there was no territorial allocation; that there was a freedom of international movement, and that there was price competition, quality competition and every other form of competition that you can envisage; assuming that were the fact would you not say that that was the ideal condition

3848

3849

contemplated by the Sherman Anti-Trust Law?

Mr. DIXON. The answer is obviously yes, your Honor.

The COURT. All right. Now let us see whether some of your strictures upon some of the suggestions made are well founded. Tell us what would be putting the defendants in a better position, and by "better" I suppose you mean that which is more consistent with the antitrust laws, A, no territorial agreement; B, no non-competing agreements, C, compulsory licensing at uniform and modest royalties. I am using the word "modest" in lieu of the word "reasonable" because I want to suggest what is intended, the intention being a condition such as the industry can readily handle without establishing an undue advantage one over the other not justified by an investment involved in these patent ownerships, and also as it is suggested in one of these propositions, not only as to all existing patents but as to all patents filed or issued over a period of five years, or all applications that will be filed over a period of years, I do not remember which.

Mr. WEBSTER. Yes, your Honor, all patents issued over a period of five years.

The COURT. Yes, all patents issued over a period of five years, and that will presumably take care of all applications now in and those that will be put in as a result of inventions made within this period of time.

3850 Now, why doesn't that begin to approximate, forgetting now the feature of costs; you know what I mean, forgetting that feature; and assuming that you may have to do more in order to prevent a recurrence of the inertia and a continuance of certain factors as a result of the inertia; but assuming the past and assuming that was the condition created, why doesn't that approximate the condition which you a few minutes ago assented would constitute an ideal situation under the Sherman Anti-Trust Act?

Mr. DIXON. Well, my first answer to the question is that it gives to the defendants the full benefits of the position which they now enjoy in this industry and which they have reached——

The COURT. By unlawful means?

Mr. DIXON. That is right.

The COURT. Now if by benefit you mean wealth, there is a way of doing it; that is, you can indict them, try them and convict them and fine them, and take some of that wealth away from them, but is there any method under

the equity procedure by which we can make them disgorge their ill-gotten gains? Is there any such method?

Mr. DIXON. Definitely yes, your Honor. We feel that there is, and that is the reason why we have requested the partial or total dissolution of these companies.

The COURT. You mean by divestiture?

3851 Mr. DIXON. Yes, divestiture.

The COURT. That does not really, strictly speaking, make them disgorge, because presumably they would get their money back for whatever they disposed of.

Mr. DIXON. That is true, your Honor.

The COURT. So it does not deprive them of their wealth.

Mr. DIXON. The purpose, of course, of asking for a partial or total divestiture is not as indicated by the defendants punitive. In one sense, any remedy which the Court grants here might be construed as punitive, but it depends upon what you call the effect of what you are trying to achieve, and it is the effect or the dissipation of the effects of this combination that the Government is concerned with, and that is all.

The COURT. Let us focus attention on precise propositions.

Mr. DIXON. Yes, sir.

The COURT. Is it the object of an antitrust proceeding to dissipate the effect of an antitrust violation, to wit, the effect of the defendants having grown strong and powerful? Would that effect in and of itself isolated from other effects bring about such a condition and, if so, has the Court ever done this, namely, try to dissipate the commercial potency of an offender under the antitrust laws where you did not have aggregations, mergers

3852 and combinations which are simply undone, but merely financial and commercial potency. That is what I want to know.

Mr. DIXON. Yes. Your Honor's question, of course, goes directly to the point, and I intended to pass upon it or discuss it hereafter, but I am very glad to discuss it now.

The COURT. Any way you see fit.

Mr. DIXON. Because it does, in our opinion, go to the crux of the relief which this Court in a decree could grant to the Government or the public.

The COURT. I think you are right. It does.

Mr. DIXON. Now, as indicated yesterday, we are fully satisfied from an examination of the cases that the precise question which your Honor has asked has never been passed

upon by any court in the sense that you are effecting, assuming you do, a break-up of a company or companies which have achieved their size and which gave them the domination in the industry without the acquisition of any competitive units. In other words, the cases on that and where dissolution has been effected are, of course, the Standard Oil Company case and the tobacco cases.

The COURT. No, I think there are cases which are against you on that. For example, let us draw a fairly necessary inference from the aluminum case. Now, the fact that the Court in dealing with the aluminum case, as I see it, said, "We will wait until after we know
3853 what happens from the disposal of the surplus plants. We will wait and see."

Now that suggests what might become relevant to the issues; otherwise there would be no point in waiting. It would follow, therefore, that if it develops that as a result of the disposal of the aluminum plants by the Government that other active competitors came into being who will operate in competition with the Aluminum Company, then presumably the Aluminum Company is not going to be shrunk down in size.

Now, clearly, if ever there was a case where the Court found that a Company had become big in part by virtue of the violation of the antitrust law, I think the aluminum case is one. Am I wrong about that?

Mr. DIXON. No, I think you are right, your Honor.

The COURT. And, nevertheless, the Court did not say, in following your analysis in an attempt to agree with you——

Mr. DIXON. Yes.

The COURT. ——it didn't say regardless of the character of the competition which may develop by the post-war disposition of the surplus aluminum plants we think the Aluminum Company has become big and powerful as the result of violations of the antitrust laws and must be deprived of that power and strength and, therefore, we are justified to A, split it up; or, B, compel it to close down; or, C, abolish it altogether. I do not know, but the fact is that they did not do any of
3854 those things but instead they said, "Despite the violations we are going to wait and see and if reasonable competition is established by virtue of those other plants, then we are going to let the Aluminum Company stay put."

Now doesn't that affirmatively show that your theory

not only has not been dealt with affirmatively by the courts, but that a contrary direction has been given it by the latest decision that we have on the subject?

Mr. DIXON. May I respectfully suggest to your Honor——

The COURT. That is simply a question. I am not committed to that view.

Mr. DIXON. Yes.

The COURT. I have to keep repeating that.

Mr. DIXON. All right.

The COURT. Because every now and then I get questions read back to me. However, this is not my judgment, but it is simply a question.

Mr. DIXON. Yes, sir, and naturally it is a very fair question, and in answer to it may I suggest that there were other considerations entering into the decision in the aluminum case, particularly the effect of dissolution during a war, which would obviously mean the disruption, assuming it were accomplished to an extent perhaps of the administrative facilities and so on; the productive facilities of the Aluminum Company.

Now, as we construe that opinion, that was cer-
3855 tainly one of the factors entering into the exercise of the discretion of the Court, and in suspending, shall we say, final judgment on the question as to whether or not the Aluminum Company as a monopolistic creature created through the practices referred to in that opinion should or should not be dissolved.

The COURT. What did they say as to the reasons? What reason did the Court assign for this waiting? Did it say, "We do not want to upset the productive capacity of this enterprise in the midst of the war?" Or did they say, "We do not know what kind of competitive effect will be created as the result of surplus disposition"?

Mr. DIXON. Your Honor's second remark is, the statement of the opinion.

The COURT. Well, aren't we, therefore, entitled to infer that that is the reason which motivated it?

Mr. DIXON. Well, in a sense you may. In our opinion, the Government does not so construe the opinion in the sense that it was a finding by the Court that dissolution of the company would not be effected if it should develop upon further evidence that dissolution was the only way of restoring competition to the aluminum industry.

The COURT. That is right. I quite agree with you and underscore the purpose which you have said. In other

words, they would dissolve the Aluminum Company
3856 if that were the only method of restoring competition to the aluminum industry. They would not dissolve the corporation merely because it had become fat by virtue of law violations.

Mr. DIXON. However, to go a step further, may I suggest to the Court that we clearly take the position that the principles of equity are such to prevent, or should prevent violators of the law to retain the benefits of that violation.

The COURT. I underscored that difficulty in a footnote in my opinion. I do not know what to do about it, and that is where I am waiting for a construction which would give me a sense of moral pleasure undoubtedly, or would give a judge a sense of moral pleasure if, having found somebody had violated the law, he could in some way exact retribution, but I do not know how to do it. Now you show me how and I think it would give me some satisfaction to do so, because I have no doubt as to who won this lawsuit even if there may be some doubt on the part of some members of the bar, and if I knew how I would proceed to do so, or to do what you say, but you must first show me and give me a formula to sustain it within the mandate of the statute before I can exercise that pleasurable instinct.

3857 Mr. DIXON. May we suggest first if the principle which we have stated is applicable, and we feel it is, that one of the principles which should influence and persuade the Court in determining what relief is granted should be, that in so far as it is practicable and possible to do so, to restore the conditions of this industry to the status quo ante combination.

The COURT. Is that ever a possibility?

Mr. DIXON. Not one hundred per cent in the sense of the term, obviously no, because you would never——

The COURT. The past result is irretrievable.

Mr. DIXON. Yes, but that does not necessarily mean you may not take such practical measures, assuming they are practical, to effect that purpose and to carry out that principle.

The COURT. Now let us see if we can frame the issue there so we can see it with precision. The defendants suggest, as I gather from their argument, that the objects of a decree under the antitrust law are (a) to dissolve the combination; and (b) to take such additional measures limited by this factor, that those additional measures shall

be only such as may prevent the resumption of the illegal activity or at least to eradicate the force of their continuity. They say that is all you can do. It is an injunction essentially rather than a mandatory direction. You have to stop people from doing
3858 illegal things which they had been doing, and such additional measures are purely ancillary to the accomplishment of an effective halt on the previously illegal conduct. You say that that is not the entire scope of the decree.

Mr. DIXON. That is right.

The COURT. That in addition the decree should attempt affirmatively to recreate a condition which would have prevailed had the illegal steps never been taken and including in that such things as creating the kind of competition which would have been created, and even the kind of business structures which would have existed, had the violations not occurred. Is that right?

Mr. DIXON. In substance that is correct, except with a qualification.

The COURT. Which one of those theories do you contend is sustained by the decisions? And if you say that yours is not sustained by the decisions you presumably argue that logic requires the development of the decisions in that direction. Let us make up our minds on which line you are going to proceed.

Mr. DIXON. Well, perhaps I can take the middle of the road course and say that there are certain statements which, in our opinion—that is, made by the Supreme Court—which indicate what the trend or what the court should do in circumstances such as these, and I have previously referred to——

3859 The COURT. Which is the strongest case that you think supports your view if you feel you are going to rely on authority? One good case is better than a lot of weak ones.

Mr. DIXON. Decidedly. I say that there is no direct authority we can find adjudicating the question that we are discussing here.

The COURT. There is no question that over the past decade the court has been moving in the direction of a stricter enforcement of the antitrust laws. Isn't that right?

Mr. DIXON. That is correct. That is my view.

The COURT. So we are not dealing with a historical

period in which the court is moderating the force of the antitrust laws.

Mr. DIXON. It is really the other way.

The COURT. As in the patent situation, where the courts have been restricting the scope of the monopoly and they have been increasing the scope of the antitrust laws.

Mr. DIXON. That is right.

The COURT. Despite this tendency, which I think has now progressed for more than a decade, the court has not quite reached the point that you now advocate, and you think it is moving in that direction.

Mr. DIXON. Yes, I think that is correct.

3860 The COURT. Now what clues are there, or what language is there, which suggests that that is the doctrinal trend which the Supreme Court has said this court should anticipate?

Mr. DIXON. Perhaps I can only refer to the Crescent case.

The COURT. That is the Theatre Amusement case?

Mr. DIXON. That is right. The decision was December 11, 1944, in which Justice Douglas wrote the opinion of the court. Justice Roberts dissented, and Justices Frankfurter, Murphy and Jackson took no part in the decision.

The COURT. So you had a six-judge court.

Mr. DIXON. That is right.

The COURT. And the decision went in what proportion?

Mr. DIXON. The decision went in favor——

The COURT. No, in what proportion out of the six? How did they divide?

Mr. DIXON. The decision was five to one. So it is clearly a majority of the court. Not like the famous Hartford-Empire case, which was a 4-to-2 decision. This is a 5-to-1 decision in which, as I stated, the opinion is written by Justice Douglas. Now in this opinion the following language is of interest and it is rather short, so I will read it.

3861 The COURT. Before you read it, just refresh my recollection as to what the case held. I remember it only vaguely.

Mr. DIXON. Well, it was a theatre or amusement case and the Government had taken the view that the relief granted by the trial court was not adequate to protect the public interests on the question of acquisitions, and the Supreme Court agreed with the contention of the Government and the decree was modified to that extent. And in

the course of the opinion the court made the following statement:

"The court has quite consistently recognized in this type of Sherman Act case that the Government should not be confined to an injunction against future violations."

As we pointed out that of course is more or less——

Mr. WEBSTER. "further violations" is the language.

Mr. DIXON. That is right, "further violations."

Mr. HANDLER. It is on page 17 of the memorandum.

Mr. DIXON. "Dissolution of the combination will be ordered where the creation of the combination is itself a violation."

The COURT. Where creation of the combination is itself a violation.

Mr. DIXON. That is right.

The COURT. Does that limit his general language
3862 or is that an illustration of his general language?

Mr. DIXON. Well, in our view it illustrates the general language of the court. Now of course the defendants take the view here that the only time you can have a dissolution or effect dissolution, is where you have a combination resulting from the acquisition of competitive units. And we frankly admit that the cases are all of that character. However, we suggest to your Honor, pausing for a moment to apply reasoning to these cases, to ask the question as to what the difference is, if any, between a case where the combination has acquired the power to dominate and does dominate and control an industry through the acquisition of competing units, or where it acquired the domination and the power by means of being able to, as in the instant case, exclude others from actively being able to compete in the industry.

The COURT. Well, I suppose that Mr. Webster and Mr. Handler would agree that this language would, if the facts warranted, support more drastic action with respect to the stock ownership in the European companies.

Mr. WEBSTER. No, I don't think so at all, your Honor.

The COURT. All right, then I will give you a chance later. If I do not get a concession I will wait until he finishes.

3863 Mr. HANDLER. I think there is a certain ambiguity, your Honor, in the word "dissolution," and if Mr. Dixon would permit, it might be helpful if I pointed that out.

The COURT. Do you want him to?

Mr. DIXON. I would rather finish, if your Honor please.

The COURT. All right, you finish.

Mr. DIXON. There is without doubt perhaps some vagueness or ambiguity as to what the word "dissolution" means in these cases.

The COURT. There it meant divestiture, didn't it?

Mr. DIXON. Yes.

The COURT. Of certain theatre buildings.

Mr. DIXON. That is correct, and in that sense there was not any ambiguity. Dissolution meant divestiture. Now the defendants therefore argue that dissolution as used in the antitrust cases can only be applied to those cases where you are divesting the combination of the companies which it illegally acquired. Witness the cases cited. And that is where we come to the parting of the ways and we submit to the Court that there is no sound reasoning for distinguishing between the manner by which the combination acquires its position of dominance in effecting relief. The important consideration that the public has, or is interested in, is what is the effect
3864 and what can be done to dissipate the effect, and that is the Government's concern.

The COURT. Well, take this language of Mr. Justice Douglas: "Those who violate the statute may not reap the benefits of their violations." That taken literally, tends to support your contention, but isn't that just rhetoric? That does not mean they are really going to be asked to give up the money they made as a result of the combination, does it?

Mr. DIXON. I think that is true. We would not argue that.

The COURT. But essentially I assume these are profit-making enterprises. They are not built up and extended simply pro gloria industrie. It is to earn money. And the benefits of their violations, expressable in terms of money, and I don't know of any case, and I don't suppose Mr. Justice Douglas means, they are to give that up and give it to the consumers. So he therefore adds his language which I suppose should be treated as a clause or limitation upon the generality of his statement when he says to "avoid an undoing of their unlawful project." In other words, that kind of benefit he speaks of means the avoidance of any undoing of their unlawful practice. If that is what that means then even the strongest case does not go to the extent of saying, we are going to shrink down big

companies because they have grown big by virtue of
3865 illegality. Does it?

Mr. DIXON. Well, perhaps you cannot read that into that statement, no.

The COURT. Now let me move a step further, because we have to proceed with the argument. I suppose we could engage in a discussion of it ad infinitum. Assuming that the law is that in an appropriate case you can do what you say should be done here, is this the kind of a case in which that principle should be applied? In other words, what are the criteria when the shrinking down should be done as you suggest?

Mr. DIXON. To specifically answer your question on that point of the case, we submit that it should be done where the obvious position in the industry of the companies involved is such that that fact in and of itself might reasonably tend to deter other companies from coming into the industry or new capital from coming into that industry.

The COURT. Now let us see. Let us hold on a minute. Let us suppose that instead of two companies which we are now dealing with, this was a combination of the four or five big and powerful enterprises, and they had jointly dominated the industry in the sense that those five occupied the fields to the extent of ninety per cent of the consumed products. Now you break up the combination. You sever the bonds which unite those five. There is no
3866 doubt that they had grown big, powerful and rich by virtue of illegal law violation. Would you say that in that case we should shrink each of the five down because in view of the magnitude of those five the chances of new competitors entering the field are not as good, or at least you surmise they are not as good, as they would be if each of those five was shrunken down to half its size?

Mr. DIXON. If you had those five companies in the industry and they were approximately on an equal basis as far as ability to compete in the sense of productive capacity and so on was concerned, customers and position in the industry, I would say that would be satisfactory, the object being to create——

The COURT. Competition?

Mr. DIXON. That is right.

The COURT. What principle of law, or what rule of economics is there which suggests that competition among five is necessarily superior to competition among two?

Mr. DIXON. None, your Honor.

The COURT. There is not any?

Mr. DIXON. That is right.

The COURT. I mean we might without reflection assume so, but the minute you subject it to scrutiny you realize there is no logical support for the assumption that competition among two is any less desirable than competition among five. Perhaps for other purposes it may be that the public has an interest in not having this titanium industry in too few baskets. From the point of view of security in the event of war, or something of that kind, but as far as Adam Smith is concerned, his ghost is satisfied by two as well as by five. Is that not so?

3867

Mr. DIXON. It might well be.

The COURT. Consequently I say to you is this a case in which the principle you advocate should be applied in view of the fact that forgetting the two minor enterprises and there will be a footnote on "minor" with Mr. Whitney saying "minor on the way of becoming major," but excluding the two minor companies you do have two corporations which are powerful without question and undoubtedly neither afraid of the other, and in a position to compete if they only would compete.

Mr. DIXON. Well, obviously your Honor forces me to the position of answering no. I mean in the sense that we could probably have effective competition from only two companies if they were in the industry.

The COURT. When you say I force you to a decision——

Mr. DIXON. I mean logically you have, because there are conditions under which that might well be the case. We do not think that the principle applies necessarily to antitrust cases, and that brings me back to the point that I was urging for this requested relief. That you cannot look at it alone from that point of view, but should apply—but if my premise is wrong why then my relief should be denied.

3868

The COURT. We might conceivably come over to your proposition within the narrow scope of the ancillary relief we discussed before if we said that although it is true that competition could prevail as effectively between two as among five, where you have the situation where there had been no competition between two, then you cannot rely upon that competition developing and that you must have power to stipulate, but don't forget in this case the finding is unique in that you have a situation there was competition between the two. Maybe that finding is not justified and maybe it is not true, but I do not remember the Government protesting or urging I should find there was no com-

petition between the two, so therefore the so-called ancillary relief which is sometimes granted to dissipate the force of inertia is here in this peculiar case least likely to become necessary.

Mr. DIXON. Well, of course the word "competition" as used in our findings read in a general sense may have a variety of meanings.

The COURT. Undoubtedly.

Mr. DIXON. And "competition" as defined, as the
3869 findings found in this case, is confined principally to a contest to serve customers, in substance, and the product competition certainly was eliminated from the picture in view of the fact that both companies had access to all the patents and patent applications of each other, so in that sense we have a restricted type of competition here, if you want to call it competition, and it properly can be so described.

The COURT. Well, any competition. We do not have the absence of competition which affects adversely the interests of consumers. That is what you have to concern yourself with. In other words, the fact that they did not compete with each other in their productive processes, assuming there was no violation in the sense it excluded others than themselves, insofar as they did exchange it was a benefit to consumers. Let us not over-look that. In other words, as between themselves the condition of non-monopoly in the art existed which would have existed if there were no patent system, which of course would be desirable on a short run anyway from the point of view of consumers. So when you say there was a restricted competition I may go along with you, but it was not the kind of restriction which adversely affected the interests of consumers. There is where perhaps we get into the question of speculation.

3870 Mr. DIXON. The Government would take the position, your Honor, that it does not necessarily follow that because you have this type of competition found to exist in this case, which may or may not be beneficial to the public, that is not proof that the public would not have been better served with perhaps a better product and a lower priced product, had the combination not exercised the power which it did exercise in this case.

The COURT. That is not a supposition. Assuming we start with decided propositions which I have decided, and as far as I am concerned I do not intend to go back of that; in other words, we have already concluded that it was

harmful in the sense of colliding with the policy of the statute. I am not here to pass upon the ultimate economic fact today that to do what the defendants did because they excluded the whole world outside of their particular enterprise, and insofar as the world was already restricted to the extent it was within that restricted world, whether to that extent it was a benefit to consumers rather than an injury. In other words, this exchange in itself, in its limited sphere, did promote and advance the art in its limited sphere, and the criticism of it is that it was a limited sphere, not that it was an exchange. If this were a universal system of exchange nobody could have criticized it; isn't that true?

Mr. DIXON. It is possible. Well, that is the reason for going back to our position as to the request for dissolution here on the principle that we feel that insofar as practical to do so that the status quo ante should be restored.

3871

The COURT. Now that is an important proposition and I would like to know whether or not it is supportable either by authority or by reason; that the object of the antitrust decree is to restore the status quo ante. I wish you would focus your analytical powers upon that, because I have an open mind on that.

Mr. DIXON. The only thing that I can add to what I have already said, your Honor—I am frank in making the statement to your Honor—is to again refer to Justice Douglas's opinion in which, as we view it, he states a cardinal principle of equity here when he says that those who violate the act or the law may not reap the benefits of their violations. Now we might put a period there. There is not one——

The COURT. If you put a period there, it would be a universal which could be so readily riddled that it would not stand up very long.

Mr. DIXON. That is true.

The COURT. So therefore you cannot put a period there.

Mr. DIXON. But he does state a principle of equity which would seem to us to be applicable to antitrust cases. Now let us assume for the moment that it is applicable. On that premise what could a court of equity do? And there we submit that in this case the court should, in so far as it is practicable and possible—within those limits of course—endeavor to restore the parties to the status quo ante position.

3872

The COURT. Of course your decree would do nothing

of the kind, you realize. Your decree would not at all restore the status quo ante. It would create a condition which man has not yet seen, namely, the existence of four enterprises which have had no prior existence either in fact or in human contemplation.

Mr. DIXON. That is why I said "in so far as it is practicable."

The COURT. Now which ante would you go to in order to find the status that you would restore? Would you go back to 1920?

Mr. DIXON. No.

The COURT. And recreate National Lead, Titanium Pigment, up in Niagara Falls, and Mr. Jebsen's laboratory? Of course when we use the language, status quo ante, even assuming it is a valid principle, that means this: A and B have combined illegally. We undo it and we restore the status quo ante, namely, A is in his own corner and B in his. Therefore in these cases you do not have to
3873 really resolve these troublesome questions we have been dealing with here because the proposition is ultimately another proposition which is unchallenged. Here we have a proposition which is not equal to another proposition which is unchallenged. "Status quo ante" here leaves us no place. I don't know where I should go to. It really is an absolutely unpointed direction to say "We are going to restore the status quo ante," because the direction yields no point of reference, and in fact as I read your decree you do not propose to go to any status quo ante. Therefore it seems to me that the principle of restoring to status quo ante is not a useful tool in antitrust law, and that we must find other criteria which are more relevant to the social policies which Congress intended to be enforced. I take it that that social policy is in briefest terms, the elimination of man-made obstacles to the free competition system. Now if that is so, we go back to the question we had yesterday, whether in achieving that the court can go further and undertake the task of the entreprencur, namely, the establishment of business enterprises, the allocation of capital, equipment, personnel, market product, all the things which in the aggregate make a living business. Can a court undertake that task, assuming that it would be a good thing to have it done? Is it equipped to make an acceptable judgment on those questions? It may be that that is what the Con-
3874 gress intended the courts to do, although I am frank to admit that I would approach the solution of that

kind of a problem with great trepidation, because I seriously doubt that the evidence in any antitrust case ever provided a court with the data, and I am sure that his experience does not provide him with the necessary judgment and experience to authorize him to risk other people's money on his conception of what will be a successful business enterprise, and that is what you really get down to.

Mr. DIXON. Well, we, of course, would not want to put the court in that position at all, and we would not, on the question of the requested relief along the lines we have been discussing, require the court to do that. We had, as the proposed decree provides, indicated that the defendants should submit a plan as to how that could be done, and so forth.

The COURT. In other words, you wanted them to make a suggestion. That is all that amounts to. Well, the responsibility has to be the chancellor's.

Mr. DIXON. In the last analysis it would be. Subject always to being proved to be a practical proposition. We are not asking the court to do something here which would require it to operate a business but merely to create the condition where, assuming someone else was interested in buying that business, they would have the oppor-
3875 tunity to do so and thus thereby further guarantee effective competition.

The COURT. Back in 1920 a group of statesmen, not sitting as a court but as a tribunal, attempted a thing like that and they dissolved an enterprise and created a new one called Austria, but it turned out to be an unsuccessful enterprise and did not have apparently the economics sufficient to sustain it. Supposing I say that the St. Louis plant of the National Lead Company—there is one, isn't there?

Mr. WEBSTER. Yes, there is.

The COURT. If there is another one, I have forgotten it, but the St. Louis plant should be set up as an independent enterprise. Well, what are its relations to a source of ilmenite? Shall we leave the source of ilmenite with the St. Louis plant or shall we leave the source of ilmenite with the New Jersey plant, or shall be split this ilmenite source and give it half to St. Louis and half of it to New Jersey? And now let us go a little further——

Mr. DIXON. May I interrupt to say we would not expect

to even ask the court to venture into such a determination.

The COURT. I would have to do it sooner or later.

Mr. DIXON. Why?

The COURT. Because I assume if I went through
3876 with your suggestion Mr. Webster would come along with a suggestion as to how we would do it and unless Mr. Webster has ceased in the art of advocacy and is acting here as a special master, which I take it he is not being paid to do, he would come in with a proposal which would best serve the interests of his clients, not necessarily the best interests of the Department of Justice, and disputes would arise. Conceivably he might come in with one enterprise which is practically a gilt edged proposition and likely to succeed, and another enterprise which would turn out to be a shell and in the private judgment of the company would be one of those things which would just collapse after a little while like one of the misfortunes of war.

Mr. DIXON. It might well be, your Honor, that might be the result. My point is all we are asking the court to do is to provide the opportunity, assuming someone wants to do it—that might be a bridge to cross—but all the Government is interested in here in trying to accomplish is, assuming someone might want to buy the St. Louis plant, to use your Honor's example, and it was a shell that is set up, that would be their business risk. It might turn out well. It might turn out a complete failure. The question of whether or not someone would buy it would be the question. Now with that the Court is not to be concerned except in so far as under the plan naturally the
3877 Government, assuming it were operated, would be interested and want to know who was buying the plant.

The COURT. And of course I would have to make sure they are setting up a salable parcel, because they could frustrate the purposes of the decree by offering something which was utterly unmarketable.

Mr. DIXON. That might well be true. The test there would be, insofar as the Government is concerned, as to whether or not there was any desire on the part of anyone, any new capital as such, to acquire the plant.

The COURT. Tell me this, is there any experience which the Department of Justice has had, or the courts—the Department of Justice has signed hundreds of consent decrees which is a formal administration of the antitrust law—is there any recorded instance in which fission, to

allude to the atomic history, fission took place where there were not pre-existing seams to open up?

Mr. DIXON. I would hesitate to answer that question, your Honor, without talking with someone who handles the consent decrees section, or the consent decrees in the division.

The COURT. What I am afraid is, you are asking me to do surgery, and surgery is a risky business. It is a much different and a much simpler task to take apart that which man has put together, but to cut living tissue is
3878 risky enterprise.

Mr. DIXON. That the Government is not interested in doing either, your Honor, obviously. The proposition we are arguing here and urging the court to consider is based on the assumption that it is possible and practical to do it. If our premise is wrong, then the relief should be denied, because otherwise the Government would not be requesting it. We are going on the assumption that this industry—perhaps it is a matter that the court would want to hear some evidence on, and if it developed that it was impracticable to do that urged by the Government, then the Government would be agreeable to finding that that was not the best way of effecting relief to this industry. I am discussing the principle.

The COURT. I understand. That is what I want to get, and the principle is what?

Mr. DIXON. And the principle is, we are submitting it to the Court, at least our point of view that it would not require the Court to do the things which your Honor has rightfully feared perhaps he might be forced to do in carrying out such proposals as are urged by the Government in this request for relief.

The COURT. These problems that we have been discussing do not really apply to the requested disposition of the stock of the British Company, Canadian Com-
3879 pany, French Company, and I assume all of that stock is held through Tinc——

Mr. WEBSTER. Not all of it, your Honor.

The COURT. Some by NL?

Mr. WEBSTER. Yes.

The COURT. Well, in any event BTP is an enterprise and we have become accustomed to the slight flow of ownership and presumably when some of that stock was held by National Lead or held by International Smelting it would not make any difference to the enterprise as a going concern. There the question is more directly related to the

problem as to whether that is a necessary step in giving effective relief. But here you have got an additional problem when you are dealing with the domestic scene.

Mr. DIXON. That is why I indicated to the Court that if it should develop on a proper showing that the proposal urged here by the Government was not practicable or feasible, I want to make the statement here now that we would be the first to say to the Court that that was not the type of relief we would ask the Court to go along with.

3880 The COURT. Let me ask you this, Mr. Dixon,——

Mr. DIXON. Yes, sir.

The COURT. ——as far as the distribution of the foreign stocks are concerned, is that founded upon the belief that that is necessary in order to prevent by reason of continuity of previous association the continuance of a policy of restrictive imports and exports, or are there some other bases for that request?

Mr. DIXON. That is the principle, your Honor. There are, of course, what we might call incidental reasons flowing from that, such as the doing of those things which will make more certain the recreation of the relationships. As we pointed out yesterday, we have a most difficult problem here at the very best in dealing with the foreign companies.

The COURT. Yes. And in the other situation you have a more difficult problem.

Mr. DIXON. Yes, sir. We are dealing with stock. I mean it is an easy matter to say that the stocks should be sold and to whom it should be sold and so forth, because you are only, figuratively speaking, dealing with a piece of paper that represents control.

The COURT. Yes.

Mr. DIXON. However, in the divestiture proposition you are dealing with physical assets.

The COURT. Yes, that is right.

3881 Mr. DIXON. And the piece of paper which would represent that asset after the corporation would be created would be the thing that would be sold there.

The COURT. Yes.

Mr. DIXON. But, as I have indicated, we are arguing principally now on the assumption that it is feasible and practicable, and if evidence should develop or be submitted, assuming that your Honor sees fit to go into that phase of the requested relief, as I have indicated before, the Government would upon such a showing clearly state to the Court and state to you that we felt

it would not accomplish the desired result.

First we say that the industry involved here is particularly adaptable to that type of——

The COURT. Division.

Mr. DIXON. Division. If it were wrong and the showing should be made that we are wrong, we would not ask this Court in the exercise of its discretion to order that kind of relief. We feel, however, that it is feasible and practicable to do it.

The COURT. Would you be prepared to proceed to prove that? After all, the affirmative would be yours on an issue of that kind.

Mr. DIXON. Well, we would call first the defendants.

The COURT. Themselves?

Mr. DIXON. Yes, sir, themselves, to prove that
3882 fact. They are the ones who have the most knowledge concerning this business, and on that basis, of course, we would submit the evidence to the Court for its further consideration.

The COURT. All right. Mr. Webster, Mr. Handler, or any one of you who desires to enlighten me on this subject, I shall be glad to hear.

Mr. DIXON. Pardon me, your Honor. I see that I have the language here of the Supreme Court in the Standard Oil case, to further indicate what I have in mind. On page 278 of 221 U. S. where the Court, as we pointed out in our brief, discusses the relief, says:

"The exertion of such measure of relief as will effectually dissolve the combination found to exist in violation of the statute, and thus neutralize the extension and continually operating force which the possession of the power unlawfully obtained has brought and will continue to bring about."

Now that is the sort of thing——

The COURT. Yes, but there are a number of cases and I thought you might cite those when you were discussing or talking in terms of power. There are quite a number of cases and I daresay that was one, but I think the tobacco case takes the position or talks ostensibly in terms of power.

Mr. DIXON. That is right.

The COURT. Of course, that is a very adjectival
3883 word.

Mr. DIXON. After all, your Honor, what is power? Power is nothing more than the position of

these companies in the industry, the customers that they now have, plus the goodwill of those customers.

The COURT. Yes.

Mr. DIXON. That is all power is.

The COURT. But you talk about dissipating that power, and then if you go out and represent what they did to dissipate it you have a different problem.

Mr. DIXON. That is right.

The COURT. Is there anyone else who wants to speak?

Mr. DIXON. Pardon me, your Honor. Mr. Jacobs has suggested that our position perhaps ought to make clear, if it is not already clear, to the Court on the patent situation, on the compulsory licensing phase of the case, and your Honor has previously stated the proposition as to our taking that view for the purposes only of the record. However, we do urge and submit to the Court——

The COURT. Just a moment, please.

Mr. DIXON. Yes, sir.

The COURT. You mean the free licensing?

Mr. DIXON. The free licensing as such.

The COURT. Which has so far been held to be improper.

3884 Mr. DIXON. That is right.

The COURT. Let me ask this question that I meant to ask you yesterday——

Mr. DIXON. Yes.

The COURT. What argument is there to be made in opposition to the proposition that if compulsory or free licensing is to be granted, that a reciprocal obligation from the beneficiary of that privilege should not be exempt?

Mr. DIXON. Well, I can very well visualize vehement opposition to such a proposal by even the present companies in the industry who would regard it as bringing about a difficulty with which they would be faced, or a condition imposed by the Court as a requisite to their receiving the license.

Mr. WHITNEY. I have to object to that evidence, your Honor. I will have to object to the witness as not being qualified.

The COURT. I want to know why shouldn't they be exempt.

Mr. WHITNEY. He is taking advantage of the situation when he speaks of there being such companies in the industry. After all, there is one sorehead in the industry,

and I do not want that statement going into the record.

Mr. Dixon. What was that?

Mr. Webster. He said there was a sorehead helping you.

3885 Mr. Whitney. Your Honor, just so there will be no misunderstanding, because I really did not mean to interrupt——

Mr. Dixon. That is all right.

Mr. Whitney. ——but I feel in this particular instance I was justified. All I mean is this: I take it that your Honor is asking questions of a general character but essentially legal in content, and the reason I interrupted brother Dixon is because the reply was exclusively evidentiary in character.

The Court. Very well. However, assuming that such was the fact, but I do not take it as a fact, and that is because I am not receiving evidence at this time, but assuming that the prospective beneficiaries of a free grant do not like it, is there anything by which they can justify their disaffection?

Mr. Dixon. As to that I am in no position to state, your Honor, I don't know.

The Court. Well, is it a fair thing to do, or would it defeat the purposes of the statute to exact such a condition from them?

Mr. Dixon. I can see where that may be argued, and that was the argument made by the defendants during the course of this trial, that the whole combination or purpose was to permit the industry——

The Court. After all, there is nothing to prevent Webster from making a private agreement for an
3886 exchange. I mean it is the lesser of the greater evil.

Mr. Webster. We found it was quite successful.

The Court. That is, an exchange which has a very limited relationship in comparison to making a universal exchange.

Mr. Dixon. May I ask this question? I do not understand whether your Honor was thinking along the line of having this on a royalty-free basis.

The Court. Assuming royalty-free, why shouldn't it be perfectly proper, assuming royalty-free, that if Virginia Chemical wanted all the National Lead patents free, that Virginia Chemical should offer National Lead an equally free license on all of its titanium patents?

Mr. DIXON. I can see where that might have considerable merit, your Honor.

The COURT. And if it is on a stipulated control, modest royalty but compulsory, and if Virginia Chemical wants access to the du Pont patents, why shouldn't du Pont have the advantage of all the Virginia Chemical patents? Otherwise you will arrive at a situation conceivably where Virginia Chemical would simply change places with du Pont in becoming the dominating factor in the industry under this extraordinary advantage of being able to take everything for itself and keeping everything that it has.

Mr. DIXON. Well, if I understand your Honor's
3887 question, it is directed to the granting of royalty-free licenses by the defendants?

The COURT. No. I am suggesting it on both premises.

Mr. DIXON. I understand, or, in other words, to anyone who wants the use of these patents on a reciprocal basis.

The COURT. Of course, a new man going into the industry, probably he has not anything to offer anybody in return.

Mr. DIXON. That is what I was about to come to.

The COURT. Ordinarily he would have nothing, but if he has it should he keep it as his exclusive property and get everything that his competitors have? There is a vast difference there.

Mr. DIXON. That is the situation that I was coming to, that someone else might come into the industry with no patents and he might be perfectly willing and probably would to assume that reciprocal obligation, and it might well be that the Government would be satisfied with that kind of arrangement, because here the ultimate purpose of this whole case, which has taken so much of your Honor's time and the time of everyone else, is to open up this industry to be certain that it is free and competitive and upon an equal basis, and so that there are no disadvantages
foisted on anyone who wants to go into the industry,
3888 and on the suggestion that your Honor has made the Government might very well be receptive to it.

The COURT. Now I assume that if there is a time limitation on the one hand, so that all patents up to midnight of a certain date are subject to this compulsory licensing on the one side, maybe the same patent invitation ought to apply on the other side, but let us put it this way: At this moment I am unable to contrive an argument which has plausibility as to why it should not be done, and that is why I asked about the Hartford-Empire case, and the

answer, of course, was effectively given that in that case you were dealing with a purely licensor organization which had no use for patents except for the control of licensing, and consequently there would be no benefit to it in receiving such cross-licenses.

Mr. WEBSTER. You also had a different kind of case involving different kinds of businesses. Some people were making bottles; some people were making flat glass and all that sort of thing.

Mr. DIXON. We are exploring the field here on the question of relief as well as the law, which is, in the opinion of the Government new in the sense as we have pointed out concerning which there are no adjudicated cases, and we have an open mind in the sense that our sole purpose here is to accomplish for this industry that which will be best in the general interests of the public, and whatever will best accomplish that is what the Government wants.

3889

We have submitted the decree in the form in which we feel that the desired result will be most effectively accomplished and, of course, have based our arguments and statements in support of that decree.

The COURT. I have found this argument very instructive. I had not really given as much thought to this problem previously as I have given to it in the course of this argument, which has crystalized a number of issues in my mind.

All right, Mr. Handler.

Mr. HANDLER. If your Honor please, adding anything to the discussion at this stage of the case would be almost like painting the lilly. However, there are just one or two comments I would like to make which may be of some assistance.

The COURT. Yes.

Mr. HANDLER. I think a good deal of the obscurity that has entered into the Government's argument is by reason of the ambiguity of the term "dissolution", which has a much wider meaning than the divestiture of physical property or the divestiture of stock.

An antitrust decree may take two forms; the negative form of restraining future wrongdoing and the affirmative form of undoing the wrong which has been committed. When the wrong is undone we speak of dissolution, and dissolution arises not only in the cases involving fusions or capital combinations, it arises in cases involving loose arrangements, so to speak, among

3890

legally independent competitors. However the dissolution prayer may come up, it seems a remedy and not a punishment, and a remedy which is granted very cautiously and with extreme reluctance by the courts only on to most clear and convincing showing that this far-reaching remedy is necessary to undo the wrong.

For example, in every Trade Association case, where a trade association indulges in price fixing, the combination of territory control, the control of production, or similar activities, principally the exchange of statistical information involving the Sugar Institute and the Maple Flooring Lumber cases, for example, the Government traditionally will request dissolution of the trade association, and that is only granted when the Court feels that the wrongdoing has so thoroughly permeated the association that a negative restraint upon the indulgence in the activities from which a violation of law is spelled out will be insufficient.

Similarly, where the suit involves the legality of a contract under the antitrust laws, which is really the heart, or at least one-half of the present litigation, the Court has to determine whether the wrongdoing has permeated the entire agreement. If it has not, and if surgery is advisable, the Court will merely restrain or excise those portions of the agreement in question and permit the agreement to stand.

3891 Likewise with the patent pool, if the patent pool is possible of lawful continuance, the Court will eliminate from the pool those practices which are obnoxious and permit the pool to stand. But, and this is the important consideration in every case in which dissolution is sought or has been sought in the past or can be sought in the matter of logic, having regard to the nature of the statute, its structure and the purposes of dissolution, the dissolution is directed against the wrongdoer. That is why it is so important to point out that where you have property divestitures, and where the original acquisition of the property or the stock was unlawful, then dissolution is an appropriate remedy having regard for all the circumstances of the case. It is an appropriate but not a necessary remedy to undo the wrong, to wit, the acquisition of the property.

Now, here the wrong consisted of two things: The international cartel based upon the agreement and the patent pool. Both are being dissolved. The wrongdoing

is being undone. Extrinsic to the dissolution, the undoing of the wrong, the Government comes in here and seeks to have divestiture of property and stock.

Now our proposition is that under the cases there must be an antecedent finding that that which is dissolved stands in violation of law. You do not dissolve something which is inherently lawful unless you desire to
3892 punish the parties for their extrinsic violation.

Now if you consider the structure of the statute and what the courts have had to say about the nature of dissolution, it becomes perfectly apparent that dissolution may never be asserted in such a case as this, but the Government, because it has won a victory here, imposes certain conditions upon the defendants as a punishment for their having been bad boys.

Now, in the history of the statute, numerous suggestions were made on the floor of the Senate where the principles adopted have far-reaching sanctions and include punishment of a most onerous character.

The original bill introduced by Senator Sherman did not have all the sanctions which are contained in the present law. Now the structure of the statute is very interesting and I think most illuminating. The statute imposes punishment for wrongdoing in the form of a criminal penalty. It provides a remedy for disgorging all profits made for wrongdoing through an action for treble damages, and it is interesting to note that in the course of the debate a proposal was made to permit the union of suits of agreed victims of a conspiracy in order to further effectuate the purposes, and that provision of the statute was rejected by the Congress, and they provided that the aggrieved individual must sue by himself to recover his damages which then may be trebled by the Court.

You have a provision for forfeiture of the prop-
3893 erty in movement in interstate commerce used to carry on the conspiracy. The Congress was not unaware of it or of the potentialities of the remedy of forfeiture, and as a means of implementing the statute they adopted forfeiture, but they limited the forfeiture to one thing, to wit, the forfeiture of goods moving into interstate commerce.

And then they went on to provide that a court of equity might enjoin violations of the statute. The wording of the statute there is very narrow and we, of course, make no point of that, because there have been 55 years of con-

struction of the statute, and the equity provision has been given a very broad construction, having regard for its purpose, to wit, remedying and undoing a wrong.

Now, the suggestion has been made that the cases that limit the relief in equity are legal antiques which are not entitled to any weight today, which suggestion seems to me to be quite unfounded, because the latest word on the subject is the decision in this circuit of the Circuit Court of Appeals in the aluminum case, which your Honor well pointed out before, and there Judge Hand stated:

"Dissolution is not a penalty but a remedy. If the industry will not need it for its protection it will be a disservice to break up an aggregation which has for so long demonstrated its efficiency."

Now the opinion in the Crescent case does not
3894 affect that statement of Judge Hand's in the slightest. On the contrary, it supports everything that has been said by us.

There Justice Douglas pointed out that dissolution has been afforded in cases involving capital combinations, and manifestly if a group get together, as in the old Standard Oil and American Tobacco cases, and build up a trust or monopoly, an integration, or fusion, the only way to bring about a condition honestly in harmony with the law would be to split up the trust into various segments, and that is what was done, and that is all that Mr. Justice Douglas means in the sentence which was called to your Honor's attention by counsel for the Government, "the undoing of their unlawful project."

In other words, dissolution is never ordered unless that which is being dissolved is in and of itself unlawful.

Now as to the question which your Honor asked as to whether this point has ever come up, I think the answer is in the affirmative. It came up a fortiori by implication in the Hartford-Empire case. There you had acquisitions which in and of themselves may have been considered unlawful, and despite the fact that you had acquisitions, and you had, as Mr. Whitney pointed out so well yesterday, the most flagrant type of antitrust violation, indeed there is no violation of the antitrust laws that has ever been reported in any of the recorded cases that you can't find in the record of the Hartford-Empire case. That constitutes
3895 the real textbook of antitrust violations. Despite that, however, no dissolution was even ordered of the acquisitions which might arguably have been said to have been unlawful. This record, of course, is entirely barren

of any acquisition which can be so claimed either of property or of stock.

Now your Honor has raised the question about the use of the concept of power in the antitrust cases in which dissolution has been decreed. There, of course, Congress had in mind the source of the power, the essential wrongdoing of the acquisition. The source of the power there is the absorption, the fusion of the case into one legal entity. Here the source of the power such as exists as between du Pont and National Lead is the agreement, the horizontal agreement between the two companies.

You have to sever the two companies, and you are going to enjoin that agreement. You are going to enjoin them from ever making another agreement of the same character. The vocal cord has been severed, and the power has been completely destroyed.

You have gone much further than that, and I think that this phase of the case has not received the attention from the Government that it deserves. Here we have two American companies that have engaged in this patent business or international cartel, and by the same token you could have one American company. And I think that
3896 would be the more orthodox pattern, because we are dealing here with companies whose power stems from the patent laws of the United States. They obtained patents, a great many of them.

Now, your Honor has found after a lengthy trial that those patents were used wrongfully, and you would have the choice here of either restraining the future wrongful use of the patents, which would follow the orthodox procedure of the decree, or you could go further, as was done in the Hartford-Empire case, and shear those patents of all of their monopoly advantages by making them available to everybody.

Now, the impediment that arises in new competition in this industry in the past has been the lawfully-granted monopoly in the patents, coupled with the improper use of that monopoly by the defendants.

Both are going to be destroyed by the decree. The lawfully-granted monopoly will be aggregated to the compulsory license, and the wrongful use of the patents will be interdicted by the restraining clause of the injunction.

Where does this concept of compulsory licensing stem from? It was never ordered in any antitrust case prior to the Hartford-Empire decision, but in a sense the Hartford-Empire decision goes very much beyond any-

thing that has ever been decreed in any antitrust case, because they did more than dissolve the wrongdoing. They actually destroyed a monopoly which was conferred
3897 by law by opening all the patents to the industry.

Well, it is perfectly apparent that compulsory licensing, which was used as the underlying principle in the decree, came from recommendations that had been before the Congress for many years. The Anti-Trust Division had recommended to the T. N. E. C., as did other agencies of the Government, that compulsory licensing of all patents be adopted by Congress, and that a restraint be put upon patentees in the restrictions that they might impose upon licenses, and those restrictions were in general put in the Hartford-Empire case, and they are not involved here.

The basis of compulsory licensing is that everyone is put on a parity in the industry. The legislative proposal would not differentiate between A and B. For example, if A goes to B and asks for B's patents, by the same token B is entitled to go to A and ask for A's patents, and the decree as proposed by the defendants would not be imposing any obligation on a new company in the field, because obviously not being a party to the cause, it is more or less put in the position where if they want our patents they must allow us their patents if they have any.

The COURT. Just one point on which I should like a little more light from you.

MR. HANDLER. Yes, sir.

The COURT. As to the stock ownership in the foreign field, wouldn't that be said to have been a wrong-
3898 ful acquisition in the same sense in which Justice Douglas speaks in the Crescent case, that it was part of the proof of the conspiracy? In other words, the stock acquisitions were part and parcel of the territorial allocation agreements, and probably were a necessary element in the establishment of the territorial arrangement. Now why can't it be said here, and whether it should be said is another matter, but why can't it be said that it is within the scheme of dissolution that you have defined?

MR. HANDLER. Your Honor is entirely correct when you state to the Government that a divestiture of stock in this case would not raise the problems of practical inconveniences that are suggested by the proposal for the divestiture of a physical plant. And, of course, it follows the orthodox pattern in the sense that there is judicial prece-

dent for ordering a divestiture of stock, but the initial acquisition and use of that stock must have been in violation of the antitrust laws.

Now our position is that the initial acquisition of this stock, and in many foreign companies the acquisitions of the stock were of wholly-owned subsidiaries, or a subsidiary having the controlling interest in a sales company, but in the case of where the plants are held by competitors or where the stock is held by the general public, we say there is not any question but that those stock acquisitions are entirely lawful.

3899 The COURT. I am concerned principally with those cases involving incidents of stock distribution being part of the treaty, and where the treaty included the scheme of exclusive territorial allocations and the principle of non-competition. Now why can't you say here or why shouldn't we say that the stock acquisition was a wrongful act in that sense?

Mr. HANDLER. Well, I would say that the wrong consisted of the cartel agreement, not the acquisition of the stock, and if you mean——

The COURT. Have you seen the agreement? It is all one agreement.

Mr. HANDLER. Yes.

The COURT. The stock is allocated. The structure is prescribed in one master agreement which refers to subsidiary agreements as implementing the major decision.

Mr. HANDLER. But that would not mean that every term and provision of the agreement was necessarily wrongful. The stock acquisition and distribution may have been part of the original plan, but the vice in it was the territorial restriction. If there had been no territorial restriction and if National Lead had collaborated with the three British companies in establishing BTP, our position is that there would have been no violation of law, but that is all there was.

Now in terms as to the efficacy of the decree, the
3900 divestiture will clearly show a very great and a serious financial loss to National Lead, and this argument is addressed entirely to your Honor's discretion.

The COURT. Yes.

Mr. HANDLER. The losses of National Lead have to be measured against the possible gains. We have gone into that in our brief, and we feel that if a balance is struck

it is perfectly apparent that the gains are hypothetical and negligible whereas the losses are actual and clear.

The COURT. What about the idea of the ancillary support of the decree? After all, if National Lead owns 40 per cent of the stock of the foreign companies, the chances of this foreign company ever actually being in competition with National Lead would be very slim, aren't they, assuming that they could be in competition with no tariffs, no patent problems, and assuming that you were in open competition?

Mr. HANDLER. That is not the situation of course.

The COURT. No, that is not the situation.

Mr. HANDLER. If it were contended that such were the situation, why, it might be different.

The COURT. So the argument is made that even if we create the most fruitful area for such competition, they would probably be operating at a minimum anyway and the social advantage would be very small.

Mr. WEBSTER. Without qualifying in any way what Mr. Handler has said, after all, those of us who have lived through the trial of the case and who have examined these agreements over and over again, perhaps in fairness to your Honor should talk about that.

3901

I don't think we can say at the end of this case that the stock acquisition in the foreign companies was not connected with what your Honor has found to be a violation of the Sherman Act. And the agreements, like the British agreement, the German agreement and the Canadian agreement, all involve the application of the famous paragraph 14 of the 1920 agreement to those other agreements. Indeed, the premise of the promotion in each instance was the existence of the 1920 agreement.

The COURT. That is right.

Mr. WEBSTER. And, in fact, the 1920 agreement, if your Honor strikes down the foreign agreements, will still rise to embarrass us abroad, because it was inextricably tied up with the obligations that were assumed by our foreign associates.

Furthermore, I think that to be perfectly candid with your Honor, and in line with what Mr. Handler said, it would be appropriate in the exercise of discretion not only to cancel those agreements to the extent that your Honor has jurisdiction over NL and Tinc, and to require NL and Tinc to dispose of the property which has been

acquired and used in connection with a decided violation of the antitrust laws.

3902 Now really what it comes down to is this: If your Honor believes that by reason of the striking down of the cartel as such by dissolution of the combination between DuPont and National Lead, by putting National Lead and Tinc under very severe injunctive provisions with a reservation of jurisdiction such as to permit further attention to this subject if there is occasion for it; with the power of the Court to punish for contempt—let us hope there will never be any contempt—but with the reserved power which is undoubtedly a sanction of great importance; that in the present very uncertain condition of international trading and the general policy of the United States to encourage American companies to engage in business abroad, that your Honor should tolerate a continuation of stock ownership which is not palpably unfavorable to the interests of the United States and which can if necessary be policed to prevent future violations.

Now to be sure there are practical problems which we can't blink here. We have been here altogether much too long to attempt to do that. I think that with the tariff and the freight situation, and the great demand in the British Empire for pigments, it is not very likely that BTP will come shooting over here with pigments and compete with the National Lead Company; and with the great pent-up demand for pigments in the United States and the growing consumption and use and

3903 preference for titanium pigments over other types of pigments, and with the freight rates and the British tariff features, I do not think that it is likely that we will go running over to the British Empire and engage in this line of commerce.

Now, furthermore, there is an argument of expediency, frankly so, which we should like to have your Honor take into account in exercising your discretion, and that is the British agreements were set up on a partnership basis. To be sure, too, they were set up on a basis which gave our British partners and our Canadian partners very substantial rights in the event that one party or the other should withdraw. Indeed, those restrictions are embodied in the articles of association of the foreign companies, and they would presumably like to continue to have our goodwill and perhaps our patents, and perhaps our know-

how. And I assume that it will be possible over a period of time to negotiate reasonable changes in the existing situation which would be subject to the Court's approval. And, therefore, what we really ask is that you permit us to continue to hold the stock in the British and Canadian companies.

The COURT. Do they have an option to buy that stock if you are offering it for sale?

Mr. WEBSTER. They have the right to buy the stock at book value.

The COURT. At book value?

3904 Mr. WEBSTER. At book value.

The COURT. Is that true of the Canadian as well as of the British?

Mr. WEBSTER. Yes, that is true. Now, of course, the book value refers only to BTP and CTP and the companies just got a start just before the war, and it now has a value vastly greater than the book value, and it would be a distinct sacrifice and indeed a destruction of the property.

The COURT. I suppose as to the Canadian situation, it can really be said that they have practically nothing up there.

Mr. WEBSTER. Well, we have no——

The COURT. Plants?

Mr. WEBSTER. Interests in a plant. On the other hand, we have an obligation under our present agreement with the Canadians to assist in financing a Canadian plant. There is an interesting possibility, and I do not mean to complicate these practical problems, but if your Honor were to require us to cancel the Canadian agreements, there is a situation that might arise in connection with duPont's interest through CIL and Canadian Titanium Pigment Company that might affect future licensing. It would not serve the interests of the United States to have the National Lead Company simply as a matter of antitrust enforcement restrained from doing any business outside of

3905 the United States or have any beneficial relations with foreign companies. That is just a thought and I have not meant to complicate the problem.

The COURT. No, I think that is a necessary thought. However, does anybody else want to add anything?

(No response.)

The COURT. Well, I think we have reached the point in the discussion where we shall have to get down to a

discussion of words and phrases. However, I was just wondering whether this is the most convenient way to do that, or would it be satisfactory if we did what we did with the findings? That is that I study your briefs, the cases, and the various suggestions which are made, and then have a draft prepared before the time we meet again.

Mr. WEBSTER. I think that would be an excellent suggestion.

The COURT. And while we are here I suppose I ought to state to you that there should be some reflection on my part in connection with the various statements which have been made here.

Mr. WEBSTER. I think your Honor's suggestion is excellent, and if your Honor on the basis of the discussion and the briefs outlines the basis on which he thinks a decree should be drawn, we will then be able to make progress very rapidly or perhaps more rapidly than we would if we were to sit down together immediately.

The COURT. All right. You are going back to
3906 Washington, Mr. Dixon?

Mr. DIXON. I am here, your Honor, as long as you want us to stay, but I merely want to say in passing, first, that we are naturally anxious if possible, subject to the time and convenience of the Court, to get the matter in final form at the earliest possible date, which I am sure is the like purpose of the defendants.

The Court: Well, my problem is that I have to dispose of this before the 12th or not dispose of it.

Mr. DIXON. Well, that is the answer then.

The COURT. So that I do not have very much time to reflect on it. However, I think the discussion has been very helpful; and there is no doubt in my mind that it is going to crystallize some of the problems.

(Discussion off the record as to adjournment date.)

The COURT. Tuesday, October 9, at 2.15. We will meet right here. I won't promise you that I will give you a draft in advance, as I may only be able to give it to you then. However, after all, we are dealing with a relatively short document.

Mr. DIXON. That is right.

The COURT. And I should not think that it would be too difficult.

Mr. DIXON. May I just again call your Honor's atten-
tion to the patents, and to ask your Honor to bear
3907 in mind that we have 32 of these that are vested with the Alien Property Custodian.

The COURT. Well, I am not going to concentrate on that problem. I am going to leave that to you to suggest the appropriate language when, as and if we decide what to do about that.

Mr. DIXON. Yes, sir.

The COURT. I do not know whether that vesting is final or tentative or whether it is subject to recovery or recoupment or sale. I mean, we do not have enough of a record here and you gentlemen will have to agree upon some method of dealing with it.

Mr. DIXON. All right, sir.

(Adjourned to October 9, 1945, at 2.15 p.m.)

(In addition to the foregoing, there were numerous conferences attended by the Court and counsel on the decree. With the consent of all concerned, these conferences were not recorded. In connection with consideration of the decree and the Government's requests, the District Judge stated that he refused to require National Lead or du Pont to divest themselves of all or part of their domestic titanium plants and business, not for want of power to require such divestiture, but as an act of discretion.)

STATEMENT OF POINTS TO BE RELIED UPON—Filed May 3, 1946

Now comes the appellant in the above entitled cause and for its statement of points upon which it intends to rely in its appeal to this Court adopts the points contained in its assignment of errors heretofore filed herein.

Dated this 30th day of April 1946.

(S.) J. Howard McGrath, Solicitor General.

Service of the foregoing statement of points to be relied upon and receipt of a copy thereof are hereby acknowledged this 1st day of May 1946.

(S.) Wm. Dwight Whitney, Counsel for E. I. duPont de Nemours and Company. Bethuel M. Webster, Counsel for National Lead Company and Titan Company, Inc.

[fol. 1288] SUPREME COURT OF THE UNITED STATES

No. 90

STATEMENT OF POINTS TO BE RELIED UPON, DESIGNATION OF PARTS OF THE RECORD NECESSARY FOR CONSIDERATION THEREOF—Filed May 3, 1946

The appellants National Lead Company and Titan Company, Inc., for their statement of the points on which they intend to rely in their appeal to this Court adopt the points contained in their assignment of errors heretofore filed herein.

Said appellants respectfully refer to the stipulation dated April 30, 1946 and filed in this Court on May 13, 1946 for the parts of the record necessary for the consideration of the foregoing points and therefore designated as parts of the record to be printed by the Clerk of the Supreme Court of the United States.

Bethuel M. Webster, Counsel for Appellants, National Lead Company and Titan Company, Inc.

[fol. 1289] Service of the Foregoing Statement of Points to be Relied upon, Designation of Parts of Record Necessary for Consideration thereof is acknowledged this 2nd day of May, 1946.

(S.) Wendell Berge, Attorney for Appellee, United States of America.

[fol. 1290] IN THE SUPREME COURT OF THE UNITED STATES

No. 91

STATEMENT OF POINTS—Filed May 3, 1946

Appellant, pursuant to the provisions of Paragraph 9 of Rule 13 of the Rules of the Supreme Court of the United States, states that the points upon which it intends to rely in said Court in this case are as follows:

1. Appellant hereby adopts its Assignment of Errors as and for its Statement of Points upon which it intends to rely in this case.

April 29, 1046.

(S.) Wm. Dwight Whitney, 15 Broad Street, New York, N. Y. Gerhard A. Gesell, Union Trust Building, Washington, D. C., Counsel for Appellant.

Acknowledgment of Service

Service of the foregoing Statement of Points is hereby acknowledged this 30th day of April, 1946.

(S.) J. Howard McGrath, Solicitor General of the United States, Counsel for Appellee.

	INDEX OF DOCUMENTS		
Exhibit No.	*Description*	*Date*	*Page*
A	Agreement between The Titanium Pigment Company, Inc., and Titan Co. A/S.	July 30, 1920	1
A-1	Agreement between National Lead Company, The Titanium Alloy Manufacturing Company, The Titanium Pigment Company, Inc., and Titan Co. A/S.	July 30, 1920	20

JUDD & DETWEILER (INC.), PRINTERS, WASHINGTON, D. C., AUG. 21, 1946.

Exhibit No.	Description	Date	Page
A-2	Agreement between The Titanium Alloy Manufacturing Company and Titan Company A/S.	July 30, 1920	24
B	Letter from G. Jebsen to Societe Industrielle du Titane.	Mar. 3, 1927	29
B-1	Letter from Societe Industrielle du Titane to Titan Co. A/S	July 12, 1927	101
B-3	Letter from S. J. Henriksen to Ch. F. Kaegebehn.	Mar. 22, 1939	102
B-4	Letter from Dr. G. Jebsen to Societe Industrielle du Titane.	Feb. 17, 1939	104
C	Agreement between Titan Co. A/S and I. G. Farbenindustrie Aktiengesellschaft.	In or about Oetober, 1927	46
C-1	Partnership-Contract between Titan Co. A. S. and I. G. Farbenindustrie Aktiengesellschaft.	"	51
C-2	Agreement between I. G. Farbenindustrie Aktiengesellschaft and Titangesellschaft m.b.H.	"	54
C-3	License Agreement between Titan Co. and the Titangesellschaft m.b.H.	"	58
C-4	Agreement between Titangesellschaft m.b.H. and I. G. Farbenindustrie Aktiengesellschaft.	"	76
C-5	Agreement between Titangesellschaft m.b.H. and I. G. Farbenindustrie Aktiengesellschaft.	"	78
C-6	Agreement between Titangesellschaft m.b.H. and I. G. Farbenindustrie Aktiengesellschaft.	"	80
C-7	Agreement between Titangesellschaft m.b.H. and Titan Co. A.S.	"	82
C-8	Agreement between Titangesellschaft m.b.H. and Titan Co. A.S.	In or about October, 1927	85
C-9	Agreement between Titan Company, Inc., and "associated companies" signed by Titan Company, Inc. and Titangesellschaft m.b.H.	Undated	87
D	Agreement between Titan Company, Inc., of Delaware, and Titan Co. A/S.	Mar. 23, 1929	91
D-1	Letter from Dr. G. Jebsen to Evans McCarty.	Aug. 9, 1929	107
E	Agreement, dated January 1, 1933, between Titanium Pigment Company, Inc., and Krebs Pigment & Color Corp. —Printed as Exhibit A to du Pont's Answer.	Jan. 1, 1933	

Exhibit No.	Description	Date	Page
E-1	Agreement between Titanium Pigment Company, Inc., Krebs Pigment & Color Corp., and E. I. du Pont de Nemours & Company.	Jan. 4, 1936	95
E-2	Agreement between E. I. du Pont de Nemours & Company, Titanium Pigment Company, Inc., and National Lead Company.	Oct. 31, 1936	98
E-3	Agreement between National Lead Company and E. I. du Pont de Nemours and Company.	Jan. 1, 1941	112
F	Agreement between Imperial Chemical Industries Limited, Imperial Smelting Corporation Limited, Goodlass Wall and Lead Industries, Limited, and Titan Company, Inc.	Feb. 16, 1933	119
F-1	Scheduled Agreement No. 1 between Titan Co., Inc., and British Titan Products Co., Ltd.	Mar. 10, 1933	129
F-2	Agreement between Imperial Chemical Industries, Ltd., Imperial Smelting Corp., Ltd., Goodlass Wall and Lead Industries, Ltd., and British Titan Products Company, Ltd.	Mar. 10, 1933	149
F-3	Scheduled Agreement No. 3 between Titan Company, Inc., and British Titan Products Company, Ltd.	Mar. 10, 1933	154
F-4	Scheduled Agreement No. 4 between Titan Company, Inc., and British Titan Products Company Limited.	Mar. 10, 1933	156
F-5	Agreement between British Titan Products Company, Ltd. and R. W. Greeff & Company, Ltd.	Mar. 10, 1933	163
F-6	Agreement between Titan Company Incorporated and British Titan Products Company Limited.	Mar. 10, 1933	168
F-7	Agreement between Titan Company, Inc., and its Associated Titanium Companies.	Oct. 24, 1938	171
F-8	Letter from C. J. Stopford to Dr. G. Jebsen.	Sept. 13, 1941	173
G	Confirmation of agreement signed by Titangesellschaft m.b.H.	Nov. 23, 1933	178
G-1	Agreement between Titan Company, Inc. and Societe Industrielle du Titane and Fabriques de Produits Chimiques de Thann et de Mulhouse, and Societe de Produits Chemiques des Terres Rares.	June 17, 1935	197

Exhibit No.	Description	Date	Page
G-2	Agreement between Titan Company, Inc., Societe Industrielle du Titane and Societe de Produits Chimiques des Terres Rares and Fabriques de Produits Chimiques de Thann & de Mulhouse.	June 17, 1935	221
G-3	Agreement between Fabriques de Produits Chimiques de Thann et de Mulhouse, Societe de Produits Chimiques des Terres Rares, Societa Anonima Titanium, Societe Industrielle du Titane, Titangesellschaft m.b.H. and Titan Company, Inc.	June 17, 1935	233
H	Agreement between Titanium Pigment Company, Inc., and American Zirconium Corporation.	May 6, 1935	260
H-1	Agreement between Titanium Pigment Company, Inc., American Zirconium Corporation, The Glidden Company, and Metal & Thermit Corp.	May 6, 1935	272
H-2	Agreement between National Lead Company, Titanium Pigment Company, Inc., The Glidden Company, Metal & Thermit Corporation, and American Zirconium Corporation.	May 6, 1935	277
I	Agreement between Krebs Pigment & Color Corp. and American Zirconium Corp.	Jan. 1, 1935	282
I-1	Agreement between Krebs Pigment & Color Corp. and E. I. du Pont de Nemours and Company.	Dec. 31, 1935	290
J	Agreement between Ste de Produits Chimiques des Terres Rares, Titan Company, Inc., and I. G. Farbenindustrie.	Jan. 18, 1936	292
J-1	Agreement between Kokusan Kogyo Kabushiki Kaisha and Doitsu Senryo Gomei Kaisha.	Jan. 17, 1936	300
J-2	Guaranty Contract between Doitsu, Titanine, I. G. Titangesellschaft, Terres Rares, and Thann.	Jan. 18, 1936	305
J-3	License Contract between Messrs. Kokusan Kogyo Kabushiki Kaisha and Messrs. Titan Kogyo Kabushiki Kaisha.		318
J-4	License contract between Messrs. Doitsu Senryo Gomei Kaisha and Messrs. Titan Kogyo Kabushiki Kaisha.		323
J-5	Minutes for agreement between Titan Kogyo and Kokusan Kogyo.		338
J-6	Minutes for agreement between Titan Kogyo and Kokusan Kogyo.		339

Exhibit No.	Description	Date	Page
J-7	Letter from J. Blumenfeld to Titan Co.	Jan. 20, 1936	340
J-8	Letter from G. Jebsen to Societe de Produits Chimiques des Terres Rares.	Feb. 4, 1936	341
K	Agreement between Canadian Industries Limited and National Lead Company.	Jan. 1, 1937	342
K-1	Agreement between National Lead Company and Canadian Titanium Pigments Limited.	Jan. 1, 1937	354
K-2	Canadian Industries Limited and Canadian Titanium Pigments Limited.	Jan. 1, 1937	374
K-3	Agreement between National Lead Company and Canadian Titanium Pigments Limited.	Jan. 1, 1937	380
K-4	Agreement between B. Laporte Limited and Canadian Titanium Pigments Limited.	Dec. 4, 1937	382
K-5	Agreement between National Lead Company and Canadian Titanium Pigments Limited.	Feb. 27, 1939	394
L	Agreement between E. I. du Pont de Nemours & Company and Virginia Chemical Corp.	Aug. 5, 1937	397
M	Agreement between E. I. du Pont de Nemours & Company and Titan Co., Inc.	July 27, 1937	406
N	Agreement between E. I. du Pont de Nemours & Company and Titan Co., Inc.	June 30, 1938	412
O	Agreement between National Lead Company and Titan Company, Inc.	Mar. 28, 1939	419
P	Agreement between International Pulverizing Corp. and National Lead Co.	Apr. 10, 1939	422
P-1	Agreement between National Lead Company and E. I. du Pont de Nemours & Co.	Apr. 14, 1939	436
P-2	Agreement between National Lead Company and American Zirconium Corp.	Dec. 19, 1940	446
Q	License Agreement between E. I. du Pont de Nemours and Co. and Titan Co., Inc.	Apr. 21, 1939	455
R	License Agreement between E. I. du Pont de Nemours and Co. and Titan Co., Inc.	May 10, 1940	470
S	License Agreement between E. I. du Pont de Nemours and Co. and Titan Co., Inc.	June 23, 1941	486
6	National Lead Company's stock holdings in designated companies from Jan. 1, 1920, to date of subpoena, together with dates of acquisition or sale of such stock.		499

Exhibit No.	*Description*	*Date*	*Page*
7	List of officers, directors, and members of Executive Committee of National Lead Company.	Jan. 1, 1920–Oct. 30, 1944	504
8	List of directors of Titanium Pigment Company, Inc.	1920–1936	507
9	List of directors and officers of Titan Co. A/S.	1929–1938	509
10	List of Board of Directors and officers of Societe Belge du Titane.	1938–	510
11	List of board of directors and officers of A/S Titania.	1938–	511
12	List of board of directors and officers of The Jossingforjd Mfg. Co. A/S.	1938–	512
13	List of directors and officers of Titan Company, Inc.	1929–1944	513
14	List of managers and officers of Titangesellschaft m.b.H.	1938–	515
15	List of directors and executive committee of United Lead Company.	1920–1944	516
16	List of directors and officers of Societe Industrielle du Titane.	1929–1938	519
17	List of directors and officers of British Titan Products Company Limited.	1938–	520
18	List of board of directors and officers of Goodlass Wall & Lead Industries, Ltd.	1938–	521
19	List of directors and officers in Canadian Titanium Pigments Ltd..	1938–	522
20	List of directors and officers of American Zirconium Corporation.	1938–	523
21	List of directors and officers of National Lead Company showing various positions held in designated companies.		524
38	Titan Co., Inc., stock holdings in designated companies from incorporation of Titan Co., Inc., to date of subpoena, together with dates of acquisition or sale of such stock.		527
39	List of directors and officials of Titan Company, Inc., showing various positions held in designated companies.		528
40	List of imports of titanium pigments into the United States and Canada from 1931 to 1937.		530
41	Statements of annual production of TiO_2 and composite titanium pigments by du Pont and/or its subsidiaries from January 1, 1928, and annual sales of Krebs Pigment and Color Corporation and du Pont of TiO_2 and composite pigments from January 1, 1928, to date of subpoena.		532

Exhibit No.	Description	Date	Page
45	Export Sales of "Ti-Pure"—Titanium Dioxide.	1932–1944	537
46	Schedule of Royalties paid by American Zirconium Company under agreement dated January 1, 1935.	1936–1944	552
47	Schedule of royalties paid by Virginia Chemical Corp.—American Cyanamid Company under agreement dated August 5, 1937.	1938–1944	553
48	Royalty paid under agreement, dated January 1, 1933, between Krebs Pigment and Color Corp., and Titanium Pigment Company, Inc.	1933–1936	554
49	Minutes of special meeting of Board of Directors of Titan Co., Inc., held Dec. 12, 1929.		555
50	Schedule of designated persons showing official title, positions, and connections with National Lead Company and designated companies.		577
51	Schedule of designated persons showing official title, positions, and connections with E. I. du Pont de Nemours & Company and designated companies.		582
51A	Schedule of directors and officers of Krebs Pigment & Color Corp.	1931–1942	587
52	Letter from Emile Lobstein to Evans McCarty.	Dec. 24, 1925	589
53	Letter from Vice President to Emile Lobstein.	Jan. 8, 1926	591
54	Telegram from McCarty to Lobstein.	Jan. 8, 1926	593
55	Letter from Lobstein to McCarty.	Apr. 1, 1926	594
56	Letter from Vice President to Emile Lobstein.	Apr. 16, 1926	595
57	Letter from Lobstein to McCarty.	Sept. 24, 1926	596
58	Letter from Vice President to Lobstein.	Oct. 8, 1926	597
59	Letter from Lobstein to McCarty.	Oct. 22, 1926	598
60	Letter from Vice President to Lobstein.	Nov. 3, 1926	602
61	Letter from G. Jebsen to Evans McCarty.	Nov. 3, 1926	603
62	Letter from Vice President to G. Jebsen.	Mar. 18, 1927	611
63	Copy of letter from Vice President to G. Jebsen.	Nov. 4, 1927	613
64	Letter from G. Jebsen to Evans McCarty.	Apr. 8, 1927	616
65	Letter to E. J. Cornish and attached copy of telegram from McCarty to Leadco.	June 18, 1927	619
66	Letter from Vice President to Dr. G. Jebsen and confirmation of telegram, dated Aug. 17, 1927, from McCarty to Jebsen, and telegram from Jebsen to McCarty dated Aug. 3, 1927.	Aug. 18, 1927	623

Exhibit No.	Description	Date	Page
67	Letter from Jebsen to Evans McCarty.	Sept. 6, 1927	627
68	Letter from Vice President to G. Jebsen.	Sept. 23, 1927	635
69	Letter from A. Thompson to Evans McCarty.	Jan. 20, 1926	637
70	Letter from E. J. Cornish to Evans McCarty.	Jan. 12, 1927	646
71	Minutes of regular meeting of Board of Directors of National Lead Company.	Nov. 17, 1927	650
72	Letter from G. Jebsen to Evans McCarty.	Oct. 2, 1926	653
73	Confirmation of Telegram from McCarty to Jebsen.	Oct. 23, 1926	659
74	Letter from Vice President to G. Jebsen.	Oct. 25, 1926	660
75	Letter from Vice President to E. J. Cornish.	Jan. 13, 1927	661
76	Letter from G. Jebsen to Evans McCarty.	May 10, 1928	664
77	Letter from G. Jebsen to Titanium Pigment Co.	Dec. 23, 1926	667
78	Letter from G. Jebsen to Evans McCarty.	Mar. 3, 1927	671
79	Letter from G. Jebsen to Evans McCarty.	Mar. 12, 1927	677
80	Letter from Vice Pres. to G. Jebsen.	Mar. 25, 1927	684
81	Letter from G. Jebsen to Evans McCarty.	Mar. 16, 1927	687
82	Radiogram from Jebsen to McCarty and letter from Vice President to G. Jebsen.	Apr. 8, 1927	689
83	Letter from E. J. Cornish to Max M. Warburg.	Apr. 29, 1927	692
84	Letter from G. Jebsen to Evans McCarty.	Aug. 17, 1927	693
85	Letter from G. Jebsen to Evans McCarty.	Nov. 3, 1928	698
86	Minutes from conferences re Titanium white matters at Leverkusen.	Mar. 24–25, 1930	702
87	Letter from S. J. Hendrikksen to Evans McCarty with minutes of Board Meetings attached.	June 18, 1930	707
88	Letter from G. Jebsen to Evans McCarty.	July 23, 1931	711
89	Minutes of conference at Leverkusen; signed Bruggemann.	Sept. 24, 1928	720
90	Resolution.		722
91	Continuation of minutes (report by Dr. Jebsen and resolutions).		723
92	Letter from G. Jebsen to Evans McCarty.	Mar. 30, 1928	725
93	Letter from Vice Pres. to G. Jebsen.	Apr. 11, 1928	735
94	Letter from G. Jebsen to Evans McCarty.	Oct. 3, 1929	738
95	Letter from G. Jebsen to Evans McCarty.	Mar. 28, 1930	743
96	Letter from Vice Pres. to G. Jebsen.	Apr. 11, 1930	745
97	Minutes of regular meeting of Board of Directors of National Lead Company.	Oct. 23, 1930	746
98	Letter from G. Jebsen to Evans McCarty with enclosure of letter from Alfred J. Thompson to G. Jebsen.	Jan. 26, 1931	747
99	Letter from G. Jebsen to Evans McCarty.	July 15, 1931	749
100	Letter from McCarty to Dr. G. Jebsen.	Nov. 6, 1931	757

Exhibit No.	Description	Date	Page
101	Letter from G. Jebsen to Evans McCarty.	Nov. 17, 1931	759
102	Letter from Robert Brown to Mr. Cornish with enclosure of telegram from Tasker to Brown.	Nov. 21, 1931	763
103	Letter from McCarty to G. Jebsen.	Dec. 14, 1931	766
104	Letter to W. S. Robinson.	Dec. 15, 1931	770
105	Letter from G. Jebsen to Evans McCarty.	Jan. 4, 1932	778
106	Letter from Vice President to G. Jebsen.	Jan. 8, 1932	780
107	Letter from McCarty to G. Jebsen.	Jan. 12, 1932	782
108	Minutes of regular meeting of the Board of Directors of National Lead Company.	Feb. 18, 1932	783
109	Letter from G. Jebsen to Evans McCarty.	Feb. 18, 1932	784
110	Letter from E. J. Cornish to Dr. Jebsen.	Mar. 5, 1932	790
111	Letter from Jebsen to Edward J. Cornish.	Apr. 7, 1932	791
112	Letter from A. Jebsen to Major L. J. Barley.	Apr. 27, 1932	796
113	Letter from G. Jebsen to Edward J. Cornish.	Apr. 29, 1932	803
114	Letter from W. S. Robinson to Dr. G. Jebsen.	May 2, 1932	811
115	Letter to Edward J. Cornish.	May 10, 1932	813
116	Letter to Dr. G. Jebsen.	May 14, 1932	817
117	Letter from H. J. Tasker to W. D. Beschorman.	June 10, 1932	819
118	Copy of telegram from Cornish to Cartvan.	June 25, 1932	821
119	Letter from W. S. Robinson to Edward Cornish.	July 16, 1932	826
120	Letter from E. J. Cornish to W. S. Robinson.	July 20, 1932	828
121	Letter from Vice President to J. S. Robinson.	Aug. 12, 1932	830
122	Letter from H. T. Warshow to E. J. Cornish.	Nov. 10, 1932	832
122-A	Indexed after Exhibit 1206-B		
123	Letter from G. Jebsen to Evans McCarty.	Oct. 19, 1927	835
124	Letter from McCarty to G. Jebsen.	Nov. 4, 1927	841
125	Letter from G. Jebsen to Evans McCarty.	Nov. 25, 1927	844
126	Letter from Vice President to Dr. G. Jebsen.	Dec. 14, 1927	846
127	Letter from Philip C. Peck to William F. Meredith.	Dec. 19, 1927	847
128	Letter from L. E. Barton to Evans McCarty.	Jan. 17, 1928	859
129	Letter from Vice President to G. Jebsen.	Apr. 13, 1928	861
130	Letter from G. Jebsen to Evans McCarty.	May 8, 1928	862
131	Letter from McCarty to G. Jebsen.	May 28, 1928	865
132	Letter from G. Jebsen to Evans McCarty.	Oct. 18, 1928	866
133	Letter from Vice President to G. Jebsen.	Oct. 31, 1928	869

Exhibit No.	Description	Date	Page
134	Letter from G. Jebsen to Evans McCarty.	Nov. 9, 1928	871
135	Letter from Vice President to G. Jebsen.	Nov. 23, 1928	884
136	Letter from G. Jebsen to Evans McCarty.	Nov. 27, 1928	885
137	Letter from McCarty to G. Jebsen.	Dec. 5, 1928	888
138	Letter from Philip C. Peck to Louis E. Barton.	Sept. 18, 1929	889
139	Letter from Evans McCarty to George A. Martin.	Feb. 11, 1930	891
140	Letter from G. Jebsen to Evans McCarty.	Apr. 1, 1930	893
141	Letter from Director, Peter Spene & Sons, Ltd., to B. F. Meredith, Titanium Pigment Co., Inc.	Apr. 12, 1930	895
142	Letter from McCarty to G. Jebsen.	Apr. 15, 1930	897
143	Letter from C. W. Thompson to L. E. Barton.	Apr. 26, 1930	898
144	Letter from G. Jebsen to Evans McCarty.	Aug. 4, 1930	899
145	Letter from McCarty to G. Jebsen.	Aug. 5, 1930	909
146	Letter from McCarty to G. Jebsen.	Aug. 13, 1930	910
147	Letter from McCarty to G. Jebsen.	Aug. 20, 1930	912
148	Letter from McCarty to G. Jebsen.	Sept. 3, 1930	914
149	Letter from G. Jebsen to Evans McCarty.	Sept. 13, 1930	916
150	Letter from McCarty to G. Jebsen.	Sept. 26, 1930	919
151	Letter from Vice President to G. Jebsen.	Sept. 26, 1930	921
152	Letter from G. W. Thompson to Evans McCarty.	Oct. 1, 1930	923
153	Letter from McCarty to G. Jebsen.	Oct. 3, 1930	924
154	Letter from G. Jebsen to Evans McCarty.	Oct. 8, 1930	925
155	Telegram from McCarty to Jebsen.	Nov. 21, 1930	927
156	Letter from McCarty to G. Jebsen.	Nov. 25, 1930	928
157	Letter from G. Jebsen to Evans McCarty.	Dec. 10, 1930	930
158	Telegram from Jebsen to "McCarty c/o National Lead Co.	Dec. 2, 1930	933
159	Letter from Vice President to G. Jebsen.	Dec. 16, 1930	934
160	Letter from G. Jebsen to Evans McCarty.	Dec. 10, 1930	936
161	Letter from Vice President to G. Jebsen.	Dec. 24, 1930	939
162	Letter from L. W. Ryan to Evans McCarty.	Jan. 7, 1931	941
163	Letter to G. Jebsen.	Feb. 18, 1931	943
164	Letter from M. F. Chase to Evans McCarty.	Feb. 2, 1931	947
165	Letter from Vice President to March Chase.	Feb. 5, 1931	951
166	Letter from A. S. Moses.	Apr. 9, 1931	953
167	Letter from March F. Chase to Evans McCarty.	Apr. 20, 1931	955
168	Letter from McCarty to March Chase.	Apr. 14, 1931	957
169	Extracts from minutes of meeting of representatives of Imperial Chemical Industries, Ltd., E. I. duPont de Nemours & Co. and Canadian Industries, Ltd.	Oct. 12, 1928	958

Exhibit No.	Description	Date	Page
170	Extract from minutes of meeting in Wilmington.	Mar. 2, 1929	960
171	Memorandum from Fin Sparre, Director, Development Dept., to Executive Committee.	Mar. 25, 1929	961

174	Memorandum from M. D. Fisher, Secretary, Executive Committee, to Finance Committee.	Apr. 13, 1929	971
175	Agreement between Commercial Pigments Corporation, Joseph Blumenfeld, and Societe de Products Chemiques Des Terres Rares.	Mar. 24, 1927	974
176	Agreement between Commercial Pigments Corporation, Societe de Produits Chimiques des Terres Rares, and Joseph Blumenfeld.	Dec. 17, 1929	981
177	Memorandum from Development Department to Executive Committee.	Feb. 18, 1931	986
178	Letter from Arthur Young, Broads, Paterson & Co., London, to Messrs. Arthur Young & Co., New York.	Feb. 17, 1931	1045
179	Memorandum from Fin Sparre, Director, Development Dept., to Executive Committee.	Feb. 18, 1931	1048
180	Letter from W. S. Carpenter to Lammot du Pont.	Feb. 19, 1931	1056
181	Memorandum from Fin Sparre, Director, Development Dept., du Pont Co., to T. S. Grasselli.	Feb. 19, 1931	1059
182	Memorandum signed by M. D. Fisher to Executive Committee.	Apr. 18, 1931	1060
183	Letter from E. J. Cornish to Dr. G. Jebsen.	Apr. 22, 1931	1066
184	Memorandum from Fin Sparre, Development Department, to Executive Committee.	Apr. 22, 1931	1072
185	Memorandum from M. D. Fisher to Fin Sparre.	June 11, 1931	1076
186	Memorandum from J. K. Jenney to Dr. Fin Sparre.	June 16, 1931	1078
187	Memorandum from Fin Sparre to Board of Directors, Grasselli Chemical Company.	June 16, 1931	1081

Exhibit No.	Description	Date	Page
188	Memorandum from Fin Sparre to Executive Committee.	June 16, 1931	1083
189	Excerpt from minutes of meeting held by directors of Commercial Solvents Corporation.	June 24, 1931	1087
190	Memorandum from H. Bradshaw.	June 24, 1931	1089
191	Memorandum from A. C. Nielsen to J. B. Eliason, Treasurer.	June 25, 1931	1098
192	Memorandum from Fin Sparre to Executive Committee and Board of Directors.	July 3, 1931	1114
193	Report on proposed consolidation of Pigments Business of the Grasselli Chemical Company (including Krebs) with that of the Commercial Pigments Corporation.		1118
194	Letter from W. D. Ticknor to Grasselli Chemical Company.	July 7, 1931	1124
195	Agreement of reorganization.	July 7, 1931	1125

VOLUME 2

INDEX OF DOCUMENTS

Exhibit No.	Description	Date	Page
196	Report from W. J. Beadle to F. Sparre.	July 8, 1931	1144
197	Letter from T. S. Grasselli to Commercial Solvents Corp.	July 9, 1931	1200
198	Report from Fin Sparre to Executive Committee.	July 13, 1931	1201
199	Schedules and history of Travancore Minerals Company, Ltd.	Dec. 8, 1931	1203
200	Letter from G. Jebsen to Evans McCarty.	Sept. 11, 1931	1224
201	Letter from McCarty to G. Jebsen.	Oct. 30, 1931	1230
202	Letter from McCarty to G. Jebsen.	Nov. 17, 1931	1232
203	Letter from McCarty to G. Jebsen.	Jan. 15, 1932	1233
204	Letter from G. W. Thompson to L. E. Barton.	Feb. 10, 1932	1235
205	Letter from L. E. Barton to Dr. G. W. Thompson.	Feb. 15, 1932	1238
206	Letter from L. E. Barton to W. F. Meredith.	Feb. 20, 1932	1242
207	Letter to Dorsey & Cole.	Mar. 26, 1932	1252
208	Letter from M. F. Chase to W. C. Beschorman.	Apr. 19, 1932	1254
209	Letter from Beschorman to M. F. Chase.	Apr. 21, 1932	1282
210	Letter from C. H. Rupprecht to Dr. G. W. Thompson.	Apr. 27, 1932	1283
211	Letter from G. W. Thompson to C. H. Rupprecht.	May 10, 1932	1286

Exhibit No.	Description	Date	Page
212	Letter from L. E. Barton to G. W. Thompson.	June 17, 1932	1290
213	Memorandum for W. S. Robinson.	Aug. 12, 1932	1293
214	Letter from G. W. Thompson to C. H. Rupprecht.	Aug. 26, 1932	1295
215	Letter from James E. Booge to C. H. Rupprecht.	Sept. 8, 1932	1309
216	Letter from C. H. Rupprecht to G. W. Thompson.	Sept. 12, 1932	1313
217	Letter from G. Donegani — Mr. Ewing.	Sept. 21, 1932	1336
218	Letter from Homer H. Ewing.	Sept. 23, 1932	1338
219	Letter from C. H. Rupprecht to H. H. Ewing.	Sept. 27, 1932	1344
220	Letter from J. K. Jenney to Imperial Chemical Industries, Ltd., atten.: L. J. Greenwood.	Sept. 27, 1932	1347
221	Letter from J. K. Jenney to W. R. Swint.	Sept. 30, 1932	1349
222	Letter from W. F. Washburn to G. W. Thompson.	Oct. 3, 1932	1352
223	Letter from J. K. Jenney to C. H. Rupprecht.	Oct. 3, 1932	1359
224	Letter from J. K. Jenny to W. R. Swint.	Oct. 4, 1932	1361
225	Letter from L. E. Barton to G. W. Thompson.	Oct. 8, 1932	1364
226	Memorandum (stenographic initials PHC/GB).	Oct. 10, 1932	1367
227	Letter from L. E. Barton to G. W. Thompson.	Oct. 11, 1932	1370
228	Draft of letter to Rupprecht presented by G. W. Thompson to Washburn, Barton, and Moses for consideration.	Oct. 11, 1932	1372
229	Letter No. 473 from Wendell R. Swint to J. K. Jenney.	Oct. 12, 1932	1378
230	Letter from Wendell R. Swint to C. H. Rupprecht.	Oct. 20, 1932	1381
231	Letter from J. K. Jenney to W. R. Swint.	Oct. 21, 1932	1382
232	Letter from L. E. Barton to G. W. Thompson.	Oct. 21, 1932	1385
233	Letter from C. H. Rupprecht to G. W. Thompson.	Oct. 27, 1932	1387
234	Letter No. 492 from Wendell R. Swint to J. K. Jenney.	Nov. 2, 1932	1393
235	Letter from L. E. Barton to G. W. Thompson.	Nov. 2, 1932	1395
236	Letter from W. F. Washburn to G. W. Thompson.	Nov. 3, 1932	1398
237	Letter from L. E. Barton to G. W. Thompson.	Nov. 5, 1932	1405
238	Letter from Philip C. Peck to G. W. Thompson.	Dec. 22, 1932	1406

Exhibit No.	Description	Date	Page
239	Minutes of regular meeting of Board of Directors of National Lead Company.	Dec. 22, 1932	1411
240	Minutes of regular meeting of Board of Directors of National Lead Company.	Jan. 26, 1933	1412
241	Letter from L. E. Barton to G. W. Thompson.	Jan. 20, 1933	1413
242	Letter from G. W. Thompson to G. Jebsen.	Feb. 2, 1933	1419
243	Unsigned memorandum of conference with Mr. Rupprecht.	Feb. 7, 1933	1427
244	Letter from G. Jebsen to G. W. Thompson.	Mar. 1, 1933	1430
245	Letter from G. Jebsen to G. W. Thompson.	Mar. 1, 1933	1436
246	Unsigned "Memorandum of impressions arrived at on reading Dr. Jebsen's letters to me of March 1, 1933."		1442
247	Letter from G. Jebsen to Edward J. Cornish.	Mar. 3, 1933	1445
248	Letter from G. Jebsen to C. W. Thompson.	Mar. 21, 1933	1446
249	Letter from President (CHR:MW) to W. C. Beschorman.	Apr. 8, 1933	1449
250	Memorandum from C. H. Rupprecht to Board of Directors, Krebs Pigment & Color Corp.	Apr. 8, 1933	1451
251	Letter from C. H. Rupprecht to O. M. Hook.	Apr. 8, 1933	1454
252	Letter from C. H. Rupprecht to W. D. Ticknor.	Apr. 8, 1933	1455
253	Letter from C. H. Rupprecht to T. S. Grasselli.	Apr. 8, 1933	1456
254	Letter from Fin Sparre to C. H. Rupprecht.	Apr. 10, 1933	1458
255	Letter from C. H. Rupprecht to Fin Sparre.	Apr. 12, 1933	1460
256	Minutes of regular meeting of Board of Directors of National Lead Company.	Apr. 20, 1933	1462
257	Letter from C. H. Rupprecht to Wm. Richter.	Apr. 27, 1933	1463
258	Letter from W. D. Ticknor to National Lead Company.	Apr. 28, 1933	1464
259	Letter from W. D. Ticknor to C. H. Rupprecht.	May 2, 1933	1465
260	Letter from N. F. Harrington to National Lead Company.	May 4, 1933	1467
261	Letter from T. S. Grasselli to National Lead Company.	May 11, 1933	1468
262	Letter from G. Jebsen to William C. Beschorman.	June 9, 1933	1469

Exhibit No.	Description	Date	Page
263	Letter from G. Jebsen to William C. Beschorman.	June 14, 1933	1471
264	Radiogram from Jebsen to L. C. Beschorman.		1472
265	Letter from L. C. Beschorman to C. H. Rupprecht.	June 23, 1933	1473
266	Letter from G. Jebsen to William C. Beschorman.	June 23, 1933	1474
267	Letter from C. H. Rupprecht to W. C. Beschorman.	June 28, 1933	1483
268	Letter from C. H. Rupprecht to E. C. Thompson.	June 29, 1933	1485
269	Letter from C. H. Rupprecht to T. R. Hanley.	June 29, 1933	1487
270	Letter from W. C. Beschorman to H. S. Tasker.	July 14, 1933	1488
271	Letter from Executive Vice President to C. H. Rupprecht.	July 17, 1933	1490
272	Memorandum from G. Jebsen to Mr. Beschorman.	July 18, 1933	1494
273	Letter from G. Jebsen to I. G. Farbenindustrie Aktiengesellschaft.	July 21, 1933	1495
274	Letter from G. Jebsen to H. Kuhne.	July 21, 1933	1502
275	Letter addressed to M. Weber Andreae.	July 21, 1933	1504
276	Letter from Wendell R. Swint to C. H. Rupprecht.	July 24, 1933	1505
277	Letter from C. H. Rupprecht to W. R. Swint.	July 25, 1933	1509
278	Letter from European Manager, E. I. du Pont de Nemours & Co., to Leonard Smith.	Aug. 3, 1933	1510
279	Letter from G. Jebsen to W. C. Beschorman.	Aug. 9, 1933	1512
280	Letter from W. C. Beschorman to Krebs Pigment & Color Co.	Aug. 28, 1933	1520
281	Letter from Z. Phelps to W. C. Beschorman.	Aug. 29, 1933	1521
282	Letter from J. K. Jenney to Z. Phelps.	Aug. 30, 1933	1522
283	Letter No. 694 from J. K. Jenney to London Office.	Aug. 30, 1933	1523
284	Letter from C. H. Rupprecht to W. C. Beschorman.	Sept. 6, 1933	1524
285	Letter from W. C. Beschorman to C. H. Rupprecht.	Sept. 26, 1933	1525
286	Letter from C. H. Rupprecht to Dr. Blumenfeld.	Oct. 9, 1933	1526
287	Letter from S. J. Henrikssen to W. C. Beschorman.	Oct. 11, 1933	1528
288	Letter from G. Jebsen to W. C. Beschorman.	Oct. 18, 1933	1534

Exhibit No.	Description	Date	Page
289	Letter from Executive Vice President to S. J. Henrikssen.	Oct. 23, 1933	1538
290	Letter from W. C. Beschorman to G. Jebsen.	Nov. 2, 1933	1539
291	Minutes of special meeting of Board of Directors.	Dec. 13, 1933	1542
292	Letter from C. H. Rupprecht to W. C. Beschorman.	Nov. 2, 1933	1544
293	Letter from W. C. Beschorman to C. H. Rupprecht.	Nov. 27, 1933	1546
294	Letter from C. H. Rupprecht to W. C. Beschorman.	Nov. 29, 1933	1547
295	Letter from W. C. Beschorman to C. P. Garesche.	May 5, 1937	1548
296	Letter from Z. Phelps to L. C. Reed.	June 21, 1937	1549
297	Letter from Z. Phelps to C. F. Garesche.	July 28, 1937	1551
298	Z. Phelps to C. F. Garesche—letter.	Apr. 25, 1939	1553
299	Letter from Z. Phelps to C. F. Garesche.	May 20, 1940	1554
300	Letter from Z. Phelps to C. F. Garesche.	Mar. 14, 1941	1558
301	Letter from Manager to Z. Phelps.	Mar. 17, 1941	1659
302	Letter from W. C. Beschorman to C. F. Garesche.	Sept. 8, 1937	1560
303	Letter from Garesche to F. W. Rockwell.	Oct. 1, 1941	1561
304	Letter to W. D. Ticknor.	July 17, 1931	1562
305	Letter from W. A. Burton to Krebs Pigment & Color Corp.	Dec. 9, 1931	1566
306	Letter from President to Travancore Minerals Company, Ltd.	Dec. 22, 1931	1569
307	Letter from W. A. Burton to W. D. Ticknor.	Aug. 4, 1932	1570
308	Letter from William A. Burton to W. D. Ticknor.	Sept. 7, 1932	1574
309	Memorandum on Auer Patents.	Oct. 14, 1932	1576
310	Letter from C. H. Rupprecht to Travancore Minerals Company, Ltd.	Nov. 7, 1932	1581
311	Memorandum from C. H. Rupprecht to Dr. G. Lutz.	Nov. 29, 1932	1583
312	Memorandum from C. H. Rupprecht to Dr. Fin Spärre.	Dec. 9, 1932	1584
313	Memorandum from C. H. Rupprecht to Dr. G. Lutz.	Jan. 13, 1933	1586
314	Letter from C. H. Rupprecht to G. Lutz.	May 16, 1933	1588
315	Letter from C. H. Rupprecht to G. Lutz.	Sept. 15, 1933	1590
316	Letter from G. Jebsen to G. W. Thompson.	Oct. 6, 1933	1592
317	Letter from G. W. Thompson to C. H. Rupprecht.	Nov. 8, 1933	1594
318	Letter from C. H. Rupprecht to G. Lutz.	Nov. 15, 1933	1595
319	Letter from C. H. Rupprecht to G. W. Thompson.	Nov. 15, 1933	1596

Exhibit No.	Description	Date	Page
320	Letter from G. W. Thompson to C. H. Rupprecht.	Dec. 5, 1933	1597
321	Memorandum from C. H. Rupprecht to G. Lutz.	Dec. 6, 1933	1598
322	Memorandum from L. E. Barton to Technical Committee.	Feb. 11, 1933	1599
323	Memorandum signed by L. E. Barton to Technical Committee.	Aug. 12, 1933	1600
324	Letter from W. F. Meredith to Ste. Industrielle du Titane.	Aug. 17, 1933	1605
325	Letter from L. E. Barton to Z. Phelps.	Aug. 31, 1933	1607
326	Letter from M. Douglas Cole to William F. Meredith.	Nov. 23, 1933	1608
327	Letter from Andreas Ravnestad to Titanium Pigment Co., Inc.	Feb. 9, 1934	1610
328	Letter from President, Titanium Pigment Company, Inc., to Ste. Industrielle du Titane.		1612
329	Letter from W. F. Meredith to Ste. Industrielle du Titane.	Mar. 13, 1934	1613
330	Letter from Andreas Ravnestad to Titanium Pigment Co., Inc.	Mar. 26, 1934	1614
331	Letter from C. H. Rupprecht to W. F. Meredith.	July 6, 1934	1616
332	Letter from G. F. Thompson to C. H. Rupprecht.	July 9, 1934	1617
333	Letter from C. H. Rupprecht to G. W. Thompson.	July 20, 1934	1618
334	Letter from President, Titanium Pigment Co., Inc., to G. W. Thompson.	Aug. 15, 1934	1619
335	Letter from W. F. Meredith to F. V. Bichowsky.	Dec. 6, 1933	1620
336	Letter from L. E. Barton to W. F. Meredith.	Jan. 23, 1934	1621
337	Letter from Charles F. Kaegebehn to J. E. Booge.	Oct. 10, 1934	1622
338	Letter from J. E. Booge to C. F. Kaegebehn.	Oct. 17, 1934	1623
339	Letter from C. F. Kaegebehn to W. C. Beuchorman.	Oct. 18, 1937	1625
340	Letter from R. M. McKinney to J. P. Hancock.	Oct. 30, 1939	1627
341	Memorandum from C. F. Kaegebehn to W. C. Beschorman.	June 1, 1937	1628
342	Letter from British Titan Products Co., Ltd., to Imperial Chemical Industries Ltd., attention of E. D. Catton.	Aug. 27, 1937	1630
343	Letter from Imperial Chemical Industries, Ltd., to C. J. Stopford.	Aug. 30, 1937	1632

Exhibit No.	Description	Date	Page
344	Memorandum from C. F. Kaegebehn to W. C. Beschorman.	Dec. 10, 1937	1633
345	C. F. Kaegebehn to E. I. duPont de Nemours and Co., attention John P. Hancock—letter.	Jan. 19, 1938	1637
346	Memorandum from C. F. Kaegebehn to W. W. Flechner.	Apr. 30, 1938	1640
347	Letter from John P. Hancock to J. B. Henrich.	May 31, 1938	1641
348	Letter from National Lead Company to J. P. Hancock.	June 7, 1938	1644
349	Letter from JBH to John P. Hancock.	Oct. 27, 1938	1645
350	Letter from C. H. Rupprecht to Adrian D. Joyce.	Jan. 9, 1934	1651
351	Letter from F. M. Carter to Adrian D. Joyce.	May 9, 1934	1652
352	Letter from W. F. Meredith to Ste. Industrielle du Titane.	May 11, 1934	1653
353	Letter from President, Titanium Pigment Co., Inc. to Adrian D. Joyce.	May 17, 1934	1656
354	Letter from Adrian D. Joyce to F. M. Carter.	June 19, 1934	1657
355	Letter from Charles F. Kaegebehn to G. W. Thompson.	Aug. 10, 1934	1658
356	Letter from W. C. Beschorman to Adrian D. Joyce.	Dec. 20, 1934	1670
357	Outline of understanding between W. C. Beschorman and A. D. Joyce.	Feb. 14, 1935	1671
359	Letter from President to Adrian D. Joyce.	Feb. 20, 1935	1674
360	Memorandum from C. H. Rupprecht to W. F. Harrington and A. B. Echols.	Mar. 21, 1935	1677
361	Letter from Titanium Pigment Co., Inc., to W. C. Beschorman.	Mar. 27, 1935	1678
362	Letter from W. C. Beschorman to Adrian D. Joyce.	Mar. 27, 1935	1680
363	Letter from Adrian D. Joyce to W. C. Beschorman.	Mar. 28, 1935	1681
364	Letter from Titanium Pigment Co., Inc., to C. J. Stopford.	June 3, 1935	1682
365	Letter from Secretary, Patent Committee, Titanium Pigment Co., Inc. to G. Jebsen for Andreas Ravnestad.	June 7, 1935	1684
366	Letter from Andreas Ravnestad, Titan Company, Inc., to Titanium Pigment Co., Inc.	June 13, 1935	1685
367	Letter from Secretary, Patent Committee, Titanium Pigment Co., Inc., to Milton Zucker.	June 14, 1935	1686

Exhibit No.	Description	Date	Page
368	Letter from Secretary, Titanium Pigment Co., Inc., Patent Committee, to G. Jebsen, for Andreas Ravnestad.	June 14, 1935	1687
369	Memorandum from M. D. Fisher to Finance Committee.	July 18, 1935	1689
370	Letter from Andreas Ravnestad to Titanium Pigment Co., Inc.	Oct. 25, 1935	1691
371	Letter from C. F. Kaegebehn to G. Jebsen.	Nov. 7, 1935	1693
372	Letter from G. Jebsen to William C. Beschorman..	Apr. 8, 1936	1697
373	Letter from G. Jebsen to William C. Beschorman.	Apr. 22, 1936	1701
374	Letter from P. E. Sprague to W. C. Beschorman.	Apr. 18, 1936	1702
375	Letter from W. C. Beschorman to Adrian D. Joyce.	May 7, 1936	1703
376	Letter from Wm. Richter to C. H. Rupprecht.	Nov. 12, 1937	1705
377	Letter from C. H. Rupprecht to Adrian D. Joyce.	Nov. 18, 1937	1706
378	Letter from S. J. Henriksson to I. D. Hagar.	Jan. 2, 1938	1708
379	Letter from I. D. Hagar to W. C. Beschorman.	Feb. 25, 1938	1710
380	Letter from Executive Vice President to I. D. Hagar.	Mar. 1, 1938	1712
381	Letter from P. E. Sprague to W. C. Beschorman.	Mar. 4, 1938	1714
382	Letter from F. W. Rockwell to G. Jebsen.	June 16, 1939	1716
383	Letter from W. J. O'Brien to Fletcher W. Rockwell.	June 30, 1939	1718
384	Letter from W. J. O'Brien to Fletcher W. Rockwell.	July 26, 1939	1719

618	Letter from G. Jebsen to W. C. Beschorman.	Aug. 8, 1934	2324

VOLUME 3

INDEX OF DOCUMENTS

Exhibit No.	Description	Date	Page
619	Letter from George Jebsen to Wm. C. Beschorman, National Lead Co.	May 21, 1935	2335
620	Letter from George Jebsen to Wm. C. Beschorman, National Lead Co.	June 22, 1935	2339
621	Letter from George Jebsen to Wm. C. Beschorman, National Lead Co.	July 9, 1935	2344
622	Letter from George Jebsen to Wm. C. Beschorman, National Lead Co.	Feb. 3, 1936	2346
623	Letter from S. J. Henrikssen to M. D. Cole, National Lead Co.	Mar. 4, 1936	2356
624	Resolution adopted by Board of Directors of Titanium Pigment Co., Inc.	Feb. 25, 1936	2358
625	Letter from S. Henrikssen to Wm. C. Beschorman, National Lead Co.	May 4, 1937	2360
626	Letter from S. J. Henrikssen to Wm. C. Beschorman, National Lead Co.	Dec. 18, 1937	2363
627	Letter from George Jebsen to Fletcher N. Rockwell, National Lead Co.	Jan. 26, 1940	2372
628	Letter from C. F. Garesche to Dr. G. Jebsen.	June 7, 1940	2374
629	Note from George Jebsen re Garesche's letter of June 7th.	Aug. 8, 1940	2377
630	Letter from C. F. Garesche to Titangesellschaft m. b. H.	Aug. 13, 1940	2379
631	Letter from Kuhne and Raspe of Titangesellschaft M. B. H. to National Lead Co.	Oct. 4, 1940	2382
632	Letter from C. F. Garesche to Titangesellschaft m. b. H.	Oct. 29, 1940	2383

Exhibit No.	Description	Date	Page
633	Letter from George Jebsen to Fletcher W. Rockwell, National Lead Co.	May 8, 1941	2384
634	Extract of Notes concerning a Board Meeting of Titan Kogyo.	Nov. 7, 1940	2386
635	Telegram from Titanco to Garesche, c/o Titanium Pigment Co.	Mar. 31, 1941	2393
636	Telegram from Garesche to Titanco.	Apr. 2, 1941	2394
637	Letter from Garesche to Mr. J. L. Turner —Sayreville.	Apr. 3, 1941	2395
638	Information requested in above telegrams.	Apr. 4, 1941	2396
639	Letter from Garesche to Doitsu Senryo Gemai Kaisha.	Apr. 11, 1941	2398
640	Telegram from Titanco to Garesche c/o Titanium Pigment Co.,	Apr. 24, 1941	2399
641	Telegram from Garesche to Titanco.	Apr. 25, 1941	2400
642	Letter from Doitsu Senryo Gomei Kaisha to Titan Co., Inc.	July 9, 1941	2401
643	Letter from Ragnar Iuell to Titan Company Inc.	Sept. 4, 1941	2402
644	Letter from George Jebsen to Evans McCarty, National Lead Co.	Nov. 16, 1928	2405
645	Letter from Lanmot du Pont to Heads of Departments and subsidiaries.	Dec. 3, 1930	2411
646	Letter from Lammot du Pont to Heads of Departments and Subsidiaries.	Dec. 10, 1930	2413
647	Memorandum to Department Heads of ICI, du Pont and CIL.		2414
648	Letter from B. T. Minter, British Titan Products Co. Ltd., to Titanium Pigment Co. Inc.	Oct. 5, 1934	2415
649	Letter from "Executive Vice President" to B. T. Minter, British Titan Co., Ltd.	Oct. 19, 1934	2416
650	Letter from Chas. J. Stopford to W. C. Beschorman, National Lead Co.	Oct. 29, 1934	2417
651	Radiogram from Stopford to Beschorman & Jebsen.	Nov. 2, 1934	2419
652	Cablegram from Beschorman to Stopford.	Nov. 2, 1934	2420
653	Letter from Chas. J. Stopford to I. D. Hagar, Titanium Pigment Co., Inc.	Nov. 9, 1934	2421
654	Letter from I. D. Hagar to C. J. Stopford	Nov. 23, 1934	2427
655	Letter from I. D. Hagar to C. J. Stopford.	Dec. 20, 1934	2431
656	Letter from Chas. J. Stopford to W. C. Beschorman.	Jan. 2, 1935	2432
657	Radiogram from Stopford to Beschorman.	Jan. 2, 1935	2434
658	Cablegram from Beschorman to Stopford.	Jan. 3, 1935	2435
659	Letter from Chas. J. Stopford to W. C. Beschorman.	Jan. 4, 1935	2436
660	Letter from George Jebsen to Wm. C. Beschorman.	Dec. 29, 1934	2438

Exhibit No.	Description	Date	Page
661	Letter from W. C. Beschorman to Dr. George Jebsen.	Jan. 10, 1935	2445
662	Letter from George Jebsen to Wm. C. Beschorman.	Feb. 2, 1935	2447
663	Letter from W. C. Beschorman to Dr. G. Jebsen.	Apr. 9, 1935	2448
664	Letter from W. C. Beschorman to Dr. G. Jebsen.	May 10, 1935	2449
665	Letter from H. Greville Smith to C. J. Stopford.	May 17, 1935	2450
666	Letter from C. J. Stopford to H. S. Tasker.	June 20, 1935	2452
667	Letter from Wendell R. Swint of du Pont Foreign Relations Dept. to Executive Committee.	June 28, 1935	2454
668	Letter from Chas. J. Stopford to W. C. Beschorman.	June 28, 1935	2463
669	Letter from C. J. Stopford to L. P. O'Brien, National Titanium Pigments, Ltd.	May 21, 1935	2467
670	Letter from Chas. J. Stopford to W. C. Beschorman.	June 18, 1935	2469
671	Letter from W. C. Beschorman to Dr. G. Jebsen.	Sept. 15, 1936	2471
672	Letter from W. C. Beschorman to Dr. George Jebsen.	Oct. 28, 1936	2478
673	Letter from W. C. Beschorman to Dr. G. Jebsen.	Oct. 28, 1936	2480
674	Inter-Office Correspondence from I. D. Hagar, Titanium Pigment Co., Inc., to Mr. Beschorman, National Lead Co.	Oct. 30, 1936	2481
675	Memorandum prepared for Mr. MacKinnon's negotiations re Titanium Dioxide.		2484
676	Letter from George Jebsen to Wm. C. Beschorman.	Nov. 9, 1936	2490
677	Letter from L. W. Haslett to W. C. Beschorman.	Nov. 21, 1936	2492
678	Letter from A. B. Purvis to Lammot du Pont.	Jan. 8, 1937	2494
679	Letter from W. C. Beschorman to Dr. G. Jebsen.	Apr. 6, 1937	2496
680	Letter from George Jebsen to Wm. C. Beschorman.	Apr. 15, 1937	2497
681	Letter from Wm. C. Beschorman to Dr. G. Jebsen.	Apr. 27, 1937	2499
682	Letter from George Jebsen to Wm. C. Beschorman.	Oct. 1, 1937	2500
683	Letter from I. D. Hagar, Titanium Pigment Corp. to R. G. Beck, Canadian Titanium Pigments, Ltd.	Jan. 8, 1940	2501

Exhibit No.	Description	Date	Page
684	Memorandum from G. N. Bates to L. W. Haslett, re Selling Prices.	Sept. 3, 1940	2502
685	Memorandum from G. N. Bates to C. Thompson, Traffic Department, re: Fair Market Value of "Titanox" Pigments.	Nov. 12, 1940	2511
686	Letter from G. N. Bates to G. W. Corddry, Titanium Pigment Corp.	June 18, 1941	2514
687	Letter from George Jebsen to W. C. Beschorman.	July 24, 1937	2516
688	Letter from George Jebsen to C. F. Kaegebehn, National Lead Co.	Aug. 6, 1937	2520
689	Memorandum of a Conference held in Montreal between C. F. Kaegebehn and Canadian Titanium Pigments, Ltd.	Aug. 23, 1937 Aug. 23, 1937	2522 2522
690	Letter from C. F. Kaegebehn to W. C. Beschorman, re: "Licensed Field" of Canadian Agreements.	Aug. 31, 1937	2530
691	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	Aug. 31, 1937	2532
692	Letter from George Jebsen to C. F. Kaegebehn.	Oct. 1, 1937	2536
693	Letter from L. W. Haslett to W. C. Beschorman.	Jan. 10, 1938	2541
694	Letter from George Jebsen to C. F. Kaegebehn.	Mar. 8, 1938	2542
695	Letter from L. W. Haslett to C. F. Garesche.	May 21, 1938	2551
696	Letter from C. F. Kaegebehn to R. G. Beck, Canadian Titanium Pigments, Ltd.	May 26, 1938	2554
697	Letter from R. G. Beck to C. F. Kaegebehn.	May 28, 1938	2556
698	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	July 26, 1938	2557
699	Letter from C. F. Kaegebehn to J. C. Asselin, Esq., Canadian Industries, Ltd.	Nov. 21, 1938	2573
700	Letter from C. F. Kaegebehn to Dr. George Jebsen.	Feb. 28, 1939	2576
701	Letter from George Jebsen to C. F. Kaegebehn.	Mar. 10, 1939	2578
702	Minutes of meeting of Board of Directors of National Lead Co.	Mar. 28, 1939	2581
703	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	June 6, 1939	2583
704	Letter from George Jebsen to C. F. Kaegebehn.	June 17, 1939	2586
705	Letter from C. F. Kaegebehn to J. C. Asselin.	July 5, 1939	2589

Exhibit No.	Description	Date	Page
706	Letter from J. C. Asselin to C. F. Kaegebehn.	July 18, 1939	2595
707	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	Aug. 9, 1939	2597
708	Memorandum, re Amendments to 1937 agreements by J. C. Asselin.	May 22, 1940	2599
709	Letter from L. W. Haslett to C. F. Garesche.	May 23, 1940	2601
710	Letter from R. G. Beck to C. F. Kaegebehn.	May 27, 1940	2603
711	Letter from C. F. Kaegebehn to R. G. Beck.	June 4, 1940	2604
712	Agreements between CIL and CTP.	July 5, 1940	2607

715	Minutes of Meeting of Executive Committee by H. O. Bates, secretary.	Apr. 4, 1940	2619
716	Letter from C. F. Kaegebehn to E. T. Henry, Canadian Titanium Pigments, Ltd.	May 7, 1940	2621
717	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	June 25, 1940	2627
718	Letter from Russell Smith to Fletcher W. Rockwell.	Sept. 3, 1940	2631
719	Letter from George Jebsen to Dr. G. W. Thompson, National Lead Co.	Sept. 21, 1934	2634
720	Letter from C. F. Garesche to Dr. G Jebsen.	Nov. 1, 1934	2636
721	Letter from C. F. Kaegebehn to Dr. George Jebsen.	Feb. 5, 1935	2689
722	Letter from Andreas Ravnestad, Titan Company, Inc., to Titanium Pigment Co., Inc.	May 14, 1935	2644
723	Letter from Titanium Pigment Co., Inc., to Dr. G. Jebsen for A. Ravnestad.	May 31, 1935	2648
724	Letter from Titanium Pigment Co. to Dr. G Jebsen for A. Ravnestad.	June 10, 1935	2649
725	Inter-Office memo from C. F. Kaegebehn to Patent Committee.	June 10, 1935	2654
726	Letter from C. F. Kaegebehn to W. C. Beschorman.	Dec. 4, 1935	2657
727	Letter from George Jebsen to Titangesellschaft m. b. H.	Feb. 18, 1936	2658
728	Letter from C. F. Kaegebehn to Dr. George Jebsen.	Mar. 5, 1936	2660
729	Letter from G. Jebsen to C. F. Kaegebehn.	Mar. 20, 1936	2662
730	Letter from Titanium Pigment Co., Inc., to Titan Co., Inc., attn. George Jebsen.	Apr. 4, 1936	2664

Exhibit No.	Description	Date	Page
731	Letter from Sigurd Anderson, Titan Co., Inc., to Titanium Pigment Co., attn. C. F. Kaegebehn.	June 12, 1936	2665
732	Letter from Titanium Pigment Co. to Dr. George Jebsen for Andreas Ravnestad.	June 22, 1936	2666
733	Letter from Andreas Ravnestad to Titanium Pigment Co., Inc., attn. C. F. Kaegebehn.	July 15, 1936	2667
734	Letter from Titanium Pigment Co., Inc., to Dr. G. Jebsen for Andreas Ravnestad.	July 23, 1936	2669
735	Letter from Titanium Pigment Co., Inc., to Dr. G. Jebsen for Andreas Ravnestad.	Oct. 5, 1936	2670
736	Letter from George Jebsen to Wm. C. Beschorman.	Oct. 18, 1937	2673
737	Letter from Wm. C. Beschorman to Dr. George Jebsen.	Oct. 26, 1937	2678
738	Letter from George Jebsen to Wm. C. Beschorman.	Jan. 11, 1938	2679
739	Letter from Wm. C. Beschorman to Dr. George Jebsen.	Jan. 24, 1938	2681
740	Letter from George Jebsen to Wm. C. Beschorman.	Feb. 1, 1938	2682
741	Letter from C. F. Kaegebehn, National Lead Co. to Dr. G. Jebsen for Andreas Ravnestad.	Dec. 14, 1937	2683
742	Letter from Hutz and Joslin to Charles F. Kaegebehn.	Dec. 27, 1937	2685
743	Letter from C. F. Kaegebehn to Dr. George Jebsen for Andreas Ravnestad.	Sept. 20, 1938	2687
744 745	Indexed after Exhibit 755.		
746	Letter from George Jebsen to C. F. Kaegebehn.	Oct. 26, 1938	2689
747	Letter from C. F. Kaegebehn to G. Jebsen.	Nov. 16, 1938	2692
748	Letter from George Jebsen to C. F. Kaegebehn.	Dec. 24, 1938	2694
749	Letter from George Jebsen to C. F. Kaegebehn.	Feb. 8, 1939	2696
750	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	Feb. 20, 1939	2699
751	Letter from Sigurd Andersen to National Lead Co., attn. C. F. Kaegebehn.	Mar. 10, 1939	2701
752	Letter from George Jebsen to C. F. Kaegebehn.	Dec. 2, 1938	2707
753	Letter from C. F. Kaegebehn to George Jebsen.	Dec. 20, 1938	2712

Exhibit No.	Description	Date	Page
754	Letter from C. F. Kaegebehn to J. L. Turner—interoffice communication.	Dec. 20, 1938	2713
755	Letter from C. F. Kaegebehn to Messrs. Hutz & Joslin.	Dec. 20, 1938	2714
744	Letter from C. F. Kaegebehn to C. F. Garesche.	May 20, 1938	2715
745	Memorandum for Mr. Rockwell.	July 30, 1938	2717
756	Letter from George Jebsen to C. F. Garesche.	Dec. 2, 1938	2721
757	Letter from George Jebsen to C. F. Kaegebehn.	Sept. 15, 1939	2723
758	Letter from C. F. Kaegebehn to G. Jebsen.	Oct. 5, 1939	2724
759	Letter from Hutz and Joslin to C. F. Kaegebehn.	Oct. 26, 1939	2731
760	Letter from C. F. Kaegebehn to J. L. Turner—interoffice communication.	Oct. 31, 1939	2733
761	Letter from C. F. Kaegebehn to Werner H. Hutz, Hutz and Joslin.	Oct. 31, 1939	2735
762	Letter from George Jebsen to C. F. Kaegebehn.	Nov. 9, 1939	2736
763	Letter from C. F. Kaegebehn to Dr. G. Jebsen.	Dec. 27, 1939	2738
764	Letter from C. F. Kaegebehn to S. Andersen, Titan Co. A/S.	Sept. 28, 1939	2741
765	Letter from Sigurd Andersen to C. F. Kaegebehn.	Nov. 30, 1939	2742
766	Letter from C. F. Kaegebehn to S. Andersen, Titan Co. A/S.	Dec. 20, 1939	2744
767	Letter from Sigurd Andersen to Titangesellschaft m.b.H.	Mar. 5, 1940	2746
768	Letter from Sigurd Andersen to C. F. Kaegebehn.	Mar. 5, 1940	2749
769	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co., Inc., attn. C. F. Kaegebehn.	Mar. 29, 1940	2750
770	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co., Inc., attn. C. F. Kaegebehn.	Mar. 19, 1940	2752
771	Letter from C. F. Kaegebehn to I. G. Farbenindustrie Aktiengesellschaft.	May 7, 1940	2756
772	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co., Inc., attn. C. F. Kaegebehn.	May 24, 1940	2757
773	Letter from C. F. Kaegebehn to Werner H. Hutz, Hutz and Joslin.	May 8, 1940	2758
774	Letter from C. F. Kaegebehn to Titan Co. A/S, attn. Andreas Rayneстad.	May 24, 1940	2759
775	Letter from George Jebsen to C. F. Kaegebehn.	May 29, 1940	2761

Exhibit No.	Description	Date	Page
776	Letter from (unsigned—on Titan Company, Inc. letterhead) to National Lead Co., attn. C. F. Kaegebehn.	Oct. 12, 1940	2766
777	Arrangement (temporary) of Patent Work Europe.	Oct. 14, 1940	2767

1133	Letter from National Lead Co. to Hutz and Joslin, attn., Werner H. Hutz.	Mar. 28, 1940	3513
1134	Letter (unsigned) to Werner H. Hutz, Hutz and Joslin.	Apr. 18, 1940	3514

VOLUME 4

INDEX OF DOCUMENTS

Exhibit No.	Description	Date	Page
1135	Letter from Hutz and Joslin to C. F. Kaegebehn.	Dec. 18, 1940	3516
1137	Letter from E. T. Henry to C. F. Kaegebehn.	Jan. 6, 1941	3517
1136	Letter from National Lead Co. to E. T. Henry, Canadian Titanium Pigments, Ltd.	Dec. 20, 1940	3518
1138	Letter from National Lead Co. to E. T. Henry, Canadian Titanium Pigments, Ltd.	Jan. 10, 1941	3519
1139	Letter from CFK to George Jebsen.	Jan. 5, 1942	3520
1140	Letter from National Lead Co. to E. T. Henry.	Jan. 5, 1942	3522
1141	Note, initialed "C. J. K."	Jan. 28, 1942	3524
1142	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co., Inc.	Apr. 4, 1940	3527
1143	Letter from Titan Co., Inc. to I. G. Farbenindustrie Aktiengesellschaft.	May 20, 1940	3528
1144	Letter from National Lead Co. to George Jebsen for S. Andersen.	May 20, 1940	3529
1145	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co., Inc.	June 12, 1940	3530
1146	Letter from Titan Co., Inc. to Titangesellschaft m. b. H.	July 29, 1940	3532

Exhibit No.	Description	Date	Page
1147	Letter from A. Ravnestad to National Lead Co.	Nov. 26, 1940	3533
1148	Letter from Titan Co., Inc. to Andreas Ravnestad.	Apr. 18, 1941	3534
1149	Letter from H. Eckoff to National Lead Co.	Sept. 11, 1941	3535
1150	Letter from Sigurd Andersen to C. F. Kaegebehn.	Jan. 2, 1941	3536
1151	Letter from Sigurd Andersen to C. F. Kaegebehn.	Oct. 17, 1940	3538
1152	Letter from National Lead Co. to Sigurd Andersen.	Dec. 12, 1940	3540
1153	Letter from British Titan Products Co., Ltd., to Imperial Chemical Industries, Ltd.	Mar. 19, 1941	3541
1154	Letter from Titan Co., Inc. to I. G. Farbenindustrie Aktiengesellschaft.	May 14, 1940	3543
1155	Letter from National Lead Co. to Werner H. Hutz.	May 14, 1940	3545
1156	Letter from National Lead Co. to George Jebsen for S. Andersen.	May 14, 1940	3546
1157	Letter from Andreas Ravnestad to National Lead Co.	June 7, 1940	3548
1158	Letter from National Lead Co. to Andreas Ravnestad.	Aug. 20, 1940	3550
1159	Letter from Sigurd Andersen to C. F. Kaegebehn.	Sept. 23, 1940	3551
1160	Letter from I. G. Farbenindustrie to Titan Co., Inc.	Dec. 6, 1940	3553
1161	Letter from I. G. Farbenindustrie to Titan Co., Inc.	June 12, 1940	3554
1162	Letter from Titan Co., Inc. to Dr. Nagashima, Nagashima Law & Patent Office.	July 30, 1940	3555
1163	Letter from Titan Co., Inc. to Titangesellschaft m. b. H.	July 30, 1940	3556
1164	Letter from Sigurd Andersen to C. F. Kaegebehn.	Aug. 29, 1940	3557
1165	Letter from Sigurd Andersen to C. F. Kaegebehn.	Sept. 23, 1940	3560
1166	Letter from Sigurd Andersen to C. F. Kaegebehn.	Oct. 5, 1940	3562
1167	Letter from National Lead Co. to Sigurd Andersen.	Oct. 25, 1940	3564
1168	Letter from Titan Co., Inc. to Titangesellschaft m. b. H.	Oct. 25, 1940	3566
1169	Letter from Titan Co., Inc. to Nagashima Law & Patent Office.	Oct. 25, 1940	3568
1170	Letter from National Lead Co. to Sigurd Andersen.	Nov. 12, 1940	3569

Exhibit No.	Description	Date	Page
1171	Letter from L. Nagashima to Titan Co., Inc.	Nov. 27, 1940	3571
1172	Letter from Sigurd Andersen to C. F. Kaegebehn.	Dec. 19, 1940	3572
1173	Letter from Sigurd Andersen to Nagashima Law & Patent Office.	Dec. 21, 1940	3574
1174	Letter from Sigurd Andersen to C. F. Kaegebehn.	Dec. 28, 1940	3576
1175	Letter from Titan Co., Inc. to Nagashima Law & Patent Office.	Jan. 2, 1941	3578
1176	Letter from National Lead Co. to Sigurd Andersen.	Jan. 8, 1941	3579
1177	Letter from Kagaku Tokkyo Jimusho to I. G. Farbenindustrie.	Sept. 28, 1940	3580
1178	Letter from I. G. Farbenindustries to Titan Co., Inc.	Oct. 1, 1940	3581
1179	Letter from I. G. Farbenindustrie to Titan Co., Inc.	Oct. 24, 1940	3582
1180	Letter from Kagaku Tokyo Jimusho to I. G. Farbenindustrie.	Nov. 2, 1940	3583
1181	Letter from Sigurd Andersen to C. F. Kaegebehn.	Nov. 25, 1940	3584
1182	Letter from Titan Co., Inc. to I. G. Farbenindustrie A. G.	Dec. 5, 1940	3586
1183	Letter from National Lead Co. to Sigurd Andersen.	Jan. 8, 1941	3587
1184	Letter from I. G. Farbenindustrie A. G. to Titan Co., Inc.	Jan. 10, 1941	3588
1185	Letter from Andreas Ravnestad to National Lead Co.	Jan. 24, 1941	3590
1186	Letter from Titan Co., Inc., to I. G. Farbenindustrie.	Mar. 5, 1941	3595
1188	Letter (unsigned) to Sigurd Andersen.	Oct. 1, 1940	3596
1187	Letter from Titan Co., Inc., to Dr. Buchert, Kagaku Tokkyo Jimusho.	July 22, 1941	3602
1189	Letter from Sigurd Andersen to C. F. Kaegebehn.	Oct. 29, 1940	3603
1190	Letter from Sigurd Andersen to C. F. Kaegebehn.	Dec. 17, 1940	3606
1191	Letter from Sigurd Andersen to Messrs. Elzaburu.	Dec. 28, 1940	3607
1192	Letter from Sigurd Andersen to C. F. Kaegebehn.	Jan. 27, 1941	3608
1193	Radiogram from Titanco to Elzaburu.	Dec. 30, 1940	3610
1194	Radiogram from Kaegebehn to Andersen.	Dec. 30, 1940	3611
1195	Letter from Elzaburu to Titan Co., Inc.	Jan. 17, 1941	3612
1196	Letter from Titan Co., Inc., to Messrs. Elzaburu.	Feb. 18, 1941	3613
1197	Letter from H. Eckhoff to National Lead Co.	May 5, 1941	3614

Exhibit No.	Description	Date	Page
1198	Letter from Ragnar Iuell to George Jebsen.	Oct. 21, 1940	3615
1199	Letter from Titah Co., Inc., to I. G. Farbenindustrie A. G.	May 21, 1941	3616
1200	Letter from I. G. Farbenindustrie Aktiengesellschaft to Titan Co.	July 3, 1941	3618
1203	Telegram from Ticknor to LCO Blumenfeld Chimiterar.		3619
1205	Letter (in French) to Rupprecht of Krebs Pigments & Color Corp.	Nov. 29, 1932	3620

Exhibit A

AGREEMENT made and entered into this 30th day of July, in the year one thousand nine hundred and twenty by and between THE TITANIUM PIGMENT COMPANY, INC., a corporation organized and existing under and by virtue of the laws of the State of Maine, hereinafter referred to as the "PIGMENT COMPANY", and the TITAN CO. A/S, a corporation organized and existing under and by virtue of the laws of the Kingdom of Norway, hereinafter referred to as the "TITAN COMPANY",

WITNESSETH:

WHEREAS, the parties hereto now respectively own and will hereafter own, or have interests in, certain Letters Patent and in applications for Letters Patent of the United States of America or of countries foreign thereto, conferring patent monopolies in the "Licensed Field" as hereinafter defined; and

WHEREAS, each of the parties hereto desires respectively to obtain certain rights and interests under or with respect to the said Letters Patent and applications of the other party in certain countries as hereinafter provided;

NOW, THEREFORE, in consideration of the premises and of the sum of One Dollar, lawful money of the United States, by each of the parties to the other in hand paid, the receipt of which is hereby severally acknowledged, and of the mutual covenants, conditions and agreements hereinafter set forth on the part of the respective parties to be respectively observed and performed, the parties hereto do hereby agree to and with each other as follows:

Exhibit A

1. *Definitions:*

(a) "Licensed Field": By this designation as hereinafter employed is meant to be included all substances, materials, or compositions consisting of or containing above two per cent. (2%) of titanium, or a compound, or compounds, thereof, unless such substances, materials, or compositions contain by weight more than five per cent. (5%) of a metal other than titanium in its purely metallic (i.e. chemically uncombined) state, and also to be included all apparatus, methods, and processes useful in the obtainment or manufacture or use of said substances, materials, or compositions in so far as said apparatus, methods, and processes may be employed in the production of said substances, materials or compositions excepting as aforesaid.

(b) "North America": By this designation as hereinafter employed is meant the entire continent of that name including the United States, the Dominion of Canada, Newfoundland, Panama and all Central American States, and including also all islands which are at present considered as being geographically appurtenant to said continent, and also including the Phillipine and Hawaiian Islands.

(c) "South America": By this designation as hereinafter employed is similarly meant the entire continent of that name including all countries therein located to the south of Panama and also all islands which are at present considered as being geographically appurtenant to said continent.

(d) "Finished Article": By this designation as hereinafter employed is meant any artificially produced article, or composition within the "Licensed Field" which has been

manufactured by aid of any process, or apparatus, or both, so as to constitute a cohesive intermixture of titanic material with other material with which such titanic material was not previously intermixed, or associated, as for example, in paint, rubber, glass, etc.

II. The Pigment Company upon the terms and conditions, including the covenants and agreements, hereinafter specified, agrees to grant to the Titan Company, and the Titan Company accepts therefrom, a license exclusive of all others including said Pigment Company to manufacture, use and sell, or to manufacture or use or sell, but only in or for territories outside of "North America" and "South America", each and every invention, improvement, or subject matter in the "Licensed Field" which is claimed in, or covered by, existing or future Letters Patent granted in any country outside of "North America" and of "South America" and now or hereafter owned or controlled by the Pigment Company, but said license shall not permit the licensee to make any sale directly or indirectly in or for any territory within "North America". For greater certainty a list of the said patents and of pending applications for such patents referred to in this Article is hereto attached marked "Schedule A" and made a part hereof, but said list shall not be considered as excluding any Letters Patent or Applications for Letters Patent not included therein.

III. The Titan Company upon the terms and conditions, including the covenants and agreements, hereinafter specified, agrees to grant to the Pigment Company, and the Pigment Company accepts therefrom, a license exclusive of all others including said Titan Company, to manufac-

ture, use and sell, or to manufacture or use or sell, but only in or for territories within "North America", each and every invention, improvement, or subject matter in the "Licensed Field" which is claimed in, or covered by, existing or future Letters Patent granted in any country of "North America" as above defined and now or hereafter owned or controlled by the Titan Company, but said license shall not permit the licensee to make any sale directly or indirectly in or for any territory outside of "North America" or "South America". For greater certainty a list of the said patents and of pending applications for such patents referred to in this Article is hereto attached marked "Schedule B" and made a part hereof; but said list shall not be considered as excluding any Letters Patent or Applications for Letters Patent not included therein.

IV. Each of said Companies hereby (*i. e.* the Titan Company and the Pigment Company) respectively agrees to grant the other a non-exclusive license to use and sell, or to use or sell, each and every subject matter in the "Licensed Field" which is claimed in, or covered by, any existing or future Letters Patent of any country of "South America" and now or hereafter owned or controlled by it, but said license shall not permit the licensee to make any sale directly or indirectly in or for any territory outside of "South America". For greater certainty a list of the said patents and of pending applications for such patents referred to in this Article is hereto attached marked "Schedule C" and made a part hereof, but said list shall not be considered as excluding any Letters Patent or Applications for Letters Patent not included therein.

Exhibit A

V. Each party (Licensee) hereto shall, and hereby does, in consideration of the exclusive license to be to it granted as herein provided, covenant and agree with the other party (Licensor) duly and faithfully to observe and perform each and every of the respective obligations hereinafter in this Article V set forth, viz.:

(a) Either Company, whenever it files in any country or place, an Application for Letters Patent on an invention in the "Licensed Field" or whenever it receives a copy of such an application from a licensee or sublicensee, shall within six months from the date of the filing thereof or upon receiving such copy of an application send a copy thereof to the other Company, and file an Application on the same invention in each country or place included in the territory with respect to which exclusive licenses to the other Company are hereby granted or provided for, in which such application can be filed, and prosecute the same with care and diligence to patent.

(b) Either party hereto may relieve itself of the obligations assumed by it under subdivision "a" of this Article "V" by sending by registered mail to the other party hereto, within two months of the time of the filing by it in any country or place of an Application for Letters Patent on any invention in the "Licensed Field", or immediately upon receiving the same from a licensee or sublicensee, a copy of such application with all papers necessary to permit the filing of an application for Letters Patent on the invention covered thereby in each of the countries or places included within the territory with respect to which an exclusive license to the other party hereunder is hereby granted or provided for, and if possible under the International Con-

vention for the Protection of Industrial Property, and with papers vesting the ownership thereof, as distinguished from a license, in such other party.

(c) Each party hereto shall be charged with the duty of making all payments lawfully required to maintain and prolong the Letters Patent owned or controlled by it and with respect to which exclusive licenses are hereby granted or provided for.

(d) Either party hereto may relieve itself of its obligation to pay any part of the expense of obtaining, defending, maintaining, or prolonging any Letters Patent or Applications for Letters Patent, with respect to which an exclusive license in favor of said party is at the time in force, by delivering to the other party owning or controlling the same a fully and duly executed release of the exclusive license of such party thereunder, in which case the party so renouncing its right shall have a non-exclusive license with respect to the same.

(e) Either party hereto may relieve itself of its obligation to pay its share in the expense of maintaining or defending [redacted] Letters Patent owned or controlled by it and with respect to which an exclusive license in favor of the other party hereto is hereby granted or provided for by delivering to the other party (the exclusive license thereunder) a full, complete, and duly executed assignment of all the right, title, and interest of such party in and to the same.

(f) Either party hereto or any exclusive sublicensee of any of its rights under any patent hereunder shall be entitled at its own expense to bring suit to restrain and to recover damages, penalties, and profits for infringement of a patent in the "Licensed Field" in any territory with

respect to which an exclusive license or sublicense to such party is hereby granted or provided for, and to receive for its own benefit any sums recoverd by such suits, using if necessary, but without recourse, the name of the other party to this Agreement. The other party hereto owning or controlling any patent so sued on shall be notified of said suit immediately upon institution thereof and shall be entitled, if it shall so elect, to intervene at its own expense in such litigation. Any licensee under any such patent may likewise intervene at its own expense in any suit brought to annul the same.

(g) It is understood and agreed between the parties hereto that if either party hereto or a licensee or a sublicensee of either party hereto, shall, in the exercise of its rights in the "Licensed Field" within the territory within which it is licensed, produce, as a by-product, any substance containing titanium or a compound thereof and more than five per cent. (5%) of other metals in a metallic state, such party, licensee, or sublicensee shall have the right to reduce the titanium content of such by-product to less than one-half of one percent. (.5%) by futher treatment and shall have the right to sell and use the by-product so treated notwithstanding any patent or patents of any party hereto.

VI. Each of the said exclusive licenses herein provided for shall and shall therein be expressly stated to be given and accepted, and their continuance dependent, upon the following express conditions:

(a) That the licensee shall never directly or indirectly question, or contest, the validity of any patent under which it is licensed, nor use nor infringe the same except as li-

censed, nor directly nor indirectly connive with, nor afford any pecuniary or other assistance to any contestant or questioner of such validity.

(b) 1. The Titan Company shall, in consideration of the thereto exclusive license, pay to the Pigment Company royalty as and in the manner following, viz.:

A royalty for each metric ton of one thousand (1,000) Kilograms, produced by it or its licensees or sublicensees in any calendar year, of titanium dioxide (TiO_2), or its equivalent if other compounds of titanium are produced, as follows:

One hundred and sixty-four Norwegian Kroner and twelve oere (Kr. 164 12/100) for each ton over three thousand (3,000) tons up to and including five thousand (5,000) tons;

One hundred and twenty-three Norwegian Kroner and nine oere (Kr. 123 9/100) for each ton over five thousand (5,000) tons up to and including ten thousand (10,000) tons;

Eighty-two Norwegian Kroner and six oere (Kr. 82 6/100) for each ton over ten thousand (10,000) tons.

No royalties shall be payable on a production of three thousand (3,000) tons or less in any calendar year nor on that part of its production within such calendar year which is greater than twice the production of the Pigment Company and its licensees and sublicensees.

2. The Pigment Company shall, in consideration of the thereto exclusive license, pay to the Titan Company royalty as and in the manner following, viz.:

Exhibit A

A royalty for each metric ton of two thousand two hundred and four (2,204) pounds each, produced by it or its licensees or sublicensees in any calendar year, of titanium dioxid (TiO_2) or its equivalent if other compounds of titanium are produced, as follows:

Forty-four dollars ($44), United States currency, for each ton over three thousand (3,000) tons up to and including five thousand (5,000) tons;

Thirty-three dollars ($33), United States currency for each ton over five thousand (5,000) tons up to and including ten thousand (10,000) tons;

Twenty-two dollars ($22), United States currency, for each ton over ten thousand (10,000) tons.

No royalties shall be payable on a production of three thousand (3,000) tons or less in any calendar year, nor on that part of production within such calendar year which is greater than twice the production of the Titan Company and its licensees and sublicensees.

(N.B. It is understood and agreed that the intent of this section is that no royalty shall be calculated or be payable on or by reason of the reworking or change in form of any titanium compound on the production of which a royalty shall have already been paid under this agreement at the rate stated.)

For the purpose of proper accounting for the royalties herein provided, each party hereto shall keep proper books showing its production and the production reported to it by is licensees and sublicensees, if any, within the "Licensed Field" and shall on or before the last day of February of each year make returns under oath to the other party to whom royalties are payable on such production showing

the amount of such production during the calendar year last preceding and shall within one month from the time of making such return pay any sum which may be due by it for royalties accruing during such last preceding calendar year.

(c) 1. The Titan Company, shall, and hereby does constitute and appoint, and shall hereafter continuously retain, to the exclusion of all others, the Pigment Company as its sole agent, so long as said Pigment Company has an exclusive license hereunder, for introduction and sale in "North America" of all products of the Titan Company in the "Licensed Field", upon such orders of said agent therefor at current European market prices of the Titan Company as the latter shall elect to fill, the same to be sold only in "North America" by said agent at prices and upon terms and conditions to be fixed by said agent. The Titan Company shall not make in or for "North America" any sale or transfer of any of its said products except through its said exclusive agent and as aforesaid.

2. The Pigment Company shall, and hereby does, constitute and appoint, and shall hereafter continuously retain, to the exclusion of all others, the Titan Company as its sole agent, so long as said Titan Company has an exclusive license hereunder, for introduction and sale, outside of both "North America" and "South America", of all products of the Pigment Company in the "Licensed Field" upon such orders of said agent therefor at current American market prices of the Pigment Company as the latter shall elect to fill, the same to be sold only in territories outside of "North America" and "South America" by said agent at prices and upon terms and conditions to be fixed by said agent.

Exhibit A

The Pigment Company shall not make in or for any territory outside of "North America" and "South America" any sale or transfer of any of its said products except through its said exclusive agent and as aforesaid.

(N. B.) Inasmuch as it is the purpose of this Agreement to provide for the widest possible development of titanium products in the "Licensed Field", it is understood and agreed that notwithstanding the agencies created by this clause "(c)", importations into the territory of the agent may be made of "finished articles" in the manufacture of which titanium products produced by the principal or a licensee or sublicensee thereof have been used, as raw material, provided however that the same shall not constitute such an important part of such finished article that its sale within the agent's territory will substantially interfere with said agent's sales of its own said titanium products in its said territory; and each party (principal) agrees that it will, upon receiving notice from the other party (agent) that such importation into its territory of such "finished articles" does interfere with the agent's sales of its own products endeavor to prevent such importation; and each party agrees that it will not sue the other, or any purchaser from, or customer of, direct or indirect, of the other on account of the importation into, or sale and use in, its territory of any such "finished articles" until after six months from the time such notice shall have been given to the other.

(d) The future cost of paying taxes and annuities necessary for maintaining or prolonging any Letters Patent with respect to which exclusive licenses are hereby granted or provided for, the future cost of defending suits brought

to annul or cancel said Letters Patent or any of them, and the future cost of obtaining Letters Patent, as provided for in section "(a)" of Article "V" hereof, shall be equally divided between the Titan Company and the Pigment Company and the party making said payments shall be reimbursed by the other party for its share of said payments within sixty days after the receipt by said other party of a verified statement of account evidenced by proper vouchers.

(e) Each party hereto shall at all times, on request of the other, duly, and with all possible diligence, execute and deliver to said other party any and all additional papers and documents and do and perform all other acts requisite and proper to fully effectuate all provisions and obligations of this agreement, and particularly so as regards all licenses therein referred to, and also all patents and the maintenance and enforcement of the latter, and also the preparation, filing and prosecution of the applications for patents.

(f) In the event that either of the parties hereto at any time, or times, violates or neglects performance of any of the conditions hereinabove set forth in this Article "VI", the other party, grantor of its exclusive license, may by registered mail thereto duly addressed notify the delinquent party accordingly. Unless within six months after such mailing of said notice the delinquency has ceased, and satisfaction therefor been made, then in that case the exclusive license hereby granted to the delinquent party may, at the option of the aggrieved party at any time thereafter be terminated by notice to that effect sent by registered mail to the delinquent party by the aggrieved party. But no such termination of license to the delinquent party shall operate to relieve the aggrieved party from its own obli-

gations hereunder, nor terminate its own exclusive license or the sublicenses thereby granted.

VII. Each party hereto agrees that it will cooperate with the other party by imparting semi-annually to the other party full and accurate information in detail as to knowledge obtained by it since the last report in and applicable to the "Licensed Field", and will permit the other party by its duly accredited representatives, during business hours, to inspection of and study and inquiry in any of its plants, where work in the "Licensed Field" is being done, exclusive of its research laboratories, provided that neither party shall be obligated to accord such permission to any person who is not at the time bound in writing under his signature to assign all his inventions pursuant to the provisions of the following Article "VIII".

VIII. Each party hereto agrees that it will, so far as possible, require its officers, agents and employes to agree to assign to it throughout the world any and all inventions within the "Licensed Field" which may be made by them or any of them prior to the time herein fixed for the termination of the exclusive licenses and of any extension of such time.

IX. Each party hereto agrees that in acquiring rights to inventions within the "Licensed Field" it will, so far as possible, endeavor to provide that such rights shall extend to all countries or places within the territory with respect to which any license to the other party hereunder is hereby granted or provided for.

X. Exclusive licenses herein granted or provided for, unless terminated as herein provided, shall extend up to

and including the last day of December 1936, and thereafter for successive periods of ten years each. Said exclusive licenses and this agreement may be terminated by either party hereto by notifying the other party in writing of its desire so to do at least five years before the last day of December, 1936, or at least five years before the expiration of the ten year period then in force. Upon the termination of the exclusive licenses and this agreement in the manner herein provided, each party to this agreement shall then receive for itself and the holders of licenses theretofore or thereafter to be granted by it within its respective territory as aforesaid, a non-exclusive license in the "Licensed Field" under any and all inventions upon which the other party to this agreement shall on the date of such termination have or control Letters Patent or Applications for Letters Patent in the "Licensed Field" in any country or place within such territory, but all other obligations and liabilities hereunder assumed by, and all other benefits resulting herefrom to either party hereto, shall cease and determine upon such date of termination.

XI. Upon the termination of the period in which the exclusive licenses are in force, or upon the rescission of this agreement, the licenses then in force in "South America" shall cease and determine and no further licenses shall be granted therein. The Pigment Company shall have the right on July 1, 1939, if this agreement shall not have been previously terminated as herein provided, to take over "South America" as its exclusive territory on paying the Titan Company for the market the latter has there created.

XII. The interest of either party hereto may be assigned *in toto* but not otherwise and only in connection with

Exhibit A

the transfer of the entire business of such party to any person, firm, association or corporation which assumes the obligations of such party, and this agreement in all respects shall be obligatory, not only upon each of the parties hereto respectively, but also upon their respective assigns, successors and legal representatives.

XIII. It is understood and agreed that the obligations assumed by each of the parties hereto shall extend to any and all subsidiaries of either of such parties, the control of which is held by either party hereto, to the end that the terms of this agreement shall not be avoided by the existence or formation of affiliated or subsidiary companies.

XIV. Either party shall have the right so long as its exclusive license shall not have been terminated by forfeiture to grant sublicenses hereunder; provided that no party hereto shall grant any license under its own patents, or any sublicense hereunder, in the "Licensed Field" except for the production of titanium or titanium compounds or for the utilization of such compounds produced by one of the parties hereto or a licensee or a sublicensee of one of the parties.

(a) If the license or sublicense is for the production of titanium or titanium compounds on which royalties are to be paid by its Licensor under this contract or for the manufacture therefrom of any product definable by the term "Pigment", and as such utilizable in the composition of any commodity then and in that event each such license or sub-license shall be in writing and shall therein be expressly stated to be given and accepted, and its continuance dependent upon the following express conditions:

Exhibit A

1. To render to its Licensor on or before the last day of January and July of each year true and correct statements under oath as to its production in the "Licensed Field" upon which royalties are payable under this contract by its licensor during the six months preceding the month in which such return is made.

2. To grant to the party to this agreement other than its Licensor its grantable rights to its (the said Licensee's or sublicensees') inventions and under its patent in the "Licensed Field" identical in character, territorial scope and duration to those given by its Licensor to the other party hereto in Articles II or III, and IV hereof.

3. To agree whenever it files an application for a patent in any country on an invention in the "Licensed Field" to send to its Licensor within two months from the date of filing thereof a copy of such application with all papers necessary to permit the filing of an application for such invention in each of the countries or places included within the territory to which licenses are to be granted to the party hereto other than its Licensor, with papers vesting, so far as in its power lies, in such other party a license identical in character, territorial scope, and duration to those granted to such party by this agreement.

4. To assume upon itself the obligations of Article "VI", Section (a) hereof.

5. To appoint the party hereto other than its Licensor its sole agent in the territory of such party in accordance with the conditions set forth in Article "VI", Section (c) hereof.

Exhibit A

6. To agree to assume in respect to its Licensor the obligations assumed by its Licensor in respect to the other party hereto in Article "VII" hereof.

7. To assume upon itself the obligations set forth in Article "VIII" hereof.

8. That if the Licensee or sublicensee violates or neglects performance of any of the conditions above recited to be assumed by it, its Licensor may by registered mail, thereto duly addressed, notify the Licensee or Sublicensee accordingly; and that unless within six months after such mailing of such said notice the delinquency has ceased and satisfaction therefor been made, then and in that event the Licensor may, at its option, terminate the license or Sublicense by notice to that effect sent by registered mail to the Licensee or Sublicensee.

XV. Each of the parties hereto agrees that upon breach by any of its Licensees or Sublicensees of any of the conditions of the licenses or sublicenses recited in Article "XIV" hereof that it will take all proper and necessary steps to cancel the license or sublicense and shall thereafter employ all proper means to prevent such Licensee or Sublicensee from infringing the patents in the "Licensed Field" and that it will whenever it grants a license or sublicense in the "Licensed Field" or cancels the same promptly notify the other party hereto, giving him the name and address of the licensee or Sublicensee and information as to the character, scope and duration of the license or sublicense.

XVI. Every sublicensee hereunder of either party shall in the event of any termination of such party's exclusive license hereunder, have the right to obtain from the other

party hereto a license under the patents thereof to which said sublicensee's original license extends, and of the same character and upon the same conditions and covenants as of his said sublicense in so far as the same are set forth in this Agreement between the Titan Co. and the Pigment Company, and upon the additional condition and covenant to pay, in lieu of the royalty, if any, by its said sublicense provided to the said other party as royalty under said license Thirty-three Dollars ($33) of its equivalent, per metric ton of titanium dioxid (TiO_2) or its equivalent, produced by it; provided within six months after such termination the sublicensee delivers to such other party or its execution duplicate instruments of license, setting forth the conditions and covenants prescribed in this Article "XVI" to be contained in said license, and duly executed on its part by said sublicensee as licensee, with the exception that such other party hereto is therein set forth as the licensor instead of said sublicensee's original licensor and as entitled in lieu of the latter to performance of all said terms, conditions and covenants by said sublicensee. Said other party hereto shall within two months after receipt of said duplicate instruments of license execute them on its part, and deliver one thereof to the therein named licensee. In default of said sublicensee's obtainment of its new license from the other party hereto as above set forth all of the said sublicensee's rights under any and every patent of said other party shall absolutely terminate and cease contemporaneously with the termination of the exclusive license hereunder of the party hereto which granted to said sublicensee its orginal sublicense.

XVII. In addition to the several documents granting their said respective exclusive licenses with full recital

Exhibit A

therein of the above conditions and covenants enumerated and set forth in Article "VI" of this Agreement to be signed and acknowledged by both of the parties hereto, the parties shall for purposes of record in the Patent Offices of Bureaus of the respective countries execute and deliver to each other, as from time to time required, confirmatory abridgments of the contents of said licenses which shall contain a specific designation, by date, number, and country, of the Letters Patent under which an exclusive license is thereby granted, the titles of the grantor and licenses companies, and a general statement to the effect that "the said licenses are granted and accepted subject to all the conditions and covenants set forth in a certain Agreement of" stated date (meaning this Agreement) "between the parties".

IN WITNESS WHEREOF, the parties hereto have duly executed these presents in quintuplet the day and year first above written.

AGREEMENT made and entered into this 30th day of July in the year one thousand nine hundred and twenty by and between the NATIONAL LEAD COMPANY, a corporation organized and existing under and by virtue of the laws of the State of New Jersey, hereinafter referred to as the "LEAD COMPANY", THE TITANIUM ALLOY MANUFACTURING COMPANY, a corporation organized and existing under and by virtue of the laws of the State of Maine, hereinafter referred to as the "ALLOY COMPANY", THE TITANIUM PIGMENT COMPANY, INC., a corporation organized and existing under and by virtue of the laws of the State of Maine, hereinafter referred to as the "PIGMENT COMPANY", and the TITAN CO. A/S, a corporation organized and existing under and by virtue of the laws of the Kingdom of Norway, hereinafter referred to as the "TITAN COMPANY",

WITNESSETH:

WHEREAS, the TITAN COMPANY has this day made and entered into a certain agreement in writing bearing even date herewith with the PIGMENT COMPANY wherein and whereby among other things the PIGMENT COMPANY and the TITAN COMPANY agree to grant to each other licenses under certain Letters Patent within the "Licensed Field" therein defined as follows:

> "Licensed Field": By this designation as hereinafter employed is meant to be included all substances, materials, or compositions consisting of or containing above two per cent. (2%) of titanium, or a compound, or compounds, thereof, unless such substances, materials, or compositions contain by weight more than five per cent. (5%) of a metal

other than titanium in its purely metallic (*i. e.* chemically uncombined) state, and also to be included all apparatus, methods, and processes useful in the obtainment or manufacture or use of said substances, materials, or compositions, in so far as said apparatus, methods, and processes may be employed in the production of said substances, materials, or compositions excepting as aforesaid.

NOW, THEREFORE, in consideration of the premises and of the sum of one dollar, lawful money of the United States, to each of them in hand paid by the PIGMENT COMPANY and the TITAN COMPANY, and other good and valuable considerations, the receipt of which is hereby acknowledged, the LEAD COMPANY and the ALLOY COMPANY each agrees for itself and its subsidiary corporations that, in so far as in its power lies, it will on its part fully respect the said agreement between the TITAN COMPANY and the PIGMENT COMPANY and that so long as any exclusive licenses remain in force under said agreement it will not against the TITAN COMPANY or the PIGMENT COMPANY or any successor in interest of either of them question or contest the validity of any of the Letters Patent covered by said agreement and will not infringe the same or afford any assistance to any one in questioning or contesting the validity thereof and will not do any other act in derogation of said agreement and will promptly communicate to the PIGMENT COMPANY the results of any experience gained or knowledge acquired by it within the "Licensed Field", and will promptly assign to the PIGMENT COMPANY throughout the world any and all Letters Patent, inventions and improvements within the "Licensed Field" which may be ac-

quired by it, and will, in so far as possible, require its officers, agents and employees to agree to assign to itself throughout the world any and all inventions within the "Licensed Field" which may be made by them or any of them.

IN WITNESS WHEREOF, the parties hereto have duly executed these presents the day and year first above written in quintuplet.

Exhibit A-2

THIS AGREEMENT made and entered into this 30th day of July in the year one thousand nine hundred and twenty by and between THE TITANIUM ALLOY MANUFACTURING COMPANY, a corporation organized and existing under and by virtue of the laws of the State of Maine, hereinafter called the Alloy Company, and TITAN COMPANY A/S., a corporation organized and existing under and by virtue of the laws of the Kingdom of Norway, hereinafter called the Titan Company,

WITNESSETH

WHEREAS on even date herewith a certain agreement has been entered into by and between THE TITANIUM PIGMENT COMPANY INC., a corporation of the State of Maine, and hereinafter called the PIGMENT COMPANY, and the Titan Company covering inventions in titanium in the "Licensed Field" described in the said agreement and concerning certain United States and foreign Letters Patent covering the same; and

WHEREAS the Alloy Company is a stockholder of the Pigment Company and was a party to the negotiation of said agreement and the said agreement was made on the promise of the Alloy Company to execute this agreement;

NOW, THEREFORE in consideration of the promises and of the sum of one dollar paid to the Alloy Company by the Titan Company, the receipt of which is hereby acknowledged, the Alloy Company agrees with the Titan Company as follows:

I. The Alloy Company agrees that it will so far as possible in acquiring rights to inventions in the "Licensed Field" endeavor to provide that such rights shall extend

Exhibit A-2

to all countries or places within the territory with respect to which any license has been granted or provided for under said agreement of even date herewith.

II. The Alloy Company further agrees on its part to fully respect the said agreement of even date herewith and not to do any of the acts prohibited to the Pigment Company in said agreement, and to do all other acts and things which are on its part necessary and proper to enable the Titan Company to enjoy the rights and privileges in the matters and things covered by this agreement to the same effect as though particularly covered by the agreement of even date herewith.

IN WITNESS WHEREOF the parties hereto have caused their names to be signed and their seals affixed by their proper officers duly empowered thereto by their respective Boards of Directors this day of ~~July,~~ 1920.

THE TITANIUM ALLOY MANUFACTURING COMPANY

PROPOSED RESOLUTION OF DIRECTORS

The President submitted to the meeting a form of contract between the Titanium Alloy Manufacturing Company, and Titan Co. A/S., a corporation organized and existing under the laws of the Kingdom of Norway, relating to a form of contract of even date between the Titanium Development Company, Inc. and Titan Co. A/S.

On motion duly made and seconded, the following resolution was unanimously adopted:

RESOLVED, that the form of contract between this company and Titan Co. A/S., as presented to this meeting, be, and the same hereby is adopted and approved and ordered identified by the signature of the Secretary and filed with and as a part of the minutes of this meeting.

RESOLVED, further, that the proper officers of this company be and they hereby are authorized and instructed, in behalf of and in the name of the company, to execute said contract in the form presented to this Board and approved at this meeting to affix the corporate seal thereto, to acknowledge the same and to deliver the said contract so executed to said Titan, Co. A/S, upon receipt of a counterpart of said contract duly signed, acknowledged an executed by said Titan Co. A/S.

I, Joseph D. Meredith, Secretary of The Titanium Alloy Manufacturing Company, hereby certify that the foregoing is a true copy of a resolution this day passed by the Board of Directors of the said Company at a meeting duly called and held for the purpose.

Dated, New York, July 30th, 1920.

JOSEPH D. MEREDITH (Sg.)
Secretary

(SEAL.)

Exhibit B

TRANSLATION

Fredrikstad, March 3d, 1927.

Société Industrielle du Titane
154 Boulevard Haussmann
Paris.

Sirs,

With reference to the Protocol of May 1st, 1925, of which you are aware, concerning the constitution of your organization, between

LA SOCIETE MINIERE & INDUSTRIELLE FRANCO-BRESILIENNE,

LA SOCIETE DES PRODUITS CHIMIQUES DE L'OUEST,

and our Company, on one hand,

and The Group directed by Mr. André VINCENT, on the other hand, we are reminding you briefly in this letter of the situation of our Company with respect to patents for the development of the titanium industry and the conditions which have surrounded the constitution of your Company, and we are confirming to you our approval of the granting of licenses, as specified below.

In order to simplify the reading of the different articles, we refer to your organization by the abbreviation "SOCIETE" and to ours by the abbreviation "TITAN".

TITAN has at its disposal acquired methods, patents, and experience relating to the manufacturing and exploitation of titanium products, especially pigments for paint. Furthermore, TITAN concluded, on July 30, 1920, with THE TITANIUM PIGMENT COMPANY, Inc., a corporation of the State of Maine, U. S. A., a contract designated hereafter as "The

Exhibit B

Agreement of 1920", of which one copy is attached to the present convention, and according to the terms of which TITAN is granted for France and a number of other countries, the use, under definite conditions, of patents, methods, and experience acquired by the TITANIUM PIGMENT COMPANY.

TITAN through its organization in FREDRIKSTAD, Norway, has itself improved said acquired methods, patents, and experience to the extent thus far indicated. However, TITAN wishes to develop this industry, in France as well as in other countries, through enterprises which would use the said acquired methods, patents and experience, while at the same time, collaborating with TITAN toward the progressive development of this industry.

The SOCIETE, whose aim is to develop in France, its colonies and other territorial possessions, an industry for the manufacture and exploitation of titanium and titanium compounds, on the basis of an agreement between TITAN, on one hand, and the SOCIETE MINIERE & INDUSTRIELLE FRANCO-BRÉSILIENNE and the SOCIETE DES PRODUITS CHIMIQUES DE L'OUEST, on the other, wishes to obtain exclusive right for France, its colonies and other possessions, to exploit said acquired patents, methods and experience, which TITAN has at its disposal for those countries, all of which would be in collaboration with TITAN for the progressive development of the said industry.

Definitions

a. License field
b. North America
c. South America
d. Finished article

Exhibit B

For the meaning of these expressions in the present convention, the definition given shall be that applied to each of these expressions in Article I of the Agreement of 1920.

e. France—By France is meant in the present convention, the territory of the French Republic, including colonies, dependencies, protectorates, and countries where France is mandatory agent, according to the peace treaty, with the exception, however, of what is geographically appertinent to the territories which are embraced within the aforesaid definitions, of "North America" and "South America".

f. TITAN's territory—by this is meant all countries not conforming to above definition of "France".

g. Allied companies—by this is meant all enterprises (other than the SOCIETE, TITAN, TITANIUM PIGMENT CO., and licensees for the latter's territories), who have acquired or who will acquire a license of the nature foreseen in Article XIV, paragraph A of the Agreement of 1920.

—II—

According to the conditions hereinafter specified, TITAN agrees to grant the SOCIÉTE, who accepts it, a license under all acquired patents, methods, and experience, which TITAN possesses and will possess during the period of the present convention within the "Licensed Field" for France.

The license covers the exclusive right to manufacture and exploit any invention, improvement of all that is within the "Licensed Field" for France, as well as the exclusive right in France to sell any product manufactured by means of these inventions and improvements, except:

a)—merchandise falling under the heading "finished article" for which the license is non-exclusive (see article III below).

b)—The right obtained from TITAN by PINCHIN JOHNSON & Co. LTD. of LONDON, to obtain supplies in France, for the manufacture by that Company or by concerns controlled by it, of titanium base articles, but this organization will be able to sell them only as manufactured articles.

On the other hand, the SOCIETE's customers in France —though not the SOCIETE itself—will have the right to sell without objection on the part of TITAN, all products described as "finished articles"—this also outside of France, as set forth in the provisions of the Agreement of 1920, relative to the sale by customers of "finished articles" from North and South America.

—III—

The SOCIETE agrees to grant to TITAN, who accepts it, upon the conditions hereinafter specified, a license for TITAN's territory, under patents, methods, and experience which the SOCIETE possesses or will possess during the period of the present convention within the "Licensed Field". The license includes the exclusive right of manufacture and of exploiting every invention and improvement relating to the "Licensed Field" for the territory of TITAN, as well as the exclusive right to sell within this territory all products produced by means of such inventions and improvements. However, for products coming under the definition of "finished article" the license is not exclusive, save for North America and possibly eventually South America where it is exclusive.

Exhibit B

On the other hand, customers of TITAN and its associated companies, but neither TITAN itself nor its associated companies, also will have the right to sell in France without objection on the part of the SOCIETE all products coming under the definition of "finished article". The Marine Company of TITAN will be considered as one of the customers of TITAN as to materials for maritime use.

Should TITAN so request, the grant of SOCIETE's exclusive license under a patent or patent application will be made directly to such associated companies as may be designated by TITAN, and such request may be made by TITAN for one or more countries, and for one or more or all patents and patent applications, within the territory of TITAN and of TITANIUM, except France.

—IV—

The SOCIETE undertakes, notwithstanding the provisions of Articles II and III above, not to sell, directly or indirectly, for or to be destined for TITAN's territory, any invention, improvement or anything relating to the "Licensed Field"; TITAN on its behalf undertakes not to sell directly or indirectly for or to be destined for France such inventions, improvements or anything relating to the "Licensed Field".

SOCIETE and TITAN mutually undertake to impose, within reasonable limits, upon their customers, the obligation set forth in the preceding paragraph.

In case TITAN should give its consent, in the event such situation should arise, and notwithstanding the provisions of Articles II and III above, to permit the SOCIETE to sell for or to be destined for the territory of TITAN, any product coming under the definition of "Licensed Field", such

sale should be made through TITAN as intermediary who is henceforth designated as the exclusive agent of the SOCIETE and will remain as such for so long as the SOCIETE will hold from TITAN, or TITAN holds from the SOCIETE, an exclusive license according to the present convention. For North America, and possibly South America, in the event that the TITANIUM PIGMENT COMPANY should take over this latter as its exclusive territory, according to the Agreement of 1920, Article X, the SOCIETE in that case will designate the TITANIUM PIGMENT COMPANY as its exclusive representative according to the Agreement of 1920, Article VI (c), it being understood that the SOCIETE will deal with this representation only through TITAN as intermediary in the same manner that its own sales require the consent of TITAN. For all other countries which are part of its territory, TITAN may require the SOCIETE to choose, in place of TITAN, as its exclusive agent an associated company holding an exclusive license from TITAN for the country under consideration.

The SOCIETE is required only to fill such orders from its agent as it will agree to fill, it being understood that the agent will determine the sales price and conditions for the resale made by it as intermediary.

Notwithstanding the provisions of Articles II and III above, in case the SOCIETE should consent to permit TITAN to sell for or to be destined for France any product coming under the definition of "Licensed Field", such sale shall be made through the SOCIETE as intermediary, which is henceforth designated as TITAN'S exclusive agent for France, and will remain so for so long as the SOCIETE will hold from TITAN or TITAN holds from SOCIETE, an exclusive license according to the present convention. TITAN

will be expected to fill only such orders of the agent as the seller will accept, it being understood that the SOCIETE itself will decide on sales prices and conditions for any resale made through it as intermediary according to agreements existing at any period, if there are any, between TITAN and the SOCIETE.

Although the above Articles II and III permit the customers of TITAN and SOCIETE freely to sell products definable under the term "finished article", the two companies will have to see to it that their respective customers do not compete with one or the other in their respective markets and if one of the companies becomes aware of such competition from a customer of the other company, the latter should take the necessary measures to prevent the customer from continuing such competition. It seems impossible precisely to envision the measures for the application of this principle, but periodic conferences will take place between the two parties for the purpose of examining market conditions and to discuss the measures to be taken.

—V—

Both contracting parties assume the following engagements.

a) Upon applying for a patent application for an invention within the "Licensed Field" to send a copy thereof to the other party within two (2) months from the date of filing and to file applications in each country constituting a part of the territory of the other party, and wherever this is done to do everything possible in the prosecution of the application until the issuance of the patent.

If TITAN or the SOCIETE receive similar papers from one of their sublicensees, TITAN and the SOCIETE will re-

ciprocally transmit them within one month from the date of reception accompanied by executed documents or annotations of transfer.

b) Both contracting parties may relieve themselves of the obligations set forth under (a) when remitting to the other party copy of the patent application within two (2) months from the date of filing or with one month after having received it from an associated company together with all necessary documents in order that such application may be filed in each country constituting a part of the territory of the other contracting party together with all papers, drawn if possible according to the International Convention for the Protection of Industrial Property, necessary to transfer the property to the other party. Upon request of TITAN, the SOCIETE will deliver transfer documents in the name of associated companies.

c) Each contracting party agrees in due time to make all legal payments necessary for the maintenance or renewal of patents owned by it or otherwise at its disposal, under which patents the other party or associated companies have an exclusive license, according to the present convention. As concerns North America and possibly eventually South America in the event the TITANIUM PIGMENT COMPANY should take over the latter as its exclusive territory under the provisions of the Agreement of 1920, Article XI, TITAN will have the right to make such payment in the name of the SOCIETE and to be reimbursed by the latter after each such payment is made, and the SOCIETE is under the obligation to inform TITAN in due time of any expirations in order to enable TITAN to make payments without difficulty in the regular way within the required time of any payments becoming due.

d) Each contracting party may avoid paying any part of the cost of obtaining, prosecuting, maintaining, or renewing any patent or patent application under which it holds an exclusive license by submitting to the other party wh has disposed of the exclusive license, as owner, or otherwise, a formal concession renouncing its exclusive license conforming to the law of exclusive licenses, in which case the first party will receive a non-exclusive license.

In the situation where the party who owns the patent or who has the disposition of it is an associated company of TITAN, the concession relinquishing the exclusive license is to be submitted to TITAN and not to the owner of the patent.

e) Each contracting party may relieve itself of the obligation to contribute its share of the cost of maintenance or of the defense of any patent which it owns or which it has at its disposal and under which the other party, or a company, or companies, allied to it have obtained, or will have the right to obtain, an exclusive license by transmitting to the other party a transfer document in good and due form of all of the rights relative thereto of which the party making the transfer has in its possession.

f) TITAN shall have the right to decide upon, and in its own name to carry on at its own expense, all actions or legal measures which TITAN may deem necessary or desirable in order to protect against attack any patent under which an exclusive license has been granted, or duly obtained according the present convention. If TITAN does not desire to carry on any such judicial action in its own name but if the SOCIETE requests this, TITAN will be obligated to proceed upon the condition that the SOCIETE furnish TITAN a sufficient guarantee for the expenses and responsibilities which TITAN may encounter by reason of such action or judiciary measure

undertaken in its name. TITAN shall advise SOCIETE of any such action or measure, and the SOCIETE shall then have the right to participate therein on its account.

g) Similarly, the SOCIETE will have the right to decide upon, and in its own name, to proceed with, at its own expense, any action or judicial measure with the object of protecting any patent under which an exclusive license has been granted, or duly obtained according to the present convention. If so, all expenses relative thereto will be the responsibility of the SOCIETE. If the SOCIETE does not desire to undertake such action, or measure, in its own name, but TITAN requests it, the SOCIETE will have to comply with this request, upon the condition that TITAN furnish the SOCIETE sufficient guarantee for all expenses and responsibilities which the SOCIETE may encounter by reason of such action or judicial measure undertaken in its name. The SOCIETE shall advise TITAN of any such action or judicial measure and TITAN will then have the right to participate therein on its own account.

h) It is understood between the two contracting parties that in case either party should undertake, in the course of the exploitation within their respective territories of its rights within the "Licensed Field", to manufacture as secondary products, titanium compositions or titanium compounds having more than 5% of other metals in the metallic state, the producer will have the right to reduce the content of titanium to less than 0.5% by means of a second treatment and to sell or to improve said secondary products, notwithstanding the patents at the disposal of either party, or of an associated company.

Exhibit B

—VI—

Every exclusive license foreseen by the present agreement will be granted and accepted upon the following special conditions which likewise regulate the maintenance of all licenses and mention of these conditions will have to be inserted in each license agreement:

a) That the licensee shall never contest or oppose any patent under which it has a license nor use it otherwise than as a licensee, nor attack it, nor lend aid or assist financially or otherwise any one opposing any such patent or contesting its fundamental value or validity.

b) That the SOCIETE undertakes the engagement to pay to TITAN, net, free of any tax a royalty of 148.09 Norwegian Crowns per metric ton of TiO_2 produced by the SOCIETE or by any producer obtaining from the SOCIETE a license within the calendar year, or its equivalent in weight of TiO_2 in the event other titanium compositions are produced.

In connection with the exercise of this right of royalty, TITAN shall have the right to verify or to have verified by such representative as it may designate, the production of the factories of the SOCIETE and of every licensee within the territory of the SOCIETE.

c) That the licensee must discharge its obligations according to Article IV, paragraphs (a) and (c) above concerning sales and the designation of an agent.

d) That all charges pertaining to the payment of taxes and of annuities for the maintenance and renewal of a patent under which an exclusive license is granted or expected to be granted according to the present convention,

as well as all future charges pertaining to obtaining a patent as foreseen under (a) of Article V shall be divided equally between the parties and that the party who shall make the payment in advance will be reimbursed by the other party for its share within 60 days after the receipt of a certified account of its expenses.

e) That each party will make at all times, upon request made by the other party, with all diligence to execute and deliver to the latter party all papers or documents, and attend to all necessary accounts, with the view fully to carry out the arrangements and obligations of the present agreement and more specially of anything which pertains to licenses and patents and their maintenance as well as the preparation and filing of patent applications and the attention these require.

f) In case of failure or neglect by one of the parties to the provisions of the present article, the other party shall have the right to point this out to said party by registered letter. If such neglect or omission has not been rectified and repaired within six months from the date such notice was sent, the injured party may whenever it chooses declare the exclusive license null and void by registered letter addressed to the other party. Such declaration of nullity will not relieve the other party of its obligations nor suspend the exclusive licenses of the injured party.

g) That the SOCIETE as a retro-licensee shall undertake toward the TITANIUM PIGMENT COMPANY all of the obligations contained in article XIV, paragraph (a) of the Agreement of 1920 and this even in the event that these obligations for the SOCIETE do not coincide with the other provisions of the present convention.

Exhibit B

—VII—

Each party agrees to cooperate with the other in furnishing a complete semi-annual, exact and detailed report concerning experience acquired and information obtained since the last report, applicable or relating to the "Licensed Field" and will permit the other party to proceed, through its authorized representative with inspections, studies or researches in all of its factories working within the "Licensed Field" except testing laboratories; however, it will not be obligated to accord this privilege to any one who has not undertaken by his signature to assign all his inventions in conformity to Article VIII.

—VIII—

Each contracting party undertakes to impose within reasonable limits upon its managers, associates, representatives and employees the obligation to assign for all countries, their inventions within the "Licensed Field" which may have been made by them or by one of them prior to the date set for the expiration of the exclusive license or any prolongation of the same.

—IX—

Each of the parties undertakes to endeavor, when acquiring patent rights within the "Licensed Field", within reasonable limits to make the other party a beneficiary also thereunder.

—X—

The exclusive licenses constituting the object of the present convention will remain in force until December 31, 1941 inclusive, and shall continue thereafter for 10 year periods unless terminated as herein provided.

of TITAN and of the SOCIETE shall stand as they are established in the present convention.

In the event that the Agreement of July 30, 1920 between TITAN and the TITANIUM PIGMENT COMPANY and the exclusive licenses granted under said contract should terminate before the present convention, the SOCIETE shall be entitled after the termination of the Agreement of July 30, 1920 only to non-exclusive licenses under patents and patent applications under which it was at the time of the termination of said contract the recipient of an exclusive license as well as that which flows from the said contract, and, if TITAN expresses the desire, the SOCIETE shall be obligated to withdraw the exclusive license it may have granted to TITANIUM PIGMENT COMPANY and in their place to give a non-exclusive license, conforming to the terms of Article X of the said agreement and to transfer to TITAN the exclusive right of license, save the restriction resulting from the license granted to TITANIUM PIGMENT COMPANY.

The renunciation of the Agreement of July 30, 1920 between TITAN and TITANIUM PIGMENT COMPANY will not in any way affect the rights and obligations of TITAN and the SOCIETE with respect to the reciprocal exclusive enjoyment of their patents until the end of December, 1941, and all 10 year extensions of the present convention.

—XI—

If TITANIUM PIGMENT COMPANY exercises its option accorded it under the Agreement of July 30, 1920 to appropriate South America as its exclusive territory, the SOCIETE will have to undertake for this territory the same relationship toward TITANIUM PIGMENT COMPANY which applies for that which concerns North America.

Exhibit B

The exclusive licenses of the present convention may be renounced by either party upon written notice addressed to the other party at least six years before the 31st of December, 1941, or before the expiration of any subsequent ten year period.

In the event that the exclusive licenses and the present convention shall become terminated in this manner, each of the parties and all recipients of licenses in its territory, those possessing a license at the time of the termination of the convention, as well as those who subsequently will acquire a license from one of the parties within its territory, or of any part of its territory, according to the preceding definitions, will become possessed of a non-exclusive license within the "Licensed Field" with respect to all inventions, which, at the termination of the convention the other party should own or have at its disposal under patents or patent applications within the "Licensed Field" in any country or locality included within said territory, it being understood that all other conditions, obligations and rights under the present convention will be terminated upon the expiration of the above mentioned period.

If one or more associated companies renounce their agreements with TITAN the latter in its turn will have the right to renounce the licenses which TITAN or alternately the SOCIETE may hold from the associated company which renounced its contract.

The SOCIÈTE and the renouncing company will then have the right and the obligation to consent to and mutually to accept a non-exclusive license, unless transfer of said license is made by TITAN to the party, according to what has been agreed above between TITAN and the SOCIETE, but as for the remainder, the mutual rights and obligations

Exhibit B

—XII—

Each contracting party has the right to assign but only in its entirety, its interests in the present convention together with the transfer of its entire business, persons, buildings or companies assuming the obligations of the party in question and the present convention shall apply in all respects not only to both parties but also to their respective successors and legal representatives.

—XIII—

It is understood that the obligations undertaken by both parties under the present convention shall extend and shall apply to all subsidiaries and branches which either party shall control so that the provisions of the present agreement cannot be avoided by the existence or the creation of subsidiaries or branches.

—XIV—

For all territories outside of France, the SOCIETE shall not have the right to grant any licenses under any patent at its disposal as owner or otherwise, or under which it is the recipient of an exclusive license, according to the present convention, which licenses (or alternatively, sublicenses) do not make of the licensee (or alternatively, retro-licensee) an associated company within the terms of Article I, paragraph (g) of the present convention. The SOCIETE will always be obligated when granting such a license (or alternatively a sub-license) to impose upon the licensee (or alternatively, retro-licensee) all obligations assumed by the SOCIETE itself under the present convention as to selling and the designation of agents outside of France.

Exhibit B

As to licenses (or alternatively, sub-licenses) which would make of the licensee (or alternatively, retro-licensee) an associated company within the terms of Article I, paragraph (g) of the present convention, the SOCIETE shall not have the right to grant it for France or any part of France without the formal and previous explicit consent of TITAN, and TITAN engages never to permit its consent to depend on conditions tending to assure economic advantages to TITAN other than or superior to those to which it is entitled under the present convention.

—XV—

TITAN gives gratuitously to the SOCIETE the use of the mark "KRONOS" which the SOCIETE shall use.

However, the SOCIETE will only have the right to use it for qualities equal or superior to the mark "STANDARD" which TITAN currently produces.

If an inferior quality should be sold, this can only be done under another mark adopted by the SOCIETE.

We beg you to give your accord to the preceding and receive our best regards.

A.

AGREEMENT BETWEEN THE TITAN CO. AND THE J. G.

The Titan Co. A. S. in Fredrikstad, Norway, (hereinafter referred to as "Titan Co.") and the J. G. Farbenindustrie Aktingesellschaft, Frankfurt a.M. (hereinafter referred to as "J.G.") have arranged to cooperate together in the field of the manufacturing and the sale of titanium and titanium compounds. By titanium compounds are understood such substances, materials and compositions which contain 2% or more of the element titanium in a chemically or physically combined state. For the common work the following principles have been agreed:

No. 1

According to the agreement (B) annexed hereto the parties formed a company with limited liability under the name "T-tangesellschaft m.b.H." (hereinafter referred to as "Titangesellschaft").

Exhibit C

It is agreed that always an even number and not less than four managers have to be appointed for the Titangesellschaft and that the Titan Co. and the J. G. has to nominate each the half part of these.

It is intended that the factory which is to be installed by the Titangesellschaft shall produce at first a quantity of 2500 tons of TiO_2 per annum.

In order to obtain a uniform taking care of the interests of both parties a committee is formed, which has to point out the principal lines of management to the managers of the Titangesellschaft. The committee consists of two persons, namely Dr. Jebsen and Dr. Kuhne. A substitute will be named for each of them viz. by the Titan-Co. for Dr. Jebsen and by the J. G. for Dr. Kuhne.

No. 2

Both parties assume the obligation to have the titanium compounds for sale in the following countries exclusively manufactured by the Titangesellschaft and to cover their total requirement of titanium compounds in Germany, Russia, Austria, Hungary, Tschecko-Slovakia, Switzerland, Roumania, Serbia, Croatia-Slavanoa, Bulgaria, Greece, Turkey, Japan, China and Spain exclusively from the Titangesellschaft.

No. 3

According to an agreement (C) annexed hereto made between the J. G. and the Titangesellschaft, the J. G. brought into the Titangesellschaft all their processes in the field of the production of titanium compounds which it has at

present and may have in the future by granting an exclusive license under the respective patents for all countries.

No. 4

According to an agreement (D) annexed hereto and made between the Titan Co. and the Titangesellschaft, the Titan Co. brought into the Titangesellschaft all their processes in the field of production of titanium compounds, which it has at present and may have in the future by granting an exclusive license under the patents for the business territory of the Titangesellschaft. The Titan Co. assumes the obligation to communicate and to disclose to the Titangesellschaft for its manufacturing all experiences and facilities in the field of manufacturing, which it has at its disposal at present.

No. 5

According to a further agreement (E) annexed hereto and made between the J. G. and the Titangesellschaft the J. G. rented a factory-building with ground situated in Wiesdorf-Leverkusen and to be placed at disposal immediately, and assumed the obligation to put at the disposal of the Titangesellschaft steam, gas, water and electricity for its factory and the transportation facilities for its operations.

No. 6

According to a further agreement (F) annexed hereto and made between the J. G. and the Titangesellschaft the Titangesellschaft assumed the obligation to cover its entire requirements of products exclusively from the J. G. and the J. G. assumed the obligation to supply such products to the Titangesellschaft.

Exhibit C

No. 7

According to a further agreement (G) annexed hereto and made between the J. G. and the Titangesellschaft the latter appointed the J. G. its exclusive selling agent for its total production in the business field of the Titangesellschaft excepting the products which are to be supplied to the Titan Co. according to the Par. 9 hereunder.

No. 8

According to a further agreement (H) annexed hereto and made between the Titan Co. and Titangesellschaft the Titan Co. assumed the obligation to supply one to the Titangesellschaft and the Titangesellschaft assumed the obligation to cover its requirements of ore from the Titan Co.

No. 9

According to a further agreement (J) annexed hereto and made between the Titan Co. and the Titangesellschaft the Titangesellschaft assumed the obligation to supply to the Titan Co. on its request its products at the prices fixed in this agreement.

No. 10

The processes which are brought into the Titangesellschaft by the J. G. and those processes which are invented by the Titangesellschaft are to be put gratuitously at the disposal of the Titan Co. respectively its sublicensees by the Titangesellschaft for being exploited in the territory which not belongs to the Titangesellschaft.

Exhibit C

No. 11

The J. G. is obliged, in the interest of the Titan Co. respectively of its sub-licensees, to refrain from every interest in the field of the production and the sale of titanium compounds outside the Titangesellschaft.

No. 12

The J. G. is further obliged, in case it invents a process or is in possession of a process or has at its disposal a process which includes the use and application of titanium compounds by granting licenses under the patent of such a process to impose the obligation on the licensee to cover his requirement of titanium compounds exclusively from the Titan Co. or its licensees or sub-licensees for the country in question respectively from the Titangesellschaft.

No. 13

The obligations assumed by the J. G. according to Par. 11 and 12 cease when the partnership-contract (B) made as per Par. 1 hereunder is changed regarding the interest of the parties in such a manner that a partner transfers all his interest according to Par. 3 of the partnership contract. However, a transfer of the Titan Co.'s interest which is made in exercising its right granted to it in Par. 5 of the partnership-contract is not to be considered such a changement.

No. 14

The Titan Co. is entitled to substitute for itself in this agreement and in the agreements which the Titangesellschaft mentioned hereunder in Par. 4 and 9 (D and J) or

Exhibit C-1

in several of them another company or other companies in which the Titan Co. or the National Lead Co., together or one of them are engaged with 100%. In such a case the new company entering into the contract has to take upon itself the liability for the former partner besides the latter in regard to the respective agreements.

Exhibit C-1

B.

PARTNERSHIP-CONTRACT

Between the Titan Co. A. S. in Fredrikstad, Norway, (hereinafter referred to as "Titan Co.") and the J. G. Farbenindustrie Aktiengesellschaft in Frankfurt a. M. (hereinafter referred to as "J. G.") the following partnership-contract is made:

No. 1

The Titan Co. and the J. G. form a company with limited liability under the name "Titangesellschaft mit beschrankter Haftung." This company has her domicile in Leverkusen.

No. 2

The object of the enterprise is the production and the sale of titanium compounds in the following countries: Germany, Russia, Austria, Hungary, Tschecko-Slovakia, Switzerland, Roumania, Serbia-Croatia-Slovonia, Bulgaria, Greece, Turkey, Japan, China, Spain.

No. 3

The initial capital for the company is RM 500,000.

To this capital each party has to contribute RM 250,000. The parties have to pay at least 25% of this initial contribution before the company will be notified for registration.

No. 4

The business year is the calendar year.

The first business year commences with the registration of the company and ends December 31, 1927.

No. 5

The consent of either party is necessary for disposing of the other party's interest in the business, or of a part of its interest. But it is understood that the Titan Co. has the right to transfer at every time its interest to the National Lead Co. or to any other company in which the Titan Co. or the National Lead Co., together or one of them, are engaged with 100%.

No. 6

The nomination and dismission of the managers is to be made at a meeting of the partners so far as the managers are not already nominated through this contract.

The partners' meeting has the right to nominate several managers. If several managers are nominated, the company is to be represented by at least two managers or by one manager and one proxy or by two proxies. As temporary manager is nominated Direktor Dr. Kuhne, chemist in Wiesdorf-Leverkusen.

No. 7

The partners' meeting is to be called by the managers by registered mail by a week notice at least.

Exhibit C-1

No. 8

In the partners' meeting each RM 1000,—give the right of one vote.

No. 9

The company cannot be dissolved earlier than December 31, 1957. The dissolution takes place, if a partner asks for by registered mail by six months notice. If the termination has not happened on December 31, 1957, it is only allowed on the December 31, 1967, and so further only on the end of a period of ten years.

However, the company can be dissolved already before December 31, 1957, if five consecutive years have brought losses and therefore a partner asks for it by registered mail by six months notice on the end of a calendar year.

In both cases above mentioned such termination has only force if the terminating partner has offered to the other partner at least six months before the termination by registered mail, to transfer to him his interests in the business on payment of a consideration according to the value to be computed on the basis of the company's position at this time without any consideration of a good will, of the patents, and similar, and if the other partner has not accepted this offer by registered mail within five months from the receipt of the offer. In the case that the parties will not agree about the value of the interests to be computed as above mentioned the value is to be fixed by an expert, who is to be nominated by the president of the Chamber of Commerce in Hamburg. The decision of this expert shall bind both parties and shall be definite.

Exhibit C-1

No. 10

In the case of the company's dissolution the liquidators are not allowed to sell or transfer the company's patents and licenses otherwise than together with its marks and in one lot.

No. 11

All notifications of the company are to be published exclusively in the "Deutscher Reichsanzeiger."

Declaration regarding B.

Between the J. G. Farbenindustrie Aktiengesellschaft in Frankfurt a.M. and the Titan Co. A.S. in Fredrikstad (Norway) is agreed that Dr. Kuhne has been nominated as single manager of the Titangesellschaft only therefore because the registration of this company should not be delayed by getting the signatures of the gentlemen who are provided as managers besides Dr. Kuhne.

It is agreed that Mr. Evans McCarty, Dr. Jebsen and Dr. Brüggemann shall be nominated additional managers of the Titangesellschaft in a partners meeting which will be called immediately after the registration of this company.

It is further agreed that Dr. Raspe and another gentleman who will be proposed by the Titan Co. shall be empowered to sign per procuration of the Titangesellschaft.

Exhibit C-2

C.

Between the J. G. Farbenindustrie Aktiegesellschaft in Frankfurt a.M. (hereinafter referred to as "J.G.") and the Titangesellschaft m.b.H. in Leverkusen near Koln a.Rh.

Exhibit C-2

(hereinafter referred to as "Titangesellschaft") the following agreement is made:

No. 1

The Titangesellschaft made today a contract with the Titan Co. A.S. in Fredrikstad (Norway), by which both companies assumed the obligation to grant themselves mutually licensed in the field of the manufacture of titanium compounds on conditions more fully described in the said contract. Referring to this contract the J.G. assumes the obligation to grant to the Titangesellschaft exclusive licenses with the right of granting sub-licenses under all patents, methods and experiences in the "Licensed Field" as named hereinafter.

By the "Licensed Field" is meant all methods and processes in the field of the manufacture of titanium compounds containing two percent or more of the element titanium as well as the titanium compounds themselves. By titanium compounds are understood substances, materials and compositions in which the element titanium is contained in a chemically or physically combined state. For instance, the composition pigments of the character of the titanox belong to them. Simple mixtures do not come under this definition.

No. 2

By filing an Application for Letters Patent on an invention in the "Licensed Field" the J. G. shall within four months from the date of the filing thereof send a copy thereof to the Titangesellschaft. The Titangesellschaft shall inform the J. G. as soon as possible, but not later than within four months from the receipt of the copy of the application for

Letters Patent in which other countries it wishes Applications to be filed on the invention. Then the I. G. shall file the Applications in the countries named by the Titangesellschaft and prosecute the same with care and diligence to patent. Independently of the decision of the Titangesellschaft the I. G. is entitled to file Applications also before the receipt of the Titangesellschaft's answer.

—3—

The I. G. shall be charged with the duty of making in due time all payments lawfully required to maintain and prolong the Letters Patent in the "Licensed Field" as far as the Titangesellschaft does not resign an exclusive license.

—4—

All expenses of obtaining, maintaining or defending any Letters Patent which the I. G. will have in the future are to be paid by the Titangesellschaft. But the Titangesellschaft is relieved of the payment of the expenses for such Patents regarding to which the exclusive license ceased by resignation or otherwise. In this case the Titangesellschaft has only a right to a non exclusive license under the respective Patents.

—5—

The I. G. assumes the obligation to require as far as possible its officers, agents and employees to agree to assign to it through-out the world any and all invention within the "Licensed Field" which may be made by them prior to the time herein fixed for the termination of the exclusive licenses and of any extension of such time.

Exhibit C-2

—6—

The exclusive licenses of the Titangesellschaft shall last as long as the I. G. is interested as partner in the Titangesellschaft according to the partnership contract between the I. G. and the Tita Co. At the termination of such interest the Titangesellschaft received a non exclusive license on all inventions, Patents and Patent Applications which the I. G. owns on the date of the termination for the Titangesellschaft itself as well as for all licensees and sublicensees who have received or later receive a license from the Titangesellschaft.

—7—

The Titangesellschaft and each possessor who has an exclusive sublicense under any patent thereunder have the right to take on its own expenses any step under the law regarding the defence of such a patent and to bring suit to restrain and to recover damages, penalties and profits for infringements of such a patent and to receive for its own benefit any sums recovered by such suits, using; if necessary, the name of the I. G. as owner of the patent, but without recourse. The party bringing such a suit has to give sufficient securities to the I. G. for all expenses and liability which may exist by the steps.

The I. G. shall be notified of said suit immediately upon institution thereof and shall be entitled to intervene at its own expense in such litigation.

—8—

The Titangesellschaft assumes the obligation never directly nor indirectly to question or contest the validity of

any patent under which it is licensed by the I. G., nor to use, nor to infringe the same except as licensed nor to afford any pecuniary or other assistance to any contestant or questioner of such validity.

The I. G. assumes the same obligation in regard to patents of the Titangesellschaft and the companies cooperating with it in the "Licensed Field".

—9—

In the case the I. G. should invent or own or have at its disposal any process which involves the use or application of a titanium compound, it is obliged by granting any license under such process, to impose on the licensee the obligation to cover his requirements of titanium compounds exclusively from the Titangesellschaft respectively its licensees or sublicensees.

—10—

The I. G. assumes the obligation, that in so far as in its power lies, its concerned companies will fully respect this agreement especially the 1, 2, 5, 8 and 9 as if they had made it themselves, and will do nothing against the interest of the Titangesellschaft and the companies cooperating with it in the "Licensed Field".

Exhibit C-3

D

License Agreement between the Titan Co. and the Titangesellschaft.

Between the Titan Co. in Frederikstad, Norway (hereinto referred to as "Titan Co."), and the Titangesellschaft m.b.H. in Leverkusen near Köln a.Rh. (hereinto referred

Exhibit G-3

as to "Titangesellschaft") is the following agreement made regarding the exploitation of the processes for the production of titanium compounds which are at disposal of both parties at present or in the future.

1. DEFINITIONS.

a. *"Licensed Field".*

By this designation as hereinafter employed is meant all methods and processes in the field of the manufacture of titanium compounds containing two per cent (2%) or more of the element titanium as well as the titanium compounds themselves.

By titanium compounds are understood substances materials and compositions in which the element titanium is contained in a chemically or physically combined state. For instance the composition pigments of the character of the titanox belong to them. Simple mixtures do not come under this definition.

b. *"North America".*

By this designation as hereinafter employed is meant the entire continent of that name including the United States, the Dominion of Canada, Newfoundland, Panama and all Central American States, and including also all islands, which are at present considered as being geographically appurtenant to said continent and also including the Philippine and Hawaiian Islands.

c. *"South America".*

By the designation as hereinafter employed is similarly meant the entire continent of that name including all coun-

tries therein located to the south of Panama and also all islands which are at present considered as being geographically appurtenant to said continent.

d. *"Finished Articles"*.

By this designation as hereinafter employed is meant any artificially produced article, or composition, within the "Licensed Field" which has been manufactured by aid of any process, or apparatus, or both, so as to constitute a cohesive intermixture of titanic material with other material with which such titanic material was not previously intermixed, or associated, as for example in paint, rubber, glass, etc.

e. *"Territory of Titangesellschaft"*.

By this designation as hereinafter employed is meant Germany, Russia, Austria, Hungary, Tschecko-Slovakia, Switzerland, Roumania, Serbia-Croatia-Slavonia, Bulgaria, Greece, Turkey, Japan, China and Spain.

f. *"Territory of Titan Co."*

By this designation hereinafter employed is meant all countries which are not mentioned under the territory of Titangesellschaft.

g. *"Allied Companies"*.

By this designation hereinafter employed is meant all enterprises (except Titangesellschaft, Titan Co., Titanium Pigment Co. and licensees for the territory of the Titanium Pigment Co.) which have received or receive a license of the character foreseen in Art. XIV (a) of the Agreement of 1920.

61

Exhibit C-3

h. *"Agreement of 1920"*

By this designation hereinafter employed is meant the Agreement of the July 30, 1920 made between the Titanium Pigment Co. Inc. and the Titan Co. So far as it is referred hereinafter to the clauses of that agreement, those clauses are to be considered as part of this present agreement.

II.

The Titan Co. assumes the obligation to grant to the Titangesellschaft for the territory of the Titangesellschaft on the conditions hereinafter specified a license on the patents, methods and experiences in the licensed field which the Titan Co. now and in the future has at disposal as owner or licensee.

The license includes the exclusive right to the exploitation of all inventions, improvements, and all which belongs to the licensed field.

The Titan Co. assumes the obligation when it grants a license in the territory of the Titangesellschaft on a process which involves the use or application of a titanium compound, to impose on the licensee the obligation to cover his requirements of titanium compounds exclusively from the Titangesellschaft, respectively its sub-licensees.

The customers of the Titangesellschaft but not the Titangesellschaft itself, shall have the right without opposition by the Titan Co. to sell also outside of the territory of the Titangesellschaft materials and products which are characterized under the designation of "Finished Articles"; however, always with the limitation which follows of the conditions of the agreement of 1920 regarding the export of "Finished Articles" to North and South America.

Exhibit C-3

The exclusive licenses shall on the request of the Titangesellschaft be made directly to the allied companies and this request can be made for one or several countries or for one or several patents or patent applications.

III.

The Titangesellschaft assumes the obligation to grant to the (Titangesellschaft) for the territory of the Titan Co. on the conditions hereinafter specified a license on the patents, methods and experiences in the licensed field which the Titangesellschaft now and in the future has at disposal.

The license includes the exclusive right to the exploitation of all inventions, improvements, and all which belongs to the licensed field.

The Titangesellschaft assumes the obligation when it grants a license in the territory of the Titan Co. on a process which involves the use or application of a titanium compound, to impose on the licensee the obligation to cover his requirements of titanium compounds exclusively from the Titan Co. respectively its sub-licensees. The customers of the Titan Co. but not the Titan Co. itself, shall have the right, without opposition by the Titangesellschaft to sell also outside of the territory of the Titan Co. materials and products which are characterized under the designation of "Finished Articles"; however, always with the limitation which follows of the conditions of the Agreement of 1920 regarding the export of "Finished Articles" to North and South America.

The maritime organization of the Titan Co. which deals nearly exclusively in supplying to Skandinavian ships, shall be considered customer of the Titan Co. The Titan Co. will let know the Titagensellschaft from time to time its selling

organs active in its maritime business in the territory of the Titangesellschaft for examining the seize of the business and sales made in the territory of the Titangesellschaft.

The exclusive licenses shall on the request of the Titan Co. be made direct to the allied companies and this request can be made for one or several countries or for one or several patents or patent applications.

IV.

The Titan Co. and the Titangesellschaft assume, mutually, the obligation, with the exception of the cases foreseen in Art. II and III, not direct or indirect to sell to the territory of the other party anything in the "Licensed Field".

The Titan Co. and the Titangesellschaft assume, mutually, the obligation so far as possible to impose this obligation also on their customers. In the case the Titan Co. permits to the Titangesellschaft to sell in or for the territory of the Titan Co. any products in the "Licensed Field", the Titangesellschaft is obliged to make this sale through the Titan Co. The Titan Co. is from now appointed exclusive agent of the Titangesellschaft for the territory of the Titan Co. and remains as such as long as the Titangesellschaft has the right to an exclusive license from the Titan Co.

For North America and eventually South America, in the case the Titanium Pigment Co. acquires the latter as exclusive territory according to Art. XI of the agreement of 1920, the Titangesellschaft shall in any case appoint the Titanium Pigment Co. as exclusive agent in accordance with the Art. VI c of the Agreement of 1920. The Titangesellschaft shall, however, only negotiate with this agent through the Titan Co. and eventual sales shall be dependent on the consent of the Titan Co.

Exhibit C-3.

The Titangesellschaft shall on request of the Titan Co. appoint as exclusive agent an allied company which received an exclusive license of the Titan Co. for its respective territory.

The Titangesellschaft is obliged only to effect such sales orders of the agent as it approves. The agent can fix his own prices and conditions for the resale.

In the case the Titangesellschaft permits to the Titan Co. to sell in or for the territory of the Titangesellschaft any products in the "Licensed Field" the Titan Co. is obliged to make this sale through the Titangesellschaft. The Titangesellschaft is from now appointed exclusive agent of the Titan Co. for the territory of the Titagesellschaft and remains as such as long as the Titan Co. has the right to an exclusive license from the Titangesellschaft

The Titan Co. shall on request of the Titangesellschaft appoint as exclusive agent an allied company which received an exclusive license of the Titangesellschaft for its respective territory.

The Titan Co. is obliged only to effect such sales orders of the agent as it approves. The agent can fix his own prices and conditions for the resale.

Though it is permitted to the customers of the Titangesellschaft by the Art. II and III hereof, to sell materials and products which are characterized under the designation of "Finished Articles", however, both parties shall watch carefully that their customers do not make competition to the one or other company in its respective territory in a manner unwelcome for the other party.

If a company ascertains such a competition of a customer of the other company, the latter shall take the necessary measures, to prevent the customer from continuing the competition.

Exhibit C-3

It seems impossible to fix the particulars of the measures which are necessary for performing this principle. But from time to time the parties will discuss together the conditions of the market and the measures to be taken.

V.

Both parties hereto assume mutually the following obligations:

a. Either party, whenever it files an Application for Letters Patent on an invention in the "Licensed Field", shall within six months from the date of the filing thereof send a copy thereof to the other party and file an Application on the same invention in each country or place which belongs to the other party's territory and prosecute the same with care and diligence to patent.

In the case the Titan Co. or the Titangesellschaft received documents regarding such an application or patent from any of its licensees or sublicensees they shall respectively send these to each other with one month from the date of the receipt, together with the necessary transfer documents.

b. Either party hereto may relieve itself of the obligations assumed by it under subdivision "a" of this Article "V" by sending by registered mail to the other party hereto within two months of the time of the filing by it in any country or place of an Application for Letters Patent on any invention in the "Licensed Field", or within one month from receiving the same from an allied company, a copy of such application with all papers necessary to permit the filing of an application for Letters Patent on the invention covered thereby in each of the countries and places included

within the territory with respect to which an exclusive license to the other party hereunder is hereby granted or provided for, and if possible under the International Convention for the protection of Industrial Property, and with the necessary papers for vesting the ownership thereof, as distinguished from a license in such other party.

c. Each party hereto shall be charged with the duty of making all payments lawfully required to maintain and prolong the Letters Patent owned or controlled by it and with respect to which exclusive licenses are hereby granted or provided for.

Regarding patents of the Titangesellschaft in North America, and eventually South America in the case the Titanium Pigment Co acquires the latter as its exclusive territory according to the Agreement of 1920 Art. XI, the Titan Co. has in any case the right to make the payments in the name of the Titangesellschaft, and to debit the latter for each payment. The Titangesellschaft shall in good time inform the Titan Co. of the terms of the payments, in order to enable the latter to make payments in regular manner without difficulties.

[RE-TRANSLATION (In Pencil)

d. Either party may free itself of its responsibilities for bearing a part of the expenses for obtaining, defending and maintaining or prolonging a patent or a patent application for which it has an exclusive license by informing the other party, who is the owner of the patent or who can dispose of it, of its invention by means of a formal withdrawal of its exclusive license, in which case it will no longer have an exclusive license over the patent.

Exhibit C-3

In case the one who owns or disposes of the patent or the patent application is a company connected with Titan Co. then the withdrawal will have to be directed to Titan Co. and not to the owner.]

d. Either party hereto may relieve itself of its obligation to pay any of the expenses of obtaining, defending, maintaining, or prolonging any Letters Patent or Application for Letters Patent, with respect to which an exclusive license in favor of said party is at any time in force, by delivering to the other party (who is the owner of the patent or who possess disposal rights thereof) a full, complete, and duly executed release of the exclusive license of such party thereunder, in which case the party so renouncing its right shall have a non-exclusive license with respect to the same. In the case the owner or controller of a patent or patent application is an allied company, the release shall be sent to the Titan Co., and not to the owner.

e. Either party hereto may relieve itself of its obligation to pay its share in the expense of maintaining or defending any Letters Patent owned or controlled by it and with respect to which an exclusive license in favor of the other party hereto is hereby granted or provided for by delivering to the other party (the exclusive licensee thereunder) a full, complete, and duly executed assignment of all the right, title, and interest of such party in and to the same.

f. Each party hereto or each possessor who has an exclusive license or exclusive sublicense under any patent thereunder shall have the right to take at its own expenses any step under the law regarding the defence of any patent under which he has granted an exclusive license and to bring suit to restrain and to recover damages, penalties,

and profits for infringements of such a patent, and to receive for its own benefit any sums recovered by such suits, using, if necessary the name of the other party of this agreement, but without recourse and on the condition of giving sufficient security to the owner for all expense and liability, what may exist by the steps. The other party hereto owning or controlling any patent so sued on shall be notified of said suit immediately upon institution thereof and shall be entitled, if it shall so elect, to intervene at its own expense in such litigation.

VI.

The exclusive licenses herein provided for shall be granted and accepted and their continuance dependent on the following conditions to be stated in every license agreement:

a. That the licensee shall never directly nor indirectly question, or contest, the validity of any patent under which it is licensed, nor use nor infringe the same except as licensed, nor directly nor indirectly connive with, nor afford any pecuniary or other assistance to any contestant or questioner of such validity.

b. The Titangesellschaft assumes the obligation to pay to the Titan Co. a royalty on the basis of Norwegian Gold Kroner 25 per ton (1000 kg) TiO_2 for the products produced which come under the present agreement.

The royalty obligation ceases at the end of 1936.

The Titangesellschaft shall within the end of January and July of each year send to the Titan Co. a statement of the production during the last six months on which it has to pay a royalty. On the request of the Titan Co. the state-

ment of the production is to be controlled by a trustee who is convenient to the Titangesellschaft. In the case no agreement can be reached with regard to the person of the trustee, the Chamber of Commerce in Hamburg shall appoint the same.

c. The licensee assumes the obligations of Art. IV.

d. The future cost of paying taxes and annuities necessary for maintaining or prolonging any Letters Patent with respect to which exclusive licenses are hereby granted or provided for, the future cost of defending suits brought to annul or cancel said Letters Patent or any of them, and the future cost of obta' ng Letters Patent, as provided for in section "a" of Art. "V" hereof, shall be equally divided between the Titan Company and the Titangesellschaft and the party making said payments shall be reimbursed by the other party for its share of said payments within sixty days after the receipt of said other party of a verified statement of account evidenced by proper vouchers.

e. Each party hereto shall at all times, on request of the other, duly and with all possible diligence, execute and deliver to said other party any and all additional papers and documents and do and perform all other acts requisite and proper to fully effectuate all provisions and obligations of this agreement, and particularly so as regards all licenses therein referred to, and also all patents and the maintenance and enforcement of the latter, and also the preparation, filing and prosecutions of the applications for patents.

f. In the event that either of the parties hereto at any time or times, violates or neglects performance of any of the conditions hereinabove set forth in this article "VI", the other party, grantor of its exclusive license, may by registered

mail thereto duly addressed notify the delinquent party accordingly. Unless within six months after such mailing of said notice the delinquency has ceased, and satisfaction therefore been made, then in that case the exclusive license hereby granted to the delinquent party may, at the option of the aggrieved party at any time thereafter be terminated by notice to that effect sent by registered mail to the delinquent party by the aggrieved party. But no such termination of license to the delinquent party shall operate to relieve the aggrieved party from its own obligations hereunder, nor terminate its own exclusive license or the sublicenses thereby granted.

g. The Titangesellschaft as receiver of the sublicense from the Titanium Pigment Co. assumes all obligations of Art. XIV a, but without the subsections (1) and (3) of the Agreement of 1920, and this also in the cases where these obligations do not coincide with the conditions of the present agreement.

VII.

Each party hereto agrees that it will cooperate with the other party full and accurate information in details as to knowledge obtained by it since the last report in and applicable to the "Licensed Field" and will permit the other party by its duly accredited representatives, during business hours, to inspection of and study and inquiry in any of its plants, where work in the "Licensed Field" is being done, exclusive of its research laboratories; provided that neither party shall be obliged to accord such permission to any person who is not at the time bound in writing under the signature to assign all his inventions pursuant to the provisions of the following Article VIII.

Exhibit C-3

VIII.

Each party hereto agrees that it will, so far as possible, require its officers, agents and employeed to agree to assign to it throughout the world any and all inventions within the "Licensed Field" which may be made by them or any of them prior to the time herein fixed for the termination of the exclusive licenses and of any extension of such time.

IX.

Each party hereto agrees that in acquiring rights to inventions within the "Licensed Field" it will, so far as possible endeavor to provide that such rights shall extend to all countries or places within the territory with respect to which any license to the other party hereunder is hereby granted or provided for.

X.

The exclusive licenses which are hereby granted or foreseen shall last as long as the Titan Co. or its successor as partner is interested in the Titangesellschaft according to the partnership-contract between the Titan Co. and the I. G. Farbenindustrie Aktiengesellschaft as per annex hereto. At the termination of such interest the parties hereto shall mutually receive a non-exclusive license on all inventions, patents and patent applications which the other party owns or has at its disposal in consequence of licenses on the date of the termination for itself as well as for all licensees and sublicensees who have received or later receive a license from the party within the territory of the respective party.

All other obligations and liabilities as well as benefits resulting from this agreement shall cease.

Exhibit C-3

In the case an agreement between the Titan Co. and one of the allied companies terminates, the Titan Co. has the right to terminate the licenses which the Titan Co. or respectively the Titangesellschaft have received from this company. The Titangesellschaft and the allied company in question have the right and the obligation, mutually, to grant non-exclusive licenses in the case these licenses are not executed by the Titan Co. in accordance with the arrangements agreed upon above between the Titan Co. and the Titangesellschaft. Mutual rights and obligations remain otherwise as agreed in this agreement.

In the case that the agreement of 1920 and exclusive licenses according to that agreement should terminate before the termination of this, the Titangesellschaft has only the right to non-exclusive licenses, as a result of the Agreement of 1920, and the Titangesellschaft obliges itself in the case the Titan Co. so requests to terminate the exclusive lises granted to the Titanium Pigment Co. by the Titangesellschaft and substitute them with non-exclusive licenses in accordance with Art. X of the mentioned agreement, and to transfer to the Titan Co. the right to an exclusive license outside of the license to the Titanium Pigment Co.

The termination of the Agreement of 1920 shall be of no influence on the mutual rights and obligations of the Titan Co. and the Titangesellschaft regarding the exclusive exploitations of their patents and inventions until the termination of the present agreement.

XI.

In the case the Titanium Pigment Co. makes use of the option in the Agreement of 1920 regarding the acqui-

sition of South America as exclusive territory, the Titangesellschaft assumes the obligation for the territory to enter into the same relation with the Titanium Pigment Co. as for North America.

XII.

The interest of either party hereto may be assigned in toto but not otherwise and only in connection with the transfer of the entire business of such party to any person, firm, association, or corporation which assumes the obligations of such party, and this agreement in all respects shall be obligatory, not only upon each of the parties hereto respectively, but also upon their respective assigns, successors and legal representatives.

XIII.

It is understood and agreed that the obligations assumed by each of the parties hereto shall extend to any and all subsidiaries of either of such parties, the control of which is held by either party hereto, to the end that the terms of this agreement shall not be avoided by the existence of formation of affiliated or subsidiary companies.

XIV.

For all countries outside its territory the Titangesellschaft cannot grant a license under a patent which it disposes as owner and otherwise; or under which it has an exclusive license hereunder, without making the licensee or sublicensee to an allied company in the sense of the definition in Art. 1 g. The Titangesellschaft is obliged by the grant of such a license to impose on the licensee the obligation which the Titangesellschaft has assumed hereunder.

Exhibit C-3

XV.

The Titan Co. leaves to the Titangesellschaft the use of the mark "Kronos". The Titangesellschaft assumes the obligation to use this mark, but only for qualities which are equal to or better than the mark "Standard" used now by the Titan Co. If it would become necessary that the Titangesellschaft sells an inferior quality, this sale is to be effected with another new mark to be adopted by the Titangesellschaft.

XVI.

The Titan Co. is entitled to substitute for itself in this agreement another company in which the Titan Co. or the National Lead Co. together or one of them, are engaged with 100%. In this case the company substituted instead of the Titan Co. has to take upon itself besides the Titan Co. the obligations of the latter according to this agreement.

Exhibit C-3

Protocol regarding the license agreements between the I.G. and the Titangesellschaft (C) and between the Titan Co. and the Titangesellschaft (D)

Par. 8 of the license agreement made today between the I. G. Farbenindustrie Aktiengesellschaft and the Titangesellschaft m.b.H. and Art. VI a of the license agreement made today between the Titan Co. A.S. and the Titangesellschaft m.b.H. say that each party shall never directly nor indirectly question or contest the validity of any patent of the other party, nor use nor infringe the same except as licensed, nor directly nor indirectly connive with, nor afford any pecuniary or other assistance to any contestant or questioner of such validity.

All three companies named herebefore agree that it is desirable that all what is said in these clauses about patents shall also apply to patents applications.

They further agree that the Titan Co. will take steps to the Titan Pigment Co. and the Societe Industrielle de Titane for bringing out the consent of these companies to an including the patents applications into their obligations.

As soon as all concerned companies consent, the extension of the obligations to patents applications shall be confirmed expressly as supplement of the agreements.

Exhibit C-4

E

Agreement between the Titangesellschaft and the I. G. regarding the renting, gas, etc., and transports.

Between the Titangesellschaft m.b.H. in Leverkusen near Köln a. Rh. (hereinafter referred to as "Titangesellschaft") and the I. G. Farbenindustries Aktiengesellschaft in Frankfurt a.M. (hereinafter referred to as "I.G.") the following agreement is made:

—1—

The I. G. rents—and only for the purpose of the production of titanium compounds—to the Titangesellschaft a factory building situated in Wiesdorf—Leverkusen and to be placed at disposal immediately with a corresponding ground which is more fully described in the annex.

The annual rent amounts to 6% of the existing building's value fixed to RM 375.000,—and 6% of the value of all alteration and all increasing of the building. On the Titangesellschaft's request the I. G. has to make alterations and wings on the ground rented.

All taxes and charges which concern the building and the ground are to be paid by the Titangesellschaft. The I. G. assumes the upkeep and repairs of the exterior of the building, whereas the upkeep of the interior of the building has to be assumed by the Titangesellschaft. The insurance premium on the building have to be carried by the Titangesellschaft.

—2—

The I. G. assumes the obligation to put at the disposal of the Titangesellschaft in the factory building leased from

the I. G. according to the #1 steam, gas, water and electricity in quantities required from the Titangesellschaft for its factory at self-cost at the place of delivery. In the case of differences regarding the self-cost, the Titangesellschaft or a partner of it is entitled to have the vouchers controlled by a trustee, who is convenient to the I. G. In the case no agreement can be reached with regard to the person of the trustee, the Chamber of Commerce in Hamburg shall appoint the same.

—3—

The I. G. assumes the obligation to put at disposal of the Titangesellschaft at reasonable prices the transportation facilities within the scope of their usual transport operations in their work Leverkusen, which are necessary for the operations of the Titangesellschaft in the leased building.

—4—

This contract valids for the during of the I. G.'s interest in the Titangesellschaft. When the I. G. transfers all its shares to the Titan Co. or to a third person, the contract ceases two years after the transfer.

Amended by agreement dated May 18, 1928—original and translation attached to Mr. McCarty's letter to M. D. C. of June 15, 1928 this file. M. D. C.

Exhibit C-5

F.

AGREEMENT BETWEEN THE TITANGESELLSCHAFT AND THE I. G. REGARDING THE SUPPLY OF PRODUCTS

Between the Titangesellschaft m.b.H. in Leverkusen near Köln a Rh. (hereinafter referred to as "Titangesellschaft".) and the I. G. Farbenindustrie Aktiengesellschaft in Frankfurt A.M. (hereinafter referred to as "I. G.") the following agreement is made:

—1—

The Titangesellschaft assumes the obligation to cover exclusively from the I. G. its entire requirements of products produced and at disposal resp. purchased by the I. G. at self-cost and 10% respectively at standing-in prices, with the right of the most-favored. The I. G. assumes the obligation to cover the Titangesellschaft's requirement of products manufactured by it on these conditions.

—2—

In case the self-cost and 10% respectively the standing-in price during three consecutive months is higher than proved offers from the competition, or if the I. G. is not able to cover the requirements of the Titangesellschaft the latter is entitled to cover its requirements of manufactured products otherwise.

—3—

The self-cost is to be computed according to a schedule agreed between both parties and annexed to this contract. In the case of differences regarding the self-cost or stand-

ing-in price the Titangesellschaft or a partner of it is entitled to have the vouchers controlled by a trustee, who is convenient to the I. G. In the case no agreement can be reached with regard to the person of the trustee, the Chamber of Commerce in Hamburg shall appoint the same on application of both parties.

The Titangesellschaft has to observe silence about the invoiced standing-in price.

—4—

This contract valids for the during of the I. G.'s interest in the Titangesellschaft. When the I. G. transfers all its shares to the Titan Co. or to a third person, the contract ceases two years after the transfer.

Exhibit C-6

G.

AGREEMENT BETWEEN THE TITANGESELLSCHAFT AND THE I. G. REGARDING THE AGENCY

Between the Titangesellschaft m.b.H. in Leverkusen near Köhn a Rh. (hereinafter referred to as "Titangesellschaft") and the I. G. Farbenindustrie Aktiengesellschaft in Frankfurt a.M. (hereinafter referred to as "I. G.") the following arrangement is made:

1.

The Titangesellschaft appoints the I. G. its exclusive selling agent for its total production for the following countries: Germany, Russia, Austria, Hungaria, Tschecko-Slovakia, Switzerland, Roumania, Serbia-Croatia-Slavonia, Bulgaria, Greece, Turkey, Japan, China, Spain. The prices are to be fixed by the Titangesellschaft. The proceeds from the sales through the agency of the products of the Titangesellschaft are to be handed over to the Titangesellschaft after deduction of a commission of at first 5%.

2.

The sale is to be effected through the sales organization of the I.G. without the consent of the Titiangesellschaft the I. G. is not entitled to transfer the exclusive sale for any country or territory to anybody who deals for his own account.

3.

The sale of the products of the Titangesellschaft has to be made exclusively with the use of its brands and marks.

Exhibit C-6

4.

All papers resulting from the sale of the products of the Titangesellschaft, especially all registers of clients, correspondence etc. remain respectively become the property of the Titangesellschaft and are to be delivered to it at the termination of the sales activity of the I. G. for the Titangesellschaft.

5.

In the case the I. G. neglects grossly the sale of the products of the Titangesellschaft, the latter is entitled to withdraw the exclusive agency and to carry on the sale either itself either by other agents.

6.

Besides the validity of this agreement expires only and then automatically either if the Titangesellschaft will be liquidated or if the one partner transfers all his shares of the Titangesellschaft, excepted this transfer is made by the Titan Co. on the authority of its right granted in Par. 5 of the partnership-contract made between the Titan Co. and the I. G.

7.

It is known to the I. G. that according to Art. III of the license agreement made between the Titangesellschaft and the Titan Co. the maritime organization of the Titan Co. which deals nearly exclusively in supplying to Skandinavian ships, shall be considered customer of the Titan Co.; and that the Titan Co. will let know the Titangesellschaft from time to time its selling agents active in its maritime business in the countries named in Par. 1 hereunder and the sales effected by them, for examining the seize of the business and sales made in these countries.

Exhibit C-7

H.

AGREEMENT BETWEEN THE TITANGESELLSCHAFT AND THE TITAN CO. REGARDING THE SUPPLY OF ORE.

Between the Titangesellschaft m.b.H. in Leverkusen near Köln a Rh. (hereinafter referred to as "Titangesellschaft") and the Titan Co. A. S. in Frederikstad, Norway, (hereinafter referred to as "Titan Co.") the following agreement is made:

1.

The Titan Co. is obliged to supply to the Titangesellschaft on its request for the requirement of its manufacturing ore in a quantity and at a price favorable to the Titangesellschaft. The approximate requirement of the Titangesellschaft has to be given to the Titan Co. in time, latest until November 1 for the following calendar year. The quantity requested has to be taken in consideration according to the actual orders by a fair division without any regard to the price.

2.

The Titan Co. supplies to the Titangesellschaft at the following price: An original cost excluding any amortization as to the annexed schedule is computed which the Titangesellschaft or a partner of it is entitled to control by a trustee who is convenient to the Titan Co. In the case no agreement can be reached with regard to the person of the trustee, the Chamber of Commerce in Hamburg shall appoint the same.

Exhibit C-7

To the original price it is added an extra of Norwegian Gold Kroner:

Kr.14—for the ton (1000 kg) 40% good at a total production of the Titan Co. until 12,500 tons the year

Kr13—for the ton (1000 kg) 40% good at a total production of the Titan Co. until 15,000 tons the year

Kr.12—for the ton (1000 kg) 40% goods at a total production of the Titan Co. until 17,500 tons the year

Kr.11—for the ton (1000 kg.) 40% good at a total production of the Titan Co. until 20,000 tons the year

Kr.10—for the ton (1000 kg) 40% good at a total production of the Titan Co. over 20,000 tons the year.

If the good contains more or less of TiO2 than 40% reckoned on dry good, the extra is to be risen or reduced for 7½% for the present Ti02. The Titan Co. guarantees a highest price of Gold Kronor 40, 50 for the ton 40% good f.o.b. Raegefjord, Norway + 1 Gold Krone for the percent TiO2 more or less contents. The Titan Co. reserves for itself the right to supply the goods damp with a percentage of water not exceeding 8%.

3.

The Titangesellschaft is obliged to cover its requirement in preference from the Titan Co. In the case the Titangesellschaft gets proved orders for supply from another side at lower price and the Titan Co. does not reduce its price proportionately, the Titangesellschaft is entitled to buy from another side.

Exhibit C-7

4.

The validity of this contract expires only and then automatically if the Titangesellschaft will be liquidated.

In the case the Titan Co. transfers all its shares to the I. G. Farbenindustrie Aktiengesellschaft or to a third person, the contract ceases two years after the transfer, excepted this transfer is made by the Titan Co. on the authority of its right granted in #5 of the partnership-contract made between the Titan Co. and the I. G. Farbenindustrie Aktiengesellschaft.

Exhibit C-8

J.

Agreement between the Titangesellschaft and the Titan Co. regarding the supply of products.

Between the Titangesellschaft m. b. H. in Leverkusen near Köln a Rh. (hereinafter referred to as "Titangesellschaft" and the Titan Co. A. S. in Frederikstad, Norway, (hereinafter referred to as "Titan Co.") the following agreement is made:

1.

It is contemplated that the Titan Co. will reduce or close its production for a time, if it can buy the products of the Titangesellschaft from the latter cheaper than it can produce itself. If the Titan Co. wishes to buy from the Titangesellschaft at the original cost, the latter is obliged to supply the quantities fixed from year to year, but latest three months before the beginning of the respective year.

2.

The original cost is to be computed according to a schedule agreed between both parties as annexed to this contract. In the case of differences regarding the original cost the Titan Co. is entitled to have the vouchers controlled by a trustee who is convenient to the Titangesellschaft. In the case no agreement can be reached with regard to the person of the trustee, the Chamber of Commerce in Hamburg shall appoint the same.

The Titan Co. is entitled to take 50% of the capacity of the Titangesellschaft's work at the original cost. For the quantities taken by the Titan Co. exceeding 50% of this capacity, an additional of 10% of the original cost is made.

Exhibit C-8

3.

In the case the Titan Co. gives notice of its requirement in due course, the Titangesellschaft is willing and obliged to increase its capacity of fabrication in an adequate way.

4.

The validity of this agreement expires only and then automatically if the Titan Co. transfers all its shares of the Titangesellschaft to the I. G. Farbenindustrie Aktiengesellschaft or to a third person, excepted this transfer is made on the authority of the Titan Co.'s right granted in #5 of the partnership-contract made between the Titan Co. and the I. G. Farbenindustrie Aktiegesellschaft.

5.

The Titan Co. is entitled to substitute for itself in this agreement another company in which the Titan Co. or the National Lead Co., together or one of them, are engaged with 100%. In such a case the new company entering into the contract has to take upon itself besides the Titan Co. the obligation of the latter according to this agreement.

Exhibit C-9

Translated from German.

Between the Titan Company Inc. and its associated Titanium companies the practice has developed to exchange licences in patent cases covering subject matters which are beyond the licensing obligation determined by contracts between the companies, but which are of interest for the production, use and sale of products within the Licenced Field, as for instance:

Recovery of materials used in the titanium industry (e. g. sulphuric acid), utilization of by-products (e. g. copperas), production of extenders, apparatus and the use of titanium pigments and compounds as well as of by-products and extenders.

It is agreed between the contract firms that when a firm offers such a licence outside its contractual obligation, it means—unless reservations are made—that the inventor company (respectively the company granting the licence), as far as it within its power and not contrary to legal regulations, is willing to give to the other companies, on current agreement conditions, the rights to the use of the invention for the purposes of the production, use and sale of products within the Licensed Field under any patents outside its territory.

It is foreseen that in cases where the receiving company (licencee) is not interested in an exclusive licence for the purposes mentioned above, it will be reserved a non-exclusive licence for these purposes.

This provision shall apply both to offers of licences made in the past and to those to be made in the future.

Exhibit C-9

This arrangement is only to be applied to associated companies which in general act or will act reciprocally.

The expression "associated companies" as used above is meant to cover any company which has or will acquire a licence of the character described in Article XIV, paragr. a) of the agreement of 1920, and further the firm E. I. Du Pont de Nemours & Co., Wilmington, Delaware, U. S. A.

TITAN COMPANY INC. TITANGESELLSCHAFT m.b.H.

Exhibit D

AGREEMENT

between The Titan Company Inc. of Delaware, U. S. A. hereinafter referred to as Incorporated, and Titan Co. A/S. of Fredriksstad, Norway, hereinafter referred to as A/S.

A/S. is in possession of certain patent rights and methods as well as of various rights according to special contracts concerning the production and sale of Titan products, viz.:

1. Contract of July 30, 1920 between A/S. and the Titanium Pigment Company Inc. together with contracts of even date with National Lead Company and Titanium Alloy Manufacturing Company, and additional Agreement of March 15th 1928 between the A/S. and the aforesaid three companies.

2. License Agreement of October 18th 1922 transferred to and accepted by Societe Industrielle du Titane with change according to letter of May 9th 1928 from Titan Co. A/S. to Societe Industrielle du Titane and accepted by the last one.

3. a. Contract of October 3rd/20th 1927 with the I. G. Farbeinidustrie Aktiengesellschaft, designated as Contract A.

   b. Contract of October 3rd/20th 1927 with Titangesellschaft m. b. H., designated as Contract D., together with protocol of the same date concerning the said Contract D. and additional Agreement of the same date between I. G. Farbenindustrie Aktiengesellschaft and A/S. concerning alterations of Paragraph 5 a. and b. of the said Contract D. executed through

Exhibit D

letters between I. G. Farbenindustrie Aktiengesellschaft and A/S. of May 8th and June 9th 1928.

c. Contract of October 3rd/20th 1927 with Titangesellschaft m. b. H., designated as Contract J.

Incorporated is beforehand fully acquainted with these contracts as well as with the contract of October 3rd/20th 1927 concerning Titangesellschaft m. b. H. and designated as B. C. E. F. G. and H.

In addition to the patent rights and methods which have been dealt with and covered by the above under 1. to 3. specified contracts, A/S. is in possession of other letters patent and of applications for letters patent conferring patent monopolies in the "Licensed Field" as defined in the above-mentioned agreement with Titanium Pigment Company Inc. of July 30th 1920.

A/S. transfers to Incorporated against payment as stipulated below all its patents and patent rights and the contracts specified under 1. to 3. above to the effect that A/S. is hereby replaced by Incorporated as a party to these contracts as if the name of Incorporated had been inserted in the contracts instead of the name of A/S.

The transfer of the contracts is subject to the consent of the different parties thereto—other than A/S.—and A/S. obliges itself to use its "bona officia" in order to obtain such consent.

Incorporated shall pay to A/S. a royalty of Twenty-five Norwegian gold crowns for each metric ton of One Thousand kilogrammes (1000 Kg.) produced by Incorporated or its licensees or sub-licensees in Europe in any calendar year of titanium dioxid (TiO_2), or its equivalent if other com-

Exhibit D

pounds of titanium are produced. This royalty to be paid within one month after the expiration of the calendar year.

Incorporated assumes—for itself and for all its licensees and sub-licensees on whose production this royalty is applicable—an obligation to keep exact records concerning the contents of TiO_2 in all products for sale as well as records concerning the produced quantities of each of such products.

For the purpose of control, A/S. shall have the right to examine by a Chartered Accountant the original books containing the said records as well as documents which may possibly serve as a control of the books or records. If the parties do not agree upon the nomination of such a Chartered Accountant, this one shall be nominated by "Oslo Börs og Handelskomite".

As regards the royalties from the licenses or sub-licensees of Incorporated, A/S. is willing to accept the system which Incorporated has established for the control of its own rights. A/S. is entitled to claim certified copies of the results of such control.

Any dispute concerning the quantities on which royalties has to be paid is to be decided by "Den Tekniske Voldgiftsret i Oslo".

The obligation to pay such royalties expires at the end of the year 1936, the production of this year being the last one on which to pay royalties.

Incorporated shall further pay to A/S. an amount of One Million Six Hundred Thousand Norwegian Crowns (N.Kr. 1,600,000.00) plus interest at four per cent. (4%) per annum from January 1st 1929. A/S. is willing to accept the payment to be liquidated in a corresponding part of its indebtedness to National Lead Company.

According to agreement between A/S. and Det Norske Aktieselskab for Elektrokemisk Industri of November

Exhibit D

23rd 1916, amended by additional agreement of June 10th 1927, A/S. is under obligation to pay to Det Norske Aktieselskab for Elektrokemisk Industri Twenty per cent. (20%) of its net profit from sale of Non-European patents or licenses. It is hereby agreed that if A/S. through this obligation shall have to pay to Det Norske Aktieselskab for Elektrokemisk Industri an amount of more than One Hundred Thousand Norwegian Crowns (N.Kr. 100,000.00), Incorporated shall indemnify A/S. for such exceeding amount.

The economical benefit and obligations derivated or to be derivated from the rights and obligations transferred by the present agreement are to be settled between the the parties as if the transfer had taken place on January 1st 1929.

Fredriksstad, Norway,
March 23rd, 1929.

TITAN Co. A/S

Exhibit E-1

THIS AGREEMENT, entered into as of the first day of January, 1936 by and between TITANIUM PIGMENT COMPANY, INC., a corporation organized under the laws of the State of Maine (hereinafter called "Titanium"), KREBS PIGMENT & COLOR CORPORATION, a corporation organized under the laws of the State of Delaware (hereinafter called "Krebs"), and E. I. du PONT de NEMOURS & COMPANY, a corporation organized under the laws of the State of Delaware (hereinafter called "du Pont"),

WITNESSETH:

WHEREAS Titanium and Krebs entered into an agreement dated January 31, 1933, providing for the granting to each other of licenses under their respective inventions within the "Licensed Field" as therein defined; and

WHEREAS the manufacturing and research assets and business of Krebs were transferred to du Pont as of December 31, 1935, and du Pont intends to conduct through a separate department, known as its Krebs Pigments Department, the manfacturing and research activities which heretofore have been carried on by Krebs; and

WHEREAS the parties desire that the rights and obligations of Krebs under the aforesaid contract be assigned to and assumed by du Pont without changing the scope or practical operation of said agreement;

NOW, THEREFORE, in consideration of the premises and of the covenants contained herein, the rights and obligations of Krebs under the aforesaid contract of January 1, 1933 and under all licenses heretofore granted by or to Krebs pursuant to said contract are hereby assigned to

and assumed by du Pont, with the consent of Titanium; provided, however, that the "Licensed Field", as defined in said contract, and the rights and privileges granted under said contract and licenses, shall not be deemed to include or apply to any methods, processes, apparatus or products of du Pont other than those which relate primarily to or come within the scope of the activities regularly conducted by its Krebs Pigments Department.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their officers thereunto duly authorized and their corporate seals to be hereto affixed, as of the day and year first above written.

THIS AGREEMENT, entered into as of the 31st day of October, 1936, by and between E. I. DU PONT DE NEMOURS AND COMPANY, a corporation organized under the laws of the State of Delaware (hereinafter called "DU PONT"), TITANIUM PIGMENT COMPANY, INC., a corporation organized under the laws of the State of Maine (hereinafter called "TITANIUM"), and NATIONAL LEAD COMPANY, a corporation organized under the laws of the State of New Jersey (hereinafter called "NATIONAL"),

WITNESSETH:

WHEREAS, TITANIUM and KREBS PIGMENT & COLOR CORPORATION, (hereinafter called "KREBS"), entered into an agreement dated January 1, 1933, providing for the granting to each of licenses under their respective inventions within the "Licensed Field" as therein defined; and

WHEREAS, DU PONT is the successor in interest of the said KREBS and by virtue of an agreement between TITANIUM, KREBS and DU PONT, dated January 1, 1936, has assumed the rights and obligations of KREBS under said agreement of January 1, 1933; and

WHEREAS the manufacturing and research assets and business of TITANIUM were transferred to NATIONAL as of October 31, 1936, and NATIONAL intends to conduct through a separate division, known as its Titanium Division, the manufacturing and research activities which heretofore have been carried on by TITANIUM; and

WHEREAS, the parties desire that the rights and obligations of TITANIUM under the aforesaid contract be assigned

Exhibit E-2

to and assumed by NATIONAL without changing the scope or practical operation of said agreement;

NOW, THEREFORE, in consideration of the premises and of the covenants contained herein, the rights and obligations of TITANIUM under the aforesaid contract of January 1, 1933 and under all licenses heretofore granted by or to TITANIUM pursuant to said contract are hereby assigned to and assumed by NATIONAL, with the consent of DU PONT; provided, however, that the "Licensed Field", as defined in said contract, and the rights and privileges granted under said contract and licenses, shall not be deemed to include or apply to any methods, processes, apparatus or products of NATIONAL other than those which relate primarily to or come within the scope of the activities regularly conducted by its Titanium Division.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their officers thereunto duly authorized and their corporate seals to be hereto affixed, as of the day and year first above written.

Titan Co. A/S
Fredrikstad, Norway.

Sirs,

We are in receipt of your letter of March 3, 1927, in which you kindly confirm to us the conditions of the grant of licenses.

We thank you for this and we are glad to give you our approval.

Yours very truly,

SOCIETE INDUSTRIELLE DU TITANE

An Administrator — (Sign.) Paul Gilbert

An Administrator — (Sign.) S. J. Henrikssen.

Wilmington, Delaware, U. S. A.

Paris, March 22nd 1939.

SJH/MH

Ch. F. Kaegebehn Esq.,
National Lead Co.
New York.

Dear Mr. Kaegebehn,

License Agreement Ste Industrielle du Titane.

In reply to your letter of March 10th, the situation as regards Societe Industrielle du Titane is, in a few words, that already in 1922 Titan Co.A/S made an arrangement with the French Company Societe Miniere Franco-Bresilienne regarding the sale of titanium in France, and it was foreseen to constitute a French Company with which Titan Co.A/S should enter into a license agreement according to a draft dated October 18th 1922.

As Société Industrielle du Titane was constituted in 1925 but the license agreement only executed by exchange of letters in 1927 (letter from Titan Co.A/S of March 3rd approved by Ste Industrielle du Titane with letter of July 12.1927), the draft agreement of 1922 had in the meantime and also later been referred to as the license agreement between Titan Co.A/S and Ste Industrielle du Titane.

Exhibit B-3

This practice has been discontinued later and we now refer to Titan Co.A/S's letter of March 3rd 1927.

You also mention the "protocol of May 1st 1925." In case you have no copy of this protocol, I may mention that it represents the agreement between the parties which finally, in 1925, organized Societe Industrielle du Titane, confirming the anticipated license agreement.

The letter of May 9. 1928 which you mention is a letter from Titan Co.A/S to Societe Industrielle du Titane which was approved by the latter company. It represents Societe Industrielle du Titane's approval of the license agreement with Titangesellschaft.

For your files and those of Mr. Cole I take pleasure in enclosing two copies each of the letter from Titan Co.A/S of March 3. 1927 and of Ste Titane's reply of July 12th as well as of the letter of May 9th 1928.

Yours very truly,

S. J. HENRIKSSEN

Paris

Dear Sirs,

Re the extension of the exchange of patent licenses between Titan Company Inc. and it's associated titanium companies.

Referring to conference, we beg to confirm the following:

It has been the practice to exchange licenses in patent cases covering subject matters which are partly or wholly outside the Licensed Field as defined in the respective License Agreements, but which are of interest for the production, use and sale of products within the Licensed Field, as for instance: recovery of materials used in the titanium industry (e.g. surphuric acid), utilization of by-products (e.g. copperas), production of extenders, apparatus and the use of titanium pigments and compounds as well as of by-products and extenders.

It is agreed that when such patent applications or patents are offered by one associated company to the other associated companies, it means—unless reservations are

made—that the inventor company (respectively the company granting the license) as far as it is within its power is willing to give, on current agreement conditions, to the other companies rights to the use of the invention for the purposes of the production, use and sale of products within the Licensed Field under any patents outside its territory.

It is specifically understood that in cases where the receiving company (licensee) is not interested in an exclusive license for the purposes mentioned above, it will be reserved a non-exclusive license for these purposes.

This agreement is only to be applied to associated companies which in general act or will act reciprocally.

The expression "associated companies" as used above is meant to cover any company which has or will acquire a license of the character described in Article XIV, paragra.) of the agreement of 1920, and further the firm E. I. Du Pont de Nemours & Co., Wilmington, Delaware, U.S.A.

For the sake of order we should be obliged if you would kindly confirm your agreement to the above and remain,

Yours very truly,

TITAN COMPANY INC.

London E.C.4.

Dear Mr. McCarthy,

RE: *The transfers to Titan Co. Inc. of the rights and obligations of the Titan Co. A/S derived from the agreements of 3/20 October 1927 with the I.G.*

In the Memo of 17th July concerning three letters from the I.G. and one from T.G. m;b.H regarding the various transfers to T.Co.Inc. the paragraph 3 and 4 concerning the conditions for the transfer of the above mentioned rights a slip has occurred, as the condition mentioned under 1 and 2, that the Titan Co A/S also in the future remains responsible besides the Titan Co Inc. for all obligations, also pertains to these transfers.

This condition has also been provided for in the agreement of 1927, although there is a difference, as the agreement of 1927 can be interpreted in such a way "that the responsibility of T.Co.A/S only can be made effective after it is proved that the substitute (T.Co.Inc.) has not fulfilled its obligation, whereas the letters of June 15th requests that the Titan Co A/S shall remain responsible besides the T.Co.Inc".

Mr. Vogt has in a latter pointed out the difference in the interpretation of the agreement of 1927 as he sees it. He finds it reasonable though, that we accept the condition as expressed in the letters. Mr. Vogt will send me an English translation of his letter, which will be forwarded to you.

Dr. Brüggemann has pointed out to me, that the intention has always been the one expressed by the condition in the letter, and I think he is right.

I remember the permission in paragraph XIV Contract A. was only given after considerable argument.

I am sorry that the Memo is not complete, and further that the same slip has also occurred in the translations made at this office of the two letters of June 15th to Titan Co A/S from the I.G. and the T.G. m.b.H. In these two letters the words "besides you" should come after "The Titan Co. Inc. New-York".

The English translation as made by Mr. Mathias of Art. XIV, Agreement A. 1927 is:

"The Titan Co is entitled to substitute for itself in this "agreement and in the agreements with the Titangesell-"schaft mentioned hereunder in Par.4. and 9. (D. and J.) "or in several of them another company or other companies "in which the Titan Co or the National Lead Co together "or one of them, are engaged with 100%. In such a case

Exhibit D-1

"the new company entering into the contract has to take "upon itself the liability for the former partner besides the "latter in regard to the respective agreements"."

Yours very truly,

P.S.—Enclosed follows the corrected translation of the 2 letters of June 15th to Titan Co A/S from the I.G. and the T.G. m.b.H.

Titan Co A/S
Fredriksstad.

We hereby beg to declare, that we agree that the Titan Co Inc. of New-York, besides you, enters into all the rights and obligations which your Company has entered into according to the agreements of 3/20th October 1927 between you and ourselves.

The assumption for this agreement is that the National Lead Company of New-York participates and will continue to participate with at least 86% in the Titan Co. Inc., and that a reduction of this proportion of participation to the extent of 86%, can only be made after beforehand having obtained our express consent.

We ask you to please acknowledge receipt of this letter and at the same time expressly confirm to us your agreement to the above.

TITAN-Gesellschaft m.b.H.

Exhibit D-1

Translated from German

I.G. Farbenindustrie Aktiengesellschaft

Leverkusen, June 15th 1929.

Titan Co A/S.
Fredriksstad.

Referring to the agreements of the 3rd/20th October 1927 entered into between you and us, regarding the production and the sale of Titanium and Titanium Compounds, we hereby declare that we agree, that the Titan Co. Inc. of New-York, besides you, enters into all the rights and obligations which your company has according to the agreements of the 3rd/20th October 1927 entered into between you and our firm, respectively the Titangesellschaft m.b.H.

The assumption for this agreement is that the National Lead Co of New-York participates and will continue to participate, with at least 86% in the Titan Co. Inc., and that a reduction of this proportion of participation to the extent of 86% can only be made after beforehand having obtained our express consent.

We ask you to expressly confirm to us by letter your agreement to the above, particularly the continuation of your liabilities according to the above mentioned agreements of the 3rd/20th October 1927.

I. G. Farbenindustrie Aktiengesellschaft

(sign.) Kühne Brüggemann

Exhibit E-3

AGREEMENT

This agreement, made and entered into this 1st day of January 1941, by and between NATIONAL LEAD COMPANY (hereinafter called NATIONAL), a corporation organized and existing under and by virtue of the laws of the State of New Jersey, and having a principal office and place of business in New York, New York, and E. I. DU PONT DE NEMOURS AND COMPANY (hereinafter called DU PONT) a corporation organized and existing under and by virtue of the laws of the State of Delaware, and having a principal office and place of business in Wilmington, Delaware;

WITNESSETH,

WHEREAS, on January 1, 1933, THE TITANIUM PIGMENT COMPANY, INC., a corporation organized and existing under the laws of the State of Maine, and KREBS PIGMENT AND COLOR CORPORATION, a corporation organized and existing under the laws of the State of Delaware, entered into an agreement providing for the granting to each other of certain licenses under their respective inventions and within the "Licensed Field" defined in said agreement; and

WHEREAS, under an instrument dated January 1, 1936, by and between DU PONT, said TITANIUM PIGMENT COMPANY, INC., and said KREBS PIGMENT AND COLOR COPORATION, DU PONT became assigned of and assumed all of the rights and obligations of the KREBS PIGMENT AND COLOR CORPORATION under said January 1, 1933 agreement with-

Exhibit E-3

out changing in any wise the scope or effect of said agreement, as more specifically provided for in said instrument;

WHEREAS, under an instrument dated October 31, 1936, by and between NATIONAL, said TITANIUM PIGMENT COMPANY, INC., and DU PONT, NATIONAL became assigned of and assumed all of the rights and obligations of THE TITANIUM PIGMENT COMPANY, INC. under said January 1, 1933 agreement without changing in any wise the scope or effect of said agreement, as more specifically provided for in said instrument;

WHEREAS, NATIONAL and DU PONT, as the respective assignees under said agreement dated January 1, 1933 between THE TITANIUM PIGMENT COMPANY, INC. and KREBS PIGMENT AND COLOR CORPORATION, desire to amend the same;

NOW, THEREFORE, in consideration of the premises and the mutual promises, covenants and undertakings hereinafter set forth, it is hereby mutually agreed between NATIONAL and DU PONT that said January 1, 1933 agreement shall be and the same is hereby amended as follows, to-wit:

1. That Article I of said agreement be canceled and in lieu thereof the following article be substituted:

ARTICLE I

"The term 'Licensed Field', wherever herein employed shall be deemed to include (1) all methods, processes and apparatus in the field of manufacture and use of all titanium compounds containing two per cent. (2%) or more of the

element titanium in a chemically, mechanically or physically combined state, and mixtures thereof, which can be used as pigments, whether or not adapted for other uses, and also inorganic extenders to be used in conjunction with such titanium compounds; and (2) all such titanium compounds and mixtures which can be used as pigments, whether or not adapted for other uses; and also inorganic extenders to be used in conjunction with such titanium compounds; provided, however, titanated lithopone shall not be deemed as included within said Licensed Field."

2. That the first paragraph of Article II of said agreement be canceled and that the following be substituted therefor:

"NATIONAL and DU PONT, during the term of this agreement, grant to each other, within the limits of said Licensed Field and as to which NATIONAL or DU PONT is or shall be free to grant such rights, an irrevocable and non-exclusive right and license, throughout the United States of America, its territories, colonies and possessions, present and future:

(a) under all original or reissue Letters Patent of the United States, now or hereafter owned or controlled by either party;

(b) under all applications for Letters Patent of the United States now or hereafter owned or controlled by either party and which have been pending for a period of at least six months from date of filing by either party; and

(c) under all pending applications for Letters Patent of the United States purchased or acquired by NATIONAL or DU PONT from third parties, after the lapse of a period of

six months' time from their date of filing; provided, however, that in event any such application shall be pending for more than six months or shall issue to patent prior to expiration of said six months' period, the license herein provided for under any such application and/or patent shall be deemed to exist as of the date of such purchase or acquisition or the date of issue of said patent."

"It is understood and agreed that the rights vested in the parties hereto shall include the right to sell the products resulting from the use of any licensed process, method and apparatus of manufacture described in the licensed patents and/or applications, throughout the United States of America, its territories, colonies and possessions, present and future, Mexico, Central America, the West Indies, and South America."

3. That Article III of said agreement be canceled and in lieu thereof the following Article be substituted:

ARTICLE III

"Each party hereto agrees not later than six months from the date of filing of any application for Letters Patent of the United States which either party may file, purchase or acquire for any invention within the Licensed Field to make full disclosure to the other of the specifications and claims under any such application. It is understood and agreed that the disclosures contemplated by this Article shall be made only by and to officials specifically designated in writing for that purpose by the respective parties hereto."

4. That Article V of said agreement be canceled and in lieu thereof the following Article be substituted:

Exhibit E-3

ARTICLE V

"Each party hereto agrees during the term of this agreement to use its best efforts (but without any obligation to incur out-of-pocket expense) to assist the other to acquire, on terms as favorable as possible to the other, an irrevocable and non-exclusive right and license to manufacture, use and sell, within the limits of the Licensed Field and licensed territory, under any United States original or reissue Letters Patent, or under any application for United States Letters Patent or reissue which has been pending for a period of not less than six (6) months from its filing date, owned by or otherwise at the disposal of other companies, firms or individuals, domestic or foreign, under which such party hereto itself is licensed.

"DU PONT further agrees that not later than six months after the filing date of any licensed application for Letters Patent of the United States it will offer to any foreign associate of NATIONAL that may be designated by NATIONAL, before offering to any other person, firm or corporation, the opportunity to acquire, upon mutually satisfactory terms and conditions, an irrevocable and non-exclusive license, within the limits of the Licensed Field aforesaid, under any application or patent relating to the Licensed Field filed or issued in any country of Continental Europe or in Great Britain, which now is or hereafter and during the term of this agreement may be owned by or otherwise at the disposal of DU PONT."

5/ It is understood and agreed between the parties hereto that except as specifically modified hereinabove, each and all of the other provisions of said agreement of Janu-

ary 1, 1933 shall remain in full force and effect and that the amendment and cancellation herein provided for shall not in any manner operate to terminate, restrict or impair the licenses heretofore acquired by either party from the other under said January 1, 1933 agreement; that the licenses provided for in Article II of said agreement of January 1, 1933, as hereinabove amended, and excepting for the specific inclusion of inorganic extenders within the Licensed Field, shall not be construed as extending to or including any patent or application therefor which would not have been licensed by virtue of said January 1, 1933 agreement; that, further, the rights and obligations assumed by DU PONT herein shall not exceed those assumed by it under the above-mentioned January 1, 1936 assignment from Krebs to DU PONT; that the "Licensed Field", as herein defined, and the rights and privileges granted in pursuance hereof and said agreement of January 1, 1933 shall be subject to all conditions of the aforesaid assignment and shall not be deemed to include or apply to any methods, processes, apparatus, uses or products of DU PONT other than those which relate primarily to or come within the scope of the activities now regularly conducted by its Krebs Pigments Department; likewise, said Licensed Field and the rights and privileges granted in pursuance hereof and said agreement of January 1, 1933 shall be subject to all conditions of the aforesaid assignment and shall not be deemed to include or apply to any methods, processes, apparatus, uses or products of NATIONAL other than those which relate primarily to or come within the scope of the activities now regularly conducted by its Titanium Division.

IN WITNESS WHEREOF, the parties hereto have caused this agreement to be executed, in duplicate, by their respec-

tive proper officers, duly authorized, and their respective corporate seals to be hereunto affixed as of the day and year first above written.

Exhibit F

THIS AGREEMENT made the 16th day of February 1933 BETWEEN IMPERIAL CHEMICAL INDUSTRIES LIMITED (hereinafter called "I.C.I.") of the first part IMPERIAL SMELTING CORPORATION LIMITED (hereinafter called "I.S.C.") of the second part GOODLASS WALL AND LEAD INDUSTRIES LIMITED (hereinafter called "G.W.") of the third part and TITAN COMPANY INCORPORATED a Company incorporated under the laws of the State of Delaware U.S.A. having an office at 111 Broadway New York City U.S.A. (hereinafter called "Titanine") of the fourth part.

WHEREAS:—

(1) The parties hereto have agreed to co-operate in the manufacture and sale of titanium and titanium compounds (which expression whenever used in this Agreement means substances materials and compositions in which the element titanium is contained in a chemically or physically combined state to the extent of more than Two per cent. but excluding simple mixtures).

(2) Titanine possesses patent rights and processes for the production of titanium compounds and particularly for the production of various qualities of titanium white or

titanium dioxide which products are manufactured on an important scale in accordance with such patent rights and processes in factories at Leverkusen in Germany and at St. Louis U.S.A.

(3) These patent rights were acquired by Titaninc from Titan Company A/S of Norway which originally started this industry in Norway and in 1920 made an agreement with the Titanium Pigment Company Inc. U.S.A. (which carries on a similar industry in U.S.A.) with a view to close co-operation between those two Companies for the development of the industry.

(4) Titaninc has also made agreements with I.G. Farbenindustrie and with Titangesellschaft m.b.H. with a view to co-operation and the exchange of technical and chemical experience for the development of the titanium industry.

(5) I.S.C. has caused an English Company to be formed under the name of British Titan Products Limited with a nominal capital of £25,000. This Company is a private Company and so far only six shares of £1 each in the share capital of the Company have been taken up. This Company is hereinafter called "British Titan."

NOW THIS AGREEMENT WITNESSETH AND IT IS HEREBY AGREED by and between the parties hereto as follows:—

1. BRITISH TITAN shall have the sole right of manufacture and sale of titanium and titanium compounds throughout the British Empire as at present constituted (including British Protectorates and Mandated Territories but excluding Canada Newfoundland British Honduras Demerara the Falkland Islands the West Indies and islands

geographically appurtenant to the Continent of North America) and Egypt and all parties hereto will satisfy all their requirements for titanium compounds for manufacture therefrom and/or for sale in the British Empire as above defined by purchasing them from British Titan and will use all endeavours and take all measures in their power to ensure that their respective subsidiary and associated companies will satisfy their requirements in like manner. PROVIDED nevertheless that British Titan shall be able and willing at all times to supply such titanium compounds at competitive prices and of the qualities required.

2. TITANINC and British Titan shall forthwith enter into a License Agreement substantially in the form of the Draft Agreement set forth in the First Schedule hereto with such modifications therein if any as may be approved by all the parties to this Agreement and I.C.I. I.S.C. and G.W. shall each of them forthwith enter into a License Agreement with British Titan substantially in the form of the Draft set forth in the Second Schedule hereto with such modifications therein if any as may be approved by all the parties to this Agreement.

3. TITANINC shall forthwith enter into Agreements with British Titan for the transfer to British Titan of the existing business and goodwill of Titaninc in titanium products in the British Empire including British Protectorates and Mandated Territories (except Canada Newfoundland British Honduras Demerara the Falkland Islands and the West Indies and islands geographically appurtenant to the Continent of North America) and Egypt substantially in the form of the Draft Agreements set forth in the Third and

Fourth Schedules hereto with such modifications therein if any as may be approved by all the parties to this Agreement.

4. THE share capital of British Titan shall forthwith be reorganized as follows that is to say:

(*a*) The share capital shall be increased to £150,000 consisting of 25,000 "A" shares of £1 each which shall be issued for cash and 125,000 "B" shares of £1 each which shall be issued credited as fully paid up to Titaninc as consideration for the transfer by Titaninc to British Titan of the existing British business and goodwill of Titaninc in titanium products and the carrying out by Titaninc of the obligations imposed on it by the Agreement contained in the Third Schedule hereto.

The "A" shares shall carry the following rights:—

(1) The right to repayment of capital and arrears of dividend on a winding-up in priority to the "B" shares and to receive the whole of the surplus assets remaining after payment of the liabilities and payment in full of the capital and arrears of dividends of the "A" and "B" shares.

(2) The right to a first cumulative preferential dividend of 7 per cent. and also to the balance of the distributable profits after payment of a dividend on the "B" shares.

(3) The voting right of one vote per share.

The "B" shares shall carry the following rights:—

(1) The right to repayment of capital and arrears of dividend on a winding-up after the repayment of the capital and arrears of dividend of the "A" shares.

(2) The right to a fixed cumulative preferential dividend of 6 per cent. ranking after the fixed cumulative preferential dividend on the "A" shares.

(3) The right of one vote per share which however is only to be exercisable in relation to alterations of the rights of the "B" Shareholders or the winding up of the Company or the selling or approving of the sale of the business of the Company or in the event of the dividend on the "B" shares being in arrear on any date after the 31st day of December 1935.

5. THE "A" shares of British Titan shall be subscribed in cash at par in the following proportions:—

Titaninc	£12,250 or 49 per cent.
I.C.I.	£4,250 or 17 per cent.
I.S.C.	£4,250 or 17 per cent.
G.W.	£4,250 or 17 per cent.

and any further new share capital required shall be subscribed by the parties hereto in the like proportions by subscribing for further "A" shares in cash at par.

6. EXCEPT in so far as is otherwise herein provided during the continuance of this Agreement no party hereto shall transfer or part with the possession of any of its shares in British Titan except with the written consent of all the other parties to this Agreement and the transferee shall agree to be bound by all the obligations hereof so far as they are binding on the transferor PROVIDED that (1) on any holder of "A" shares transferring or parting with the possession of the whole of his "A" shares the provisions of Clause 11 hereof shall bind such holder for a period of five

years after the date of such transfer but so that nothing in the said Clause 11 shall restrict Titaninc or any of its allies or affiliated companies outside the British Empire (as herein defined) and Egypt (2) Titaninc shall be entitled to transfer or have allotted to R. W. Greeff & Co. Ltd. not more than 1,250 of its "A" shares and any other "A" shares which on a further issue of capital Titaninc would be entitled to subscribe in respect of any shares allotted or transferred to R. W. Greeff & Co. Ltd. in pursuance of this clause on such terms as it may think fit and for the purpose of the next succeeding clause of this Agreement such shares shall be deemed to be part of Titaninc's participation (3) that R. W. Greeff & Co. Ltd. shall be entitled at all times to re-transfer to Titaninc any of the said "A" shares so allotted or transferred to them free from the restriction contained in proviso (1), (4) that any party hereto shall be entitled to have any of its shares in British Titan allotted to or to transfer any of its said shares to any subsidiary Company in which it owns the whole of the share capital and any shares so held by any such subsidiary Company may be transferred to its parent company being a party hereto or to another subsidiary Company in which that party owns the whole of the share capital. Provided that the holding of any of such shares by any such subsidiary Company shall in no way relieve any party hereto from any of its obligations hereunder and Provided Also that if any such subsidiary Company shall cease to be wholly owned by its parent Company being a party hereto that party will procure the shares concerned to be transferred either to itself or to another subsidiary Company in which it owns the whole of the share capital and (5) that any party hereto shall be entitled to transfer to a nominee or nominees for

the purpose only of qualifying such nominee or nominees as a Director or Directors of British Titan such shares in British Titan as shall be necessary for that purpose.

The Articles of Association of British Titan shall provide that on any sale of "A" shares the same shall first be offered to the other holders of "A" shares and that if acceptances are received in respect of more shares than are offered the shares offered shall be transferred to the other holders proportionately to their respective holdings.

7. THE Board of British Titan shall consist of not more than six Directors of whom Titaninc shall be entitled to nominate and from time to time to remove and replace three and I.C.I. I.S.C. and G.W. shall each be entitled to nominate and from time to time to remove and replace one. In the event of a variation in the proportions of the "A" shares held by the various parties to this Agreement an adjustment shall be made in the proportional representation to which the parties are entitled on the Board of British Titan.

8. THE Chairman of the Board of British Titan shall be such one of the Directors nominated by I.C.I. I.S.C. and G.W. as may be agreed between the parties hereto and shall have a casting vote.

9. THE question of the erection of a factory in England by British Titan is to be left for the decision of the Board after full examination of the circumstances.

10. THE requisite alterations in the Articles of Association of British Titan shall be forthwith made to give effect to the provisions of this Agreement.

11. DURING the continuance of this Agreement I.C.I. I.S.C. and G.W. agree that they will not nor will any of

them deal in or manufacture titanium compounds, (as defined in Scheduled Agreement No. 1) except through or at the request of British Titan and these parties undertake to use all endeavours and take all measures in their power to ensure that their respective Subsidiary and Associated Companies shall observe the like restrictions. Provided nevertheless that this provision shall not apply to the manufacture and/or sale of Titanium tetrachloride by I.C.I. or any of its subsidiary or associated companies.

12. UNTIL British Titan has commenced to manufacture titanium compounds and for two years thereafter Titaninc will arrange for the supply of titanium compounds manufactured by Titangesellschaft Leverkusen Germany and Titaninc and British Titan will forthwith enter into an Agreement substantially in the form of the Draft Agreement set forth in the Fifth Schedule hereto with such modifications therein if any as may be agreed to by all the parties hereto.

13. SUBJECT to the provisions elsewhere contained in this Agreement and to the continued existence during that time of British Titan this Agreement shall remain in force for thirty years from the date hereof. If at or at any time after the expiration of that period any party shall wish to retire from the provisions of this Agreement it shall be entitled to do so provided it has previously given twelve months' notice in writing to that effect to the other parties hereto. Any party so retiring shall offer to the remaining parties the right to purchase the whole of the "A" shares in British Titan then held by the retiring party at a price to be determined by mutual agreement and corresponding to the book value of the shares without taking into account any

values of patents trade marks or goodwill and in default of agreement the price shall be settled by arbitration in accordance with the provisions of the Arbitration Act 1889. Should the remaining parties be unwilling to purchase the whole of the "A" shares so offered to them by the retiring party the retiring party shall have the right to require British Titan to be voluntarily wound up and in that event each of the remaining parties shall use their voting power in British Titan to put that company into voluntary liquidation.

14. SHOULD the Agreement of 1920 referred to in the third recital to this Agreement cease or determine prior to the expiration of thirty years from the date of this Agreement each party to this Agreement shall have the right to retire from the provisions of this Agreement by giving to the other parties notice in writing to that effect within six calendar months of the date when notice of the cessation or determination of the said Agreement of 1920 is received by British Titan. Such retiring party or parties shall have similar obligations to those contained in the last preceding Clause of this Agreement to offer to the remaining parties the right to purchase the "A" shares in British Titan of such retiring party or parties and to require that Company to be wound up should the remaining parties be unwilling to purchase the whole of the "A" shares so offered to them. Save as expressly provided by this clause or by the preceding clause no party hereto shall without the consent of all the other parties hereto use its voting power in British Titan to put that Company into voluntary liquidation.

15. ON any party exercising his option under Clauses 13 or 14 hereof the provisions of Clause 11 hereof shall

bind him for a period of five years after the date when he ceases to be a shareholder unless British Titan is wound up in pursuance of either of the said Clauses 13 or 14 but as regards Titaninc nothing in the said Clause 11 shall restrict it or any of its subsiidary or associated Companies outside the British Empire (as herein defined) and Egypt.

IN WITNESS whereof the parties hereto have entered into these presents.

THE SCHEDULES.

FIRST SCHEDULE—AGREEMENT to be made between Titaninc and British Titan for exclusive licence for British Empire.

SECOND SCHEDULE—AGREEMENT to be made between I.C.I. I.S.C. and G.W. respectively and British Titan for exclusive licence for the world (with modifications applicable to I.C.I.)

THIRD SCHDULE—AGREEMENT between Titaninc and British Titan forming title to "B" shares in British Titan to be allotted to Titaninc for the consideration therein mentioned.

FOURTH SCHEDULE—AGREEMENT between Titaninc and British Titan for transfer of British Business and sale of Stocks (with Agency Agreement with R. W. Greeff & Co. Ltd. scheduled).

FIFTH SCHEDULE—AGREEMENT between Titaninc and British Titan for supply of Titanium products from Leverkusen.

129

Exhibit F-1

SCHEDULED AGREEMENT NO. 1.

AN AGREEMENT made the 10th day of March 1933 Between TITAN COMPANY INCORPORATED a Company incorporated under the Laws of the State of Delaware U.S.A. and having an office at 111 Broadway New York U.S.A. (hereinafter referred to as "Titaninc" which expression includes its successors and permitted assigns) of the one part and BRITISH TITAN PRODUCTS COMPANY LIMITED a Company incorporated under the Laws of England and having its registered office at 95 Gresham Street London (hereinafter referred to as "British Titan" which expression includes its successors and permitted assigns) of the other part.

WHEREBY IT IS AGREED AND DECLARED as follows:—

ARTICLE I.

In this Agreement the under-mentioned expressions shall have the meanings set opposite to them respectivly as follows:—

(*a*) "Licensed Field" means and includes all methods and processes in the field of the manufacture of Titanium compounds containing two percent. or more of the element Titanium and also includes the Titanium compounds themselves.

By Titanium compounds is meant substances materials and compositions in which the element Titanium is contained in a chemically or physically combined state.

For instance composition pigments of the character of titanox belong to them. Simple mixtures do not come under this definition.

There are excluded from the Licensed Field substances materials or compositions which contain by weight more than 5 per cent. of a metal other than Titanium in its purely metallic (*i.e.* chemically uncombined) state.

(*b*) "North America" includes the entire continent of that name including U.S.A. Dominion of Canada Newfoundland Panama and all Central American States and also all islands which were on the 30th July 1920 considered as being geographically appurtenant to the continent of North America and also the Philippine and Hawaiian Islands.

(*c*) "South America" similarly includes the entire continent of that name including all countries therein located to the South of Panama and also all islands which were on the 30th July 1920 considered as being geographically appurtenant to the said continent.

(*d*) "Finished Articles" means any artificially manufactured article or mixture which has been produced by the aid of any Titanium Compound within the Licensed Field in such a manner that the product constitutes a cohesive inter-mixture of such Titanium compound with other materials as for instance paint rubber glass etc.

(*e*) "Territory of British Titan" includes the whole of the British Empire as at present constituted including British Protectorates and Mandated Territories (except the Dominion of Canada Newfoundland British

Exhibit F-1

Honduras Demerara Falkland Islands and the West Indies and islands geographically appurtenant to the continent of North America) and Egypt.

(*f*) "Territory of Titaninc" includes all countries outside the Territory of British Titan.

(*g*) "Allied Companies" means all companies firms and commercial or industrial enterprises (other than British Titan Titaninc the Titanium Pigment Co. and licensees for the Territory of the Titanium Pigment Co.) which have received or shall receive a license of the nature referred to in Article XIV (*a*) of the Agreement of 1920 or in Article XIV hereof.

(*h*) "Agreement of 1920" means the Agreement dated 30th July 1920 between the Titanium Pigment Co. Inc. and the Titan Co. A/S since transferred to Titaninc.

ARTICLE II.

Titaninc grants and agrees to grant to British Titan for the territory of British Titan an exclusive licence in respect of all or any patents processes and subject matter within the scope of the Licensed Field of which Titaninc now is or may hereafter become the beneficial owner or in respect of which Titaninc now is or may hereafter become entitled to grant for such territory an exclusive licence and a non-exclusive licence in respect of all or any patents processes and subject matter within the scope of the Licensed Field as to which Titaninc now is or may hereafter become entitled to grant or may be entitled to obtain the right to grant for such territory a non-exclusive licence solely for the purpose

of the production of titanium compounds within the Licensed Field with full rights throughout the territory of British Titan to manufacture and/or use and/or sell titanium compounds so produced and with the right to grant sub-licences wherever Titaninc has or is entitled to obtain power to confer such right subject always to the conditions contained in this Agreement.

If Titaninc shall grant a licence in the Territory of British Titan in respect of any process involving the use or application of a Titanium compound such licence shall so far as may be lawful require that such compound shall only be purchased from British Titan or its sub-licensees unless in any particular case Titaninc satisfies British Titan that such a stipulation is impracticable.

No objection shall be made to customers of British Titan or of its exclusive licensees or sub-licensees selling Finished Articles in the Territory of Titaninc but so that any such sales to North America shall be kept within the limits imposed by the Note to Article VI (*c*) of the Agreement of 1920 but no such sales shall be made by British Titan itself.

Exclusive licences shall on the written request of British Titan be granted direct to Allied Companies in respect of the whole or any part of British Titan's Territory or in respect of all or any one or more of the patents or patent applications.

ARTICLE III.

British Titan grants and agrees to grant to Titaninc for the territory of Titaninc an exclusive licence in respect of all or any patents processes and subject matter within the

scope of the Licensed Field of which British Titan now is or may hereafter become the beneficial owner or in respect of which British Titan is or may hereafter become entitled to grant for such territory an exclusive licence and a non-exclusive licence in respect of all or any patents processes and subject matter within the scope of the Licensed Field as to which British Titan now is or may hereafter become entitled to grant or is entitled to obtain the right to grant for such territory a non-exclusive licence solely for the purpose of the production of titanium compounds within the Licensed Field with full rights throughout the territory of Titaninc to manufacture and/or use and/or sell titanium compounds so produced and with the right to grant sub-licences wherever British Titan has or is entitled to obtain power to confer such right subject always to the conditions contained in this Agreement.

If British Titan shall grant a licence in the Territory of Titaninc in respect of any process involving the use or application of a Titanium compound such licence shall so far as may be lawful require that such compound shall only be purchased from Titaninc or its sub-licensees unless in any particular case British Titan satisfies Titaninc that such a stipulation is impracticable.

No objection shall be made to customers of Titaninc or its exclusive licensees or sub-licensees selling Finished Articles in the Territory of British Titan but no such sales shall be made by Titaninc itself. Provided however (i) any sales within the Territory of British Titan by customers of the Titanium Pigment Company in North America are to be kept within the limits imposed by the Note to Article VI (*c*) of the Agreement of 1920 and (ii) the Maritime Organisation of the Titan Company A/S (which deals

almost exclusively in supplying Scandinavian ships) shall be entitled to make any sales of paste and paint for ships in the Territory of British Titan. Titaninc shall upon request inform British Titan as to sales made in the Territory of British Titan by the said Maritime Organisation and will provide any further information that may be necessary to enable British Titan to form an opinion as to the size of the business and sales and if the business and sales to ships other than Scandinavian ships should become sufficiently important as to interfere substantially with British Titan's sales of its own Titanium products within its territory Titaninc agrees on being satisfied of such interference to take all reasonable steps to bring about the limitation of such business and sales to dimensions which will cause no such interference.

Exclusive licences shall on the written request of Titaninc be granted direct to Allied Companies in respect of the whole or any part of Titaninc's Territory or in respect of all or any one or more of the patents or patent applications.

Article IV

Except to the extent provided for in the preceding Articles II and III hereof or as may be otherwise specifically agreed between the parties hereto neither of the parties hereto shall without the consent of the other sell or knowingly permit to be sold within the Territory of the other party any of the products within the scope of the Licensed Field and to this end each of the parties hereto shall take all reasonable steps to ensure that this obligation shall be observed by their respective customers.

Exhibit F-1

If either party should at any time permit the other party to sell within or for importation into the territory of the first party any products within the scope of the Licensed Field the following provisions shall have effect:—

(1) The party to whom such permission is granted (herein called "the Principal Party") shall make such sale or procure such sale to be made through the agency of the party granting such permission (herein referred to as "the Agent Party").

(2) Each party irrevocably appoints the other party its exclusive agent for the sale of the said products in the territory of such other party.

(3) Such appointment shall continue so long as the Principal Party has the right to an exclusive licence from the Agent Party.

(4) In the case of North America British Titan shall appoint the Titanium Pigment Co. its exclusive agent in accordance with the provisions of Article VI (*c*) of the Agreement of 1920 but British Titan shall only deal with its agent through Titaninc and all sales to be made by such agent shall depend on the consent of Titaninc.

(5) The Principal Party on the written request of the Agent Party shall appoint as exclusive agent an Allied Company which has received an exclusive licence for any part of its territory to which such licence relates.

(6) The Agent Party may fix its own prices and conditions for the re-sale of any such products but the Principal Party shall not be obliged to effect sales against any orders of which it does not approve.

Exhibit F-1

(7) Each party undertakes to endeavor to prevent its customers from competing with the other in that other's territory to its detriment in the sale of Finished Articles permitted under Articles II and III respectively. The measures to be taken for this purpose are to be discussed and agreed on from time to time.

ARTICLE V.

The parties hereto mutually agree with each other to observe and perform the following obligations viz:—

(a) 1. Either party whenever it files an application for Letters Patent on an invention in the Licensed Field, shall within two months from the date of filing send a copy thereof to the other party with information as to the countries or places included in the territory of the other party in which such applicant party will file an application on such invention. The other party shall thereafter as soon as possible but not later than four months from the receipt of the copy of the said application for patent cause the applicant party to be informed by suitable notice which country or countries included in its territory such other party its licensees and/or sub-licensees request applications for patent on the said invention to be filed therein. The applicant party must then file an application for patent on the invention in each of the countries so designated to it and prosecute the same with care and diligence to patent.

2. The applicant party has the right to file applications for patent in its own name in the territory of the other party before receiving any information from the

other party as to the filing of such applications for patent as hereinbefore provided.

3. If either party hereto shall receive information as to the application by any other person firm or company for Letters Patent in the Licensed Field in respect of which it shall be entitled to an exclusive licence or to grant an exclusive licence it shall forthwith pass on such information to the other party as if it had itself applied for such Letters Patent under the foregoing clauses.

(*b*) Either party hereto may relieve itself of the obligations assumed by it under sub-clause (*a*) 1 hereof with respect to any or all of the countries designated by the other party by sending by registered mail to the other party within two months of the time of its receipt of said notice of designation from the other party a copy of the said application for patent on the invention with all papers necessary to permit the filing of an application in the country or countries within the territory with respect to which an exclusive licence has been therein granted or is contemplated by this Agreement to the other party and so far as possible under the provisions of the International Convention for the protection of Industrial Property and with the necessary papers for vesting the ownership thereof as distinguished from a licence in such other party.

(*c*) Each party hereto shall make all payments lawfully required to maintain and prolong the Letters Patent owned or controlled by it and with respect to which exclusive licences are hereby granted or provided for

such payments to be ultimately divided as provided in Article VI (*d*) hereof.

With respect to patents of British Titan in North America Titaninc shall be entitled to make the payments in the name of British Titan and to debit them for each payment. British Titan shall within reasonable time before any such payment becomes due inform Titaninc of the due date thereof to enable such payments to be made in a regular manner and without difficulty.

(*d*) Either party hereto may relieve itself of its obligation to pay any part of the expenses of obtaining defending maintaining or prolonging any Letters Patent or Application for Letters Patent with respect to which an exclusive licence in favour of such party is at the time in force by delivering to the other party owning or controlling the same a full and duly executed Release of the exclusive licence of such party thereunder in which case the party so renouncing its right shall have a non-exclusive licence in respect of the same.

Where the owner or controller of a patent or patent application is as regards Titaninc an Allied Company the Release shall be sent to Titaninc and not to such owner or controller.

(*e*) Either party hereto may relieve itself of its obligation to pay its share of the expenses of maintaining and defending any Letters Patent owned or controlled by it and with respect to which an exclusive licence in favour of the other party is hereby granted or provided for by delivering to the other party (the exclusive licencee thereunder) a full complete and duly executed assignment of all the right title and interest of such party in and to the same.

Exhibit F-1

(*f*) Either party hereto or any exclusive licensee or sub-licensee under any Patent hereunder shall be entitled at its own expense (but subject to the provisions of Article VI (*d*) in the case of the defence of any action brought to annul or cancel any Letters Patent) to institute and/or defend any action regarding any patent in the Licensed Field in any territory with respect to which an exclusive licence or sub-licence to such party is hereby granted or provided for and in particular to restrain or to recover damages penalties or profits for infringement and to receive for its own benefit any sums recovered by such action using where necessary but under indemnity the name of the owner of the patent. The party taking such steps must before so doing provide satisfactory security to the owner of the patent for such indemnity. Notice shall be given by the party taking such steps to the owner or controller of the patent in question who may if it shall so elect enter at its own expense into such litigation and any damages recovered shall in such case be divided between the parties in such manner as they shall agree to be fair and equitable.

ARTICLE VI.

The exclusive licences herein provided for shall be expressly stated or shall be deemed to be given and accepted and their continuance dependent upon the following conditions:—

(*a*) That the licensee shall neither directly nor indirectly question or contest the validity of any patent under which it is licensed or use or infringe the same beyond the limits of the licence nor directly or indirectly

connive with or afford any pecuniary or other assistance to a contestant or questioner of such validity.

(*b*) British Titan shall pay to Titaninc a royalty of 25 Norwegian Kroner for every metric ton of 1,000 Kg. of titanium dioxide (TiO_2) or its equivalent (if other compounds of titanium are produced) produced by it or its licensees or sub-licensees in any calendar year up to and including the year 1936. Such royalty shall be paid twice yearly as soon as practicable before the 31st January and 31st July in every year and shall be accompanied by a statement showing the production during the six months ended 31st December or 30th June as the case may be on which such royalty is payable. Titaninc shall have the right to have the statement checked by some accountant or other person acceptable to British Titan or in the event of disagreement to be appointed by the President for the time being of the Institute of Chartered Accountants in London. After the cesser of the said royalty British Titan shall continue to submit to Titaninc half-yearly statements of production.

(*c*) The Licensee shall faithfully perform and observe the obligations of Article IV hereof so far as they are applicable to the Licensee.

(*d*) The future cost of paying taxes fees and other periodical sums necessary for maintaining or prolonging any Letters Patent with respect to which exclusive licences are hereby granted or provided for the future cost of defending suits brought to annul or cancel said Letters Patent or any of them and the future cost of obtaining Letters Patent as provided for in section (*a*)

of Article V hereof shall be equally divided between Titanine and British Titan and the party making such payments shall be reimbursed by the other party for its share of the said payments within sixty days after the receipt by the other party of a verified statement of account evidenced by appropriate vouchers.

(*e*) Each party hereto shall at all times on request of the other duly and with all possible diligence execute and deliver to such other party all additional papers and documents and do and perform all other acts requisite and proper to fully effectuate all the provisions and obligations of this Agreement and particularly as regards all licences herein referred to and also all patents and the maintenance and enforcement of the same and the preparation filing and prosecution of applications for patents.

(*f*) In the event of either of the parties hereto at any time violating or failing to perform any of the conditions contained in this Article VI the other party may by notice in writing duly despatched by registered post notify the delinquent party accordingly. Unless within six months after such despatch the delinquency has ceased and satisfaction has been made the exclusive licence hereby granted to the delinquent party may at the option of the aggrieved party at any time thereafter be determined by notice sent by registered post to the delinquent party by the aggrieved party but no such termination of licence shall operate to relieve the aggrieved party from its own obligations under this Agreement nor terminate the exclusive licence or sub-licences granted to it hereunder.

(*g*) British Titan as received of the sub-licences from the Titanium Pigment Company assumes all the

obligations of Article XIV (*a*) of the Agreement of 1920 (except sub-section 1 which is to be substituted by a clause similar in all respects to Clause VI (*b*) hereof so far as refers to statements of production and sub-section 3 which is to substituted by clauses similar in all respects to Clauses V (*a*) and (*b*) hereof) and as regards such sub-licences where such obligations differ from those hereunder the obligations under the said Article XIV (*a*) (with the above exceptions) shall prevail.

ARTICLE VII.

EACH party hereto agrees that it will co-operate with the other party by imparting semi-annually to the other party full and accurate information in detail as to knowledge obtained by it since the last report in and applicable to the Licensed Field and will permit the other party by its duly accredited representatives during business hours to inspect study and enquire into any of its plants where work in the Licensed Field is being done exclusive of its research laboratories provided that neither party shall be obliged to accord such permission to any person who is not at the time bound in writing under his signature to assign all his inventions pursuant to the provisions of the following Article VIII.

ARTICLE VIII.

EACH party hereto agrees that it will so far as possible require its officers agents and employees to agree to assign to it throughout the world any and all inventions within the Licensed Field which may be made by them or any of

them prior to the time herein fixed for the termination of the exclusive licences and of any extension of such time.

ARTICLE IX.

EACH party hereto agrees that in acquiring rights to inventions within the Licensed Field it will so far as possible endeavour to provide that such rights shall extend to all countries or places within the territory with respect to which any licence to the other party hereunder is hereby granted or provided for.

ARTICLE X.

(*a*) THE exclusive licences hereby granted or provided for shall remain in force for the longest period for which the respective parties have power to grant such licences provided however that such licences shall terminate if and when Titaninc or its successors and/or its subsidiary Companies shall cease to own in total at least 25 per cent. of the issued "A" shares of British Titan. Should such ownership cease each of the parties hereto shall receive a non-exclusive licence (for itself as well as for all licensees and sub-licensees who have received or may receive a license for use within the parties' respective territories) for the longest term which it is then possible to grant for their respective territories for all inventions patents and patent applications within the Licensed Field which the other party at the date of termination owns or in respect of which it is then entitled to grant or is entitled to obtain the right to grant such licence. All other rights obligations and liabilities under this Agreement shall cease.

(*b*) IF any agreement between one of the parties hereto and one of the Allied Companies should terminate such party has the right to determine the licences which the

parties hereto or either of them have received from such Allied Company. In case such licences are not executed by the party hereto which was party to the Agreement with the Allied Company the other party hereto and the Allied Company in question shall have the right and the obligation mutually to grant non-exclusive licences in manner provided in paragraph (*a*) above. Mutual rights and obligations remain otherwise as agreed in this Agreement.

(*c*) SHOULD the Agreement of 1920 and exclusive licences received or granted under that Agreement terminate before the termination of this present Agreement British Titan has the right only to non-exclusive licences so far as they result from the Agreement of 1920 and British Titan shall if Titaninc so requires determine the exclusive licences granted to the Titanium Pigment Company by British Titan and substitute them by non-exclusive licences in accordance with Article X of the 1920 Agreement and to give to Titaninc the right to a licence which shall be exclusive except for the licence to the Titanium Pigment Company and any sub-licences granted by it.

THE termination of the Agreement of 1920 shall not affect the mutual rights and obligations of Titaninc and British Titan regarding the exclusive exploitation of their patents and inventions until the termination of the present Agreement.

ARTICLE XI.

THE option contained in Clause XI of the Agreement of 1920 having lapsed South America is open to both Titaninc and the Titanium Pigment Company under the terms of the 1920 Agreement.

ARTICLE XII.

THE interest of either party hereto may be assigned *in toto* but not otherwise and only in connection with the transfer of the entire business of such party to any person firm association or corporation which assumes the obligations of such party and this Agreement in all respects shall be obligatory not only upon each of the parties hereto respectively but also upon their respective assigns successors and legal representatives.

ARTICLE XIII.

IT is understood and agreed that the obligations assumed by each of the parties hereto shall extend to any and all subsidiaries of either of such parties the control of which is held by either party hereto to the end that the terms of this Agreement shall not be avoided by the existence or formation of affiliated or subsidiary companies.

ARTICLE XIV.

EITHER party hereto shall have the right so long as its exclusive licences hereunder shall be in force and shall not have been terminated by forfeiture to grant sub-licences hereunder but neither party hereto shall grant any licence under its own patents or any sub-licence hereunder in the Licensed Field except for the production of Titanium compounds or for the utilization of such compounds produced by one of the parties hereto or a licensee or a sub-licensee of one of the parties. If any such licence or sub-licence is for the production of Titanium compounds or for the manufacture therefrom of any product definable by the term "Pigment" and as such utilizable in the composition of any commodity then every such licence or sub-licence shall be in

writing and shall on the face thereof be expressly stated to be given and accepted and its continuance to be dependent upon the following express conditions which shall be binding on the Licensee or sub-Licensee as the case may be.

(*a*) To render to its Licensor on or before the last day of January and July of each year true and correct statements in writing as to its production in the Licensed Field during the six months preceding the month in which such return is made. The Licensor shall have the right to have such statements verified either by oath or by some accountant appointed by the Licensor as the Licensee shall prefer.

(*b*) To assume towards its Licensor in respect of its (the Licensee's or sub-Licensee's) inventions and patents in the Licensed Field the same obligations as are assumed by the Licensor under Articles II and III of this Agreement.

(*c*) To assume towards its Licensor the same obligations regarding its patents and inventions as are assumed by the parties hereto towards each other under Articles V (*a*) and (*b*) of this Agreement.

(*d*) To assume upon itself the obligations of Article VI (*a*) hereof.

(*e*) To appoint as its sole agent in the territory of such party in accordance with the conditions set forth in Article IV hereof its Licensor or some nominee of its Licensor.

(*f*) To agree to assume in respect of its Licensor the obligations assumed by its Licensor in respect to the other party hereto in Article VII hereof and also to

assume similar obligations to those assumed by its Licensor under Article VIII hereof.

(*g*) That if the Licensee or sub-Licensee violates or neglects performance of any of the conditions above recited to be assumed by it the Licensor may by registered mail thereto duly addressed notify the Licensee or sub-Licensee accordingly and that unless within six months after such mailing of such said notice the delinquency has ceased and satisfaction therefor been made then and in that event the Licensor may at its option terminate the licence or sub-licence by notice to that effect sent by registered mail to the Licensee or sub-Licensee.

Each of the parties hereto agrees that it will whenever it grants a licence or sub-licence in the Licensed Field or cancels the same or is notified of any breach thereof promptly notify the other party hereto giving him the name and address of the Licensee or sub-Licensee and information as to the character scope and duration of the licence or sub-licence.

Article XV.

It is intended that the mark "Kronos" for use in the territory of British Titan shall be assigned to it. British Titan will use this mark only for qualities which are equal to or better than the quality "Standard" now used by Titaninc.

Article XVI.

Where any patent is registered in the name of Titan Company A/S Titaninc will procure that any licence there-

of to be granted hereunder to British Titan shall be executed by the Titan Company A/S or alternatively shall cause the patent to be registered in its name before any licence thereof is executed.

ARTICLE XVII.

ALL notices to Titaninc may be sent by registered post addressed to it at its said principal office in New York City. All notices to British Titan may be sent by registered post addressed to it at its registered office. Either party may at any time or from time to time by notice in writing substitute a new address in lieu of this address above set forth.

ARTICLE XVIII.

THIS Agreement shall be construed according to the Law of England.

IN WITNESS whereof the parties hereto have duly executed these presents the day and year first above written.

Exhibit F-2

SCHEDULED AGREEMENT NO. 2.

AN AGREEMENT made the 10 day of March 1933 BETWEEN

whose Registered Office is situate at

(hereinafter called "the Grantor") of the one part and BRITISH TITAN PRODUCTS COMPANY, LIMITED a Company (incorporated under the Companies Act 1929 whose Registered Office is situate at 95 Gresham Street London England (hereinafter called "British Titan") of the other part.

WHEREBY IT IS AGREED by and between the parties hereto as follows:—

1. THE Grantor grants and agrees to grant to British Titan an exclusive licence in respect of all and any patents processes and subject matter within the scope of the Licensed Field as hereinafter defined of which the Grantor now is or may hereafter become the beneficial owner or in respect of which the Grantor now is or may hereafter become entitled to grant an exclusive licence and a non-exclusive licence in respect of all and any patents processes and subject matter within the scope of the Licensed Field as to which the Grantor now is or may hereafter become entitled to grant or may be entitled to obtain the right to grant a non-exclusive licence solely for the purpose of the production of Titanium compounds within the Licensed Field with full rights to manufacture and/or use and/or sell Titanium compounds so produced and with the right to grant sublicences wherever the Grantor has or is entitled to obtain

power to confer such right subject always to the conditions contained in this Agreement.

The term "Licensed Field" herein means all methods and processes in the field of the manufacture of Titanium compounds containing Two per cent. (2%) or more of the element Titanium as well as the Titanium compounds themselves and "Titanium Compounds" means substances materials and compositions in which the element Titanium is contained in a chemically or physically combined state. For instance the composition pigments of the character of titanox belong to them. Simple mixtures do not come under this definition.

There are excluded from the Licensed Field substances materials or compositions which contain by weight more than 5 per cent. of a metal other than Titanium in its purely metallic (*i.e.* chemically uncombined) state.

2. WHENEVER the Grantor files an application for Letters Patent on an invention in the Licensed Field the Grantor shall within two months from the date of filing send a copy thereof to British Titan. British Titan shall thereafter as soon as possible but not later than four months from the receipt of the copy of the said application inform the Grantor in which country or countries British Titan desires applications for patents on the said invention to be filed. The Grantor shall then file the requisite application in that country or those countries and prosecute the same with care and diligence until the requisite patents are obtained and the Grantor may also if it thinks fit file such an application without waiting for the reply of British Titan. As regards any such invention for which British Titan shall not desire an exclusive licence or any country or countries in which it shall not desire such exclusive licence the Grantor shall be entitled to take out a patent or patents for its own benefit.

Exhibit F-2

3. THE Grantor shall be charged with the duty of making all payments lawfully required to maintain and prolong any Letters Patent in the Licensed Field belonging to or controlled by the Grantor but only so long as British Titan continues to hold an exclusive licence in respect thereof provided that the Grantor shall before ceasing to make any such payments give notice to British Titan that it intends so to do and if British Titan desires to keep such Letters Patent alive it may make such payments itself and the Grantor shall at the expense and cost of British Titan execute and do such documents acts and things as may be necessary or requisite for that purpose.

4. THE expenses involved in obtaining maintaining or defending any Letters Patent in the Licensed Field belonging to or controlled by the Grantor and paid by the Grantor under the two last preceding clauses shall be reimbursed to the Grantor by British Titan so long as British Titan desires to retain an exclsive licence under such patent. British Titan is relieved of this obligation when the exclusive licence is renounced by it or otherwise terminates in which case British Titan shall be entitled to a non-exclusive licence.

5. THE Grantor agrees that it will so far as possible require its officers agents and employees to agree to assign to it throughout the world any and all inventions within the Licensed Field which may be made by them or any of them prior to the time hereby fixed for the termination of the exclusive licence hereby granted.

6. THE exclusive licence hereby granted shall last as long as the Grantor or any of its subsidiary Companies continues to own shares in British Titan. Should such owner-

ship cease so that neither the Grantor nor any of its subsidiary Companies own shares in British Titan then British Titan shall be entitled at once to receive (for itself and for all licensees and sub-licensees who have received or may subsequently receive a licence from British Titan) a non-exclusive licence in respect of all or any of the said patents and processes of which the Grantor is then the beneficial owner or in respect of which the Grantor is then entitled to grant a non-exclusive licence.

7. BRITISH TITAN and any exclusive sub-licensee of any of its rights in respect of the said patents and processes shall be entitled at its own expense to bring suit to restrain and to recover damages and penalties and profits for infringement of a patent in the Licensed Field and to receive for its own benefit any sums recovered by any such suit using if necessary but under indemnity the name of the Grantor. The Grantor shall be notified of any such suit immediately upon its institution and shall be entitled if it shall so elect to intervene at its own expense in any such litigation. The party instituting any such suit shall first give a satisfactory security to the Grantor against any expense or liability on the part of the Grantor resulting from such proceedings.

8. (*a*) BRITISH TITAN shall never directly or indirectly question or contest the validity of any patent under which it is licensed in pursuance of this Deed nor use nor infringe the same except as licensed nor directly nor indirectly connive with or afford any pecuniary or other assistance to any contestant or questioner of such validity.

(*b*) The Grantor shall never directly or indirectly question or contest the validity of any patent of British Titan or of the companies co-operating with British Titan in any

part of the world in the Licensed Field nor infringe the same nor directly nor indirectly connive with or afford any pecuniary or other assistance to any contestant or questioner of such validity.

9. THE Grantor undertakes to use all endeavours and take all measures in its power to ensure that its allied and affiliated companies shall respect this Agreement as if they were parties to it and that they shall do nothing contrary to the interests in the Licensed Field of British Titan or its sub-licensees.

IN WITNESS whereof the parties hereto have duly executed these presents the day and year first above written.

NOTE.—The foregoing Agreement will be signed by I.C.I. but with the following modifications namely:—

(a) The licences to be granted will be given in respect of all patents, processes and subject matter relating to the manufacture of Titanium oxide or Titanium pigments of which I.C.I. may hereafter become possessed and be free to dispose of. The terms "Titanium oxide" and "Titanium pigments" mean those in which the element Titanium is contained in a chemically or physically combined state; for instance the composition pigments of the character of Titanox belong to them. Simple mixtures do not come under this definition.

(*b*) Except as mentioned below there will be no reference to the Licensed Field and references to patents or inventions covered by the Agreement shall be substituted for references to the Licensed Field.

(*c*) In Clauses 8 (*b*) and 9 reference to the Licensed Field will be retained and shall refer to the Licensed Field as defined in the foregoing Agreement.

Exhibit F-3

SCHEDULED AGREEMENT NO. 3.

AN AGREEMENT dated the 10th day of March 1933 Between TITAN COMPANY INCORPORATED a Company incorporated under the Laws of the State of Delaware U. S. A. and having an office at 111 Broadway New York City U. S. A. (hereinafter referred to as "Titaninc") of the one part and BRITISH TITAN PRODUCTS COMPANY LIMITED having its Registered Office at 95 Gresham Street London England (hereinafter referred to as "British Titan") of the other part.

WHEREAS the share capital of British Titan is £150,000 divided into 25,000 "A" shares of £1 each carrying a fixed cumulative preferential dividend of 7 per cent. per annum and the balance of the distributable profits after payment of the dividend on the "B" shares hereinafter mentioned and the right in a winding up to repayment of the capital paid up thereon and arrears of cumulative dividend in priority to the repayment of capital and arrears of cumulative dividend on the "B" shares and also to the whole of the surplus assets; and 125,000 "B" shares of £1 each carrying the right to a fixed cumulative preferential dividend of 6 per cent. per annum ranking after the fixed cumulative dividend on the "A" shares and the right in a winding up to payment off of capital and arrears of cumulative dividend after repayment of the capital and arrears of cumulative dividend on the "A" shares.

Exhibit F-3

NOW IT IS HEREBY AGREED AND DECLARED as follows:—

1. TITANINC shall transfer to British Titan the existing business and goodwill in Titanium products in the British Empire in accordance with a Draft Agreement already prepared and signed for identification by the parties thereto.

2. TITANINC also agrees to give and make available to British Titan all technical knowledge and experience at its disposal in the manufacture of Titanium products or relating to the marketing thereof in the British Empire.

3. IN consideration of the foregoing British Titan agrees to allot to Titaninc 125,000 "B" shares of £1 each of British Titan credited as fully-paid and numbered to inclusive.

IN WITNESS whereof the parties hereto have duly executed these presents the day and year first above written.

Exhibit F-4

SCHEDULED AGREEMENT NO 4

AN AGREEMENT made the 10th day of March — 1933 Between TITAN COMPANY INCORPORATED a Company incorporated under the Laws of the State of Delaware U.S.A. and having an office at 111 Broadway New York City U.S.A. (hereinafter referred to as "Titaninc") of the one part and BRITISH TITAN PRODUCTS COMPANY LIMITED having its registered office at 95 Gresham Street London England (hereinafter referred to as "British Titan") of the other part.

WHEREAS:—

1. Under an Agreement dated the 19th day of July 1929 and made between Titan Co. A/S of Fredriksstad Norway of the one part and R. W. Greeff & Co. Ltd. of Thames House Queen Street Place London (hereinafter called Greeffs) of the other part Greeffs agreed to promote the sales of Titanium products in the United Kingdom and elsewhere as therein mentioned and to maintain a commercial and technical organisation the cost of which was to be borne by the said Titan Co. A/S and Greeffs became sole vendors of the said products in the said territory.

2. The interests of the said Titan Co. A/S in the said Agreement has become vested in Titaninc but the business is still being carried on in the name of the said Titan Co. A/S.

Exhibit F-4

3. The course of business between Titaninc and Greeffs under the said Agreement has been for Titaninc to charge as the price of the said products sold to Greeffs a sum equivalent to certain fixed percentages below the price at which such goods are re-sold by Greeffs such re-selling price being fixed from time to time by Titaninc.

4. There are certain stocks of Titanium products in the United Kingdom which belong to Greeffs but which are at the disposal of Titaninc.

5. Titaninc has agreed to transfer to British Titan the whole of its interest and business in connection with Titanium products in the British Empire including British Protectorates and Mandated Territories (excluding Canada Newfoundland British Honduras Demerara the Falkland Islands and the West Indies) and Egypt.

6. It is the intention that the said stocks of Titanium products in the United Kingdom shall be transferred to British Titan and that Greeffs shall act as agents of British Titan.

7. Titaninc is the owner of certain Trade Marks registered in the name of the Titan Co. A/S. and mentioned in the First Schedule hereto which are used in connection with the business.

NOW IT IS HEREBY AGREED by and between the parties hereto as follows:—

1. THE said stocks of Titanium products now in the the United Kingdom shall be sold by Titaninc to British Titan at a price representing the cost for 1932 charged by

the manufacturers to Titaninc plus all extra charges already paid in respect of the said stocks including freight insurance import duty landing and storage charges.

2. AN inventory shall be made of the said stocks which are now lying in warehouses in the name of Greeffs on some convenient date to be agreed between the parties as the date for completion and the said inventory together with warrants or receipts for the stocks will be handed over to British Titan against payment of the purchase price together with an acknowledgment by Greeffs that they hold such stocks as are not covered by warrants or receipts in the name of British Titan for account of British Titan. All current contracts for sale shall be taken over by British Titan who shall indemnify Greeffs against any future liability thereunder.

3. TITANINC shall procure the transfer from Titan Co. A/S to British Titan of the registered Trade Marks mentioned in the First Schedule hereto together with the business and goodwill of the business carried on by Titan Co. A/S for account of Titaninc relating to the sale of goods of the class in respect of which the said Trade Mark is registered together with any other Trade Marks belonging to it and relating to the said business agreed to be transferred to British Titan.

4. TITANINC will procure that Greeffs shall enter into an Agreement with British Titan in the form contained in the Second Schedule hereto with such modifications if any as may be agreed between the parties hereto and that the existing Agreement of 19th July 1929 shall be cancelled

Exhibit F-4

such agreement and cancellation to operate from the date of completion.

5. TITANINC shall also take such steps as may be necessary to vest in British Titan the benefit of its business and stock in other parts of the British Empire (as above defined) and Egypt not covered by the foregoing clauses, payment being made for any stocks transferred in similar manner to that provided in clause 1 hereof.

IN WITNESS whereof the parties hereto have duly executed these presents the day and year first above written.

Exhibit F-5

THE SECOND SCHEDULE ABOVE REFERRED TO.

AN AGREEMENT made this 10th day of March 1933 Between BRITISH TITAN PRODUCTS COMPANY LIMITED of 95 Gresham Street E.C.2 (hereinafter called "the Manufacturers" of the one part and R. W. GREEFF & COMPANY LIMITED of Thames House Queen Street Place London E.C.4 (hereinafter called "the Agents") of the other part WHEREBY IT IS AGREED as follows:—

1. THE Agents agree to use their best efforts to promote the sale in the United Kingdom Ireland Australia New Zealand and Malta (hereinafter called "the Agents' territory") of the Titanium Pigments for which the Manufacturers hold or shall hold exclusive licenses (hereinafter called "Titan products") and will during the currency of this Agreement maintain a suitable commercial and technical organisation—the cost of the technical organisation covering for the present and until mutually agreed otherwise Mr. Noel Heaton and one assistant the laboratory at 81 Queen Victoria Street London E.C. and all expenses attendant thereon to be reimbursed to the Agents by the Manufacturers according to a budget to be agreed upon in advance.

2. IN consideration of the Manufacturers reimbursing the Agents for the cost of laboratory operations and the salaries of the staff employed by them for the technical work on Titanium matters (until further notice Mr. Noel Heaton

and his assistant) in accordance with a yearly budget to be agreed upon between the Agents and the Manufacturers the work done by these gentlemen shall be the property of the Manufacturers and at their disposal also any inventions and patent rights which may be arrived at. No patents to be applied for without the Manufacturers' consent and the staff to agree to assist in the application for and obtaining of these patents to the extent that this is considered desirable or necessary by the Manufacturers. The members of the staff to undertake the obligation also to transfer to the Manufacturers any inventions or patent rights in the field of the work done during their engagement as well as in Titanium matters in gene[illegible] period of at least two years after the e[illegible] of their engagement. Should the Agents find it impossible to obtain this condition they will confer with the Manufacturers before entering into agreements with the staff. Members of the staff also undertake that for a period of 12 months after the determination of their services with the Agents they will not accept a situation with any firm directly competing with the Agents in Titan products.

3. The Agents shall not sell Titan products for export outside the Agents' territory, nor shall the Agents enter into any contract providing for the delivery of more than fifty tons of Titan products to any one customer at any one time without imposing the above-mentioned restrictions on any such customer and reserving the right to cancel all future deliveries on the breach of the said restrictions by any such customer and upon being called upon by Manufacturers will exercise such right of cancellation. Nothing contaned in this clause shall prevent the export to any part of the world by the customers of Titan products in a *bona fide*

manufactured form except that Titan products in any form shall not be exported by the customer to the American Continent north of the Panama Canal and islands adjacent thereto.

4. DURING the period of this Agreement subject as hereinafter mentioned the Manufacturers will not without the consent of the Agents knowingly sell Titan products to any other person firm or company carrying on business in the Agents' territory or for shipment to any point in the Agents' territory and the Agents will not buy or sell or act as Agents for any of the Titan products from other sources than the Manufacturers.

5. COMMISSION allowed to the Agents by the Manufacturers on the net invoice prices shall be five per cent. (5%) for the first One hundred thousand pounds sterling (£100,000) turnover in each year four per cent. (4%) for the second One hundred thousand pounds sterling (£100,000) turnover in each year and thereafter three per cent. (3%). The Agents shall sell the goods at such prices as are fixed from time to time by the Manufacturers.

6. THE Manufacturers will afford the Agents all the technical information in their power and will reply promptly to enquiries which will arise on technical points and on the relative values of Titan products as compared with others to enable the Agents to effectively deal with enquiries of their customers.

7. THE Agents will keep the Manufacturers advised respecting progress made in the use of Titan products the situation of the market in pigments and in general respecting points of interest arising in the Agents' territory af-

fecting business in Titan products and the Agents will give to the manufacturers all facilities to follow the work of the Agents with regard to the sale and its development with respect to the commercial as well as the technical matters.

8. THE Manufacturers will provide a reasonable supply of free samples.

9. THE Agents will sell the goods under the brand or brands of the Manufacturers and for their account and risk.

10. THE Agents shall arrange to make good to the Manufacturers any loss arising from insolvency of customers and will within 6 months pay to the Manufacturers the full amount of invoices for all products sold by the Agents and duly delivered to customers and accepted by them and in respect to which there is no dispute or claim. The Agents shall not be responsible for the balances of any contracts entered into by customers and not delivered for any reason whatsoever. The Agents will take all reasonable steps to obtain prompt payment of accounts due and will hand up to the Manufacturers on the Thursday of each week all amounts collected during the preceding week less the amount of any commission which may be due to them.

11. THE Manufacturers will add the name of the Agents as the sole source of supply of Titan products to all advertisements of Titan products for the Agents' territory.

12. THE Agents shall be entitled to purchase a limited quantity of Titan products at Two Pounds (£2) per ton additional margin of profit for them for the execution of

smaller orders *i.e.*, those which are taken in deliveries of less than one ton. The maximum quantity purchasable under these conditions is fixed until further notice at one hundred tons during twelve months.

13. ANY dispute arising under this Agreement shall be submitted to Arbitration in London each party to appoint an Arbitrator and the two so appointed to appoint a third the decision of any two to be binding and the same shall be a submission in accordance with the provisions of the Arbitration Act 1889.

14. THIS Agreement shall operate from the date hereof until July first One thousand nine hundred and thirty-four.

Exhibit F-6

SCHEDULED AGREEMENT NO. 5.

AN AGREEMENT made the 10th day of March 1933 Between TITAN COMPANY INCORPORATED a Company incorporated under the Laws of the State of Delaware U. S. A. and having an office at 111 Broadway New York City U. S. A. (hereinafter referred to as "Titaninc") of the one part and BRITISH TITAN PRODUCTS COMPANY LIMITED having its Registered Office at 95 Gresham Street London England (hereinafter referred as "British Titan") of the other part.

WHEREAS by an Agreement made in the year 1927 between Titangesellschaft m.b.H. Leverkusen near Cologne Germany of the one part and Titan Co. A/S of Fredrikstad Norway of the other part Titangesellschaft granted to Titan Co. A/S the right to buy from Titangesellschaft at cost price to be settled as therein mentioned a quantity of its products to be fixed from year to year at the latest three months before the beginning of each calendar year up to the total quantity of 50 per cent. of the capacity of the factory at Leverkusen and such Agreement also provided that if deliveries should amount to more than 50 per cent. of the capacity of the said plant the price charged would be 10 per cent. above cost price and further that provided the Titan Co. A/S stated its requirements in due time Titangesellschaft would increase its manufacturing capacity adequately for the purpose.

The interest of Titan Co. A/S in the said Agreement has been transferred to and is now vested in Titaninc.

Exhibit F-6

NOW IT IS HEREBY AGREED:—

1. TITANINC undertakes until such time as British Titan shall have commenced to manufacture Titanium compounds and for two years thereafter to supply to British Titan Titanium products manufactured by Titangesellschaft in such quantities as British Titan may require from year to year (the amount required being notified to Titaninc not less than 16 weeks before the beginning of each calendar year commencing with the year 1934) to be obtained from the factory at Leverkusen at cost price to Titaninc under the said Agreement and subject to the conditions hereof.

2. IF Titangessellschaft's deliveries to Titaninc (including the requirements of British Titan) should exceed 50 per cent. of the capacity of the plant the full 10 per cent. charged to Titaninc is to be borne by British Titan to the extent that British Titan takes deliveries and so that in no case shall British Titan be charged more than Titangesellschaft's cost price plus 10 per cent.

3. IF the total requirement of Titangesellschaft and Titaninc (including British Titan's requirements) should exceed the capacity of the Leverkusen plant the deliveries to British Titan are to be reduced to the quantities Titaninc under the said Agreement has available from the existing plant at Leverkusen after satisfying its other markets.

4. IF British Titan's requirements are such that an extension of the said plant is necessary and if British Titan desires to postpone the erection of a factory in Great Britain Titaninc undertakes to co-operate with Titangesellschaft to extend the said plant at Leverkusen provided that since such extention will involve a new investment of capital

such extension will only be made on the condition that British Titan enters into an agreement on such terms as Titanine may determine to take such products manufactured by Titangeselischaft's Leverkusen factory for an agreed period and of an agreed minimum amount sufficient to ensure a reasonable return and amortisation on the capital so invested.

IN WITNESS whereof the parties hereto have duly executed these presents the day and year first above written.

GJ/GK

AGREEMENT

Re the Extension of the Exchange of Patent Licences between Titan Company Inc. and its Associated Titanium Companies

It has been the practice to exchange licences in patent cases covering subject matters which are partly or wholly outside the Licenced Field as defined in the respective Licence Agreements, but which are of interest for the production, use and sale of products within the Licensed Field, as for instance: recovery of materials used in the titanium industry (e.g. sulphuric acid), utilization of by-products (e.g. copperas), production of extenders, apparatus and the use of titanium pigments and compounds as well as of by-products and extenders.

It is agreed that when such patent applications or patents are offered by one associated company to the other associated companies, it means—unless reservations are made—that the inventor company (respectively the company granting the licence) as far as it is within its power is willing to give, on current agreement conditions, to the other companies, rights to the use of the invention for the purposes of the production, use and sale of products within the Licensed Field under any patents outside its territory.

Exhibit F-7

It is specifically understood that in cases where the receiving company (licencée) is not interested in an exclusive licence for the purposes mentioned above, it will be reserved a non-exclusive licence for these purposes.

This agreement is only to be applied to associated companies which in general act or will act reciprocally.

Agreed on behalf of

TITAN COMPANY INC.

Dear Mr. Jebsen,

B.T.P./N.T.P. QUOTA

I mentioned to you some while ago that we were negotiating a quota arrangement with N.T.P. and I enclose herewith a copy of the formal letter which has been exchanged between our respective companies, which I think gives full details of the arrangement.

If there are any points on which you would like further information, please let me know.

The sale of titanium pigments now comes under the control of a Government department and is subject to a rationing scheme which limits both home sales and export.

Yours sincerely

s/ C.J. Stopford

Exhibit F-8

British Titan Products Co., Ltd.
Billingham.

BTM/MKB/2535

11th September 1941

National Titanium Pigments Ltd,
Kingsway,
Luton, Beds.

Dear Sirs,

QUOTA

We formally confirm our acceptance of a quota arrangement with you on the terms and conditions set out below.

Scope

The arrangements will include all deliveries of manufactured Titanium Oxide and Titanium Pigments containing more than 2% of titanium oxide, but will not include deliveries of ilmenite or other natural products.

Quota

Of the total deliveries of Titanium Oxide including the Titanium Oxide equivalent of other grades of pigment effected by British Titan Products Co., Ltd, and National Titanium Pigments Ltd, the former company shall be entitled to deliver seventy-nine point nine percent (79.9%) and the latter company twenty point one percent (20.1%).

Period Covered

The quota arrangement shall come into force on and from May 1st, 1941, and shall continue for two years or

until the cessation of hostilities between Great Britain and Germany, whichever is the shorter period, after which time it may be terminated by either party giving six months' notice in writing to the other.

Definition of Deliveries

The amount delivered shall be the quantity despatched to customers during the period covered. Deliveries shall include any material despatched to associated companies with the sole exception of any deliveries made to agents abroad to be held as consignment stocks. In this case only actual deliveries from these stocks shall be taken as the amount delivered. Deliveries shall include any deliveries of Titanium Pigments made by associated companies on behalf of or with the consent of either party to territory within the British Empire excluding the continent of North America.

The quota is based on the TiO_2 content of pigment delivered and for this purpose the TiO_2 content of commercially pure oxide shall be calculated as though it were 100% and the TiO_2 content reduced grades shall be calculated as though it were the round figure, i.e., 70%, 50% or 25%, minor variations in the TiO_2 content being ignored.

Period and Method of Adjustment

Each party shall on the 15th day of each month or as soon as possible after that date during the period covered by the quota send to the other a statement of home and export deliveries made during the preceding month in the case of deliveries made in this country. In the case of deliveries from consignment stocks held abroad, the figures will be

exchanged three months in arrears, e.g., deliveries from overseas consignment stocks made in February will be included in the total deliveries for May.

As soon as possible after November 30th 1941, and each succeeding six monthly period an independent accountant (to be selected by mutual agreement) will determine the deliveries made by each party during the period and submit a statement of both parties' deliveries to each party. The deliveries to be included in the period shall be all material despatched during the period except in the case of deliveries made from consignment stocks abroad which shall be taken out for a period 3 months in arrears e.g., the deliveries from consignment stocks to be included in the first period shall be those made between February 1st and July 31st inclusive.

Compensation

In the event of the accountants' statement showing an over-delivery by one party, that party shall purchase from the other party a quantity of Titanium Pigments necessary to adjust the quota to the agreed percentage and will pay for the material so purchased at the 100 ton price ruling at the end of the period covered by the adjustment less 5%, provided always that if the other party has, during the period covered, purchased pigments from the over-delivered party under a scheme known as the Mutual Aid Scheme at a lower price, this lower price shall apply to an equal quantity of material purchased under the quota-adjustment arrangement. Any deliveries to one party from the other under this clause may be spread over a period of six months if so desired.

Exhibit F-8

Selling Price

Prices shall be mutually controlled and no alterations made except by mutual consent. Any sale of off-grade material at a reduced price may not be made without the sanction of the other party who shall decide if such a sale is to be excluded from the quota arrangement.

Third Party Competition

In the event of a third-party competition arising any quota or compensation made to the third party with mutual consent shall be borne by the parties to this agreement in the proportion of their respective quotas.

Expenses

Any expenses incurred by reason of the employment of the independent account shall be borne by the parties to this agreement in the proportion of their respective quotas.

Arbitration

The decision of the independent account shall be final as regards figures, otherwise any complaints or disputes between the parties arising out of this agreement shall be referred to arbitration. The Arbitrator shall be the Chairman of the London Chamber of Commerce for the time being or some person nominated by him; such Arbitrator's decision on all questions shall be final and shall be enforceable as an award under the Arbitration Act, 1889, or any statutory modifications thereto or re-enactments for the time being in force.

Yours truly,

For BRITISH TITAN PRODUCTS COMPANY LIMITED.

Sgd. B.T. MINTER
Secretary.

Exhibit G

Titangesellschaft m.b.H. *Translated from German.*

Leverkusen a Rh., November 23, 1933.

Verein für chemischt und
metallurgische Produktion

Aussig / Elbe

We beg to confirm herewith the arrangement agreed upon during our recent conferences, i.e., that you and we in future will handle the sales—in the territories mentioned in article 1—of the Titanium Oxide and Titanium White produced by you and ourselves, along common lines. We grant each other the right to use our product-patents (Anwendungspatente) in the field of Titanium White, for us and and our respective customers, and will support each other in protecting these patent rights. You have assumed the obligation to acquire from us the Titanium Oxide and Titanium White you require for the territories covered by the agreement, in so far as these requirements exceed your production capacity at the time of the conclusion of this agreement and provided this does not interfere with the stipulations of article II of this letter. We have assumed the obligation to supply these goods at a preferential price.

In so far as the contents of this letter concern the I.G. Farbenindustrie Akt.Ges., Frankfurt/Main 20, this Company will confirm its agreement directly in writing.

As far as the details of our cooperation are concerned, we have agreed upon the following:

Exhibit G

ARTICLE 1.

Field of the agreement—technically and as to territory.

The field covered by this agreement comprises:

a) technically: All materials or substances containing Titanium, with a minium content of 2% of the element Titanium, which can be used as pigments, whether chemically combined or mechanically mixed or physically combined (as for instance mixed crystals), whether used as pigments or for other purposes. The same applies also to mixtures of these materials.

b) territory: Germany with Danzig and Saar-District
Czechoslovakia
Poland
German Austria
Hungary
Jugoslavia
Roumania
Russia.

Both our firms will do their utmost in order to prevent the products covered by this agreement to be imported by third parties into the territories of the agreement.

We will indicate to each other by special letters the products of our manufacture—at present on the market—which fall under this agreement, besides Titanium Oxide.

ARTICLE 2.

Sales rights (Quotas):

The total deliveries of both our firms, calculated as TiO_2, are to be divided according to the following quotas:

Exhibit G

Up to a total annual delivery of 2.800 tons TiO_2 content
Your quota will be 25% our quota ~~will be~~ 75%

From 2801 to 7.000 tons total deliveries, your quota will increase from 25% to 28% and our quota will proportionally decrease from 75% to 72%. From 7.000 tons p.a. upwards the quotas will remain the same, viz:

28% for you
72% " us.

Consequently, your quota for an annual quantity between 2800 and 7000 tons p.a. would develop as follows:

For	2.800	tons	total	annual	delivery 25 %
	3.000	"	"	"	" 25.14%
	3.200	"	"	"	" 25.29%
	3.400	"	"	"	" 25.43%
	3.600	"	"	"	" 25.57%
	3.800	"	"	"	" 25.71%
	4.000	"	"	"	" 25.85%
	4.200	"	"	"	" 26.00%
	4.400	"	"	"	" 26.14%
	4.600	"	"	"	" 26.29%
	4.800	"	"	"	" 26.43%
	5.000	"	"	"	" 26.57%
	5.200	"	"	"	" 26.71%
	5.400	"	"	"	" 26.85%
	5.600	"	"	"	" 27.00%
	5.800	"	"	"	" 27.14%
	6.000	"	"	"	" 27.29%
	6.200	"	"	"	" 27.43%
	6.400	"	"	"	" 27.57%
	6.600	"	"	"	" 27.71%
	6.800	"	"	"	" 27.85%
	7.000	"	"	"	" 28.00%

Exhibit G

For a quantity between these figures the quota is to be calculated in a similar way.

ARTICLE 3.

Sales activities.

The sale of the products covered by the agreement will take place on the basis of extensive mutual information and support, either by the firms themselves or by their representatives.

I.G. Farbenindustrie Akt.Ges., *Frankfurt/Main 20*, Grüneburgplatz, will act as our sales organisation.

In order to establish as close a sales cooperation as possible, the representatives of both parties will meet at fixed intervals, forming a working committee in order to discuss all outstanding questions.

The names of the firms whom we are supplying with products, resp. for which you or we wish customer protection, will be communicated in the Working Committee.

ARTICLE 4.

Fixation of sales prices and terms for the products covered by the agreement.

This shall take place in principle by mutual consent; however you will have the prepondering influence for Czechoslovakia and we for Germany with Danzig and the Saar-District. In the remaining territories the prices shall be fixed in such a way as to avoid any loss being incurred by the seller; but on the other hand, the sales should not be impaired by too high prices.

In cases where it appears appropriate, the prices of both firms need not always be identical. As long as competition

with other white pigments necessitates a flexibility in prices, your company and ours should be allowed the greatest possible mobility in the quotation of prices—however the consent of the other party is an absolute condition therefor.

ARTICLE 5.

Adjustment of quantities.

On the 22nd day of each month you will inform I.G. and I.G. will inform you of the quantities delivered in the preceding month in the territories of the agreement, with specification of each quality separately, and calculated as TiO2. The I.G. will submit to you, within 30 days from the end of each quarter, a preliminary statement of the quantities in order to determine excess—or short sales. The final statement will be made by I.G. 45 days after the end of each calendar year, for the first time on February 15, 1934, covering the remainder of 1933. (An approximate financial adjustment, in accordance with article 11, shall however be made already after the expiration of the first 6 months of each year). The resulting short sales are to be adjusted, if not otherwise stipulated under article 11 of this letter, in such a way that the party, having sold in excess, has to order from the other party the excess quantity of TiO2 delivered, within 30 days after the date of the settlement. For this adjustment delivery, the party having sold in excess will have to pay the sales proceeds, if not otherwise stipulated in article 11.

The settlement as to quantities will be made exclusively on the basis of the TiO2 content of the products covered by the agreement; however, within the limits of their quotas, both firms have claim to a percentage of the deliv-

eries of Titanium Oxide and mixed products, corresponding to the percentage each product constitutes of the total deliveries of our firms for the year in question.

For the adjustment of short deliveries, as far as mixed products are concerned, the repartition of the short quantities over the different qualities shall be in proportion to the quantities of each quality which the party, having delivered in excess, delivered during the period in question. However, in order to simplify matters when making the repartition, only the sales proportion of those mixed products will be taken into account the delivery of which in the respective year exceeded 100 t. TiO_2 content as far as we are concerned, and 25% as far as you are concerned.

If, for instance, the deliveries of Titanium Oxide in the form of mixed pigments, made by one of the parties, are 200 t. short, and the party having delivered in excess, for instance, we, has during the same period, supplied 60% of the mixed products in the form of Standard A, 30% in the form of Extra T and 10% in the form of Standard T, the repartition of these 200 tons will at the time of the settlement have to be made according to the same percentage proportion, *i.e.*, 120 t. TiO_2 in the form of Standard A, 60 t. in the form of Extra T and 20 t. in the form of Standard T.

Short deliveries of your firm, resulting from the difference between your actual deliveries and your capacity of 700 t. TiO_2 are compensated only on the basis of Titanium Dioxide, so that the above stipulations regarding the claim to a percentage of the deliveries of Pure Titanium Oxide and Titanium White shall only apply to a short delivery of your firm, exceeding this.

Exhibit G

In case the orders given in due time by the party having delivered in excess have not been filled within 30 days by the other party, the adjustment in merchandise is considered as having taken place; however, in this case, the party whose deliveries were below the allowed quota, is entitled to a financial compensation. The amount of this compensation for short deliveries—to be found out by taking the difference between the purchase prices (Uebernahnpreise) fixed according to article 11 and the sales proceeds figured out according to the last paragraph of article 5.

Mutual deliveries between our firms are not to be included in the settlement.

Quantities for own use of both our firms and of the I. G., as well as of those firms in which our three companies are interested for at least 50% each, directly or indirectly, or with whom an agreement has been concluded, which, according to terms and duration, is equivalent to a merger, are not included in the settlement, provided, however, that such quantities are not used for the manufacture of products to be resold as pigments for paint.

The parties have to advise each other, at the end of each year, as to the names of the firms to which deliveries are being made according to the preceding paragraph under self consumption right.

With regard to sales proceeds as mentioned in this agreement, it is determined that these will be figured out as follows:

The gross sales price less possible freight expenses (postage, freight-reimbursements), trade taxes (as turnover tax, compensation tax and similar), custom duties and custom expenses, as well as commission actually paid to agents. The sales proceeds are based on goods in original packing; addi-

tional expenses in connection with smaller packing are to be taken into account accordingly.

ARTICLE 6.

Price adjustments.

No price adjustments are to take place. On the contrary, each party is entitled to the proceeds obtained.

If exchange fluctuations or variations should essentially disturb the relation between service rendered and consideration, existing at the time of the conclusion of the agreement, then it shall be endeavored through loyal negotiations to make an equitable adjustment.

ARTICLE 7.

Responsibility for deliveries.

The responsibility for the quality of the goods rests with the manufacturer; the responsibility in connection with the delcredere is with the party which made the sale. Deliveries for which the seller obtains no payment or only part payment, on account of the customer's insolvability, will be eliminated from the settlement, either entirely or for the part unpaid. In this case, the situation at the termination of the bankruptcy or compromise proceedings, is determinative.

Lost shipments, covered by insurance, are to be included in the settlement.

ARTICLE 8.

Control by a trustee.

Once a year a trustee will examine the books of both parties in order to ascertain that the stipulations of this

agreement have been complied with. He will each time inform the other party and the I.G., if the stipulations of the agreement have been complied with by the firm in question —particularly if the reports mentioned under article 5 have actually been sent, or if and to what extent the firm in question has not fulfilled its contractual obligations. Otherwise, the trustee has to observe silence. Towards third parties the trustee's obligation as to secrecy is unlimited.

The Working Committee will issue more detailed instructions regarding the trustee's duties and the way in which he shall attend to his work.

Judge Frech, Dusseldorf, will be appointed trustee, it being understood that he may be represented by an assistant, educated in law, in case he should be prevented from attending to this work, or when it is only a question of examining books and papers.

ARTICLE 9.

Competition clause and secrecy.

During the continuance of this agreement and with regard to the territory covered by the same, the parties and the I.G. are not allowed to participate directly or indirectly in other factories which manufacture or intend to manufacture in the territory covered by the agreement, or deliver or intend to deliver to the said territory the products mentioned under article 2, or to aid such factories in any way in their installation or operations, by technical or commercial advice or preferential deliveries, grant of licenses or similar. Both parties and the I.G. will bind their employees to the same obligations, in so far as there is question thereof in connection with the character of their engagement contracts and so far as it is permitted by law.

Exhibit G

It will not be considered a violation of the obligations under article 1, if one of the parties or I.G. take an interest in another enterprise which, besides other products, also manufactures products falling under this agreement, provided this interest is prompted by these other products. In such case, however, the party in question is obliged to subject the new manufacture of convention products to the stipulations of the present agreement and include this manufacture in his quota.

You oblige yourselves and we oblige ourselves, as far as possible to keep this agreement secret as far as third parties are concerned.

ARTICLE 10.

Patents.

During the life of the patents, we grant each other, for us and our respective customers, the right to gratuitously use our product-patents (Anwendungspatente), for the field of the agreement, technically and as to territory, as well as patent applications published during the continuance of the agreement.

We will support each other in protecting these patent rights against outsiders.

We further undertake the obligation, during the continuance of the agreement and in the territory covered by this agreement, to refrain from filing oppositions to grant of each other's patent applications, including those dealing with manufacturing processes.

Besides the understanding, reached for the time being, with regard to product-patents, the parties contemplate arriving at an understanding regarding the entire patent field and exchange of experience. Should this contemplated understanding be arrived at during the continuance of this

agreement, the date of expiration of the agreement is automatically postponed to the end of 1939.

ARTICLE 11.

Our deliveries to you.

You will purchase from us the Ti02 you require, inasmuch as these requirements exceed your present production capacity of 700 tons p.a., and we are obliged to supply these quantities to you, as long as these deliveries, in addition to our other delivery obligations, do not call for an extension of the production by the erection of new factory buildings. Should this occur, you are entitled to extend your plants in the territory of the agreement, with the exception of Germany incl. Danzig, and the Saardistrict. You undertake the obligation to sell the goods supplied by us, exclusively for consumption in the territory of the agreement.

We shall supply to you the products covered by the agreement at the following prices f.o.b. Leverkusen factory, incl. original packing:

Titanium Dioxide	RM. 66.—	per 100 Kg
Titanium White Extra T	" 46.90	
" " Standard T	" 29.04	
" " Standard A	" 32.91	
" " Standard A Paste	" 39.34	

It is assumed that, prior to ordering any goods from us, you will have utilised your own capacity of 700 t. Ti02, as regards both production and sales. If you purchase Ti02 from us, without having fully utilised your capacity, we shall grant you on the above mentioned price for Ti02 an additional 10% reduction on those quantities which you would have been able to produce yourself if you had produced to the extent of your capacity of 700 t. Ti02.

Exhibit G

The above purchase prices (Uebernahmepreise) are dependent on two factors:

1. Variations in our sales proceeds.
2. Variations in our production costs.

They are to change as follows:

a) as regards proceeds:

Will be taken as a basis:

1) The average proceeds from German sales (Durschnittsverkaufserlös) for Titanium Oxide during the first quarter of 1933, amounting to Rm. 118.— per 100 Kg.

2) The average proceeds in the territories covered by this agreement during the first quarter of 1933

for Extra T	RM.	80.45	per 100 Kg.
Standard T	"	40.04	
Standard A	"	43.97	
Standard A Paste		50.30	

both incl. packing fob Leverkusen factory.

With each increase or reduction of one of these sales proceeds by Mk. I.—the purchase price is increased or reduced by

RM.—.243 per 100 Kg.

A similar calculation is made for changes amounting to fractions of Mk. I.—

b) As regards our production costs:

is taken as a basis our selfcost price for the first quarter 1933, incl. packing, of which we have notified you. With each increase or reduction of this selfcost price by Mk. I.—the purchase price is increase or reduced by

RM.—.737 per 100 Kg.

A similar calculation is made for changes amounting to fractions of MK. I.—

We will advise the trustee of our production price for the first 6 months of 1933 with a detailed specification of the factors on which it is based. At the time of the annual settlement, we will inform you of the changes, and you will be entitled to have the calculation of these changes controlled by the trustee.

Should the purchase price drop below our production costs under the influence of the factors foreseen, we are entitled to decline deliveries at these prices. In this case you would be entitled to increase your capacity accordingly; however, we undertake the obligation to supply the goods to you, up to the time when you can avail yourselves of the increased capacity, at the purchase prices prevailing up to the month before the purchase prices ("Uebernahmepreise") dropped below the production costs. It is evident that during this period the purchase prices in question are again liable to variations—upwards or downwards—but downwards not beyond the limit of the production costs.

Force majeure cases, such as impossibility to make deliveries or shipments, due to acts of nature, strike or lockout, war or acts of God, relieve the parties from their delivery or purchase obligations for the period involved.

However, in such a case, both parties, in their mutual interest, will do their utmost to eliminate any prejudices resulting from such difficulties and to remove the obstacle itself as soon as possible.

ARTICLE 12.

Transfer of contract rights to third parties.

Should one of us, during the continuance of this agreement, sell, lease or otherwise cede his plants for the manufacture of the products covered by the agreement, to a third party, he is obliged to impose upon his successor the obligations resulting from this agreement. A transfer of the quota or parts thereof to third parties is only admissable with the approval of the other party to this agreement.

ARTICLE 13.

Disputes/Court of Arbitration.

The trustee will arbitrate any disputes or differences of opinion, which may arise regarding whether the agreement is in force, regarding interpretation or execution of the present agreement.

Each party is entitled to appeal to a Court of Arbitration with regard to the decision of the trustee, within two weeks after this decision has been notified. Each party will appoint an arbitrator to this Court of Arbitration. In case no agreement can be arrived at by the two arbitrators, they will elect an umpire. If the two arbitrators cannot agree on the choice of an umpire, the latter will be appointed by the President of the International Chamber of Commerce, upon request of one of the two parties. The President of

the International Chamber of Commerce will also appoint the arbitrator for the party which has failed to nominate one within two weeks after the other party has requested it to do so. The umpire must be qualified to act as a judge. The procedure to be adopted by the Court of Arbitration is decided by the Court itself. The arbitrator's decisions are definite, excluding due course of law.

ARTICLE 14.

Duration and notice.

The present agreement is effective as from July 1st, 1933, and may be terminated on 6 months notice, for the first time on December 31, 1936, or, in case article 10 paragraph 4 should come into effect, on December 31, 1939. If no notice has been given 6 months before expiration, the agreement is prolonged for another two years. Notice will be considered as having been given in due time, if it is mailed not later than June 30 of the year in question.

Should a new competition arise during the continuance of this agreement in the territory covered by the same, both our companies will together endeavor to make the outsider's activities ineffective. Should these endeavours be unsuccessful and should the activities of the new competitor lead to a considerable change in the situation of the market, each party would be entitled to denounce the agreement immediately, as long as an understanding as provided for in article 10, paragr. 4, has not been reached. The agreement then expires 3 months after notice has been given.

After resiliation of the agreement, each party can, not sooner than two months before this expiration, undertake sales on any conditions, to be actually effected after the

agreement has expired. Deliveries against sales contracts made before the expiration of this agreement, are to be included in the settlement only if such deliveries have been made before the expiration of the agreement.

The final settlement will be governed ("gelten sinngemäiss") by the provisions of article 5.

ARTICLE 15.

If, during the continuance of the agreement, unfair hardships should result from this agreement, these hardships are to be adjusted in a friendly spirit, if necessary by altering some of the provisions of the agreement. If such a settlement cannot be reached, it will be effected by the Court of Arbitration upon appeal of one of the parties to this agreement.

If new laws or regulations should, permanently or temporarily, fully or partly, handicap the execution of this agreement, new negotiations will take place, in order to adapt the agreement in a friendly spirit to the new situation

LEVERKUSEN

Re: Titanium White Agreement.

We have received via Frankfurt the confirmation of our agreement regarding Titanium Dioxide and Titanium White, and beg to enclose our reply, signed by us.

For the sake of clearness, we only wish to state that, as agreed with Mr. Borgwardt in Prague, in view of the fact that no goods from Leverkusen are actually ordered and resold by us, only the stipulations of article 11 are in force for the settlement of our short deliveries, by payment of the difference between the purchase prices ("Uebernahmepreise") fixed in the above article and the sales proceeds determined according to the stipulations of said article.

We may ask you now also to convoke the trustee, and remain

Yours very truly,

Via I.G. Farbenindustrie A.G.
Frankfurt a/M.

Exhibit G-1

Translated from French
Contrat à Quatre

AGREEMENT

BETWEEN

FABRIQUES DE PRODUITS CHIMIQUES DE THANN ET DE MULHOUSE, SOCIETE DE PRODUITS CHIMIQUES DES TERRES RARES, SOCIETE INDUSTRIELLE DU TITANE, TITAN COMPANY INC.

1935.

Exhibit G-1

Between Titan Company Inc. and Société Industrielle du Titane agreements exist concerning a technical and commercial cooperation regarding the products of the present contract, according to which the industrial and commercial activities are reserved:

a) *Société Industrielle du Titane* with exclusive rights for the following countries:

France including colonies, dependencies, protectorates and mandated territories (excluding those of the Continent of America located to the north of the Panama Canal and all islands geographically appurtenant to the said continent). For the Saar, Société Industrielle du Titane has certain rights in conjunction with those of Titangesellschaft.

b) *Titan Company Inc.* with exclusive rights for the rest of the world.

Titan Company Inc. has agreements with:

Titan Co. A/S which has exclusive rights of manufacture and sale for the following countries: Norway, Sweden, Denmark (with Iceland, Greenland and the Faroe Islands), Finland, Esthonia, Latvia and Lithuania, and non-exclusive rights of sale of its maritime pastes and paints in all countries.

Titanium Pigment Co. Inc. which has exclusive rights of manufacture and sale for: the Continent of America north of the Panama Canal and all islands geographically appurtenant to the said continent, Hawai and the Philippine Islands.

Further, Titanium Pigment Co. Inc. has the right to manufacture and sell in South America.

Exhibit G-1

Titangesellschaft m.b.H. which has exclusive rights of manufacture and sale for: Germany, Russia, Austria, Hungary, Czechoslovakia, Switzerland, Rumania, Yugoslavia, Bulgaria, Greece, Turkey, Japan, China, Spain, Poland, Portugal, Dantzig, South America (excluding Guiana) with reservation for South America as specified above. For the Saar Titangesellschaft has certain rights in conjunction with those of Société Industrielle du Titane.

British Titan Products Company Limited which has exclusive rights of manufacture and sale for: the British Empire as at present constituted, including protectorates and mandated territories (except the British countries of the Continent of America located to the north of the Panama Canal and all islands geographically appurtenant to the said continent, Demerara, the Falkland Islands and the West Indies), Egypt and Irak.

Between Société de Produits Chimiques des Terres Rares and Fabriques de Produits Chimiques de Thann et de Mulhouse agreements exist concerning a technical and commercial cooperation regarding the products of the present contract, according to which the industrial and commercial activities are reserved:

a) *Fabriques de Produits Chimiques de Thann et de Mulhouse* with exclusive rights of manufacture and sale for France including colonies, dependencies, protectorates and mandated territories and Saar. They have non-exclusive rights of sale for all countries in

which Société de Produits Chimiques des Terres Rares has not transferred its rights to other companies.

b) *Société de Produits Chimiques des Terres Rares* which has exclusive rights for all countries with the exception of the rights specified under a) and the rights resulting from the agreements made with:

Società Anonima Titanium which has exclusive rights of manufacture and sale for Italy with colonies, dependencies, protectorates and mandated territories, and non-exclusive rights of sale for the following countries: Belgium, Holland, Switzerland, British Empire, Spain, Portugal and South America. These non-exclusive rights can be resiliated with 3 months notice.

Krebs Pigment & Colour Corporation which has acquired the American (U. S. A.) patents of the Blumenfeld group.

Verein für chemische und metallurgische Produktion which has exclusive rights of manufacture and sale in Czechoslovakia, Austria, Hungary, Yugoslavia and Rumania. Subject to certain obligations, it has exclusive rights of manufacture and sale in Germany, Dantzig, the Memel District and Denmark. It has with Société des Terres Rares exclusive rights of manufacture and sale in Poland and U. R. S. S.

In order to ensure sales on common lines, the parties hereto, viz:

Titan Company Inc., 7 West 10th Street, Wilmington, Delaware, U. S. A. (hereinafter called Titaninc,) and

Exhibit G-1

Société Industrielle du Titane, 26 Rue de la Pépinière, Paris, France (hereinafter called Sté Titane) of the one part and Société de Produits Chimiques des Terres Rares, 67 Rue de Prony, Paris, France (hereinafter called Terres Rares), and Fabriques de Produits Chimiques de Thann & de Mulhouse, Thann, Haut Rhin, France. (hereinafter called Thann) of the other part have entered into the present agreement.

ARTICLE 1.

Products and countries covered by the agreement:

a) *Products covered by the agreement:* as products covered by the agreement are considered all materials or substances containing Titanium having undergone a chemical treatment and with a minimum content of 2% of the element Titanium, and which can be used as pigments—whether chemically combined or mechanically mixed or physically combined (as for instance mixed crystals), without it being necessary to consider whether they are actually used as pigments or for other purposes. The same principle applies to mixtures of these substances.

The parties will indicate to each other in writing those of their products which come under the category above defined.

b) *Countries covered by the agreement:* As countries covered by the agreement are considered:

France including colonies, dependencies, protectorates and mandated territories (excluding those of the Continent of America located to the North of the Panama Canal and all islands geographically appurtenant to the said continent), Monaco, as well as Saar, subject to the result of the plebiscite foreseen—hereinafter called "France".

Belgium and Luxemburg including colonies, dependencies, protectorates and mandated territories, hereinafter called "Belgium".

Holland including colonies, dependencies, protectorates and mandated territories—hereinafter called "Holland".

Various countries, viz: Esthonia, Latvia, Lithuania, (excluding Memel), Abyssinia, Liberia, Arabia, Afghanistan, Persia, Siam,—hereinafter called "Various countries".

ARTICLE 2.

Rights of delivery.

The total deliveries of the parties hereto to customers in each territory, calculated as TiO2, shall be divided according to the following quotas:

Exhibit G-1

France	Terres Rares and Thann	Titanine and Sté Titane
Quantities up to 1000 tonnes annually	55%	45%
" between 1000 and 2000 t. "	45%	55%
" above 2000 t. "	50%	50%

(Saar District:

If the plebiscite foreseen for 1935 decides that Saar in future shall be German, it will no more be among the countries covered by the agreement. In the meantime the deliveries which will be made there by Terres Rares, Thann and Sté Titane to customers shall be comprised in the deliveries in "France", Titangesellschaft is not considered as a customer. With regard to the deliveries of Titangesellschaft in the Saar District, a settlement between the latter and Terres Rares-Thann is to take place.)

Belgium		
Any quantity	30%	70%
Holland		
Any quantity	30%	70%
Various countries		
Any quantity	30%	70%

Exhibit G-1

ARTICLE 3.

Repartition of the quantities to be purchased from Società Anonima Titanium.

The parties to the present contract have bound themselves by contract dated 5/10/17/1935 to take annually, under certain conditions, from S.A. Titanium 75 tonnes TiO2 (plus possibly 12½ tonnes). For the repartition of these 75 tonnes (plus possibly 12½ tonnes) between the parties to the present agreement, the quotas specified in article 2 of the present agreement are also to be applied, i.e.:

June

for 56 tonnes (plus possibly 9 tonnes) the quotas specified above for France;

for 19 tonnes (plus possibly 3.5 tonnes) the quotas specified for the other territories.

The parties hereto undertake to forward to each other a copy of the orders sent S.A. Titanium.

The parties hereto have jointly bound themselves towards S.A. Titanium to take these 75 tonnes (plus possibly 12,5 tonnes). If, for some reason or other, one of the parties has to take a delivery which was incumbent on another party, the quota of the latter shall be reduced to the profit of the former in due proportion.

If the quantities to be purchased from S.A. Titanium fall below 75 tonnes (plus possibly 12,5 tonnes), the reduction resulting therefrom shall be divided between the parties proportionally to their respective obligations for each country.

Exhibit G-1

ARTICLE 4.

Sales.

The sales shall take place on the basis of an interchange of commercial information and mutual support, either by the firms themselves or by their representatives.

In order to ensure as close a cooperation as possible concerning the sales, the representatives of the parties will meet at fixed intervals, thus forming one or several working committees which will have to discuss current matters.

The names of the firms for which one of the parties shall wish to remain sole supplier, will be communicated during the sessions of this Committee.

ARTICLE 5.

Fixation of sales prices and terms of delivery and payment.

The sales prices and terms of delivery and payment shall be fixed by mutual consent in all the countries covered by the agreement, taking into account the prices of the competitive pigments and the intention to develop the consumption as much as possible.

However, should Terres Rares-Thann object to a change in prices proposed by Titanine for Belgium and Holland, the latter would be entitled to denounce the entire agreement.

In cases where it will appear expedient in the interest of all concerned, the prices and terms of the parties need not necessarily always be identical and this by mutual consent.

Exhibit G-1

ARTICLE 6.

Compensation for quantities delivered below or above the quotas.

On the 25th of each month at the latest, each party shall inform the other of the quantities delivered by it to customers during the preceding month in each territory, with specification of the different qualities as well as calculation of the respective TiO2 content. Deliveries between the parties shall not be included.

Titanine shall submit, within 40 days from the end of each quarter, a preliminary statement of the quantities delivered, in order to determine excess—or short deliveries and enable the excess deliverer to order from the short deliverer the quantity delivered in excess. The final annual statement shall be established by the comptroller (see art. 9) soonest possible, but not later than the following 15th of May, and communicated to the parties.

The Committee foreseen in art. 4 shall see to it that the deliveries correspond well to the quotas of each party so that the final adjustments only involve small quantities.

If nevertheless one of the parties at the end of a year should have delivered a quantity exceeding its quota by more than 10%, the excess deliverer, besides his contractual obligation to make a compensation in merchandise or in cash, shall have to pay for the quantity exceeding the 10% a penalty of 20% of the average gross sales price taken as a basis for this compensation. The penalty in question would not have to be paid if the excess delivery was caused by insufficient production at Leverkusen or at Thann. The provisions of this paragraph only apply to the market "France".

Exhibit G-1

Short deliveries in each territory shall be compensated as follows: The party whose deliveries exceed its quota (the excess deliverer) will have to order from the other party (the short deliverer) the quantity of Ti02 delivered in excess, either in Dioxide or in other current qualities of the latter. These orders will in principle have to be sent in one month at the latest after the quarterly statement is issued and for a quantity, calculated as Ti02, equal to the excess delivery during the quarter expired. The necessary orders have to be sent in on the 15th of June at the latest for the adjustment of the deliveries for the year expired.

For these compensation deliveries, the excess deliverer shall have to pay, for each territory, the average sales price for the period in question, obtained by the short deliverer in the respective territory and reduced to fob the short deliverer's production place for each quality ordered. The short deliverer shall not be obliged to execute this order and if delivery has not taken place within 30 days from the date of the order, the settlement in merchandise will be foreclosed. In this case the short deliverer shall be entitled, for the quantity of Ti02 contained in the different qualities ordered but not delivered, to a compensation in cash, equal to the average profit obtained by the excess deliverer on the Ti02 contained in all his deliveries to customers during the period and in each respective territory.

The parties will have to inform each other quarterly of their average sales prices. These prices will be definitely established by the comptroller at least once a year and communicated to the parties soonest possible but not later than the 15th of May for the year expired.

Any settlement in merchandise or cash will have to be made separately for each territory.

The details regarding compensation in merchandise or cash are stated in Annex A.

ARTICLE 7.

Adjustment of the sales proceeds.

No adjustment as regards the sales proceeds will be made. Each party is entitled to the proceeds from its sales.

ARTICLE 8.

Responsibility for deliveries.

Each party remains responsible for the quality of its goods within commercial limits, even after re-sale by another party.

ARTICLE 9.

Control.

Whenever requested by one of the parties, but at least twice a year, the books of the parties shall be examined by a comptroller—a person or company agreed upon by the parties—, in order to verify if the stipulations of the agreement have been complied with. The comptroller will each time inform each party whether the conditions of the present agreement have been complied with, whether the information referred to in article 6 has regularly and accurately been imparted and, if one or several parties have not fulfilled the contractual obligations, to what extent. The comptroller and his possible substitute shall be bound to secrecy and, towards third parties, to absolute secrecy.

The Working Committee shall issue more detailed instructions regarding the comptroller's duties and the way in which he shall attend to his work.

The parties hereto undertake the mutual obligation to place at the disposal of the comptroller all documents necessary for the execution of the present agreement, and to permit the Comptroller at all times access to their books and vouchers, as far as they concern questions affecting the execution of the agreement.

ARTICLE 10.

Competition and secrecy clause.

Except in the cases foreseen in article 13 hereafter, the parties will be prohibited during the continuance of the present agreement, from participating directly or indirectly in competitive enterprises producing or delivering or preparing to produce or to deliver in the countries covered by the agreement, except to one of the parties, the products covered by the agreement, or to assist them in any way whatever as regards their installation or operations by technical or commercial advices or preferential deliveries, grant of licenses, assignment of patents, etc. The same obligations are incumbent on the persons employed by the parties, within the limits of their engagement contracts and the limits of the laws.

It will not be considered a violation of the obligation under paragraph 1, to take an interest in an enterprise manufacturing other products besides those coming under this agreement, provided the object of this interest are these other products.

In such a case, the party in question will have to subject the deliveries of products covered by the agreement, made by this enterprise in the countries covered by the agreement, to the stipulations of the present agreement, by adding them to its own deliveries.

Exhibit G-1

The parties bind themselves not to supply intermediary products to third parties likely to utilise them for the manufacture of products covered by the agreement. Although free in principle, the parties also undertake not to supply products covered by the agreement to third parties likely to utilise them for re-sale in the form of titanated lithopone, without having discussed the question beforehand.

The parties shall do their utmost to prevent that the products covered by the agreement and having been sold by them, be imported by third parties into the countries covered by this agreement. However, if the parties ascertain any illicit importations of their goods into a country covered by the agreement, the Working Committee will have to take the necessary steps to settle the question.

The parties hereto undertake to keep this agreement secret towards third parties as far as possible.

ARTICLE 11.

Patents concerning the use of the products of the agreement.

During the life of the patents concerning the use of the products of the agreement, the parties acknowledge mutually, for themselves and their respective customers, the right to use these patents gratuitously as far as the countries of the agreement are concerned, as well as patent applications published during the continuance of the agreement.

In case a license in respect of patents concerning the use of the products of the agreement is granted to a customer, the parties shall as far as possible bind him to use for the application of the license and for its duration solely the products of the parties, leaving him however free choice

to procure them from any of the parties authorized to sell in the country in question.

Each party further undertakes, during the continuance of the agreement and in the countries covered by the agreement, to refrain from rising opposition against patent applications filed by another party, concerning the use of the products of the agreement.

ARTICLE 12.

Production.

No factory shall be erected in the countries of the agreement outside France, without the mutual consent of the parties hereto, which remain free to manufacture in France any quantity they consider advisable.

ARTICLE 13.

Succession or transfer of rights to third parties.

The present agreement shall bind not only the companies who are signatory thereto, but also their successors, assigns or anybody having rights under the agreement, who shall have to assume all the obligations resulting therefrom.

As far as France is concerned, the grant of an exclusive license comprising all the products of the agreement will not constitute a violation of the obligation of paragr. 1 of article 10, and each party may sell, lease or transfer to a third party all its factories for the manufacture of the products of the agreement or all its patents for the manufacture of the products of the agreement, together with its entire quota.

In all other cases an assignment by a party of the quota or part thereof to third parties will be subject to the consent of the other parties.

In the cases foreseen above each party signatory to the present agreement will remain responsible towards the other parties until it has been expressly released by them.

ARTICLE 14.

Disputes, Arbitration.

In case of disputes or differences of opinion with regard to this agreement, the parties hereto will endeavour to settle the difficulties in a friendly spirit.

If unsuccessful, the difficulties shall be settled according to the conditions of conciliation and arbitration of the International Chamber of Commerce, by one or several arbitrators appointed according to the rules of the said Chamber of Commerce.

The arbitrator's decision shall be definite and without appeal.

ARTICLE 15.

Duration.

The present agreement enters into force on the day of its signature. Except in the cases foreseen in the articles 16 and 17, it can only be denounced as per December 31, 1938 with 6 months notice, i.e. given on June 30th 1938. If no notice has been given, the agreement continues to run for periods of 2 years if it is not denounced 6 months before the expiration of each period. Notice will be considered as having been given in due time if it has been dispatched by registered mail to all the parties, not later than June 30 of the year in question.

The quota system foreseen by the present agreement shall be applied with retroactive effect as from May 1st 1934.

Exhibit G-1

Once the agreement is denounced, but not earlier than 2 months before its expiration, each party can make sales on any conditions for the period following the expiration of the agreement.

Deliveries against sales contracts in force at the definite termination of the agreement are to be included in the settlement only if such deliveries have been made prior to the date of this termination.

ARTICLE 16.

Anticipated resiliation.

The present agreement may be resiliated at an earlier date than foreseen, in case of events beyond the control of the parties, of such a nature as to prevent its fulfilment or which would make it prejudicial to one of the parties.

As events of such a nature are considered for instance:

1) A profound change of the sales possibilities, resulting from governmental measures or from a new competition.

2) Any governmental or legislative measures contrary to the present contract or making it partly or wholly illegal

If the reasons for an anticipated resiliation should present themselves only in part of the countries covered by the agreement outside France, Belgium and Holland, the maintenance of the contract might be exacted for the countries not affected by the event in question.

The anticipated and full resiliation of the present agreement shall also take place if Titaninc denounces it according to its right foreseen in article 5.

In case of anticipated resiliation, the present agreement may be denounced as per the end of a month with 3 months notice.

Once the agreement is denounced, but not earlier than 2 months before its termination, each party can make sales on any conditions for the period following the termination of the agreement.

ARTICLE 17.

Relation to other agreements.

The present agreement is closely connected with the agreement made in order to ensure sales on common lines, on June 5/10/17/ 1935 between:

Società Anonima Titanium
Société de Produits Chimiques des Terres Rares
Fabriques de Produits Chimiques de Thann et de Mulhouse
Titan Company Inc.
Societé Industrielle du Titane
Titangesellschaft m.b.H.

Should the latter agreement be denounced, the present agreement may also be denounced with 3 months notice and as per the end of a month, on the condition however that the notice be given within 60 days from the date of mailing the notice of the other above mentioned agreement to the parties.

Exhibit G-1

ANNEX "A" TO THE CONTRACT OF JUNE 5/17/1935 BETWEEN TITANINC, SOCIETE TITANE, TERRES RARES, THANN.

Settlement of the compensation in merchandise or in cash according to article 6.

The compensation in merchandise or in cash shall be made separately for each territory.

Quantities: The following will be the procedure for determining whether one of the parties has exceeded the quotas specified in article 2:

	Terres Rares and Thann	Titaninc and Sté Titane
France: including colonies, dependencies, protectorates and mandated territories (excluding those of the Continent of America located to the North of the Panama Canal and all islands geographically appurtenant to the said continent) and Monaco.		
(Saar District: If the plebiscite foreseen for 1935 decides that Saar in future shall be German, it will no more be among the countries covered by the agreement. In the meantime the deliveries which will be made thereby Terres Rares, Thann and Sté Titane to customers shall be comprised in the deliveries in		

Exhibit G-1

	Terres Rares and Thann	Titanine and Sté Titane
"France". Titangesellschaft is not considered as a customer. With regard to the deliveries of Titangesellschaft in the Saar-District a settlement between the latter and Terres Rares-Thann is to take place).		
Quantities up to 1000 tonnes annually	55%	45%
" between 1000 and 2000 t. "	45%	55%
" above 2000 t. "	50%	50%
Belgium and Luxemburg including colonies, dependencies, protectorates and mandated territories	30%	70%
Holland including colonies, dependencies, protectorates and mandated territories	30%	70%
Various countries comprising: Esthonia, Latvia, Lithuania (excluding Memel), Abyssinia, Liberia, Arabia, Afghanistan, Persia, Siam.	30%	70%

Only the total TiO2 content of the different qualities delivered and invoiced to customers shall be taken into account.

For standard products, i.e. for products of which the chemical composition and pigmentary quality remain regularly fixed within the limits tolerated in the trade, the parties will admit, for all calculations provided for in the pres-

Exhibit G-1

ent agreement, the TiO2 content officially stated unless an important deviation is proved.

No deduction will be made for unpaid goods or for goods dispatched to a customer and lost in transit.

Deliveries between the parties will not be included.

Compensation in merchandise.

Short deliveries shall be compensated as follows:

The party whose deliveries exceed its quota (the excess deliverer) shall order from the other party (the short deliverer) the quantity of Ti02 delivered in excess, either in Dioxide or in other current qualities of the short deliverer and of which he has delivered during the last 12 months at least 25 tonnes calculated as Ti02. These orders shall in principle be sent in at the latest one month after the quarterly statement is issued and for a quantity, calculated as Ti02, equal to the excess delivery during the quarter expired.

On the 15th of June at the latest the necessary orders shall be sent in for the adjustment of the deliveries for the year expired.

Unless otherwise agreed, the goods ordered shall be dispatched to the territory for which they serve as compensation, in order to be distributed and sold there by the excess deliverer.

The goods shall be delivered free frontier or maritime port, duty paid, expenses and duty to be paid by the short deliverer for account of the excess deliverer and reimbursable against invoice.

Exhibit G-1

Price for compensation deliveries.

The excess deliverer shall pay for each quality ordered the average sales price for the period in question, obtained by the short deliverer and reduced to fob the short deliverer's production place, expenses and taxes to be paid in connection with the sales, to be deducted. The short deliverer will thus obtain the same profit which he would have realised if he himself had delivered these same quantities to customers.

The average net sales price of the short deliverer for each quality for the period in question, reduced to fob his production place, is calculated as follows: from the net invoice amount are deducted expenses and taxes, such as:

a) Transport and insurance expenses from the short deliverer's production place to the customer.
b) Sales taxes.
c) Rebates.
d) Sales commission (fixed arbitrarily at 5% of the invoice amount).
e) Storage expenses.
f) Extra expenses for small packings (below 200 Kg.)
g) Duty, custom expenses, consular fees.
h) Import tax.

Unpaid goods shall be included in the calculation of average prices at invoice price. Goods dispatched to customer and lost or damaged on the way, shall be included at the price insured.

Terms of payment for compensation deliveries.

Net within 30 days from date of invoice.

Exhibit G-1

Responsibility for and quality of deliveries.

The goods delivered are to be of a quality equal to that of the samples accepted by the excess deliverer and in accordance with the current qualities sold by the short deliverer.

Each party remains responsible for the quality of its goods within commercial limits, even after re-sale by the other party.

Compensation in cash.

If total or partial delivery has not taken place within 30 days from the date of the order, the short deliverer is entitled to a compensation in cash for the quantity of TiO2 contained in the different qualities ordered but not delivered, equal to the average profit obtained by the excess deliverer on the TiO2 contained in all his deliveries to customers in the period and territory in question, excepting the quantities originating from S.A. Titanium, Milan, according to contract of June 5/10/17/1935.

The average profit shall be established by deducting from the average sales price, reduced to fob production place of the goods delivered, a price equal to the purchase price fixed according to the delivery contract of June 5/17/35 between the parties to the present agreement.

The purchase price to be used for deliveries from Thann shall be calculated according to formulas A) or B), this being each time in the choice of Titaninc—Sté Titane.

Any product sold by one of the parties and manufactured from one or several pigments included in the present agreement, shall be calculated according to its content of pigments used and at the average profit obtained for this or these pigments.

Exhibit G-1

Penalty for excess deliveries in France.

Should one of the parties, at the end of a year, have delivered a quantity exceeding its quota by more than 10%, the excess deliverer, besides his contractual obligation to make a compensation in merchandise or in cash, shall have to pay for the quantity exceeding the 10% a penalty of 20% of the average gross sales price taken as a basis for this compensation. The penalty in question will not have to be paid if the excess delivery was caused by insufficient production at Leverkusen or at Thann. The provisions of this paragraph only apply to the market "France".

If from the stipulations in the present annex prejudicial situations should arise for one or the other party the question shall be dealt with by the parties in a friendly spirit and settled if necessary by the modification of the stipulations in this annex.

AGREEMENT

Concerning the Mutual Deliveries

BETWEEN

Fabriques de Produits Chimiques de Thann et de Mulhouse, Societe de Produits Chimiques des Terres Rares, Societe Industrielle du Titane, Titan Company Inc.

1935.

Exhibit G-2

Between Titan Company Inc. (hereinafter called Titaninc) and Société Industrielle du Titane (hereinafter called Sté Titane) of the one part, and Société de Produits chimiques des Terres Rares (hereinafter called Terres Rares) and Fabriques de Produits Chimiques de Thann & de Mulhouse (hereinafter called Thann) of the other part, an agreement has been entered into on June 5/17/1935 concerning certain Titan Products.

Subject to the conditions stated below and for the duration of the said agreement, the following is agreed upon:

Titaninc which has an agreement with Titangesellschaft m.b.H., concerning supply of products from the latter's factory in Leverkusen, undertakes to supply to Terres Rares-Thann, directly or through Sté Titan, for the countries covered by the above mentioned agreement, goods originating from this factory up to the quantities it has available at Leverkusen, after its own sales, incl. those to the companies cooperating with Titaninc and those of Titangesellschaft m.b.H., have been satisfied, and at prices and conditions fixed as specified hereafter.

Terres Rares-Thann undertake to supply to Titaninc and Sté Titane for the same countries, up to the quantities they have available after satisfying their own sales, at prices and conditions fixed as specified hereafter.

Purchase prices ex Leverkusen (Deliveries of Titaninc).

The purchase prices for goods delivered ex Leverkusen shall be fixed as follows:

Exhibit G-2

		Basic price per 1000 Kg. f.o.b. factory at Leverkusen		
		France	*Belguim*	*Holland*
For Titanium Oxide	R.M.	663.04	665.68	652.73
" Extra T (or equivalent products)	"	456.09	464.17	449.30
" Stand. T (or equivalent products)	"	304.—	291.69	292.03

in 200/250 Kg. casks.

For the "Various countries" shall be applied the same purchase prices as for Belguim.

These purchase prices shall be dependent on two factors:

1) The modification of the average net sales price of Titanine and Sté Titane in the respective territories.

2) The modification of the cost price of the factory at Leverkusen.

They shall be altered as follows:

a) From the point of view of the average net sales price: As a basis have been adopted the average net sales prices during the first quarter of 1934 for each quality in France, Belgium and Holland respectively, reduced to f.o.b. Leverkusen, viz:

	RM. per 1000 Kg. incl. Packings
FRANCE:	
Ti02	1.028.76
Extra T	659.79
Standard T	409.35
BELGIUM:	
Ti02	1.037.09
Extra T	685.37
Standard T	370.52

Exhibit G-2

HOLLAND:

TiO2	996.16
Extra T	638.46
Standard T	371.60

For any increase or reduction of one of these average net sales prices by RM. I.—the respective purchase price in the country in question shall be increased or reduced by:

RM. 0.317 per 1000 Kg.

For modifications affecting fractions of RM. I.—the increase or reduction shall be established proportionally.

The average net sales price shall be calculated as follows:

From the net invoice amount are deducted expenses and taxes, such as:

a) Transport and insurance expenses from the Leverkusen factory to the customer.

b) Sales taxes.

c) Rebates.

d) Sales commission, fixed arbitrarily at 5% of the invoice amount.

e) Storage expenses.

f) Extra expenses for small quantities (below 200 Kg.)

g) Duty, custom expenses, consular fees, etc.

h) Import tax.

Unpaid goods shall be included at invoice price. Goods dispatched to customer and lost or damaged on the way shall be included at the price insured.

Deliveries between the parties shall not be included in the calculation.

Exhibit G-2

The price thus obtained for a quality in one of the countries in question, converted into RM. at the closing selling rate of exchange in London on the last working day of the quarter represents the average net sales price for this quality in the country in question.

b) From the point of view of cost prices:

For any increase or reduction of the cost price by RM. I.—the respective purchase price shall be increased or reduced by

RM. 0.683 per 1000 Kg.

For modifications affecting fractions of RM. I.—the increase or reduction shall be established proportionally.

If the purchase prices, calculated as above, drop below the cost prices of the Leverkusen factory, Titaninc shall be entitled to refuse delivery at these prices.

Purchase prices ex Thann. (Deliveries of Terres Rares—Thann.)

The purchase prices for goods delivered ex Thann shall be fixed as follows, and this each time in the choice of Titaninc, (respectively Sté Titane):

A. To the purchase price ex Leverkusen, calculated as specified above for deliveries of Titaninc, shall be added an amount corresponding to the transport expenses to the French frontier and to the French duty and customs expenses.

B. As for the price ex Leverkusen, shall be established the cost price of Thann and the average net sales price of Terres Rares-Thann in the respective territories.

Exhibit G-2

		Basic price per 1000 Kg. fob factory at Thann.		
		France	Belguim	Holland
For Titanium Oxide	Fr.Frs.	5384.29	4998.61	5017.69
" White Label 55%	" "	3851.45	3.592.37	—
" Green Label 20%	" "	2641.60	—	—

in 200/250 Kg. casks.

For the "various countries" shall be applied the same purchase prices as for Belguim.

These purchase prices shall be dependent on two factors:

1) The modification of the average net sales price of Terres Rares-Thann in the respective territories.
2) The modification of the cost prices of the Thann factory.

They shall be altered as follows:

a) From the point of view of the average net sales price:

As a basis have been adopted the average net sales prices during the first quarter of 1934 for each quality, in France, Belgium and Holland respectively, reduced to fob Thann, viz:

	French Francs per 1000 Kg. incl. packings
FRANCE:	
TiO2	7.202.24
White Label	4.471.—
Green Label	3.155.90
BELGIUM:	
TiO2	5.985.59
White Label	3.653.70
Green Label	no sales

Exhibit G-2

HOLLAND:

Ti02	6.045.80
White Label	no sales
Green Label	"

For any increase or reduction of one of these average net sales prices by French Frs. I.—the respective purchase price in the country in question shall be increased or reduced by

French Frs. 0.317 per 1000 Kg.

For modifications affecting fractions of French Fr. I.— the increase or reduction shall be established proportionally.

The average net sales price shall be calculated as follows:

From the net invoice amount are deducted expenses and taxes such as:

a) Transport and insurance expenses from the Thann factory to the customer.

b) Sales taxes.

c) Rebates.

d) Sales commission, fixed arbitrarily at 5% of the invoice amount.

e) Storage expenses.

f) Extra expenses for small quantities (below 200 Kg.)

g) Duty, custom expenses, consular fees, etc.

h) Import tax.

228

Exhibit G-2

Unpaid goods shall be included at invoice price. Goods dispatched to customer and lost or damaged on the way shall be included at the price insured.

Deliveries between the parties shall not be included in the calculation.

The price thus obtained for a quality in one of the countries in question, converted into French Francs at the closing selling rate of exchange in London on the last working day of the quarter represents the average net sales price for this quality in the country in question.

b) From the point of view of cost prices:

For any increase or reduction of the cost price by French Fr. 1.—the respective purchase price shall be increased or reduced by

French Frs. 0.683 per 1000 Kg.

For modifications affecting fractions of French Fr. 1.—the increase or reduction shall be established proportionally.

If the purchase prices, calculated as above, drop below the cost prices of the Thann factory, Terres Rares-Thann shall be entitled to refuse delivery at these prices.

Calculation of the purchase prices.

Titanine shall give the comptroller forseen in the agreement of June 5/17/1935 above mentioned, a full description of the elements entering into the calculations of cost prices.

At the request of Terres Rares-Thann, Titanine shall establish every three months—soonest possible—the purchase prices to be applied for each quality for the following period, and shall communicate them to Terres Rares-

229

Exhibit G-2

Thann. If important fluctuations of the cost prices, the sales prices or the rates of exchange have taken place, but these fluctuations have not found their right expression in the purchase prices established as indicated above, these factors will have to be taken into account when fixing the purchase prices.

Terres Rares-Thann shall be entitled to have the calculations verified by a comptroller agreed upon by the parties at the expiration of each year, and also in case important modifications of the cost price should seriously influence the purchase prices.

Similarly, Terres Rares-Thann shall give the comptroller a full description of the elements entering into the cacula-tions of their cost prices.

For deliveries ex Thann, Terres Rares-Thann shall establish every three months, at the request of Titaninc-Sté Titane, the purchase prices to be applied for each quality, and shall communicate them to Titaninc-Sté Titane. If important fluctuations of the cost prices, the sales prices or the rates of exchange have taken place, but these fluctuations have not found their right expression in the purchase prices established as indicated above, these factors will have to be taken into account when fixing the purchase prices.

Titanic-Sté Titane shall be entitled to have the calculations verified by a comptroller agreed upon by the parties at the expiration of each year, and also in case important modifications of the cost price should seriously influence the purchase prices.

Payment.

The deliveries will be invoiced at the last purchase price established, and the payment, including transport expenses

up to place of destination, shall take place on receipt of the invoice. The seller is entitled to choose the currency in which the payment is to be made, and is bound to advise the buyer thereof in due time, upon request, in order to enable him to cover himself.

Unless otherwise agreed, the amount to be paid in the currency chosen shall be calculated on the basis of the closing selling rate of exchange in London, the day before the order is sent in.

Orders.

The monthly orders shall be sent in 6 weeks in advance and shall be in due and regular proportion to the development of the sales. In case a substantial decrease in the orders or in the possibilities of delivery can be foreseen, the parties shall inform one another soonest possible.

Samples.

The goods shall be in accordance with the accepted samples.

Reexportation.

The goods delivered shall not be reexported from the country for which they have been ordered and delivered and the buyer will have to impose on his customers the obligation not to export or sell these goods for export.

The buyer shall not enter into any sales contracts with his customers as far as these goods are concerned, without reserving himself the right to cancel the quantities remaining to be delivered under the said contracts, in case of violation of the above obligation.

However it is agreed that the above obligations shall not prevent or limit the export of Titan products in a bona fide manufactured form, as long as the products covered by the agreement do not constitute a proportion of the manufactured products, sufficiently important to substantially interfere with the sales of the parties and those of the companies cooperating with them. The parties will particularly see to it that any reexportation to America, north of the Panama Canal, be avoided.

Disputes, arbitration.

In case of disputes or differences of opinion with regard to this agreement, the parties hereto will endeavor to settle the difficulties in a friendly spirit.

If unsuccessful, the difficulties shall be settled according to the conditions of conciliation and arbitration of the International Chamber of Commerce, by one or several arbitrators appointed according to the rules of the said Chamber of Commerce.

The arbitrator's decision shall be definite and without appeal.

Force Majeure.

Any force majeure cases, as for instance: impossibility to make deliveries and shipments, due to strike, lock-out, fire, war or acts of God, relieve the parties from the delivery obligation for the period involved. However, in such a case, the parties shall, in the interest of all concerned, do their utmost to eliminate the prejudices resulting from these difficulties and to remove soonest possible the obstacle itself.

If, after an order has been accepted, a force majeure case prevents the deljvery, the order is to be considered as cancelled.

Exhibit G-2

Discretion.

The parties hereto undertake to keep this agreement secret towards third parties as far as possible.

If from the stipulations in the present agreement prejudicial situations should arise for one or the other party, the question shall be dealt with by the parties in a friendly spirit and settled if necessary by the modification of the stipulations in this agreement.

CONTRACT SIGNED:

Leverkusen, June 17th, 1935.

On Behalf of: SOCIETE TITANE: TITANINC.:

G. Jebsen G. Jebsen

Milano, June 5th 1935.

On Behalf of: TERRES RARES: THANN & MULHOUSE:

J. Blumenfeld J. Ourisson

Exhibit G-3

Contral à Six

AGREEMENT

BETWEEN

FABRIQUES DE PRODUITS CHIMIQUES DE THANN ET DE MULHOUSE,

SOCIETE DE PRODUITS CHIMIQUES DES TERRES RARES,
SOCIETA ANONIMA TITANIUM,
SOCIETE INDUSTRIELLE DU TITANE,
TITANGESELLSCHAFT m.b.H.
TITAN COMPANY INC.

WITH

SUPPLEMENT

1935

Exhibit G-3

Titan Company Inc. has made agreements with Titangesellschaft m.b.H. and with Société Industrielle du Titane concerning a technical and comercial cooperation regarding the products of the present contract, according to which the industrial and commercial activities are reserved:

a) *Titangesellschaft m.b.H.* with exclusive rights for the following countries:

Germany, Russia, Austria, Hungary, Czechoslovakia, Switzerland, Rumania, Yugoslavia, Bulgaria, Greece, Turkey, Japan, China, Spain, Poland, Portugal, Dantzig, South America (excluding Guiana) with reservation for South America as specified below.

For the Saar Titangesellschaft has certain rights in conjunction with those of Société Industrielle du Titane. Titan Company Inc. has further an agreement with Titangesellschaft concerning supply of products from the latter's factory in Leverkusen.

b) *Société Industrielle du Titane* with exclusive rights for the following countries:

France including colonies, dependencies, protectorates and mandated territories (excluding those of the Continent of America located to the north of the Panama Canal and all islands geographically appurtenant to the said continent). For the Saar Société Industrielle du Titane has certain rights in conjunction with those of Titangesellschaft.

c) *Titan Company Inc.* with exclusive rights for the rest of the world.

Titan Company Inc. has made agreements with:

Exhibit G-3

Titan Co A/S which has exclusive rights of manufacture and sale for the following countries:

Norway, Sweden, Denmark (with Iceland, Greenland and the Faroe Islands), Finland, Esthonia, Latvia, and Lithuania

and non-exclusive rights of sale of its maritime pastes and paints in all countries.

Titanium Pigment Co., Inc. which has exclusive rights of manufacture and sale for:

the Continent of America north of the Panama Canal and all islands geographically appurtenant to the said continent, Hawai and the Philippine Islands. Further, Titanium Pigment Co. Inc. has the right to manufacture and sell in South America.

British Titan Products Company Limited which has exclusive rights of manufacture and sale for:

the British Empire as at present constituted, including protectorates and mandated territories (except the British countries of the Continent of America located to the north of the Panama Canal and all islands geographically appurtenant to the said continent, Demerara, the Falkland Islands and the West Indies), Egypt and Irak.

Société de Produits Chimiques des Terres Rares has made agreements with Fabriques de Produits Chimiques de Thann et de Mulhouse and Società Anonima Titanium,

concerning a technical and commercial cooperation regarding the products of the present contract, according to which the industrial and commercial activities are reserved:

a) *Fabriques de Produits Chimiques de Thann et de Mulhouse* with exclusive rights of manufacture and sale for France including colonies, dependencies, protectorates and mandated territories and Saar. They have non-exclusive rights of sale for all countries in which Société de Produits Chimiques des Terres Rares has not transferred its rights to other companies.

b) *Società Anonima Titanium* with exclusive rights of manufacture and sale for Italy with colonies, dependencies, protectorates and mandated territories, and non-exclusive rights of sale for: Belgium, Holland, Switzerland, British Empire, Spain, Portugal and South America. These non-exclusive rights can be resiliated with 3 months' notice.

c) *Société de Produits Chimiques des Terres Rares*, which has exclusive rights for all countries, with the exception of the rights specified under a) and b) and the rights resulting from the agreements made with:

Krebs Pigment & Colour Corporation, which has acquired the American (U. S. A.) patents of the Blumenfeld group.

Verein für chemische und metallurgische Produktion which has exclusive rights of manufacture and sale in Czechoslovakia, Austria, Hungary, Yugoslavia, and Rumania. Subject to cer-

tain obligations, it has exclusive rights of manufacture and sale in Germany, Dantzig, the Memel District and Denmark. It has with Société des Terres Rares exclusive rights of manufacture and sale in Poland and U. R. S. S.

In order to ensure sales on common lines, the parties hereto, viz:

Società Anonima Titanium (Fabrica di Bovisa), Milan, Italy (hereinafter called Bovisa).

Société de Produits Chimiques des Terres Rares, 67 Rue de Prony, Paris, France (hereinafter called Terres Rares).

Fabriques de Produits Chimiques de Thann et de Mulhouse, Thann, Haut Rhin, France (hereinafter called Thann).

Titan Company Inc., 7 West 10th Street, Wilmington, Delaware, U. S. A. (hereinafter called Titaninc).

Société Industrielle du Titane, 26 Rue de la Pépinière, Paris, France (hereinafter called Sté Titane)

Titangesellschaft m.b.H., I.G., Werk, Leverkusen a/Rhein, Germany (hereinafter called Titangesellschaft)

have entered into the present agreement.

Article 1.

Products and countries covered by the agreement.

a) *Products covered by the agreement*: As products covered by the agreement are considered all materials or substances containing Titanium having undergone a chemical treatment and with a minimum

content of 2% of the element Titanium and which can be used as pigments—whether chemically combined or mechanically mixed or physically combined (as for instance mixed crystals,) without it being necessary to consider whether they are actually used as pigments or for other purposes. The same principle applies to mixtures of these substances. The parties will indicate to each other in writing those of their products which come under the category above defined.

b) *Countries covered by the agreement*: As countries covered by the agreement are considered all countries of the world, except the British Empire, Egypt, Irak, the Continent of America north of the Panama Canal and all islands geographically appurtenant to the said continent, Hawai and the Philippine Islands.

ARTICLE 2.

Reserved Territories.

The parties recognize mutually exclusive rights of sale and delivery of the products covered by the present agreement, for:

Titangesellschaft and
Verein für chemische und metallurgische Produktion
(hereinafter called "Aussig"):

Germany, Dantzig, Czechoslovakia, Poland, Austria, Hungary, Yugoslavia, Rumania, Russia—hereinafter called "Aussig countries".

Exhibit G-3

Titangesellschaft, Terres Rares and *Thann*:

Spain, Portugal, Japan, including their colonies, dependencies, protectorates and mandated territories, Switzerland, Bulgaria, Greece, Turkey, China and the part of the Continent of America located to the south of the Panama Canal, excluding Guiana—hereinafter called "Non-Aussig countries", with reservation as to Bovisa's rights according to article 4 and the rights of Titanium Pigment Co. Inc. to manufacture and sell in South America. In case Titanium Pigment Co. Inc. should erect a factory in one of the countries of South America, the parties (Titangesellschaft, Terres Rares, Thann) would be entitled to recover their freedom as far as South America is concerned.

Terres Rares, Thann and Sté Titane:

France including colonies, dependencies, protectorates and mandated territories (excluding those of the Continent of America located to the north of the Panama Canal and all islands geographically appurtenant to the said continent), Monaco, as well as Saar, subject to the result of the plebiscite foreseen —hereinafter called "France", but with reseration as to Bovisa's rights according to article 4 and Titangesellschaft's right to sell in Saar.

Terres Rares, Thann and *Titaning*:

a) Belgium and Luxemburg including colonies, dependencies, protectorates and mandated territories—hereinafter called "Belgium";

b) Holland including colonies, dependencies, protectorates and mandated territories—hereinafter called "Holland";

c) Estonia, Latvia, Lithuania (excluding Memel), Abyssinia, Liberia, Arabia, Afghanistan, Persia, Siam—hereinafter called "Various Countries"

a) and b) with reservation as to the rights of Bovisa according to article 4.

Bovisa:

Italy including colonies, dependencies, protectorates and mandated territories—hereinafter called "Italy".

Titaninc:

Norway, Sweden, Finland.

Titaninc, Aussig:

Denmark (including Iceland, Greenland and the Faroe Islands) and the Memel District.

The parties hereto renounce from selling and delivering products covered by the agreement in favour of the parties which have the exclusive rights specified in the present article, for the countries reserved these parties.

The parties will do their utmost to prevent that the products covered by the agreement and having been sold by them be imported by third parties into the countries which they have given up. However, should this happen, the quotas of the parties will be reduced by the same quantity.

If the goods have been exported into a country in which the supplier has no quota, the quantity is to be deducted

from his quota in a country in which he has delivery rights or, in the choice of the wronged party, a compensation in merchandise shall be made according to the principle laid down in Annex A.

ARTICLE 3.

Rights of delivery for the Non-Aussig countries

The total deliveries of Terres Rares-Thann and Titangesellschaft in the Non-Aussig countries, calculated as TiO2, shall be divided according to the following quotas:

Terres Rares-Thann	30%
Titangesellschaft	70%

The calculation will be made by Titangesellschaft according to the procedure described in Annex A to the present agreement.

By "delivery" is meant "delivered and invoiced to customers".

ARTICLE 4.

Bovisa's export right.

Bovisa has the right to deliver for France, Belgium and Holland an annual quantity of 75 tonnes Ti02. This quantity shall not be delivered direct to the customers but purchased by Terres Rares, Thann, Titaninc and Sté Titane.

If, for a year, the total deliveries of these companies in France, Belgium and Holland, calculated as Ti02, exceed by 10% or more the deliveries of 1933, the quantity to be purchased from Bovisa shall be increased by 12.5 tonnes Ti02 content.

These deliveries shall be made on the conditions stipulated in Annex B to this agreement.

Exhibit G-3

Further, Bovisa has the right to deliver in the Non-Aussig countries products covered by this agreement, up to an annual quantity of 175 tonnes Ti02 content. This quantity will be divided as follows:

117 t. on the quota of Terres Rares-Thann
58 " " " " " " Titangesellschaft.

If, for a year, the quota of Terres Rares-Thann in the Non-Aussig countries is below 117 tonnes, Terres Rares-Thann shall take upon themselves the deficit up to a quantity of 25 tonnes. If the deficit is above 25 t. the part of the deficit exceeding 25 t. will be borne by Bovisa.

The quantity of 58 t. to be taken by Titangesellschaft shall not be reduced under any circumstances, except in the case provided for in article 5.

If, for a year, the total deliveries in the Non-Aussig countries, calculated as Ti02, exceed by 10% or more the deliveries in 1933, Bovisa's right of delivery for the Non-Aussig countries will be increased by 12.5 t. Ti02 content, to be divided as follows:

Terres Rares-Thann	3.75 t.
Titangesellschaft	8.75 t.

By "delivery" is meant "delivered and invoiced to customers".

ARTICLE 5.

Restriction of Bovisa's export rights.

Bovisa binds itself, for itself as well as for the enterprises which may possibly cooperate with is (see article 7 and 9), to increase its production capacity, including that

of the enterprises which may possibly cooperate with it, only to the extent and at the time justified by the requirements of the Italian market.

If, in a year, the market of Bovisa in Italy, including colonies, dependencies, protectorates and mandated territories, adding the quantities granted by article 4, increases so as to absorb more than 1500 t. TiO_2, the export rights of Bovisa shall be reduced by this excess quantity. This reduction will be applied proportionally to the respective obligations stipulated in article 4.

Consequently, if in a year, Bovisa's deliveries in Italy with colonies, dependencies, protectorates and mandated territories, reach 1500 tonnes of TiO_2, Bovisa's export rights shall cease to exist for the year in question.

Article 6.

Sales prices in the Non-Aussig countries.

As long as the parties themselves sell their products in the Non-Aussig countries, each of them will be free to fix the prices. However, in order that the prices may be brought as far as possible to the same level, the parties will regularly exchange their opinion on the subject. Each party is obliged to give all desirable information regarding its prices.

If the sales are made jointly, the sales prices and terms will be fixed by the party in charge of the sales.

For the sale of pure TiO_2 by those of the parties who fix their sales prices and conditions by mutual consent, an adjustment of the sales proceeds shall take place as described in Annex A to the present agreement.

As far as the other qualities are concerned, no adjustment of this kind will take place; the deliverer will thus remain in full possession of the amount received. However, it is assumed that the supplier of such a quality will obtain about the same profit, proportionate to the Ti02 content, as for the sale of pure Ti02. If this assumption does not materialise and if the deliverer's sales prices and conditions have been fixed in agreement with the other parties, the parties will have to agree on an indemnity in favour of the deliverer, in order to compensate the difference.

Article 7.

Competition and secrecy clause.

Except in the cases foreseen in article 9 hereafter, the parties shall be prohibited, during the continuance of the present agreement, from participating directly or indirectly in competitive enterprises producing or delivering or preparing to produce or to deliver in the countries covered by the agreement, except to one of the parties, the products covered by the agreement, or to assist them in any way whatever, as regards their installation or operations, by technical or commercial advices or preferential deliveries, grant of licenses, assignment of patents, etc. The same obligations are incumbent on the persons employed by the parties, within the limits of their engagement contracts and the limits of the laws.

It will not be considered a violation of the obligation under paragraph 1, to take an interest in an enterprise manufacturing other products besides those coming under this agreement, provided the object of this interest are these other products.

In such a case the party in question shall have to subject the deliveries of products covered by the agreement, made by this enterprise in the countries covered by the agreement, to the stipulations of the present agreement, by adding them to its own deliveries.

The parties bind themselves not to supply intermediary products to third parties likely to utilise them for the manufacture of products covered by the agreement.

The parties hereto undertake to keep this agreement secret towards third parties as far as possible.

Article 8.

Patents concerning the use of the products of the agreement.

During the life of the patents concerning the use of the products of the agreement, the parties acknowledge mutually, for themselves and their respective customers, the right to use these patents gratuitously as far as the countries of the agreement are concerned, as well as patent applications published during the continuance of the agreement.

In case a license in respect of patents concerning the use of the products of the agreement is granted to a customer, the parties shall as far as possible bind him to use for the application of the license and for its duration solely the products of the parties, leaving him, however, free choice to procure them from any of the parties authorized to sell in the country in question.

Each party further undertakes, during the continuance of the agreement and in the countries covered by the agreement, to refrain from rising opposition against patent applications filed by another party, concerning the use of the products of the agreement.

Exhibit G-3

ARTICLE 9.

Succession or transfer of rights to third parties.

The present agreement shall bind not only the companies who are signatories thereto, but also their successors, assigns or anybody having rights under the agreement, who shall have to assume all the obligations resulting therefrom.

The grant of an exclusive license comprising all the products of the agreement, for one or several countries of the agreement, shall not constitute a violation of the obligation of paragr. 1 of art. 7 and each party may sell, lease or transfer to a third party all its factories for the manufacture of the products of the agreement or all its patents for the manufacture of the products of the agreement, together with its entire quota.

In all other cases, an assignment by a party of the quota or part thereof to third parties shall be subject to the consent of the other parties.

In the cases foreseen above each party signatory to the present agreement shall remain responsible towards the other parties until it has been expressly released by them.

ARTICLE 10.

Disputes, Arbitration.

In case of disputes or differences of opinion with regard to this agreement, the parties hereto will endeavour to settle the difficulties in a friendly spirit.

If unsuccessful, the difficulties shall be settled according to the conditions of conciliation and arbitration of the International Chamber of Commerce, by one or several arbitrators appointed according to the rules of the said Chamber of Commerce.

The arbitrator's decision shall be definite and without appeal.

ARTICLE 11.

Duration.

The present agreement enters into force on the day of its signature. Except in the cases foreseen in the articles 12 and 13, it can only be denounced as per December 31, 1938 with 6 months notice, i. e. given on June 30, 1938. If no notice has been given, the agreement continues to run for periods of 2 years if it is not denounced 6 months before the expiration of each period. Notice will be considered as having been given in due time if it has been dispatched by registered mail to all the parties, not later than June 30 of the year in question.

The quota system foreseen by the present agreement is to be applied with retroactive effect as from May 1st 1934.

Once the agreement is denounced but not earlier than 2 months before its expiration, each party can make sales on any conditions for the period following the expiration of the agreement.

Deliveries against sales contracts in force at the definite termination of the agreement are to be included in the settlement only if such deliveries have been made prior to the date of this termination.

ARTICLE 12.

Anticipated resiliation.

The present agreement may be resiliated at an earlier date than foreseen in case of events beyond the control of the parties, of such a nature as to prevent its fulfilment or which would make it prejudicial to one of the parties.

As events of such a nature are considered for instance:

1) A profound change of the sales possibilities, resulting from governmental measures or from a new competition.

2) Any governmental or legislative measure contrary to the present contract or making it partly or wholly illegal.

If the reasons for an anticipated resiliation should present themselves only in one of the secondary countries of the agreement, the maintenance of the agreement might be exacted for the countries not affected by the event in question.

In case of anticipated resiliation, the present agreement may be denounced as per the end of a month with 3 months' notice.

Once the agreement is denounced but not earlier than 2 months before its termination, each party can make sales on any conditions for the period following the termination of the agreement.

ARTICLE 13.

Relation to other agreements.

The present agreement is closely connected with the agreement made in order to ensure sales on common lines, on June 5/17/1935 between: Titaninc, Sté Titane, Terres Rares and Thann. The latter agreement contains the following resiliation clauses:

a) in article 15:

It (the agreement) "can only be denounced as per December 31, 1938 with 6 months notice,

Exhibit G-3

i.e. given on June 30, 1938. If no notice has been given the agreement continues to run for periods of 2 years if it is not denounced 6 months before the expiration of each period. Notice will be considered as having been given in due time if it has been dispatched by registered mail to all the parties, not later than June 30 of the year in question."

b) In article 16:

"The present agreement may be resiliated at an earlier date than foreseen in case of events beyond the control of the parties, of such a nature as to prevent its fulfilment or which would make it prejudicial to one of the parties.

As events of such a nature are considered for instance:

1) A profound change of the sales possibilities resulting from governmental measures or from a new competition.

2) Any governmental or legislative measure contrary to the present contract or making it partly or wholly illegal.

If the reasons for an anticipated resiliation should present themselves only in part of the countries covered by the agreement outside France, Belgium and Holland, the maintenance of the agreement might be exacted for the countries not affected by the event in question.

The anticipated and full resiliation of the present agreement shall also take place if Tita-

nine denounces it according to its right foreseen in article 5.

In case of anticipated resiliation, the present agreement may be denounced as per the end of a month with 3 months' notice".

c) In article 5:

". . . should Terres Rares-Thann object to a change in prices proposed by Titanine for Belgium and Holland, the latter would be entitled to denounce the entire agreement".

Should the agreement between Titanine, Sté Titane, Terres Rares and Thann be denounced according to one of these clauses, the present agreement may also be denounced with 5 months' notice and as per the end of the month, on the condition, however, that this notice be given within 60 days from the date of mailing the notice of the other above mentioned agreement to the parties.

The party which denounces the present agreement or the agreement of June 5/17/1935 above mentioned, will inform each of the other parties to these two agreements, without delay, by registered letter.

Exhibit G-3

ANNEX "A"

ANNEX TO THE CONTRACT OF JUNE 5/10/17/1935

ARTICLE 3.

I. *Settlement of the compensations in merchandise for the "Non-Aussig" countries.*

1. *Preliminary statements of quantities.*

The parties will send each other every month by circular letter a preliminary statement of the quantities of TiO2 delivered by them in the "Non-Aussig" countries.

Bovisa will advise the parties as soon as its deliveries in Italy, its colonies, dependencies, protectorates and mandated territories shall reach a rate of 1225 tonnes per annum; as long as these deliveries will be between 1225 and 1500 tonnes per annum Bovisa will furnish the information necessary to determine the reductions of its exports foreseen in article 5.

These statements will be made out according to the following schedule:

..... Kg. TiO2 in Titanium Dioxide
..... " " " " Pigments

Total..... Kg. TiO2

These statements will be transmitted to the other parties not later than the 15th of the month following the month of delivery.

2. *Final statements of quantities.*

A statement of the quantities actually delivered will be established by each of the parties every three months, ac-

cording to the above schedule, and transmitted to the other parties within 30 days from the end of the respective quarter.

3. *Preliminary comparative statements of quantities.*

These statements will be established by Titangesellschaft every three months in order to ascertain the differences between the deliveries of each party and its quota. These preliminary statements will enable the parties, in the course of the year, to adapt as far as possible their sales to their quotas, in order to avoid considerable differences at the end of the year.

4. *Final statements of quantities.*

The parties will communicate to each other by circular letter, within 42 days from the end of each year, the quantities delivered by them during the year in question and their TiO2 content, according to the above schedule.

On the basis of this information, Titangesellschaft will establish a statement giving the differences between the deliveries of each party and its quota for the year in question.

5. *Compensation in merchandise.*

The party which has exceeded its quota will have to purchase from the party which has not reached its quota a quantity equal to the excess quantity, at the average price stated below (paragr. II 1))—less 5% sales commission—fob export port or free frontier of the export country. The deliveries will have to be of good saleable merchandise, if not otherwise stipulated: 97 to 98% TiO2, and according to sample accepted by the buyer. If the quality of this merchandise does not permit to sell it at the normal price, the

possible reduction in price shall be borne by the manufacturer who remains responsible for the quality of his merchandise, even after re-sale by the other parties.

The quantities resulting from the adjustment of the year 1934 shall be divided equally over the four following years. The compensation for the following years shall be made for each of these years within the six months following the year in question. Deliveries which, in spite of request made in due time, are not made within the period provided for, may be cancelled by the buyer without his being obliged to grant an extra delay for delivery.

The payment of the goods is to be made within 30 days from the date of invoice.

It shall not be necessary that the compensation in merchandise be effected by deliveries from one factory to another, it can be carried through by transfer of orders from the buyer to the seller. If, in spite of the offer from the seller, the buyer has not taken delivery of the compensation merchandise before the end of the first 6 months of the year, the seller shall be authorized to invoice the quantity in question and to place it at the disposal of the party which ought to have taken delivery thereof. Payment within 30 days of the date of the invoice.

The party which has not reached its quota may give up its rights to compensation.

II. *Adjustment of the sales proceeds.*

1. *Statement of accounts.*

The adjustment of the sales proceeds shall only apply to the deliveries of pure TiO_2, the other pigments are only to be included in the statements of quantities. When issuing the annual statement of deliveries, the parties shall at the

same time state the net proceeds (fob export port or free frontier of the export country), obtained by them for the quantities of TiO_2 delivered in the preceding year.

In order to determine these net proceeds, expenses and taxes such as the following shall be deducted from the amount of the invoice:

a) Transport and insurance expenses from fob export port or free frontier of the export country to the customer including intermediary storage.

b) Sales taxes (such as the turnover tax).

c) Rebates.

d) Extra expenses for small packings (below 200 Kg.).

e) Duty, custom expenses, consular fees, etc.

f) Import tax.

On the basis of these net proceeds Titangesellschaft will calculate the average price which is due the parties participating in the adjustment and which will permit the calculation of the amount each of them has obtained too much or too little.

2. *Payment*

The balances are to be paid within 10 days from the date the statement of account was established.

If from the stipulations in the present annex prejudicial situations should arise for one or the other party, the question shall be dealt with by the parties in a friendly spirit and settled, if necessary, by the modification of the stipulations in this annex.

Exhibit G-3

ANNEX "B"

ANNEX TO THE CONTRACT OF JUNE 5/10/17/35 ARTICLE 4.

Purchase price for the 75 tonnes from Bovisa.

The purchase price for the 75 tonnes of Ti02 and for the possible additional 12.5 t. shall be based on the net average sales price of the buyer for Ti02 in the territories in question, viz:

"France" for delivery of 56 t. plus possibly 9 t.
"Belgium" " " " 10 " "
"Holland" " " " 9 " "

However, the buyers are free to direct the goods purchased by them to any destination in their market, without this affecting the fixation of the purchase price.

In order to fix the net average sales price, should be deducted from the total amounts of the invoices for pure Ti02 the expenses which Bovisa would have had to carry in case of direct sale by them to the customers, such as:

a) Transport and insurance expenses from f.o.b. Genoa to the buyer's warehouse (Clichy, resp. Thann, Antwerp and Rotterdam).

b) Sales taxes such as turnover tax.

c) Rebates.

d) Sales commission (fixed arbitrarily at 5% of the invoice amount).

e) Extra expenses for small packings (below 200 Kg.).

Exhibit G-3

f) Duty, custom expenses, consular fees, etc.

g) Import tax.

h) 3% publicity expenses.

Quality.

If the quality of Bovisa's merchandise is different from that of Titangesellschaft or Thann, and therefore commands another price in the market, the difference shall be either to the credit or to the debit of Bovisa which remains responsible for the quality of its merchandise even after re-sale by the other parties.

Time of delivery.

The quantities shall as far as possible be ordered, half during the first 6 months, half during the second 6 months of the year, unless there is reason to believe that deliveries shall cease as a result of the development of the Italian market (see article 5).

Terms of payment.

The payment shall take place within 30 days from the date of invoice, provisionally at the minimum official sales price, less expenses enumerated above. The final settlement shall take place as soon as the final price for the year has been fixed.

If from the stipulations in the present annex prejudicial situations should arise for one or the other party, the question shall be dealt with by the parties in a friendly spirit

and settled, if necessary, by the modification of the stipulations in this annex.

Translated from French

SUPPLEMENT

To the Contract of June 5.10.17.1935 Between "Thann", "Terres Rares", "Bovisa", "Societe Titane", "Titangesellschaft" and "Titaninc".

In Partial derogation from articles 4 and 5 of the said contract, it is agreed that the quantities which Bovisa reserved itself the right to export shall not be reduced below 120 tons.

When Bovisa's exports will have dropped to these 120 tons, the exports will be divided as follows:

16 t.5 are to be bought by Terres Rares—Thann on the conditions stipulated for "France" at a price foreseen in the annex B.

20 t. are to be bought by Titaninc and Sté Titane on the conditions stipulated for "France" at a price foreseen in the annex B.

56 t.5 are to be disposed of in the "Non Aussig" countries to be deducted from the quota of Terres Rares—Thann.

27 t. are to be disposed of in the "Non Aussig" countries to be deducted from the quota of Titangesellschaft.

WHEREAS, Zirconium is desirous of obtaining a license under said Letters Patent and each of them; and

WHEREAS, Zirconium is the owner of all right, title and interest in and to Letters Patent of the United States, and in and to the respective inventions thereof, listed and enumerated as follows:

Lubowsky No. 1,640,952 of August 30, 1927;
Lubowsky No. 1,793,501 of February 24, 1931;
Lubowsky No. 1,843,427 of February 2, 1932;

Rhodes No. 1,922,328 of August 15, 1933;
Rhodes No. 1,931,682 of August 24, 1933;
Richter No. 1,932,087 of October 24, 1933;
Richter No. 1,947,226 of February 13, 1934; and

WHEREAS, Titanium is desirous of obtaining a license under said Letters Patent and each of them;

NOW THEREFORE, in consideration of the premises and of the sum of one dollar lawful money of the United States and other good and valuable consideration by each of the said parties to the other in hand paid, the receipt of which is hereby severally acknowledged, and of the mutual covenants, conditions and agreements hereinafter set forth on the part of the respective parties to be respectively observed and performed, the parties hereto do hereby agree to and with each other as follows:

1. DEFINITIONS. (a) The designation "Licensed Field" wherever herein employed, means and includes (1) all methods, processes and apparatus in the field of manufacture and use of all titanium compounds containing in chem-

ical, mechanical or physical combination two per cent (2%) or more of the element titanium, and mixtures of such compounds, which can be used as pigments, whether or not adapted for other uses; and (2) all such titanium compounds and mixtures thereof which can be used as pigments, whether or not adapted for other uses.

(b) The designation "Finished Article" wherever herein employed means any artificially produced article or composition within the "Licensed Field" which has been manufactured by aid of any process or apparatus or both so as to constitute a cohesive intermixture of titanic material with other material with which such titanic material was not previously intermixed or associated as, for example, in paint, rubber, glass and titanated lithophone.

II. Titanium hereby gives and grants to Zirconium and Zirconium hereby accepts from Titanium, upon the terms and conditions hereinafter specified, a non-exclusive right and license to make, use and/or sell, throughout the United States of America, its territories and dependencies, but not elsewhere, to the same extent that Titanium itself is free to make, use and/or sell the same, each and every invention, improvement or subject matter in the "Licensed Field" claimed in or covered by the Letters Patent hereinabove enumerated and in or by any and all other Letters Patent now or hereafter owned by or otherwise at the disposal of Titanium and with respect to which Titanium is or shall be privileged to grant sublicenses, provided always, however, that the license so granted shall not permit Zirconium to sell or export for sale, directly or indirectly, outside of the United States of America, its territories and dependencies, except to the extent hereinafter provided with respect to "Finished Articles", any products within the "Licensed Field" manufactured in

whole or in part under and in accordance with the Letters Patent herein licensed or any of them.

III. Zirconium hereby gives and grants to Titanium and Titanium hereby accepts from Zirconium, upon the terms and conditions hereinafter specified, a non-exclusive right and license to make, use and/or sell throughout the United States of America, its territories and dependencies, to the same extent that Zirconium itself is free to make, use and/or sell the same, each and every invention, improvement or subject matter in the "Licensed Field" claimed in or covered by the Letters Patent hereinabove enumerated and in or by any and all other Letters Patent now or hereafter owned by or otherwise at the disposal of Zirconium and in respect to which Zirconium shall be privileged to grant sub-licenses.

IV. As Titanium is under obligation to other licensors to render periodic reports of its production and that of its sublicensees within the "Licensed Field", Zirconium shall keep accurate account of all its own production within that field and on or before the 31st day of January and July of each year shall render to Titanium, verified under the oath of one of its officers, true statements of all its production within the "Licensed Field" during the six months ended December 31st or June 30th next preceding, as the case may be; and Titanium shall have the right, upon request, to have any such statement audited by an independent certified public accountant or other person acceptable to Zirconium.

V. Each party hereby acknowledges the validity of the several Letters Patent hereinabove enumerated and the ownership or control thereof by the other party, and agrees

that it will never directly or indirectly question or contest the validity of any of said Letters Patent, nor of any other Letters Patent hereafter licensed hereunder, nor use nor infringe the inventions thereof except as herein licensed, nor directly or indirectly connive with, nor afford any pecuniary or other assistance to, any contestant or questioner of the validity thereof or any infringer thereof, this covenant to remain in force for the full term of each and all of said Letters Patent irrespective of any earlier termination of this agreement in accordance with the provisions hereof.

VI. Each party hereto agrees, to the extent that its prior obligations to other licensors do not prevent, to cooperate with the other by imparting semi-annually to such other party full and accurate information in detail as to knowledge obtained by it in and applicable to the "Licensed Field" since its last report hereunder, and to permit such other party to adopt, apply and use the same; *provided*, however, that neither party shall be obligated hereunder to impart or otherwise disclose to the other party, or to permit the other party to adopt, apply or use, any knowledge, information, method, process or apparatus acquired by it from any third party under or pursuant to an agreement which precludes it from so imparting or disclosing the same or permitting the use thereof.

VII. Each party hereto agrees that it will so far as possible require its officers, agents and employees to agree to assign to it throughout the world any and all inventions within the "Licensed Field" which may be made by them or any of them prior to the end of the last expiring term of the Letters Patent hereinabove enumerated.

VIII. Zirconium agrees to grant to Titanium and/or any licensee or sublicensee of Titanium specified by Titanium an exclusive right and license, exclusive of all others including Zirconium, throughout all countries of the world other than the United States of America, its territories and dependencies, to manufacture, use and/or sell each and every invention, improvement or subject matter within the "Licensed Field", whether or not patented or patentable, now owned or controlled by Zirconium or hereafter and during the term of this agreement made, discovered or acquired by it or otherwise at its disposal. Zirconium further agrees, whenever it or any person licensed by it other than Titanium files an application for a United States Letters Patent on an invention in the "Licensed Field", to send to Titanium within two months from the date of such filing a copy of such application and, upon request of Titanium in writing and within two months of the receipt of such request by Zirconium, all papers necessary to permit the filing of an application for patent on such invention in any country of the world outside of the United States of America, its territories and dependencies, and, so far as in its power lies, papers vesting in Titanium or any licensee or sublicensee of Titanium specified by Titanium an exclusive license in and for any such country to manufacture under and in accordance with said invention and/or to use and/or sell the product thereof throughout the full term of any patent granted therefor.

IX. Zirconium shall and hereby does constitute and appoint and shall hereafter continuously retain Titanium or any licensee or sublicensee of Titanium specified from time to time by Titanium, to the exclusion of all others, as

the sole agent of Zirconium throughout the term of this agreement for the introduction and sale outside of the United States of America, its territories and dependencies, of all products of Zirconium within the "Licensed Field", upon such orders of said agent therefor at current market prices of Zirconium as the latter shall elect to fill, the same to be sold by said agent only in territories outside of the United States of America, its territories and dependencies, at prices and upon terms and conditions to be fixed by said agent; and Zirconium shall not make any sale or transfer of any of its said products in or for any territory outside of the United States of America, its territories and dependencies, except through its said exclusive agent and as aforesaid; provided, however, that notwithstanding the agency or agencies created by this Article, Zirconium may export into the territory of any such agent "Finished Articles" as hereinbefore defined in the manufacture of which titanium products produced by Zirconium or by one of its licensees or sublicensees have been used as raw material and of which such titanium products shall not constitute such an important part that the sale thereof within the territory of such agent will substantially interfere with such agent's sales of its own titanium products in its territory; provided further, that upon the receipt by Zirconium of notice from any such agent that such importation of such "Finished Articles" into the territory of such agent does in fact interfere with such agent's sales of its own products, Zirconium shall endeavor to prevent any further such importation, and Titanium agrees, for itself and its licensees and sublicensees, that it will not sue Zirconium or any purchaser from or customer, direct or indirect, of Zirconium on account of the exportation or sale and use of any such "Finished

Articles" outside of the United States of America, its territories and dependencies, until after the expiration of six months from the time such notice as aforesaid shall have been given to Zirconium.

X. In the event of any violation or failure of performance on the part of either party hereto of any of the terms and conditions of this agreement to be performed or assumed by it the other party may by notice in writing mailed to the delinquent party at its last known post office address notify the delinquent party of such delinquency, and unless such delinquency has ceased and satisfaction therefor been made within six months after the mailing of such notice the other party may at its option terminate the license or licenses granted such delinquent party hereunder by notice in writing to that effect mailed to the delinquent party at its last known post office address. Such termination of any license or licenses as in this Article hereof provided shall not release the delinquent party from any obligation or liability to the other party hereunder which may have accrued at the date of such termination, nor terminate any license or licenses granted by the delinquent party hereunder.

XI. It is mutually understood and agreed that any omission on the part of either party on any one or more occasions to assert or exercise any of its rights hereunder shall not be deemed or construed to constitute a continuing waiver of such right nor preclude or limit the other party from or in the assertion or exercise of the same on any subsequent occasion.

Exhibit H

XII. Except as hereinbefore otherwise provided with respect to the grant of licenses by Zirconium for countries outside the United States of America, its territories and dependencies, this agreement and the licenses hereby granted are personal to the respective parties and neither party shall have any right or power to assign this agreement or the license or licenses hereby granted, or to grant sublicenses thereunder in whole or in part, except to a successor to the entire business and good will of such party and then only with the consent in writing of the other party first had and obtained.

XIII. Unless sooner terminated as herein provided this agreement and the licenses hereby granted shall continue and remain in force until August 7, 1951, and shall then terminate; provided, however, that each and every license then in effect hereunder with respect to Letters Patent extending beyond August 7, 1951, shall continue and remain in force throughout the full term of said respective Letters Patent.

XIV. This agreement and all the terms and conditions thereof and all questions arising thereunder shall be construed and decided according to the law of the State of New York.

IN WITNESS WHEREOF the parties hereto have caused these presents to be duly executed by their respective officers thereunto duly authorized, and their respective cor-

porate seals to be hereunto affixed and duly attested; the day and year first above written.

Exhibit H-1

AGREEMENT made this sixth day of May, 1935, by and between Titanium Pigment Company, Inc., (hereinafter called "Titanium"), a corporation of the State of Maine, and American Zirconium Corporation, (hereinafter called "Zirconium"), a corporation of the State of Maryland, and The Glidden Company, (hereinafter called "Glidden"), a corporation of the State of Ohio, and Metal & Thermit Corporation, (hereinafter called "Thermit"), a corporation of the State of New Jersey.

WITNESSETH:

WHEREAS, in and by an agreement in writing between Titanium and Zirconium, executed simultaneously herewith and bearing even date herewith, (hereinafter referred to as "License Agreement") among other things Titanium granted to Zirconium a license under or with respect to the letters patent of the United States therein described, upon the terms and conditions set forth in said "License Agreement" and

WHEREAS, said "License Agreement" is entered into among other things upon the faith of this agreement by Titanium and Zirconium, and

WHEREAS, Glidden and Thermit together own and control a majority of the shares of the capital stock of Zirconium having voting rights;

NOW, THEREFORE, in consideration of the premises and of the sum of One Dollar, lawful money of the United States, by each of the parties to the other in hand paid,

and of other good and valuable consideration, the receipt of which is hereby acknowledged, the parties hereto do hereby agree to and with each other as follows:

FIRST: In lieu of royalties and other payments for the license granted to Zirconium by Titanium in and by said "License Agreement", and in consideration thereof, Zirconium hereby agrees to issue and deliver to Titanium one thousand one hundred and twelve (1,112) shares of the common stock of Zirconium full paid and non-assessable, presently to be authorized for such purpose. The certificate or certificates from time to time issued representing said shares shall bear the following endorsement "The shares represented by this certificate are subject to agreement dated the 6th day of May, 1935, between the Titanium Pigment Company, Inc., American Zirconium Corporation, The Glidden Company and the Metal & Thermit Corporation."

SECOND: Zirconium agrees that it will not issue or authorize the issuance of any shares of the common stock of Zirconium in excess of eleven thousand one hundred and twelve (11,112) shares or any shares of the preferred stock in excess of six thousand (6,000) shares of which four thousand two hundred thirty-two (4,232) shares are now issued and outstanding without offering such additional shares to all common stockholders pro rata.

THIRD: Titanium agrees that during the period of the "License Agreement" it will not sell or otherwise dispose of the above One Thousand One-hundred and Twelve (1,112) shares of the Common Stock of Zirconium without first offering such stock proposed to be sold or other-

wise disposed of at the same price as Titanium is offered by a responsible bona fide bidder, to Glidden and Thermit, one-half thereof to each and if either of them do not purchase such shares so offered within thirty (30) days thereafter then offering the entire amount thereof to the other party; and Glidden and/or Thermit shall have the right within thirty (30) days after receiving such offer to purchase such stock so offered at the price and upon the same terms as are offered; if within the thirty (30) days Glidden and/or Thermit fail to purchase such stock Titanium shall be free to dispose of the same, and thereafter such stock shall not be subject to the provisions of this paragraph.

FOURTH: Glidden and Thermit severally agree that during the period of the "License Agreement", they will not sell or otherwise dispose of their shares of the common stock of Zirconium, except to each other, without first offering such stock proposed to be sold or otherwise disposed of, at the same price as they are offered by a responsible bona fide bidder to Titanium and Titanium shall have the right within thirty (30) days after receiving such offer to purchase such stock so offered at the price and upon the same terms as are offered; if within the thirty (30) days Titanium fails to purchase such stock Glidden and/or Thermit shall be free to dispose of the same and thereafter such stock shall not be subject to the provisions of this paragraph.

FIFTH: Titanium further agrees that if it shall elect to cancel the "License Agreement" as provided for in paragraph X of such Agreement, it will return to Zirconium along with said notice of termination the One Thousand

Exhibit H-1

One-Hundred and Twelve (1,112) shares of the Common Stock of Zirconium above mentioned and that any notice of termination that may be given unless accompanied by the shares as hereinabove provided shall be wholly void and ineffective.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be duly executed by their respective officers thereunto duly authorized, and their respective corporate seals to be hereunto affixed and duly attested, the day and year first above written.

AGREEMENT made this 6th day of May, 1935, by and between NATIONAL LEAD COMPANY (hereinafter called NATIONAL), a corporation of the State of New Jersey, and TITANIUM PIGMENT COMPANY, INC., (hereinafter called TITANIUM), a corporation of the State of Maine, of the one part, and THE GLIDDEN COMPANY (hereinafter called GLIDDEN), a corporation of the State of Ohio, METAL & THERMIT CORPORATION (hereinafter called THERMIT), a corporation of the State of New Jersey, and AMERICAN ZIRCONIUM CORPORATION (hereinafter called ZIRCONIUM), a corporation of the State of Maryland, of the other part

WITNESSETH

WHEREAS, Titanium and Zirconium are executing simultaneously herewith a certain agreement in writing bearing even date herewith (hereinafter referred to as the License Agreement), wherein and whereby each grants to the other among other things certain licenses under or with respect to Letters Patent of the United States therein described within the "Licensed Field" therein defined, upon the terms and conditions set forth in said License Agreement; and

WHEREAS, said License Agreement is executed by the parties thereto among other things in consideration and upon the faith of the execution of this agreement by the parties hereto and

WHEREAS National owns and controls all of the capital stock of Titanium; and Glidden and Thermit together own and control a majority of the shares of the capital stock of Zirconium having voting rights;

Exhibit H-2

NOW THEREFORE, in consideration of the premises and of the sum of One Dollar lawful money of the United States by each of the parties hereto to the other in hand paid, and of other good and valuable considerations, the receipt of which is hereby severally acknowledged, the parties hereto do hereby covenant and agree to and with each other as follows:

FIRST. National hereby guarantees, promises and agrees to and with Glidden, Thermit and Zirconium and each of them that Titanium will well and faithfully perform and fulfill everything in the above mentioned License Agreement on its part and behalf to be performed and fulfilled, and does hereby further agree, for itself and its subsidiary corporations, that insofar as in its power lies it will on its part fully respect the above mentioned License Agreement between Titanium and Zirconium and that so long as said License Agreement remains in force it will not against either of the parties thereto or against any licensee or successor in interest of either of them question or contest the validity of or infringe any of the Letters Patent covered by said License Agreement, nor afford any assistance to any one in questioning or contesting the validity thereof or infringing the same, and will not do any other act in derogation of said License Agreement; and further will promptly communicate to Titanium the results of any experience gained or knowledge acquired by it within the "Licensed Field" as defined in said License Agreement, and will promptly assign to Titanium for the United States of America, its territories and dependencies, any and all Letters Patent, inventions and improvements within the "Licensed Field" which may be acquired by it, and will insofar as possible require its officers, agents and employees to agree to assign to itself for the United States of Amer-

ica, its territories and dependencies, any and all inventions within the "Licensed Field" which may be made by them or any of them.

SECOND. Glidden and Thermit hereby severally guarantee, promise and agree to and with National and Titanium and each of them that Zirconium will well and faithfully perform and fulfill everything in the above mentioned License Agreement on its part and behalf to be performed and fulfilled; and do hereby further severally agree, each for itself and its subsidiary corporations, that insofar as in their power lies they will on their part fully respect the above mentioned License Agreement between Titanium and Zirconium, and that so long as said License Agreement remains in force they will not against either of the parties thereto or against any licensee or successor in interest of either of them question or contest the validity of or infringe any of the Letters Patent covered by said License Agreement, nor afford any assistance to any one in questioning or contesting the validity thereof or in infringing the same, and will not do any other act in derogation of said License Agreement; and further will promptly communicate to Zirconium the results of any experience gained or knowledge acquired by them within the "Licensed Field" as defined in said License Agreement, and will promptly assign to Zirconium throughout the world any and all Letters Patent, inventions and improvements within the "Licensed Field" which may be acquired by them and will insofar as possible require their respective officers, agents and employees to agree to assign to themselves throughout the world any and all inventions within the "Licensed Field" which may be made by their said respective officers, agents and employees or any of them.

Exhibit H-2

THIRD. National shall not be liable upon its guarantee above set forth unless notice in writing of the failure on the part of Titanium to well and faithfully perform and fulfill said above mentioned license agreement for which it is to be held liable shall have been given to it within thirty days after knowledge of such default upon the part of Zirconium; and neither Glidden nor Thermit shall be held liable upon their several guarantees unless notice in writing of the failure on the part of Zirconium to well and faithfully perform and fulfill said above mentioned license agreement for which they are to be held liable shall have been given to them within thirty days after knowledge of such default upon the part of Titanium.

FOURTH. Glidden and Thermit severally agree that they will each pay to Titanium an amount equal to five per cent (5%) of all sums expended by Zirconium in defending any suit or suits for patent infringement brought by any licensee of Titanium against Zirconium within two years from the date of this agreement.

IN WITNESS WHEREOF the parties hereto have caused these presents to be duly executed by their respective officers thereunto duly authorized and their respective corporate seals to be hereunto affixed and duly attested, the day and year first above written.

Exhibit I

THIS AGREEMENT, made as of the first day of January, 1935, by and between KREBS PIGMENT & COLOR CORPORATION, a corporation organized under the laws of the State of Delaware (hereinafter referred to as "Krebs"), and AMERICAN ZIRCONIUM CORPORATION, a corporation organized under the laws of the State of Maryland (hereinafter referred to as "American"),

WITNESSETH:

WHEREAS, Krebs is engaged in the manufacture and sale of titanium dioxide (TiO_2) and related products, and is the owner of certain Letters Patent issued by the United States covering processes for the manufacture of titanium dioxide, all of which Letters Patent are described in Schedule "A", attached hereto and made a part hereof; and

WHEREAS American is engaged in the manufacture and sale of titanium dioxide and related products, and desires to obtain a license under the aforesaid Letters Patent of Krebs;

NOW, THEREFORE, in consideration of the premises and of the covenants contained herein, the parties hereto have agreed as follows:

Exhibit I

I.

(a) Krebs hereby grants to American a non-exclusive license to make titanium dioxide in the quantities specified in paragraph (b) of this Article, and to use and sell titanium dioxide so produced, throughout the United States of America and the territories and dependencies thereof, under the Letters Patent described in Schedule "A" hereof and any reissues or divisions thereof.

(b) The total quantity of titanium dioxide (including the titanium dioxide content of all compounds, mixtures and other products) made wholly or partly under the license granted herein, shall not exceed in any calendar year during the continuance of this agreement the quantity specified for such year in the following table:

Year	*Quantity*
1935	3,000 tons
1936	3,000 "
1937	3,000 "
1938	6,000 "
1939	6,000 "
1940	6,000 "
1941	6,000 "
1942	6,000 "
1943	6,000 "
Each subsequent year	9,000 "

II.

(a) American shall pay to Krebs a royalty at the rate per pound specified in paragraph (b) of this Article, on the total quantity of all titanium dioxide produced by Amer-

ican during each calendar year throughout the period of this agreement, including the titanium dioxide content of all compounds, mixtures and other products.

(b) The amount of royalty payable by American as aforesaid on each and every pound of titanium dioxide produced by it shall be equal to two per cent. (2%) of the selling price per pound of titanium dioxide as contained in Krebs' published carload selling price to the general trade, in effect at the close of each quarterly period for which royalties are payable hereunder; provided, however, that the royalty so payable by American shall be not less than one-fourth of one cent (¼¢) per pound.

(c) Royalties on titanium dioxide produced by American during each calendar quarterly period shall be paid to Krebs, at its office in Wilmington, Delaware, within thirty (30) days after the end of such quarter; provided, however, that payment of royalties on titanium dioxide produced by American during the first six months of the current year shall be made concurrently with the payment for the third quarterly period of said year.

(d) American shall maintain suitable records showing the quantities of titanium dioxide produced by it during the period of this agreement, and the representatives of Krebs shall have the right to inspect such records at any time or times during business hours.

III.

If at any time during the life of this agreement Krebs should grant a license under any or all of the patents enumerated in Schedule "A" hereof, and should charge therefor a royalty lower in rate than the royalty terms herein set

forth, the royalty imposed hereunder shall be reduced to correspond to such lower rate so long as the latter is payable by any other licensee of Krebs. The provisions of this Article shall not be deemed to apply to the granting of any license by Krebs primarily for a consideration other than the payment of cash royalty by the licensee.

IV.

American admits the validity of each of the Letters Patent listed in Schedule "A" hereof, and agrees that it will not directly or indirectly infringe or contest the validity or scope of any of the claims thereof, or aid or encourage others in so doing. The termination of this license for any cause, prior to its normal expiration, shall not affect the provisions of this Article or release or discharge American from the admission and estoppel herein set forth.

V.

American agrees that it will affix to the containers of all products made and sold by it under this license, such notices or markings as may be required by Krebs to designate the Letters Patent under which such products shall have been produced.

VI.

This agreement shall remain in full force and effect until the expiration of all the Letters Patent listed in Schedule "A" hereof; provided, however, that if American shall fail to perform any of the provisions to be performed by it hereunder, and shall fail to remedy such default within thirty (30) days after notice from Krebs specifying such default, Krebs may terminate this agreement at any time by so notifying American in writing; and provided further,

that American may terminate this agreement at any time after the expiration of ten (10) years from the date hereof, if the products then made by it and the methods of producing the same do not infringe the claims of any of the unexpired Letters Patent licensed hereunder, and if it makes available to Krebs all information evidential of such non-infringement. The termination or expiration of this agreement for any cause shall be without prejudice to the rights and remedies of Krebs for any royalties then accrued or earned hereunder, or for any antecedent breach hereof.

VII.

The rights and obligations under this agreement shall inure to and be binding upon Krebs, its successors and assigns but shall not be assigned or transferred by American without the written consent of Krebs.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their officers thereunto duly authorized and their corporate seals to be hereunto affixed, as of the day and year first above written.

Assignment of Contract

AGREEMENT Made this 31st day of December, 1935, between KREBS PIGMENT & COLOR CORPORATION, a Delaware corporation (hereinafter called the "Assignor") and E. I. du PONT de NEMOURS AND COMPANY, a Delaware corporation (hereinafter called the "Assignee"):

The Assignor, for value received, hereby sells, assigns and transfers to the Assignee all the right, title and interest of the Assignor in, to or under the Agreement dated January 1, 1935 between AMERICAN ZIRCONIUM CORPORATION and the Assignor relating to non-exclusive license to American Zirconium Corporation under a list of patents covering the manufacture of titanium oxide.

The Assignee, in consideration of the premises, accepts the assignment aforesaid and hereby assumes and agrees to perform and discharge, to the complete exoneration of the Assignor, all the obligations on the part of the Assignor to be kept and performed under the provisions of said Agreement.

IN WITNESS WHEREOF, the parties hereto have duly executed this Agreement as of the day and year first above written.

POOL — AGREEMENT

between

Ste de Produits Chimiques des Terres Rares
Titan Company Inc.,
I. G. Farbenindustrie,
regarding the formation of a
Japanese Company.

Initialed Jan. 18th 1936,
by Dr. Jebsen
Mr. Blumenfeld
Mr. Borgwardt
Mr. Mayer-Wegelin.

Exhibit J

Translated from German.

by S. Glenshussen

The firms:

1. *Société de Produits Chimiques des Terres Rares, 67, rue de Prony, Paris.*

("Terres Rares").

2. *Titan Company Inc., 7 West 10th Street, Wilmington, Delaware, U. S. A.*

("Titaninc").

3. *I. G. Farbenindustrie Aktiengesellschaft, Frankfurt a.M.*

("I. G.").

hereinafter called "the parties to the agreement",—the latter through the Titangesellschaft m.b. H., Leverkusen,—have formed, with other titanium white manufacturers, an international convention, according to which the japanese market (incl. Manchuria) is reserved the three above mentioned firms. In this market Terres Rares participates with 30% and Titaninc and I. G. together (i. e. through Titangesellschaft m.b.H., Leverkusen) with 70%.

Terres Rares and Titaninc intend to erect, with the Japanese firm *Kokusan Kogyo, Kabushiki Kaisha, Kobe*, a titanium white factory in Japan by special agreements, in such a manner that the japanese firm participation with 50% and Terres Rares and Titaninc together with the remaining 50%. 20% of the capital to be taken over by Terres Rares and Titaninc shall be paid in cash, and 80% shall be covered by patents, licenses and experience. The

subdivision between Terres Rares and Titaninc will take place in the proportion of 30 for Terres Rares to 70 for Titaninc; for half of its share Titaninc shall grant an option to the I. G.

In order to ensure a unified action between the three parties to the agreement, towards the Japanese, the following "Pool-Agreement", also binding for possible legal successors, is made:

1.

Terres Rares and Titaninc jointly authorise the *Doitsu Senryo Gomei Kaisha, Kobe/Japan,* hereinafter called "Doitsu" to conclude in its own name but acting as trustee of Terres Rares and Titaninc, an agreement with Kokusan Kogyo for the formation of a company, in accordance with the principles of the attached draft B., and to subscribe and take over the participation-shares intended for Terres Rares and Titaninc.

The necessary funds will be placed at the disposal of Doitsu by Terres Rares and Titaninc in the proportion 30 : 70.

2.

By signing this agreement, Doitsu accepts to subscribe and take over the shares as a trustee, and binds itself to exercise its rights as shareholder in the new Japanese factory, only upon joint instructions from the parties to the agreement, which will be transmitted to it through the I. G.

The I. G. assumes the responsibility towards the other parties to the agreement for Doitsu's actions.

Exhibit J

3.

Titaninc grants the I. G. the following option: The I. G. is entitled, within 15 years from the beginning of the present agreement, regardless whether or not this agreement will continue to exist during this period, to purchase half of the shares in the new Japanese factory, acquired by Titaninc (through the intermediary of the Doitsu acting as a trustee), against payment of half of the cash dollar amount used for the purchase of all the shares by Titaninc —(resp. Doitsu as trustee of Titaninc). To this amount is to be added 5% interest, calculated according to banking practice, from the day of disbursement, as well as possible taxes, administrative expenses and similar paid in connection with the shares. From this amount are to be deducted dividends received in the meantime on the shares covered by the option. On dividends are equally 5% interest to be calculated in the same way according to banking practice.

Titaninc is obliged, in case the I. G. makes use of the above option, to transfer, against payment as above mentioned, half of its shares to the I. G. or to such party as determined and controlled by I. G., in such a manner that Titaninc instructs the Doitsu to administer in the future as a trustee, on behalf of the I. G., the above mentioned half of the shares purchased and administered as trustee for Titaninc. If the I. G. makes use of this option, it subjects itself, or, as the case may be, the third party as determined by it, to the stipulations of this pool agreement, i.e. also the shares of the I. G. (35% of the half of the capital of the new Japanese factory held by the three parties) will be administered by the Doitsu acting as a trustee, according to the present agreement.

Exhibit J

4.

The parties to the agreement form, with their shares or parts in the Japanese titanium white factory to be erected, a syndicate, the shares or parts of which shall vote and operate in the same way at the General Meetings of the Japanese company to be formed, as well as in all other respects as regards decisions concerning the operations of the company.

Any declarations to be issued by the syndicate and the parties to the agreement, to the Japanese party and the Japanese factory, are to be made exclusively through the I. G., which will forward them through the Doitsu.

5.

The shares or parts are to be deposited by Doitsu with a first class banking firm in Tokyo, Japan, which, if necessary, will take care of the registration for the General Meeting in accordance with the prevailing rules.

If necessary and especially upon invitation of one of the parties to the agreement, the parties shall meet for discussion regarding the united attitude to be taken at the General Meeting of the Japanese firm, provided such a discussion can not take place in writing. The resolutions unanimously arrived at during such a conference are binding for all the parties to the agreement.

6.

All the parties bind themselves (without prejudice to the rights of preemption in art. 7), if the case may be, to sell their shares in the Japanese factory, including possible additional shares resulting from increase in the capital, only in one lot and not separately, and further only when the purchaser binds himself to take over the shares of the

other parties, at their request simultaneously and on the same terms.

In all cases of sales of shares, the purchaser must be placed under the obligation to enter the agreement with all rights and obligations of his predecessor.

7.

If Titaninc intends to sell its share in the Japanese factory, the I. G. will have a preemption right on this share. The same applies in favour of Titaninc in case I. G. should have intentions to sell. If, in the first case the I. G. and/or in the second case Titaninc decline to make use of the right of preemption, this will become the privilege of Terres Rares.

If Terres Rares intend to sell their share in the Japanese factory, each of the two other parties shall have a right of preemption on one half of this share, or—if only one of them wishes to make use of his preemption right—on the whole share. Titaninc and I. G. can also exercise the right of preemption jointly.

The party who wishes to sell its share has to state this without delay by registered letter, subject to a penalty amounting to 50% of the nominal value of its share but at least U. S. A. $30,000.—, as soon as it gets in touch with an interested party, or with some intermediaries regarding the sale; this advice should be sent

a) in case Titaninc intends to sell its share to the I. G.;

b) in case the I. G. intends to sell its share to Titaninc;

c) in case Terres Rares intend to sell their share to Titaninc and I. G.

Re a) and b): Should Titaninc and/or I. G. decline to make use of the preemption right, Terres Rares shall be advised accordingly.

A further advice is to be sent by registered letter, similarly without delay, and subject to the same penalty, as soon as the one of the parties who intends to sell his share has claimed a determined amount for his share or has changed a claim previously made. A claim expressed in equivalents other than money is equal to a claim expressed in money. A similar advice is to be sent as soon as one of the parties receives from an outsider an offer regarding his share, and if the said party does not decline the offer within a delay of 6 weeks.

The preemption right of the remaining party or parties is to be exercised within a delay of 3 months from the advice foreseen in the foregoing paragraph regarding a complete and firm binding offer and which has been received by the respective party by registered letter. The preemption right implies that the party entitled to make use of the said right (should Terres Rares intend to sell, each party entitled to make use of the preemption right for ½ or both jointly) can purchase the share of the selling party—and the latter is obliged to transfer his share—at the same terms and conditions as those that were offered in a binding form by a third party.

It is not considered to be a sale or intention to sell in the above sense, if changes of ownership take place within the syndicate or by transfer to a concern-company without impairing the present contract, or through succession. By concern-company is to be understood a company in which the selling party participates with at least 50% or with which he has concluded an agreement involving a com-

munity of interests, which, according to contents and duration, is equivalent to an economic merger.

8.

As long as the option belonging to the I. G. is not made use of, Titaninc can only sell its shares if the purchaser assumes the option-obligation stipulated in article 4 as regards Titaninc.

9.

The present pool agreement is effective as long as any one of the parties to the agreement or any one of their legal successors possesses shares in the Japanese titanium white factory, either directly or indirectly.

Should the Japanese company to be formed, be dissolved, then the present pool agreement shall also be terminated on the day of the dissolution, it being understood that its provisions be applied during the liquidation stage of the Japanese company in the spirit of the contract.

10.

All disputes arising in connection with the present contract or regarding whether it is in force, shall be settled under the rules of conciliation and arbitration of the International Chamber of Commerce, by one or more arbitrators appointed in accordance with these rules.

Exhibit J-1

Draft 17/1/36.

To be re-written and adapted in Japan in accordance with Japanese law and custom.

Contract to be in English

B.

AGREEMENT REGARDING THE FORMATION OF A JAPANESE COMPANY NAMED "TITAN KOGYO K. K."

between

Messrs. KOKUSAN KOGYO Kabushiki Kaisha, at TOKYO hereinafter referred to as "KOKUSAN KOGYO"

and

Messrs. DOITSU SENRYO GOMEI KAISHA, at KOBE/TOKYO, Japan—hereinafter referred to as "DOITSU"

DOITSU act under power of attorney in this agreement for:

TITAN COMPANY INC., 7 West 10th Street, Wilmington, Delaware, U. S. A.

I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfurt a. M.

SOCIETE DE PRODUITS CHIMIQUES DES TERRES RARES, 67, rue de Prony, *Paris*.

1.

KOKUSAN KOGYO and DOITSU agree to form a company with the name of: TITAN KOGYO K. K. at TOKYO, hereinafter referred to as "TITAN KOGYO"

Exhibit J-1

2.

The purpose of the company is to be the production and sale of Chemical Products in general and Titanium Pigments in particular in the territories of Japan and its colonies, leased and mandated territories as at present constituted, as well as Manchoukuo as per the map attached to the Japan Manchoukuo Year Book 1935. (Photocopy of this map is attached to this contract.)

3.

The company shall be formed with a share capital of Yen 1.500.000.—consisting of 30.000 shares of Yen 50 each, half of which to be issued respectively to KOKUSAN KOGYO and DOITSU as follows:

15.000 shares shall be issued for cash to KOKUSAN KOGYO

3.000 shares shall be issued for cash to DOITSU

12.000 shares shall be issued credited as fully paid up to DOITSU as consideration for the transfer of the existing Japanese business and goodwill as well as the transfer of patents and processes.

At the start only two thirds or one million Yen of the capital are to be paid up of which 500.000.—Yen in cash by KOKUSAN KOGYO and 100.000.—Yen in cash by DOITSU. The remaining one third of the capital will be paid up when required that is 250.000.—Yen in cash by KOKUSAN KOGYO and 50.000.—Yen in cash by DOITSU.

Exhibit J-1

4.

KOKUSAN KOGYO shall not transfer or part with the possession of any of their shares or holdings, except with the written consent of DOITSU and the transferee shall agree to be bound by all the obligations hereof so far as they are binding on KOKUSAN KOGYO.

The firms represented by DOITSU as trustees are restricted by agreements between them as regards the transfer or sale of their shares or holdings in TITAN KOGYO.

5.

The business year shall be the calendar year.

The first business year commences on the date the company is registered in accordance with the Japanese laws and terminates on the 31st of December of the following year.

6.

The Board of TITAN KOGYO shall consist of an even number of Directors, half of which to be nominated by KOKUSAN KOGYO and the other half by DOITSU.

The Manager or Managers of the company shall be appointed and dismissed by the Board.

The company shall be legally represented by .....
..... (to be completed according to Japanese laws and custom).

7.

As regards General Meetings the following shall be provided:

a) Each share of Yen 50.—shall have a voting right of one vote.

b) A general Meeting shall be held in every year at such time and place as may be determined by the directors.

c) General Meetings are to be called by the Board of Directors with three weeks notice at the least, and must be called upon request of KOKUSAN KOGYO or DOITSU.

d) No business shall be transacted at any General Meeting unless a quorum is present when the Meeting proceeds to business. A quorum is present when 75% of the shares are represented. Resolutions can only be passed by a majority of 75% of the shares represented.

e) If a resolution cannot be passed because the conditions under d) are not fulfilled a second General Meeting shall be called, with at least four months notice. Such second Meeting can pass resolutions on the same subjects as the first Meeting by a simple majority of the shares represented.

8.

Subject to the provisions specified below, TITAN KOGYO cannot be dissolved until after the 31st of December of the year nineteen hundred and sixty.

A General Meeting to pass the necessary resolutions for dissolving the company shall be held forthwith after December 31st 1960, if notice has been given by registered mail, by one of the parties to the other party, at least twelve months before that date, to the effect that such dissolution is desired. If such notice has not been given, it can be given to be effective next time not before December 31st 1970 and so on only at the end of a ten years period.

The company may however be dissolved before the 31st December 1960, if the returns of the company show a loss

during each one of five consecutive business years after the manufacturing plants have been put into operation, and if one of the parties gives 6 months notice by registered mail on that account. Such notice to be given within 24 months after the returns of the 5th year have been established.

In both cases mentioned above the notice given is only valid if the party giving notice has offered twelve months before by registered mail to the other party, the right to purchase all its shares and holdings at a price to be determined by mutual agreement and corresponding to the book value of the shares without taking into account any values of patents, trade marks or goodwill, and if the other party has not accepted such offer by registered mail within seven months from the date of receiving same.

In default of agreement the price shall be settled by an Expert to be nominated by the International Chamber of Commerce. The decision of the Expert shall be final and the expenses incurred shall be charged to each party with 50%.

Should the other party refuse to purchase the shares and holdings so offered and the party making the offer consequently have the right to require TITAN KOGYO to be voluntarily wonned up, then the refusing party shall use its voting power in TITAN KOGYO to put that company into voluntary liquidation.

9.

It shall be provided that if the company be dissolved, all patents, licenses, processes and secrets of manufacture in the hands of the company must be sold in toto but not otherwise and only together with its trade marks.

10.

All notifications on behalf of the company will be made exclusively in the.....

GUARANTY CONTRACT

between

DOITSU SENRYO GOMEI KAISHA, KOBE/JAPAN,
hereinafter referred to as "DOITSU"

TITAN COMPANY INC., 7 West 10th Street, WILMINGTON, DELAWARE, U.S.A.,
hereinafter referred to as "TITANINC".

I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, FRANKFURT a/M.,
hereinafter referred to as "I.G.".

TITANGESELLSCHAFT m.b.H., I.G. WERK-LEVERKUSEN a.Rh.,
hereinafter referred to as "TITANGESELLSCHAFT"

SOCIETE DE PRODUITS CHIMIQUES DES TERRES RARES, 67 RUE de Prony, PARIS,
hereinafter referred to as "TERRES RARES", and

FABRIQUES DE PRODUITS CHIMIQUES DE THANN ET DE MULHOUSE, THANN/ Haut Rhin,
hereinafter referred to as "THANN".

Terres Rares, Titaninc and I. G. have on..... entered into a "Pool-Agreement" regarding joint participation in a Titanium factory to be erected in Japan together with the Kokusan Kogyo Kabushiki Kaisha, Tokyo. In this Pool-Agreement Doitsu is, as trustee of the parties to

the contract, authorised to conclude an agreement with Kokusan Kogyo for the formation of a company. Terres Rares and Thann of the one part and Titaninc, I.G. and Titangesellschaft of the other part, have made contractual arrangements with regard to the grant of licences and sales rights for various territories amongst which Japan, its colonies, leased and mandated territories, as well as Manchoukuo. Terres Rares and Thann have made with Titaninc and Titangesellschaft contractual arrangements regarding sales in the Japanese market.

In order to closer determine the relations of the interested parties towards the Japanese enterprise, as well as with each other, and to give Doitsu's activity as trustee the necessary basis, the following agreement, binding also possible legal successors, is made for the protection of all the parties.

Definitions.

1) "Licensed Field"

The term "Licensed Field" wherever herein employed means and includes:

a) All methods, processes and apparatus in the field of manufacture of all Titanium compounds, containing two per cent (2%) or more of the element Titanium in a chemically, mechanically or physically combined state and mixtures thereof, which can be used as pigments, whether or not adapted for other uses and

b) All such Titanium compounds and mixtures which can be used as pigments, whether or not adapted for other uses.

2) "European-American Group".

By this designation is meant:

Titaninc
I.G.
Titangesellschaft
Terres Rares
and Thann.

3) "Titan Kogyo".

By this designation is meant the Japanese company, whether or not it is given another name.

4) "Territory of Titan Kogyo".

By this designation is meant:

Japan, its colonies, leased and mandated territories, as at present constituted, as well as Manchoukuo as per the map attached to the "Japan Manchoukuo Yearbook 1935" (Photocopy of this map is attached to this contract).

5) "Territory of Doitsu".

By this designation is meant: all countries outside the territory of Titan Kogyo.

6) "North America".

By this designation is meant the entire continent of that name including the United States, Canada, Newfoundland, Panama and all Central American States and also all islands which were on the 30th July 1920 considered as being geographically appurtenant to said continent and also the Philippine and Hawaian Islands.

Exhibit J-2

7) "Finished Article".

By this designation is meant any artificially produced article or mixture produced by the aid of any Titanium Pigment in such a manner that the product constitutes a cohesive inter-mixture of a Titanium Pigment with other materials as for instance paints, rubber, glass, etc.

1.

a) The European-American group refrain from granting any license under their rights within the scope of the Licensed Field to any firms in the territory of Titan Kogyo other than the Japanese company, Titan Kogyo, mentioned in the introduction.

b) Titaninc, I. G. and Titangesellschaft authorize Doitsu, as their representative, to enter into the attached License Agreement "D" with Titan Kogyo, and Doitsu shall see to it that this be done.

c) Terres Rares and Thann undertake to keep themselves free in such a way that they can at any time grant the Titan Kogyo through Doitsu, for the territory of Titan Kogyo, exclusive licenses on the patents, processes and experiences within the Licensed Field, which they have and shall have at their disposal in future as owners or licencees. The licence comprises the exclusive right for the exploitation of any invention, improvement and anything within the scope of the Licensed Field.

Terres Rares and Thann declared that no licences in the Licenced Field for the territory of Titan Kogyo exist at the time of the conclusion of the agreement.

Exhibit J-2

d) Titangesellschaft undertakes to transmit to Titan Kogyo through Doitsu the information as to technical experience as stipulated in the agreement, respectively to receive such from Titan Kogyo through Doitsu. The other firms of the European-American group shall send their information of technical nature, so far as they are bound to transmit same, to the Titangesellschaft, to be forwarded.

As no exchange of technical information takes place at present between Titaninc, I. G. and Titangesellschaft of the one part and Terres Rares and Thann of the other part, Terres Rares and Thann agree that they shall not be informed about the processes and experiences imparted by Titangesellschaft to Titan Kogyo. The same applies to the processes and improvements placed at the disposal of Titaninc, I. G. and Titangesellschaft by Titan Kogyo.

However, should there amongst these be inventions or should Titan Kogyo make inventions as regards the application of Titanium Pigments, which in no way are based on the experience of and information from Titangesellschaft and establish something new in principle, these inventions shall be placed at the disposal also of Terres Rares.

Terres Rares and Thann agree and the I. G. declares itself willing that the I. G. decide in a form binding for all parties concerned, whether such an invention is new and independent in the above sense. None of the parties shall be entitled to protest against this decision.

Exhibit J-2

Should Titan Kogyo acquire from a third party inventions within the Licensed Field or regarding the application of Titanium Pigments, such inventions shall be placed at the disposal also of Terres Rares, at selfcost.

e) Except to the extent provided for below, under (g), the European-American group undertake not to sell, without the consent of Titan Kogyo, as well as Doitsu, any products within the Licensed Field, either directly or indirectly, to the territory of Titan Kogyo, and, as far as possible to impose the same obligation on their customers and to this end take all reasonable steps to ensure that this obligation shall be observed by their respective customers.

Doitsu shall see to it that Titan Kogyo and Kokusan Kogyo assume the same obligations as regards export of their products within the scope of the Licensed Field, to the territory of Doitsu. Such a sale can however be made through Doitsu (respectively, as far as North America, is concerned, through Titaninc), but only to one or more of the firms of the European-American group and only with the consent of all of these firms.

f) However, the customers of Titaninc, Titangesellschaft, Terres Rares and Thann, as well as their licensees and sublicensees, but not these companies themselves, shall have the right, without objection on the part of Titan Kogyo, to sell "Finished Articles" within the territory of Titan Kogyo and, on the other hand, the customers of Titan Kogyo, but not Titan Kogyo itself, shall have the right, with-

out objection on the part of the above mentioned firms, to sell "Finished Articles" in the territory of Doitsu, with the exception of North-America, to which shall be applied the provisions of the License Agreement "D", art. 2 b).

Although the free sale of substances and products characterised by the designation "Finished Article" is permitted for the customers, the companies shall watch that their customers do not compete in an undesirable way, that is:

1) The customers of Titaninc, Titangesellschaft, Terres Rares and Thann not in a way undesirable for Titan Kogyo;

2) The customers of Titan Kogyo not in a way undesirable for Titaninc, Titangesellschaft, Terres Rares and Thann.

If one of the companies ascertains competition of this kind from a customer of another company, the latter shall take the necessary steps to prevent the customers from continuing this competition.

It seems impossible to fix the particulars of the measures necessary to carry through this principle. The parties shall, however, from time to time meet for discussions regarding the conditions of the market and the steps to be taken.

Doitsu shall see to it that Titan Kogyu accepts these obligations.

g) It shall not be considered as a violation of the obligations under e) and i), if the European-American group continue to sell products within the Licensed

Field in the territory of Titan Kogyo, up to the day on which Doitsu, upon request of Titan Kogyo, informs the European-American group that Titan Kogyo is in a position to satisfy normal demands. To allow Titan Kogyo to take over the sales as soon as possible after the start of its production, the European-American group shall enter into no contracts with customers for the territory of Titan Kogyo for quantities exceeding the normal requirements for 3 months. When Titan Kogyo has given notice as to when it will be in a position to deliver, no contracts shall be entered into for deliveries after that date, and no deliveries exceeding the normal requirements up to that date shall be made. The European-American group shall, however, have the right to deliver the quantities on contracts entered into before receipt of this notice.

Doitsu shall see to it that Titan Kogyo accepts these provisions.

h) The firms of the European-American group assume the mutual obligation not to participate directly or indirectly in any enterprise competing or preparing to compete in the territory of Titan Kogyo by production or delivery of Products within the Licensed Field, or to assist such an enterprise in any way as regards its installations and/or operations and business organisation, by technical or commercial advice regarding products within the Licensed Field. Doitsu is authorised to bind the European-American group in this respect towards Titan Kogyo and shall see to it that Titan Kogyo assumes the same obligations throughout the world.

Exhibit J-2

i) The firms of the European-American group assume the mutual obligation to refrain from selling in the territory of Titan Kogyo any products within the Licensed Field and to cover their total requirements of such products, to be further treated in their own factories in the territory of Titan Kogyo, exclusively from Titan Kogyo. Doitsu is authorised to bind the European-American group in this respect towards the Titan Kogyo, and shall see to it that Titan Kogyo undertake to cover its total requirements of products within the Licensed Field, to be further treated in their own factories in the territory of Doitsu, from one or more of the firms of the European-American group or their licensees or sublicensees.

2.

In connection with the formation of Titan Kogyo, undertaken jointly with Kokusan Kogyo, Doitsu assumes the obligation to see to it that Kokusan Kogyo enter into the following obligations:

a) A license agreement as per attached Contract C;

b) Contracts for the purpose of satisfactory working conditions for Titan Kogyo in the spirit of and along the lines set forth in the annexed drafts: encl. E and F.

c) The processes passed on to Titan Kogyo by Kokusan Kogyo or invented or developed by Titan Kogyo shall be placed at the disposal of Doitsu free of charge by Titan Kogyo for use free of charge in the countries outside the territory of Titan Kogyo, such processes to be passed on by Doitsu to one or

more of the firms of the European-American group, as foreseen in art. 1.

d) *1.* Kokusan Kogyo undertakes, on its own behalf, as well as on behalf of all firms belonging to the Nippon Sangyo Concern, to refrain from any activities or participation in the manufacture of or trading in products within the Licensed Field, other than through Titan Kogyo, and to cover their total requirements of such products within the territory of Titan Kogyo, exclusively from this firm.

d) *2.* Kokusan Kogyo undertakes further, on its own behalf, as well as on behalf of all firms belonging to the Nippon Sangyo Concern, that if they should find some processes involving the use of products within the Licensed Field or have at their disposal such processes as owners or licensees, they shall, when using such processes, cover their requirements in such products within the countries belonging to the territory of Titan Kogyo, from the Titan Kogyo, and in all other countries from the firm or firms designated by Doitsu—unless Kokusan Kogyo can satisfy Doitsu that this is impracticable.

e) The obligations assumed by Kokusan Kogyo in this article, paragr. a) and d) are void if Kokusan Kogyo dispose of all their shares with the consent of Doitsu.

3.

The European-American group authorise Doitsu to act as their representative within the limits and in the spirit of the above mentioned obligations, contracts and principles,

and Doitsu in turn undertakes in its actions to keep closely within these limits and to follow the further instructions of the European-American group.

The I. G. assumes the responsibility towards the other parties hereto for the actions of Doitsu and its possible legal successors.

4.

The firms of the European-American group shall consider the obligations assumed by Doitsu as trustee, as their own—to the extent the firms have bound themselves in this contract—and shall compensate Doitsu for any damage resulting therefrom.

5.

Any communications from the European-American group in connection with the interpretation of the contract shall be despatched to Doitsu, to avoid any misunderstanding and disagreement, exclusively through the I.G., and Doitsu shall use the same way.

6.

As compensation for the efforts made and to be made by Doitsu and I.G., 10% of the profits of the European-American group, resulting from the participation in the Japanese Titanium factory, shall be allotted to Doitsu, this share to be deducted when the profit is paid out.

7.

The present agreement and all the obligations entered into by virtue of this agreement, shall remain in force as long as any one of the parties hereto or any one of their

legal successors holds shares in Titan Kogyo, either directly or indirectly. It is also binding upon their legal successors, as well as upon the purchasers of shares in case one or more of the other parties sell their shares or a part thereof.

8.

As Terres Rares do not participate in the License Agreement "D", neither directly nor indirectly, it is agreed that the provisions of the License Agreement D can only be applied in so far as compatible with the Guaranty-Contract and in so far as no special advantage arises therefrom for the parties to the License Agreement D, which is not provided for in the Guaranty Contract.

Any cases arising in this connection are to be examined in a loyal spirit.

9.

The obligations assumed by the parties hereto shall extend to all the firms depending upon or controlled by the parties, to the end that they cannot be avoided by the formation or aid of such firms.

10.

Differences of opinion as to the stipulations of this contract, which cannot be settled by means of direct negotiations between the parties, shall be settled under the rules of conciliation and arbitration of the International Chamber of Commerce, by one or more arbitrators appointed in accordance with these rules.

Exhibit J-3

Contract to be in English

C.

LICENCE CONTRACT

BETWEEN

Messrs. KOKUSAN KOGYO Kabushiki Kaisha at TOKYO/ Japan hereinafter referred to as "KOKUSAN KOGYO"

and

Messrs. TITAN KOGYO Kabushiki Kaisha, at TOKYO hereinafter referred to as "TITAN KOGYO"

the following agreement is made and entered into, binding the parties as well as their legal successors.

1.

TITAN KOGYO have this day made a contract with the DOITSU SENRYO GOMEI KAISHA of KOBE/TOKYO, by which the two companies agree to grant each other licences for the production of Titanium Pigments, at the terms described in detail in the contract "D". Referring to that contract, KOKUSAN KOGYO undertake to grant TITAN KOGYO exclusive licences within the scope of the "licensed field" as hereinafter defined under all patents, processes and subject matter available to KOKUSAN KOGYO now or later with the right for TITAN KOGYO to grant sublicences.

The term "licensed field" wherever herein employed means and includes

a) all methods, processes and apparatus in the field of manufacture of all titanium compounds, containing two per cent (2%) or more of the element Titanium in a chemically, mechanically or physically combined

state and mixtures thereof, which can be used as pigments, whether or not adapted for other uses and

b) all such Titanium compounds and mixtures, which can be used as pigments, whether or not adapted for other uses.

2.

Whenever KOKUSAN KOGYO file an application for letters patent on an invention in the licensed field KOKUSAN KOGYO shall within two months from the date of filing send a copy thereof to TITAN KOGYO with information as to the countries in which KOKUSAN KOGYO will file an application on such invention.

TITAN KOGYO and their licensees or sublicensees shall be entitled to apply for patents in all other countries and KOKUSAN KOGYO will on request supply TITAN KOGYO with all necessary papers and powers for that purpose and so far as possible under the provisions of the International Convention for the Protection of Industrial Property.

KOKUSAN KOGYO shall prosecute with all possible diligence and care, all patent applications which KOKUSAN KOGYO have announced will be filed by them and in the case of difficulties confer with TITAN KOGYO their licensees or sublicensees in the respective countries as instructed by TITAN KOGYO.

3.

KOKUSAN KOGYO undertake to make in due time all payments necessary to maintain and prolong the patents in the licensed field, unless TITAN KOGYO expressly renounce their claim on an exclusive license.

Exhibit J-3

4.

The expenses incurred by KOKUSAN KOGYO in obtaining, maintaining, prolonging or defending any patent in the "Licensed Field" in future will be refunded by TITAN KOGYO. TITAN KOGYO is, however, relieved of this obligation when the exclusive license is renounced by them or otherwise terminates in which case TITAN KOGYO shall be entitled to a non-exclusive license under the patents in question.

5.

KOKUSAN KOGYO agree that they will as far as possible require their officers, agents and employees to assign to them any and all inventions within the licensed field which may be made by them or any of them prior to the time fixed for the termination of the exclusive licenses and of any extension of such time.

6.

The exclusive licenses hereby granted shall last as long as KOKUSAN KOGYO continue to own shares in TITAN KOGYO in accordance with the contract made between KOKUSAN KOGYO and DOITSU. Should such ownership cease, TITAN KOGYO will receive a non-exclusive license in respect of all inventions, patents and patent applications of which KOKUSAN KOGYO are then the owner, such licenses being available to TITAN KOGYO as well as their licensees and sublicensees who have received or may subsequently receive a license from TITAN KOGYO.

Exhibit J-3

7.

TITAN KOGYO or any exclusive sublicensee under any patent hereunder shall be entitled at their own expense to take any legal steps for the protection of such patent and recover damages, penalties and profits for infringements of such patent and to receive for their own benefit any sums recovered by such steps. They are for such purposes entitled to use the name of KOKUSAN KOGYO as owners of the patents but this gives them no right to claim reimbursement from KOKUSAN KOGYO of the expenses incurred by the procedure. The party taking such steps shall, however, provide for KOKUSAN KOGYO satisfactory security against all expenses and liabilities which may result for KOKUSAN KOGYO from such proceedings.

KOKUSAN KOGYO shall be notified of such steps immediately and shall be entitled to intervene at their own expense in such litigation.

8.

TITAN KOGYO shall never directly or indirectly question or contest the validity of any patent under which it is licensed by KOKUSAN KOGYO nor use nor infringe the same except as licensed nor connive with or afford any pecuniary or other assistance to any contestant or questioner of such validity.

KOKUSAN KOGYO assume the same obligations with regard to the patents of TITAN KOGYO and of the companies cooperating with TITAN KOGYO in the "Licensed Field".

9.

KOKUSAN KOGYO undertake that, in case they invent or have at their disposal as owners or licensees any process which involves the use of Titanium Pigments, they will

stipulate when granting licences in respect of such processes, that the Licensees shall cover their requirement of Titanium Pigments solely and exclusively from TITAN KOGYO or their licensees or sublicensees, or such other firms designated by DOITSU, unless KOKUSAN KOGYO satisfies DOITSU that such stipulation is impracticable.

10.

KOKUSAN KOGYO undertake to provide that the NIPPON SANGYO CONCERN undertake for itself and use all endeavours and take all measures in its power to ensure that its associated and affiliated companies shall respect this agreement as if they were parties to it and that they shall do nothing contrary to the interests of TITAN KOGYO and the companies cooperating with TITAN KOGYO in the "Licensed Field".

Exhibit J-4

Contract to be in English.

D.

LICENCE CONTRACT.

Between

Messrs. DOITSU SENRYO GOMEI KAISHA at KOBE/TOKYO, JAPAN,

hereinafter referred to as "DOITSU"

and

Messrs. TITAN KOGYO Kabushiki Kaisha at TOKKO

hereinafter referred to as "TITAN KOGYO"

the following agreement is made and entered into binding the parties as well as their legal successors and to the purpose of exploiting the processes for the production of Titanium Pigments available to either of the parties now or in future.

In this agreement DOITSU act as trustees of TITAN COMPANY INC., 7 West 10th Street, WILMINGTON, DELAWARE, U.S.A., I. G. FARBENINDUSTRIE AKTIEGESELLSCHAFT, FRANKFURT a/M., TITANGESELLSCHAFT m.b.H., I. G. WERK-LEVERKUSEN a.Rh., with which firms they have made corresponding arrangements and contracts.

1.

DEFINITION.

a) *"Licensed Field".*

The term "Licensed Field" wherever herein employed means and includes

1) all methods, processes and apparatus in the field of manufacture of all Titanium compounds, containing two per cent (2%) or more of the element Titanium in a chemically, mechanically or physically combined state and mixtures thereof, which can be used as pigments, whether or not adapted for other uses and

2) all such Titanium compounds and mixtures, which can be used as pigments whether or not adapted for other uses.

b) *"North America"*.

By this designation is meant the entire continent of that name including the United States, Canada, Newfoundland, Panama and all Central American States and also all islands which were on the 30th July 1920 considered as being geographically appurtenant to said continent and also the Philippine and Hawaian Islands.

c) *"Territory of* TITAN KOGYO".

The term "Territory of TITAN KOGYO" wherever herein employed means and includes:

Japan, its colonies, leased and mandated territories, as at present constituted,

as well as Manchoukuo as per the map attached to the "Japan Manchoukuo Year Book 1935". (Photo-copy of this map is attached to this contract).

d) *"Territory of* DOITSU".

The term "Territory of DOITSU" wherever herein employed means and includes all countries outside the territory of TITAN KOGYO.

Exhibit J-4

e) *"Finished articles".*

By this designation is meant any artificially produced article or mixture produced by the aid of any Titanium Pigment in such a manner that the product constitutes a cohesive inter-mixture of a Titanum Pigment with other materials as for instance paints, rubber, glass, etc.

2.

a) The DOITSU agree to grant to TITAN KOGYO for the territory of TITAN KOGYO an exclusive licence in respect of all or any patents, processes and subject matter within the scope of the Licensed Field of which TITANINC., I.G. and/or TITANGESELLSCHAFT now is or may hereafter become entitled to grant for such territory an exclusive licence and a non-exclusive licence in respect of all or any patents, processes and subject matter within the scope of the Licensed Field as to which TITANINC now is or may hereafter become entitled to grant or may be entitled to obtain the right to grant for such territory a non-exclusive license solely for the purpose of the production of titanium compounds within the Licensed Field with full rights throughout the territory of TITAN KOGYO to manufacture and/or use and/or sell the titanium compounds so produced, whenever TITANINC., I.G. and/or TITANGESELLSCHAFT has or is entitled to obtain power to confer such right subject always to the conditions contained in this agreement.

These licenses do not include the right for TITAN KOGYO to grant sublicenses.

b) No objection shall be made to customers of TITAN KOGYO selling "Finished Articles" in the territory of DOITSU but so that any such sales to North America shall

be kept within the limits specified below, and no such sales shall be made by TITAN KOGYO itself in the territory of DOITSU.

"Finished Articles" in the manufacture of which titanium products produced by TITAN KOGYO have been used as raw material may be imported to North America provided that the same does not constitute such an important part of such finished article that its sale substantially interferes with TITANINC's or TITANGESELLSCHAFT's or their licensee's or sublicensee's sale. TITAN KOGYO agree that upon receiving notice from DOITSU that such importation into North-America of such finished article does interfere with the sale of the products of the above mentioned parties, TITAN KOGYO will endeavour to prevent such importation. DOITSU agree that neither DOITSU nor any of the above mentioned parties will sue the TITAN KOGYO or any purchaser from, or customer of, direct or indirect of the TITAN KOGYO on account of the importation into or sale and use in North-America of any such finished article until after six months from the time such notice shall have been given to the TITAN KOGYO.

3.

a) TITAN KOGYO agree to grant to DOITSU for the territory of DOITSU an exclusive license in respect of all or any patents, processes and subject matter within the scope of the Licensed Field of which TITAN KOGYO now is or may hereafter become the beneficial owner or in respect of which TITAN KOGYO is or may hereafter become entitled to grant for such territory an exclusive license and a non-exclusive license in respect of all or any patents, processes and subject matter within the scope of the Licensed Field as to

which TITAN KOGYO now is or may hereafter become entitled to grant or is entitled to obtain the right to grant for such territory a non-exclusive license solely for the purpose of the production of titanium compounds within the Licensed Field with full rights throughout the territory of DOITSU to manufacture and/or use and/or sell titanium compounds so produced and with the right to grant sublicenses wherever TITAN KOGYO has or is entitled to obtain power to confer such right subject always to the conditions contained in this agreement.

b) No objection shall be made to customers of TITANINC., TITANGESELLSCHAFT or their licensees or sublicensees selling "Finished Articles" in the territory of TITAN KOGYO but no such sales shall be made by these companies themselves.

c) The exclusive as well as the non-exclusive licenses shall on the written request of DOITSU be granted direct to TITANGESELLSCHAFT or TITANINC or any of its licensees or sublicensees.

d) The TITAN KOGYO undertake that when granting a license in the territory of DOITSU, for a process involving the use of Titanium pigments, they will impose on the licensee the obligation to purchase all Titanium pigments required, solely and exclusively from TITANINC, I. G., TITANGESELLSCHAFT or their licensees or sublicensees in accordance with the instructions given by DOITSU on enquiry, unless in any particular case TITAN KOGYO satisfy DOITSU that such a stipulation is impracticable.

4.

Except to the extent provided for in the preceeding articles 2. and 3. hereof, or as may be otherwise specifically

agreed between the parties hereto, neither of the parties hereto shall without the consent of the other sell or knowingly permit to be sold within the territory of the other party any of the products within the scope of the Licensed Field and to this end each of the parties hereto shall take all reasonable steps to ensure that this obligation shall be observed by their respective customers.

If DOITSU permit TITAN KOGYO to sell any products within the scope of the Licensed Field in or for the territory of DOITSU, TITAN KOGYO shall make such sales through DOITSU. DOITSU are from now on appointed sole agents of TITAN KOGYO for all countries outside the territory of TITAN KOGYO and remain such agents as long as TITAN KOGYO have the right to an exclusive license from DOITSU, their licensees or sublicensees with the exception of North America for which the TITANIUM PIGMENT CO. INC., 111 Broadway, NEW YORK CITY, shall be appointed exclusive agent.

The TITAN KOGYO shall on the request of DOITSU appoint the firms for which DOITSU is trustee—their licensees or sublicensees—sole agents for their respective licensed territories.

TITAN KOGYO shall only deal with these agents through DOITSU and possible sales shall be dependent upon the consent of DOITSU.

TITAN KOGYO are only obliged to execute such orders from DOITSU as TITAN KOGYO approve of. DOITSU can fix the prices and terms for resale at their own discretion.

If TITAN KOGYO permit DOITSU to sell any products within the scope of the Licensed Field within or for the territory of TITAN KOGYO, DOITSU shall effect such sales

only through TITAN KOGYO. TITAN KOGYO are from now on appointed sole agents of DOITSU for the territory of TITAN KOGYO and remain such agents as long as DOITSU have the right to exclusive licenses from TITAN KOGYO.

DOITSU are only obliged to execute such orders from TITAN KOGYO as DOITSU approve of. TITAN KOGYO can fix the prices and terms for resale at their own discretion.

Although articles 2. and 3. of this contract permit customers of DOITSU or of TITAN KOGYO to sell substances and products characterized by the designation "finished articles" without other restrictions than specified in article 2., the two companies shall watch carefully that their customers do not compete with either of the companies to an undesired extent within the territories reserved the company in question. If one of the companies ascertains competition of this kind from a customer of the other company, the latter shall take the necessary steps to prevent the customer from continuing the competition.

It seems impossible to fix the particulars of the measures necessary to carry through this principle and therefore the parties will from time to time meet for discussions regarding conditions of the market and the steps to be taken.

5.

a) TITAN KOGYO, whenever they file an application for Letters Patent on an invention in the Licensed Field shall within two months from the date of filing send a copy thereof to DOITSU with information as to the countries included in the territory of DOITSU in which TITAN KOGYO will file an application on such invention. TITAN INC., TITANGESELLSCHAFT and their licensees or sublicensees shall be entitled to apply for patents in all other countries

within their territory, and TITAN KOGYO will on request supply DOITSU with all necessary papers and powers for that purpose and so far as possible under the provisions of the International Convention for the Protection of Industrial Property.

TITAN KOGYO shall prosecute with all possible diligence and care all patent applications which TITAN KOGYO have announced will be filed by them in the territory of DOITSU and in the case of difficulties confer with the licensee or sublicensee in the respective countries as instructed by DOITSU.

a 2) If TITAN KOGYO shall receive information as to the application by any other person, firm or company for letters patent in the Licensed Field in respect of which it shall be entitled to an exclusive license or to grant an exclusive license in the territory of DOITSU they shall with all possible diligence and care act to the purpose of providing DOITSU with the necessary information, papers and documents to enable TITANINC. and/or TITANGESELLSCHAFT and/or their licensees and/or their sublicensees to secure an exclusive license or applying for a letters patent in the countries within the territory of DOITSU and so far as possible under the provisions of the International Convention for the Protection of Industrial Property.

b 1) DOITSU agree that TITANINC., I. G. and TITANGESELLSCHAFT whenever they file an application for Letters Patent on an invention in the Licensed Field respectively shall within two months from the date of filing send a copy thereof to DOITSU (TITANINC. and TITANGESELLSCHAFT through I. G.) to be passed on to TITAN KOGYO with information as to the countries included in the territory of TITAN KOGYO in which they will file an application on such invention. TITAN KOGYO shall be entitled to apply for

patents in all other countries within their territory and TITANIC, I. G. and TITANGESELLSCHAFT respectively will on request supply TITAN KOGYO through DOITSU with all necessary papers and powers for that purpose and so far as possible under the provisions of the International Convention for the Protection of Industrial Property.

TITANINC., I. G. and TITANGESELLSCHAFT respectively shall prosecute with all possible diligence and care all patent applications which they have announced will be filed by them in the territory of TITAN KOGYO and in the case of difficulties confer with TITAN KOGYO.

b 2) If TITANINC., I. G. or TITANGESELLSCHAFT shall receive information as to the application by any other person, firm or company for Letters Patent in the Licensed Field in respect of which they shall be entitled to an exclusive license or to grant an exclusive license in the territory of TITAN KOGYO they shall with all possible diligence and care act to the purpose of providing TITAN KOGYO through the intermediary of DOITSU with the necessary information, papers and documents to enable TITAN KOGYO to secure an exclusive license or applying for a Letters Patent in the countries within the territory of KOGYO and so far as possible under the provisions of the International Convention for the Protection of Industrial Property.

c) Each party shall make punctually all payments necessary for the maintenance or prolongation of the patents owned or controlled by it, and with respect to which exclusive licenses are hereby granted or provided for.

With respect to patents of TITAN KOGYO in "North America" DOITSU shall be entitled to have the payment made by TITANINC. or their licensees in the name of TITAN KOGYO and to debit TITAN KOGYO for each payment.

TITAN KOGYO shall in due time inform DOITSU of the dates on which payment is due, to enable such payments to be made in a regular manner and without difficulty.

d) TITAN KOGYO as well as DOITSU (and the latter in the name of one or more of the firms represented by them) may relieve themselves of the obligation to pay any part of the expenses of obtaining, defending, maintaining or prolonging any Letters Patent or application for Letters Patent, with respect to which they possess an exclusive license by delivering to the other party owning or controlling the same a full and duly executed release of its exclusive license in which case the party so renouncing its right shall have a non-exclusive license in respect of the same.

e) Either party named under d) may relieve itself of the obligation to pay its share of the expenses of maintaining or defending any Letters Patent owned or controlled by it and with respect to which an exclusive license in favour of the other party is hereby granted or provided for by delivering to the other party (the exclusive licensee thereunder) a full complete and duly executed assignment of all the right, title and interest of such party in and to the same.

f) Either party or any exclusive licensee or sublicensee under any patent hereunder shall be entitled at its own expense to take any legal steps for the protection of a patent with respect to which an exclusive license to such party is hereby granted or provided for and to recover damages, penalties and profits for infringements of such patent and to receive for its own benefit any sums recovered by such steps. They are for such purpose entitled to use the name of the owner of the patent, but this gives them no right to

claim reimbursement from the owner of the patent of the expenses incurred by the procedure. The party taking such steps shall, however, provide satisfactory security against all expenses and liabilities which may result for the owner of the patent from such proceedings.

The other party whether owner or licensee under the patent shall be notified of such step immediately and shall be entitled to intervene at its own expense in such litigation.

6.

Each party hereto agrees that it will cooperate with the other party by imparting semi-annually to the other party full and accurate information in detail as to knowledge obtained by it since the last report in and applicable to the Licensed Field.

7.

Each party hereto agrees that it will so far as possible require its officers agents and employees to agree to assign to it throughout the world any and all inventions within the Licensed Field which may be made by them or any of them prior to the time herein fixed for the termination of the exclusive licenses and of any extension of such time.

8.

The licenses herein provided for shall be granted and accepted and their continuance dependent upon the following conditions to be stated in every license agreement:

a) That the licensee shall never directly nor indirectly question or contest the validity of any patent under which it is licensed or use or infringe the same beyond the limits of the license nor directly nor indirectly connive with or af-

ford any pecuniary or other assistance to a contestant or questioner of such validity.

b) TITAN KOGYO undertake to render to DOITSU on or before the last day of January and July of each year true and correct statements in writing as to their production in the Licensed Field during the preceding 6 months, the DOITSU to have the right to have these statements verified.

c) The future cost of maintaining or prolonging any Letters Patent with respect to which exclusive licenses are hereby granted or provided for, the future cost of defending suits brought to annul or cancel said Letters Patent or any of them and the future cost of obtaining Letters Patent as provided for in section a) of article 5. hereof shall be equally divided between DOITSU and TITAN KOGYO and the party making such payments shall be reimbursed by the other party for its share of the said payments within sixty days after the receipt by the other party of a verified statement of account evidenced by appropriate vouchers.

d) Each party hereto shall at all times on request of the other duly and with all possible diligence execute and deliver to such other party all additional papers and documents and do and perform all other acts requisite and proper to fully effectuate all the provisions and obligations of this Agreement and particularly as regards all licenses herein referred to and also all patents and the maintenance and enforcement of the same and the preperation filing and prosecution of applications for patents.

e) TITAN KOGYO assume the obligation not to participate directly or indirectly in competitive enterprises producing or delivering or preparing to produce or to deliver the products in the Licensed Field or to assist them in any way

whatever as regards their installations or operations, business organisations, etc., by technical or commercial advice or by preferential deliveries, grant of licenses, assignment of patents or in any other manner. TITAN KOGYO further undertake to keep all processes and subject matter within the scope of the Licensed Field secret as regards third parties. TITAN KOGYO will make stipulations to this effect in their contracts, etc., with their employees, workmen, etc., in as far as this is possible and legal.

f) In the event of either of the parties hereto at any time violating or failing to perform any of the conditions contained in article 2, 3, 4, 5a) and b), 6, 7 and in this article, the other party may by notice in writing duly despatched by registered post notify the delinquent party accordingly. Unless within six months after such despatch the delinquency has ceased and satisfaction has been made, the license hereby granted to the delinquent party may at the option of the aggrieved party at any time thereafter be terminated by notice sent by registered post to the delinquent party by the aggrieved party but no such termination of license shall operate to relieve the aggrieved party from its own obligations under this agreement nor terminate the licenses or sublicenses granted to it hereunder.

9.

Each party hereto agrees that in acquiring rights to inventions within the Licensed Field it will so far as possible endeavour to provide that such rights shall extend to all countries or places within the territory with respect to which any license to the other party hereunder is hereby granted or provided for.

Exhibit J-4

10.

The exclusive license hereby granted or provided for shall remain in force for the longest period for which the respective parties have power to grant such licenses, provided however that such licenses shall terminate if and when DOITSU or their successors cease to be owners of shares in TITAN KOGYO in accordance with the Partnership Contract B. (copy of which is attached hereto), which was made between DOITSU and the KOKUSAN KOGYO K. K. TOKYO.

Should such ownership cease, each of the parties hereto shall receive a non-exclusive license for the longest term for which it is then possible to grant for their respective territories for all inventions, patents and patent applications within the Licensed Field which the other party at the date of termination owns or in respect of which it is then entitled to grant or is entitled to obtain the right to grant such license.

DOITSU shall be entitled to pass such licenses on to TITANINC., I. G. and TITANGESELLSCHAFT, and/or their present or future licensees or sublicensees.

All other obligations and rights under this agreement shall cease.

11.

TITAN KOGYO are entitled to transfer their rights in toto but not otherwise and only in connection with the transfer of their entire business to any person, firm, association or corporation which assumes the obligations of TITAN KOGYO, and this agreement in all respect shall be obligatory, not only upon each of the parties hereto respectively, but

also upon their respective assigns, successors and legal representatives.

12.

It is understood and agreed that the obligations assumed by each of the parties hereto shall extend to any and all subsidiaries of either of such parties the control of which is held by either party hereto to the end that the terms of this agreement shall not be avoided by the existence or formation of affiliated or subsidiary companies.

Exhibit J-5

E.

Minutes for an agreement between Titan Kogyo and Kokusan Kogyo regarding supplies made and services rendered by Kokusan Kogyo to Titan Kogyo are to be made on the following principles:

1) Raw materials, energies, intermediary products and machinery manufactured or generated by Kokusan Kogyo themselves or any of their subsidiaries or affiliated companies or any other member of the Nippon Sangyo concern are to be supplied at self-cost price plus maximum 10%.

2) Raw materials, energies, intermediary products and machinery purchased by Kokusan Kogyo are to be supplied by Kokusan Kogyo to Titan Kogyo at purchase price without any additional charge.

3) Titan Kogyo are bound to cover their requirements of the above mentioned products and energies with Kokusan Kogyo unless purchases can be made at more favourable terms than those offered by Kokusan Kogyo.

4) With regard to services as for inst. rent for ground and buildings, repairs, water supply, transport charges, etc. terms are to be arranged on a reasonable basis.

Exhibit J-6

F.

Minutes for an agreement between TITAN KOGYO and the KOKUSAN KOGYO K. K. TOKYO, on the terms of agency.

If TITAN KOGYO do not desire to sell their products directly and wish to appoint KOKUSAN KOGYO their agents, an agreement including the following terms must be made:

1) Exact definition of the field of products and geographic territory for which KOKUSAN KOGYO are appointed agents,

2) Selling prices are fixed by TITAN KOGYO,

3) TITAN KOGYO grant KOKUSAN KOGYO 5% selling commission on their net proceeds,

4) Only the denominations, trade marks, brands, etc. of TITAN KOGYO may be used for the sales,

5) Reservation of proprietory rights reserved to TITAN KOGYO on all letters, papers, printed matters, and especially customers' indexes referring to the trade of TITAN KOGYO,

6) Reservation of the right to withdraw from the contract if KOKUSAN KOGYO neglect the sale of the products of TITAN KOGYO and DOITSU ask for the withdrawal.

7) Termination of the contract at the latest when KOKUSAN KOGYO surrender their shares in TITAN KOGYO or if TITAN KOGYO be liquidated.

Société de Produits Chimiques
des Terres Rares.
67 Rue de Prony

Paris, January 20th, 1936.

Titan Company Inc.
7 West 10th Street
Wilmington, Delaware.
U. S. A.

Dear Sirs,

Further to our last conversation, we beg to confirm that in the Pool Agreement and its appendices, as well as in the text of the Guaranty Contract, copies of which were exchanged January 18th 1936, we pointed out to you that by the designation "Société de Produits Chimiques des Terres Rares" we meant Société de Produits Chimiques des Terres Rares and Fabriques de Produits Chimiques de Thann et de Mulhouse, and that you were in agreement with this.

As arranged, we should be obliged if you would kindly confirm your approval.

Yours very truly,

(sign.) J. BLUMENFELD.

Paris

Dear Sirs,

We thank you for your letter of January 20th and take pleasure in confirming our agreement.

Yours very truly,

Sig. G. JEBSEN
Vice President.

Copy to I. G. Farbenindustrie, Mr. Borgwardt
" " Titangesellschaft.

Exhibit K

THIS AGREEMENT made the 1st day of January 1937 Between CANADIAN INDUSTRIES LIMITED (hereinafter called "C-I-L"), a corporation organized and existing under the laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec, of the first part, and NATIONAL LEAD COMPANY (hereinafter called "National"), a corporation organized and existing under the laws of the State of New Jersey, U. S. A., and having an office at 111 Broadway, New York City, of the second part.

WHEREAS:—

(1) The parties hereto have agreed to co-operate in the manufacture and sale of titanium compounds, which expression whenever used in this Agreement means all forms of the element titanium and all substances, materials and compositions containing two per cent (2%) or more of that element in a chemically, mechanically or physically combined state (including simple mixtures thereof but excluding titanated lithopones and titanium tetrachloride), which can be used as pigments, whether or not adapted for other uses.

(2) National possesses patent rights and processes for the production of titanium compounds and particularly for the production of various qualities of titanium white or titanium dioxide which products are manufactured on an important scale in accordance with such patent rights and processes in factories at Sayreville, New Jersey, and St. Louis, Missouri, U. S. A., and at Leverkusen, Germany, and Billingham, England.

(3) These patent rights were in part acquired and are exercised by National (as successor to its former subsidiary Titanium Pigment Company, Inc., a corporation of the State of Maine) under and in accordance with an agreement dated July 30, 1920, between the said Titanium Pigment Company, Inc., and Titan Co. A/S of Norway which provides for close co-operation between the parties thereto for the development of the industry and under which the interest of Titanium Pigment Company, Inc., has since been acquired and is now held by National and the interest of said Titan Co. A/S has since been assigned to and is now held by Titan Company Inc., U. S. A. (hereinafter called "Titaninc").

(4) The said Titaninc has also made agreements with I. G. Farbenindustrie and with Titangesellschaft m. b. H., of Germany, and with Imperial Chemical Industries Limited and others and with British Titan Products Company Limited, of England, with a view to co-operation and the exchange of technical and chemical experience for the development of the titanium industry.

(5) C-I-L possesses patent rights and processes for the production of titanium compounds and particularly for the production of various qualities of titanium white or titanium dioxide and has access to the technical information of E. I. duPont de Nemours and Company Inc., on such products for use in the Dominion of Canada and the Colony of Newfoundland.

(6) C-I-L has caused a Canadian Company to be formed under the name of Canadian Titanium Pigments Limited with a nominal capital of $50,000. This Company is a private Company and so far only six (6) shares of $100

each in the share capital of the Company have been issued. This Company is hereinafter called "Canadian Titanium".

NOW THIS AGREEMENT WITNESSETH AND IT IS HEREBY AGREED by and between the parties hereto as follows:—

1. Canadian Titanium shall have the sole right of manufacture and sale of titanium compounds throughout the Dominion of Canada and the Colony of Newfoundland as at present constituted and both parties hereto will satisfy all their requirements for titanium compounds for consumption and/or for sale in the territory above defined by purchasing them from Canadian Titanium and will use all endeavors and take all measures in their power to ensure that their respective subsidiary and associated companies will satisfy their requirements for the said territory in like manner PROVIDED nevertheless that Canadian Titanium shall be able and willing at all times to supply such titanium compounds at competitive prices and of the qualities required.

2. National and Canadian Titanium shall forthwith enter into a License Agreement substantially in the form of the Draft Agreement set forth in the First Schedule hereto with such modifications therein if any as may be approved by both the parties t this Agreement and C-I-L shall forthwith enter into a License Agreement with Canadian Titanium substantially in the form of the Draft set forth in the Second Schedule hereto with such modifications therein if any as may be approved by both the parties to this agreement.

3. National shall forthwith enter into an Agreement with Canadian Titanium for the transfer to Canadian Titanium of the existing business and goodwill of National in titanium compounds in the Dominion of Canada and

Colony of Newfoundland, substantially in the form of the Draft Agreement set forth in the Third Schedule hereto with such modifications therein if any as may be approved by both the parties to this Agreement.

4. The authorized share capital of Canadian Titanium shall forthwith be increased to $1,300,000 consisting of:

(a) 5,000 "A" shares of $100 each of which 1,000 shall be subscribed in cash at par forthwith in the proportion of 49% by National and 51% by C-I-L, and further subscriptions by the parties hereto for such shares, as required from time to time, shall be made in the like proportions in cash at par up to the total authorized;

(b) 8,000 "B" shares of $100 each which shall be issued credited as fully paid up to National as consideration for the transfer by National to Canadian Titanium of the existing Canadian business and goodwill of National in titanium compounds and the carrying out by National of the obligations imposed on it by the Agreement contained in the Third Schedule hereto.

The "A" shares shall carry the following rights:

(1) The right, on a winding-up, to arrears of dividend and repayment of capital, after payment of the liabilities of the Company but in priority to arrears of dividend and repayment of capital of the "B" shares, and to receive the surplus assets remaining after payment in full of the arrears of dividend and capital of the "B" shares.

(2) The right to a fixed cumulative dividend of seven per cent (7%) per annum and arrears thereof in priority to the dividend and arrears of dividend on the "B" shares, and to the balance of the distributable profits remaining after payment of the dividend and arrears of dividend on the "B" shares.

(3) The right to one vote per share.

The "B" shares shall carry the following rights and be subject to the following restrictions:

(1) The right, on a winding-up, to arrears of dividend and repayment of capital, after payment of the liabilities of the Company and payment in full of the arrears of dividend and capital of the "A" shares.

(2) The right to a fixed cumulative dividend of six per cent (6%) per annum and arrears thereof ranking after the payment of the fixed cumulative dividend of seven per cent (7%) on the "A" shares and any arrears thereof.

(3) The right to one vote per share which, however, shall be exercisable only in relation to alteration of the rights attaching to the "B" shares or to the winding-up of the Company or to the sale of its business, or in the event of the fixed cumulative dividend on the "B" shares being in arrear on any date after 31st December 1938, or whenever the holders of the "B" shares are required by law to vote for the sanction of any by-law dealing with or directly affecting such shares.

(4) Such shares shall be redeemable at the option of the Company, either as a whole or from time to

time in lots of 1,000 shares or multiples thereof, on any dividend payment date after the first day of January 1942, at the amounts paid up on such shares, provided that the fixed cumulative dividend on all the "B" shares shall have been paid in full up to the date of any such redemption and provided that notice in writing of any such redemption shall have been given by the Company to the holders of the shares to be so redeemed at least thirty days prior to the date fixed for redemption, and provided further that upon any partial redemption the same proportion of the total number of shares held by each shareholder shall be redeemed as the total number of shares to be then redeemed bears to the total number of shares then outstanding.

It is agreed however between the parties hereto that for so long as the whole of the said "B" shares shall be held by National or any subsidiary company in which it owns the whole of the share capital, neither National nor any such subsidiary company will exercise until after 31st December 1940, the right to vote attaching to such shares in the event of the dividend thereon being in arrear.

5. The funds required for the ~~erection by~~ Canadian Titanium of a factory in Canada shall be provided by an issue of not exceeding $1,100,000 in par value of 30-year 7% Bonds which, as and when so required, shall be subscribed in cash ~~at~~ par in the proportions of 49% by National and 51% by C-I-L. Such bonds shall be redeemable at the option of Canadian Titanium on any interest payment date after 1st January 1942, at par and accrued interest, upon notification in writing having been given at least 30 days in

advance to the holders thereof, in lots aggregating an even $100,000 or multiple thereof and prorated among the holders thereof according to their respective holdings.

6. EXCEPT in so far as is otherwise herein provided, during the continuance of this Agreement no party hereto shall transfer or part with the possession of any of its shares or bonds in Canadian Titanium except with the written consent of the other party to this Agreement and any transferee of such shares shall agree to be bound by all the obligations hereof so far as they are binding on the transferor PROVIDED (1) that on any holder of "A" shares transferring or parting with the possession of the whole of its "A" shares the provisions of Clause 11 hereof shall bind such holder for a period of five years after the date of such transfer but otherwise such holder shall thereupon be released from all its obligations hereunder (2) that any party hereto shall be entitled to have any of its shares or bonds in Canadian Titanium allotted to or to transfer any of its said shares or bonds to any subsidiary Company in which it owns the whole of the share capital and any shares or bonds so held by any such subsidiary Company may be transferred to its parent company being a party hereto or to another subsidiary Company in which that party owns the whole of the share capital. Provided that the holding of any of such shares or bonds by any such subsidiary Company shall in no way relieve any party hereto from any of its obligations hereunder and Provided Also that if any such subsidiary Company shall cease to be wholly owned by its parent Company being a party hereto that party will procure the shares and bonds concerned to be transferred either to itself or to another subsidiary Com-

pany in which it owns the whole of the share capital and (3) that any party hereto shall be entitled to transfer to a nominee or nominees for the purpose only of qualifying such nominee or nominees as a Director or Directors of Canadian Titanium such shares in Canadian Titanium as shall be necessary for that purpose.

On any sale of "A" shares or bonds the same shall first be offered to the other holder or holders of "A" shares for refusal or acceptance within six months. If acceptances are received in respect of more shares or bonds than are offered the shares or bonds offered shall be transferred to the other accepting holders proportionately to their respective holdings.

7. The Board of Canadian Titanium shall consist of not more than six Directors of whom, as long as the percentage ownership of "A" shares by the parties hereto remains substantially as provided in Clause 4(a) hereof, National shall be entitled to nominate and from time to time to remove and replace three and C-I-L shall be entitled to nominate and from time to time to remove and replace three.

8. The President of Canadian Titanium shall be such one of the Directors nominated by C-I-L as may be agreed between the parties hereto.

9. The question of the erection of a factory in Canada by Canadian Titanium is to be left for the decision of the Board after full examination of the circumstances.

10. The requisite alterations in the By-Laws of Canadian Titanium shall be forthwith made to give effect to the provisions of this Agreement.

Exhibit K

11. During the continuance of this Agreement C-I-L agrees that it will not deal in or manufacture titanium compounds in any part of the world except through or at the request of Canadian Titanium and undertakes to use all endeavors and take all measures in its power to ensure that its subsidiary and associated companies shall observe the like restrictions, and National assumes the same obligation with respect to dealings or manufacture within the Dominion of Canada or the Colony of Newfoundland. It is understood that for the purposes of this Clause, E. I. duPont de Nemours and Company Inc. shall not be deemed to be an associated company of C-I-L.

12. Until Canadian Titanium shall have commenced itself to manufacture titanium compounds and as long thereafter as Canadian Titanium may require, National agrees itself to supply Canadian Titanium from the United States, at cost plus ten per cent (10%), and to use its best endeavors to enable Canadian Titanium to obtain from England through British Titan Products Company Limited, at cost plus ten per cent (10%), such quantities of titanium compounds as Canadian Titanium may require to satisfy the market demand therefor in the Dominion of Canada and the Colony of Newfoundland.

13. Subject to the provisions elsewhere contained in this Agreement and to the continued existence during that time of Canadian Titanium this Agreement shall remain in force for thirty years from the date hereof and shall continue from year to year thereafter unless terminated as hereinafter provided. If at or at any time after the expiration of that thirty year period either party or its successor or assign shall wish to retire from the provisions of this

Agreement it shall be entitled to do so provided it has previously given twelve months' notice in writing to that effect to the other party hereto. Either party so retiring shall offer to the other party for refusal or acceptance within 6 months the right to purchase the whole of the bonds and "A" shares in Canadian Titanium then held by or for account of the retiring party at a price for said bonds equal to the par value thereof and accrued interest and at a price for said "A" shares to be determined by mutual agreement and corresponding to the book value of the shares without taking into account any values of patents trade marks or goodwill and in default of agreement the price shall be settled by arbitration in accordance with the laws of the Province of Quebec relating to arbitration. Should the other party be unwilling to purchase the whole of the bonds and "A" shares so offered to it by the retiring party the retiring party shall have the right to require Canadian Titanium to be voluntarily wound up and in that event the other party shall use its voting power in Canadian Titanium to put that company into voluntary liquidation.

14. Should the Agreement of 1920 referred to in the third recital to this Agreement cease or determine for any cause beyond the control of National prior to the expiration of thirty years from the date of this Agreement, National shall forthwith notify Canadian Titanium of such termination and each party to this Agreement or its successor or assign shall have the right to retire from the provisions of this Agreement as of any date after the expiration of six calendar months from the effective date of termination of said Agreement of 1920 or from the date of receipt of notice thereof by Canadian Titanium as afore-

said, whichever date shall be the later, by giving to the other party six months prior notice in writing to that effect. Such retiring party shall have similar obligations to those contained in the last preceding Clause of this Agreement to offer to the remaining party for acceptance or refusal within six months the right to purchase the "A" shares and bonds in Canadian Titanium held by or for account of such retiring party and to require that Company to be wound up should the remaining party be unwilling to purchase the whole of the "A" shares and bonds so offered to it. Save as expressly provided by this Clause or by the preceding clause no party hereto shall without the consent of the other party hereto use its voting power in Canadian Titanium to put that Company into voluntary liquidation.

15. On either party exercising its option under Clauses 13 or 14 hereof the provisions of Clause 11 hereof shall bind it for a period of five years after the date when it ceases to be a shareholder unless Canadian Titanium is wound up in pursuance of either of the said Clauses 13 or 14.

16. Nothing herein contained shall be construed as giving to either party hereto the right to receive or to use or to disclose to its associates or to any other party any of the technical knowledge or experience which may be transmitted or disclosed by the other party to Canadian Titanium hereunder, except to the extent and in the manner provided in the license agreements between the respective parties hereto and Canadian Titanium contemplated by Clause 2 hereof.

THE SCHEDULES

FIRST SCHEDULE — Agreement to be made between National and Canadian Titanium for exclusive license for Canada and Newfoundland.

SECOND SCHEDULE—Agreement to be made between C-I-L and Canadian Titanium for exclusive license for the World.

THIRD SCHEDULE — Agreement between National and Canadian Titanium forming title to "B" shares in Canadian Titanium to be allotted to National for the consideration therein mentioned.

Exhibit K-1

AN AGREEMENT made the first day of January, 1937 Between NATIONAL LEAD COMPANY, a corporation organized and existing under the laws of the State of New Jersey, U. S. A., and having an office at 111 Broadway in the City and State of New York (hereinafter referred to as "National" which expression includes its successors and permitted assigns) of the one part and CANADIAN TITANIUM PIGMENTS LIMITED, a corporation organized and existing under the laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec, (hereinafter referred to as "Canadian Titanium" which expression includes its successors and permitted assigns) of the other part.

WHEREBY IT IS AGREED AND DECLARED as follows:—

ARTICLE I.

In this Agreement the under-mentioned expressions shall have the meanings set opposite to them respectively as follows:—

(a) "Licensed Field" means and includes all methods, processes and apparatus in the field of the manufacture and use of all titanium compounds, as defined in the paragraph next following, and all such titanium compounds themselves.

(b) "Titanium compounds" means and includes all forms of the element titanium and all substances, materials and compositions containing two per cent (2%) or more of that element in a chemically, mechanically or physically combined state (including simple mixtures thereof but ex-

cluding titanated lithopones and titanium tetrachloride), which can be used as pigments, whether or not adapted for other uses.

(c) "North America" includes the entire continent of that name except the Dominion of Canada and Newfoundland and also includes Panama and all Central American States and all islands which were on the 30th July 1920 considered as being geographically appurtenant to the continent of North America and also the Philippine and Hawaiian Islands.

(d) "South America" similarly includes the entire continent of that name including all countries therein located to the South of Panama and also all islands which were on the 30th July 1920 considered as being geographically appurtenant to the said continent.

(e) "Finished Articles" means any artificially manufactured article or mixture which has been produced by the aid of any titanium compound within the Licensed Field in such a manner that the product constitutes a cohesive inter-mixture of such titanium compound with other materials as for instance paint, rubber, glass, etc.

(f) "Territory of Canadian Titanium" includes the whole of the Dominion of Canada and the Colony of Newfoundland as at present constituted.

(g) "Territory of National" includes all countries outside the Territory of Canadian Titanium.

(h) "Allied Companies" means all companies, firms and commercial or industrial enterprises (other than the parties hereto and licensees and sub-licensees of National, including their licensees and sub-licensees, for the territory of National outside of North America and South America)

which have received or shall receive a license of the nature referred to in Article XIV (a) of the Agreement of 1920 or in Article XIV hereof.

(i) "Agreement of 1920" means the Agreement dated 30th July 1920 between Titanium Pigment Company, Inc. and the Titan Co. A/S under which the interest of said Titanium Pigment Company, Inc. has since been acquired and is now held by National and the interest of said Titan Co. A/S has since been assigned to and is now held by Titan Company, Inc., U. S. A.

ARTICLE II.

National grants and agrees to grant to Canadian Titanium for the territory of Canadian Titanium an exclusive license in respect of all or any patents, processes and subject-matter within the scope of the Licensed Field of which National now is or may hereafter become the beneficial owner or in respect of which National now is or may hereafter become entitled to grant for such territory an exclusive license, and a non-exclusive license in respect of all or any patents, processes and subject-matter within the scope of the Licensed Field as to which National now is or may hereafter become entitled to grant or may be entitled to obtain the right to grant for such territory a non-exclusive license, for the production of titanium compounds within the Licensed Field and for the sale and/or utilization of titanium compounds so produced, and with the right to grant sublicenses wherever National has or is entitled to obtain power to confer such right subject always to the conditions contained in this Agreement.

Exhibit K-1

If National shall be permitted or requested to grant and shall grant a license in the territory of Canadian Titanium in respect of any process involving the use or application of a titanium compound the terms of such license shall be agreed upon by National and Canadian Titanium.

No objection shall be made to customers of Canadian Titanium or of its exclusive licensees or sub-licensees selling Finished Articles in the territory of National but so that any such sales to countries within such territory but outside of North America and South America shall be kept within the limits imposed by the Note to Article VI(c) of the Agreement of 1920, but no such sales shall be made by Canadian Titanium itself.

Any license or licenses to which Canadian Titanium shall be entitled under this Article shall on the written request of Canadian Titanium be granted direct to Allied Companies in respect of the whole or any part of Canadian Titanium's territory or in respect of all or any one or more of the patents or patent applications.

ARTICLE III.

Canadian Titanium grants and agrees to grant to National for the territory of National an exclusive license in respect of all or any patents, processes and subject-matter within the scope of the Licensed Field of which Canadian Titanium now is or may hereafter become the beneficial owner or in respect of which Canadian Titanium is or may hereafter become entitled to grant for such territory an exclusive license, and a non-exclusive license in respect of all or any patents, processes and subject-matter within the scope of the Licensed Field as to which Canadian Titanium now is or may hereafter become entitled to grant or is en-

titled to obtain the right to grant for such territory a non-exclusive license, for the production of titanium compounds within the Licensed Field and for the sale and/or utilization of titanium compounds so produced, and with the right to grant sub-licenses wherever Canadian Titanium has or is entitled to obtain power to confer such right subject always to the conditions contained in this Agreement. Provided, that in respect of any patent, process or subject-matter as to which an exclusive license is or shall be granted to National under this Article National shall grant to E. I. duPont de Nemours and Company, Inc., U.S.A. (hereinafter called "duPont"), whenever so requested by duPont, a corresponding non-exclusive sub-license for North America and South America, upon the condition, however, that duPont shall reimburse or agree to reimburse National for one-half of any expense incurred by National as provided in Article VI (d) hereof, with respect to Letters Patent covering the subject matter of such sub-license, but such sub-license shall not be subject to the conditions stipulated in Article XIV hereof.

If Canadian Titanium shall be permitted or requested to grant and shall grant a license in the Territory of National in respect of any process involving the use or application of a titanium compound the terms of such license shall be agreed upon by National and Canadian Titanium.

No objection shall be made to customers of National or of its exclusive licensees or sub-licensees selling Finished Articles in the territory of Canadian Titanium but no such sales shall be made by National itself. Provided, however (i) any sales within the territory of Canadian Titanium by customers of Titan Company, Inc., located within the territory of National but outside of North America are to

be kept within the limits imposed by the Note to Article VI (c) of the Agreement of 1920 and (ii) the Maritime Organization of the Titan Company A/S (which deals almost exclusively in supplying Scandinavian ships) shall be entitled to make any sales of paste and paint for ships in the territory of Canadian Titanium. National shall upon request inform Canadian Titanium as to sales made in the territory of Canadian Titanium by the said Maritime Organization and will provide any further information that may be necessary to enable Canadian Titanium to form an opinion as to the size of such business and sales, and if such business and sales to ships other than Scandinavian ships should become sufficiently important as to interfere substantially with Canadian Titanium's sales of its own titanium compounds within its territory National agrees on being satisfied of such interference to take all reasonable steps to bring about the limitation of such business and sales to dimensions which will cause no such interference.

Any license or licenses to which National shall be entitled under this Article shall on the written request of National be granted direct to Allied Companies in respect of the whole or any part of National's territory or in respect of all or any one or more of the patents or patent applications, subject always to the right of duPont to a sublicense as hereinbefore provided.

ARTICLE IV.

Except to the extent provided for in the preceding Articles II and III hereof or as may be otherwise specifically agreed between the parties hereto neither of the parties hereto shall without the consent of the other sell or knowingly permit to be sold within the territory of the other party

any of the products within the scope of the Licensed Field and to this end each of the parties hereto shall take all reasonable steps to ensure that this obligation shall be observed by their respective customers.

If either party should at any time permit the other party to sell within or for importation into the territory of the first party any products within the scope of the Licensed Field the following provisions shall have effect:—

(1) The party to whom such permission is granted (herein called "the Principal Party") shall make such sale or procure such sale to be made through the agency of the party granting such permission (herein referred to as "the Agent Party").

(2) Each party irrevocably appoints the other party its exclusive agent for the sale of the said products in the territory of such other party.

(3) Such appointment shall continue so long as the Principal Party has the right to an exclusive license from the Agent Party.

(4) In the case of the territory of National outside of North America and South America Canadian Titanium shall appoint Titan Company Inc. or a licensee of Titan Company Inc. to be designated by Titan Company Inc. its exclusive agent in accordanee with the provisions of Article VI (c) of the Agreement of 1920 but Canadian Titanium shall only deal with its agent through National and all sales to be made by such agent shall depend on the consent of National.

(5) The Principal Party on the written request of the Agent Party shall appoint as exclusive agent for any

part of the territory of the Agent Party an Allied Company which has received an exclusive license for the territory to which such appointment applies.

(6) The Agent Party may fix its own prices and conditions for the resale of any such products but the Principal Party shall not be obliged to effect sales against any orders of which it does not approve.

(7) Each party undertakes to endeavor to prevent its customers from competing with the other in that other's territory to its detriment in the sale of Finished Articles permitted under Articles II and III respectively. The measures to be taken for this purpose are to be discussed and agreed on from time to time.

ARTICLE V.

The parties hereto mutually agree with each other to observe and perform the following obligations, viz.:—

(a) 1. Either party, whenever it files an application for Letters Patent on an invention in the Licensed Field, shall within two months from the date of filing send a copy thereof to the other party with information as to the countries or places included in the territory of the other party in which such applicant party will file an application on such invention. The other party shall thereafter as soon as possible but not later than four months from the receipt of the copy of said application for patent cause the applicant party to be informed by suitable notice as to the country or countries included in its territory in which such other party its licensees and/or sub-licensees desire an exclusive license or licenses under said invention and request applications

for patent thereon to be filed. The applicant party must then file an application for patent on the invention in each of the countries so designated to it and prosecute the same with care and diligence to patent.

2. The applicant party has the right to file applications for patent in its own name in the territory of the other party before receiving any information from the other party as to the filing of such applications for patent as hereinbefore provided.

3. If either party hereto shall receive information as to the application by any other person, firm or company for Letters Patent in the Licensed Field in respect of which it shall be entitled to an exclusive license or to grant an exclusive license it shall forthwith pass on such information to the other party.

(b) Either party hereto may relieve itself of the obligations assumed by it under sub-clause (a) 1 hereof with respect to any or all of the countries designated by the other party by sending by registered mail to the other party within two months of the time of its receipt of said notice of designation from the other party a copy of the said application for patent on the invention with all papers necessary to permit the filing of an application in the country or countries within the territory of the other party with respect to which the applicant party desires to be relieved of said obligations, and so far as possible under the provisions of the International Convention for the protection of Industrial Property, and with the necessary papers for vesting the ownership thereof as distinguished from a license in such other party.

Exhibit K-1

(c) Each party hereto shall make all payments lawfully required to maintain and prolong the Letters Patent owned or controlled by it and with respect to which exclusive licenses are hereby granted or provided for, such payments to be ultimately borne as provided in Article VI (d) hereof.

(d) Either party hereto may relieve itself of its obligation to pay any part of the expenses of defending, maintaining or prolonging any Letters Patent or Application for Letters Patent with respect to which an exclusive license in favor of such party is at the time in force by delivering to the other party owning or controlling the same a full and duly executed Release of the exclusive license of such party thereunder in which case the party so renouncing its right shall have a non-exclusive license in respect of the same.

Where the owner or controller of a patent or patent application is as regards National an Allied Company the Release shall be sent to National and not to such owner or controller.

(e) Either party hereto may relieve itself of its obligation to pay its share of the expenses of defending any Letters Patent owned or controlled by it and with respect to which an exclusive license in favor of the other party is hereby granted or provided for by delivering to the other party (the exclusive licensee thereunder) a full complete and duly executed assignment of all the right title and interest of such party in and to the same.

(f) Either party hereto or any exclusive licensee or sub-licensee under any Patent hereunder shall be en-

titled at its own expense (but subject to the provisions of Article VI (d) in the case of the defence of any action brought to annul or cancel any Letters Patent) to institute and/or defend any actions regarding any patent in the Licensed Field in any territory with respect to which an exclusive license or sub-license to such party, licensee or sub-licensee is hereby granted or provided for and in particular to restrain or to recover damages, penalties or profits for infringement and to receive for its own benefit any sums recovered by such action using where necessary but under indemnity the name of the owner of the patent. The party taking such steps must before so doing provide satisfactory security to the owner of the patent for such indemnity. Notice shall be given by the party taking such steps to the owner or controller of the patent in question who may if it shall so elect enter at its own expense into such litigation and any damages recovered shall in such case be divided between the parties in such manner as they shall agree to be fair and equitable.

Article VI.

The licenses provided for in Articles II and III hereof shall be expressly stated or shall be deemed to be given and accepted and their continuance dependent upon the following conditions:—

(a) That the licensee shall neither directly nor indirectly question or contest the validity of any patent under which it is licensed or use or infringe the same beyond the limits of the license nor directly or indirectly connive with or afford any pecuniary or other assistance to a contestant or questioner of such validity.

(b) Canadian Titanium shall render to National half-yearly statements of production.

(c) The Licensee shall faithfully perform and observe the obligations of Article IV hereof so far as they are applicable to the Licensee.

(d) The future cost of paying taxes, fees and other periodical sums necessary for maintaining or prolonging any Letters Patent with respect to which an exclusive license is hereby granted or provided for shall be borne by the party in whose favor such exclusive license is currently in force, the future cost of defending suits brought to annul or cancel any such Letters Patent shall be divided between the parties hereto in such manner as they shall agree to be fair and equitable, and the future cost of obtaining Letters Patent as provided for in section (a) of Article V hereof shall be borne by the party at whose instance and request such Letters Patent were obtained. The party making any such payments for account of the other shall be reimbursed by the other party therefor within sixty days after the receipt by the other party of a verified statement of account evidenced by appropriate vouchers.

(e) Each party hereto shall at all times on request of the other duly and with all possible diligence execute and deliver to such other party all additional papers and documents and do and perform all other acts requisite and proper to fully effectuate all the provisions and obligations of this Agreement and particularly as regards all licenses herein referred to and also all patents and the maintenance and enforcement of the same and the

preparation, filing and prosecution of applications for patents.

(f) In the event of either of the parties hereto at any time violating or failing to perform any of the conditions contained in this Article VI the other party may by notice in writing duly despatched by registered post notify the delinquent party accordingly. Unless within six months after such despatch the delinquency has ceased and satisfaction has been made any license hereby granted to the delinquent party may at the option of the aggrieved party at any time thereafter be determined by notice sent by registered post to the delinquent party by the aggrieved party but no such termination of licenses shall operate to relieve the aggrieved party from its own obligations under this Agreement nor terminate any license or sub-license granted to it hereunder.

(g) Canadian Titanium as receiver of the sub-licenses from the Titan Company, Inc., assumes all the obligations of Article XIV (a) of the Agreement of 1920 (except sub-section 1 which is to be substituted by a clause similar in all respects to Clause VI (b) hereof so far as refers to statements of production and sub-section 3 which is to be substituted by clauses similar in all respects to Clauses V (a) and (b) hereof) and as regards such sub-licenses where such obligations differ from those hereunder the obligations under the said Article XIV (a) (with the above exceptions) shall prevail.

Article VII.

Each party hereto agrees that it will co-operate with the other party by imparting semi-annually to the other party

Exhibit K-1

full and accurate information in detail as to knowledge obtained by it with the right of disposal since the last report in and applicable to the Licensed Field and will permit the other party by its duly accredited representatives during business hours to inspect, study and enquire into any of its plants where work in the Licensed Field is being done exclusive of its research laboratories provided that neither party shall be obliged to accord such permission to any person who is not at the time bound in writing under his signature to assign all his inventions pursuant to the provisions of the following Article VIII.

ARTICLE VIII.

Each party hereto agrees that it will so far as possible require its officers, agents and employees to agree to assign to it throughout the world any and all inventions within the Licensed Field which may be made by them or any of them prior to the time herein fixed for the termination of the licenses granted or provided for by Articles II and III hereof and to any extension of such time.

ARTICLE IX.

Each party hereto agrees that in acquiring rights to inventions within the Licensed Field it will so far as possible endeavor to provide that such rights shall extend to all countries or places within the territory with respect to which any license to the other party hereunder is hereby granted or provided for.

ARTICLE X.

(a) The licenses granted or provided for by Articles II and III hereof shall remain in force for the longest period

for which the respective parties have power to grant such licenses provided however that such licenses shall terminate if and when National or its successors and/or its subsidiary Companies shall cease to own any shares of Canadian Titanium. Should such ownership cease each of the parties hereto shall receive a non-exclusive license (for itself as well as for all licensees and sub-licensees who have received or may receive a license for use within the parties' respective territories) for the longest term which it is then possible to grant for their respective territories for all inventions, patents and patent applications within the Licensed Field which the other party at the date of termination owns or in respect of which it is then entitled to grant or is entitled to obain the right to grant such license. All other rights, obligations and liabilities under this Agreement shall cease.

(b) If any agreement between one of the parties hereto and one of the Allied Companies should terminate such party has the right to determine the licenses which the parties hereto or either of them have received from such Allied Company. In case such licenses are not executed by the party hereto which was party to the Agreement with the Allied Company, the other party hereto and the Allied Company in question shall have the right and the obligation mutually to grant non-exclusive licenses in manner provided in paragraph (a) above. Mutual rights and obligations remain otherwise as agreed in this Agreement.

(c) Should the Agreement of 1920 and exclusive licenses received or granted under that Agreement terminate before the termination of this present Agreement Canadian Titanium has the right only to non-exclusive licenses so far as they result from the Agreement of 1920 and Canadian Titanium shall if National so requires determine any exclusive

licenses granted to the Titan Company Inc. by Canadian Titanium and substitute them by non-exclusive licenses in accordance with Article X of the 1920 Agreement and give to National the right to a corresponding license or licenses which shall be exclusive of all others except the Titan Company Inc. and its sub-licensees, subject always, however, to the right of duPont to a sub-license as hereinbefore provided.

The termination of the Agreement of 1920 shall not affect the mutual rights and obligations of National and Canadian Titanium regarding the exclusive exploitation of their patents and inventions until the termination of the present Agreement.

ARTICLE XI.

The option contained in Clause XI of the Agreement of 1920 having lapsed South America is open to both National and Titan Company, Inc., under the terms of the 1920 Agreement.

ARTICLE XII.

The interest of either party hereto may be assigned in toto but not otherwise and only in connection with the transfer of the entire business of such party within the Licensed Field to any person, firm, association or corporation which assumes the obligations of such party and this Agreement in all respects shall be obligatory not only upon each of the parties hereto respectively but also upon their respective assigns, successors and legal representatives.

ARTICLE XIII.

It is understood and agreed that the obligations assumed by each of the parties hereto shall extend to any and all subsidiaries of each such party the control of which is held

by such party to the end that the terms of this Agreement shall not be avoided by the existence or formation of subsidiary companies.

ARTICLE XIV.

Either party hereto shall have the right so long as any exclusive licenses hereunder shall be in force and shall not have been terminated by forfeiture, to grant sub-licenses hereunder but neither party hereto shall grant any license under its own patents or any sub-license hereunder in the Licensed Field except for the production of titanium compounds or for the utilization of such compounds produced by one of the parties hereto or a licensee or a sub-licensee of one of the parties. If any such license or sub-license is for the production of titanium compounds or for the manufacture therefrom of any product definable by the term "pigment" and as such utilizable in the composition of any commodity then every such license or sub-license shall be in writing and shall on the face thereof be expressly stated to be given and accepted and its continuance to be dependent upon the following express conditions which shall be binding on the licensee or sub-licensee as the case may be.

(a) To render to its licensor on or before the last day of January and July of each year true and correct statements in writing as to its production in the Licensed Field during the six months preceding the month in which such return is made. The licensor shall have the right to have such statements verified either by oath or by some accountant appointed by the licensor as the licensee shall prefer.

(b) To assume towards its licensor in respect of its (the licensee's or sub-licensee's) inventions and patents in

the Licensed Field the same obligations as are assumed by the licensor under Articles II and III of this Agreement.

(c) To assume towards its licensor the same obligations regarding its patents and inventions as are assumed by the parties hereto towards each other under Article V (a) and (b) of this Agreement.

(d) To assume upon itself the obligations of Article VI (a) hereof.

(e) To appoint as its sole agent in the territory of such party in accordance with the conditions set forth in Article IV hereof its licensor or some nominee of its licensor.

(f) To agree to assume in respect of its licensor the obligations assumed by its licensor in respect of the other party hereto in Article VII hereof and also to assume similar obligations to those assumed by its licensor under Article VIII hereof.

(g) That if the licensee or sub-licensee violates or neglects performance of any of the conditions above recited to be assumed by it the licensor may by registered mail thereto duly addressed notify the licensee or sub-licensee accordingly and that unless within six months after such mailing of such said notice the delinquency has ceased and satisfaction therefor been made, then and in that event the licensor may at its option terminate the license or sub-license by notice to that effect sent by registered mail to the licensee or sub-licensee.

Each of the parties hereto agrees that it will whenever it grants a license or sub-license in the Licensed Field or cancels the same or is notified of any breach thereof promptly notify the other party hereto giving him the name

and address of the licensee or sub-licensee and information as to the character, scope and duration of the license or sub-license.

ARTICLE XV.

It is intended that the mark "Titanox" for use in the territory of Canadian Titanium shall be assigned to it or otherwise made available for its exclusive use in such manner as the parties shall agree upon as most effective for the purpose. Canadian Titanium will use this mark only for qualities which are equal to or better than the quality upon which said mark is now used by National.

ARTICLE XVI.

Where any patent is registered in the name of Titan Co. A/S or Titan Company Inc. or Titanium Pigment Company, Inc. National will procure that any license thereof to be granted hereunder to Canadian Titanium shall be executed by such registered owner or alternatively shall cause the patent to be registered in its name before any license thereof is executed.

ARTICLE XVII.

All notices to National may be sent by registered post addressed to it at its said principal office in New York City. All notices to Canadian Titanium may be sent by registered post addressed to it at its head office. Either party may, at any time or from time to time by notice in writing substitute a new address in lieu of this address above set forth.

ARTICLE XVIII.

This Agreement shall be construed according to the Law of the Dominion of Canada.

Exhibit K-1

IN WITNESS WHEREOF the parties hereto have duly executed these presents the day and year first above written.

Exhibit K-2

AN AGREEMENT made the 1st day of January 1937 Between CANADIAN INDUSTRIES LIMITED, a corporation organized and existing under the laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec, (hereinafter called "C-I-L") of the one part and CANADIAN TITANIUM PIGMENTS LIMITED, a corporation organized and existing under the laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec, (hereinafter called "Canadian Titanium") of the other part.

WHEREBY IT IS AGREED by and between the parties hereto as follows:—

1. C-I-L grants and agrees to grant to Canadian Titanium an exclusive license throughout the world in respect of all and any patents, processes and subject matter within the scope of the Licensed Field as hereinafter defined of which C-I-L now is or may hereafter become the beneficial owner or in respect of which C-I-L now is or may hereafter become entitled to grant an exclusive license, and a like non-exclusive license in respect of all and any patents, processes and subject matter within the scope of the Licensed Field as to which C-I-L now is or may hereafter become entitled to grant or may be entitled to obtain the right to grant a non-exclusive license, for the production of titanium compounds within the Licensed Field and for the sale and/or utilization of titanium compounds so produced, and with the right to grant sub-licenses wherever C-I-L has or is entitled to obtain power to confer such right subject always

to the conditions contained in this Agreement. Provided that in respect of any patent, process or subject matter now or hereafter owned by C-I-L and as to which an exclusive license is or shall be granted to Canadian Titanium under this Article, Canadian Titanium shall grant to E. I. duPont de Nemours and Company, Inc., U.S.A., (hereinafter called "duPont"), whenever so requested by duPont, a corresponding non-exclusive sub-license for any part of North America except the Dominion of Canada and the Colony of Newfoundland and of South America, upon the condition, however, that duPont shall reimburse or agree to reimburse Canadian Titanium for one-half of any expense incurred by Canadian Titanium under Clause 4 hereof with respect to Letters Patent covering the subject matter of such sub-license, but such sub-license shall not be subject to the conditions stipulated in Article XIV of that license agreement of even date herewith entered into between Canadian Titanium and National Lead Company.

The term "Licensed Field" herein means and includes all methods, processes and apparatus in the field of the manufacture and use of all titanium compounds, as defined in the paragraph next following, and all such titanium compounds themselves.

The term "titanium compounds" herein means and includes all forms of the element titanium and all substances, materials and compositions containing two per cent (2%) or more of that element in a chemically, mechanically or physically combined state (including simples mixtures thereof but excluding titanated lithopones and titanium tetrachloride), which can be used as pigments, whether or not adapted for other uses.

Exhibit K-2

2. WHENEVER C-I-L files an application for Letters Patent on an invention in the Licensed Field C-I-L shall within two months from the date of filing send a copy thereof to Canadian Titanium. Canadian Titanium shall thereafter as soon as possible but not later than four months from the receipt of the copy of the said application inform C-I-L whether or not Canadian Titanium desires an exclusive license for said invention and if so in what country or countries. C-I-L shall then file an application for patent on the said invention in any country or countries so designated and prosecute the same with care and diligence until the requisite patents are obtained and C-I-L may also if it thinks fit file such an application without waiting for the reply of Canadian Titanium. As regards any such invention or any country or countries with respect to which Canadian Titanium shall not have informed C-I-L of its desire for an exclusive license as aforesaid C-I-L shall be entitled to take out a patent or patents for its own benefit.

3. C-I-L shall be charged with the duty of making all payments lawfully required to maintain and prolong any Letters Patent in the Licensed Field belonging to or controlled by it but only so long as Canadian Titanium continues to hold an exclusive license in respect thereof, provided that C-I-L shall before ceasing to make any such payments give notice to Canadian Titanium that it intends so to do and if Canadian Titanium desires to keep such Letters Patent alive for its own benefit it shall have the right to acquire the same and make such payments itself and C-I-L shall at the expense and cost of Canadian Titanium execute and do such documents, acts and things as may be necessary or requisite for that purpose.

Exhibit K-2

4. The expenses hereafter involved in obtaining, maintaining or defending any Letters Patent in the Licensed Field belonging to or controlled by C-I-L and paid by it shall be reimbursed to C-I-L by Canadian Titanium so long as Canadian Titanium desires to retain an exclusive license under such patent. Canadian Titanium is relieved of this obligation, as to expenses thereafter incurred, when the exclusive license is renounced by it or otherwise terminates in which case Canadian Titanium shall be entitled to a non-exclusive license.

5. C-I-L agrees that it will so far as possible require its officers, agents and employees to agree to assign to it throughout the world any and all inventions within the Licensed Field which may be made by them or any of them prior to the time hereby fixed for the termination of the exclusive license hereby granted.

6. The licenses hereby granted or provided for shall last as long as C-I-L or any of its subsidiary Companies continues to own any shares in Canadian Titanium. Should such ownership cease so that neither C-I-L nor any of its subsidiary Companies own any shares in Canadian Titanium, then Canadian Titanium shall be entitled at once to receive (for itself and for all licensees and sub-licensees who have received or may subsequently receive a license from Canadian Titanium) a non-exclusive license in respect of all or any of the said patents and processes of which C-I-L is then the beneficial owner or in respect of which C-I-L is then entitled to grant a non-exclusive license.

7. Canadian Titanium or any exclusive sub-licensee of any of its rights in respect of the said patents and processes

shall be entitled at its own expense to bring suit to restrain and to recover damages and penalties and profits for infringement of a patent in the Licensed Field, in respect of which it holds or is entitled to receive an exclusive license or sub-license, and to receive for its own benefit any sums recovered by any such suit using if necessary but under indemnify the name of C-I-L. C-I-L shall be notified of any such suit immediately upon its institution and shall be entitled if it shall so elect to intervene at its own expense in any such litigation and to be reimbursed for its expenses therein, ratably with the party instituting such suit, out of any sums recovered thereby. The party instituting any such suit shall first give a satisfactory security to C-I-L against any expense or liability on the part of C-I-L resulting from such proceedings.

8. (a) Canadian Titanium shall never directly or indirectly question or contest the validity of any patent under which it is licensed in pursuance of this Agreement nor use nor infringe the same except as licensed nor directly nor indirectly connive with or afford any pecuniary or other assistance to any contestant or questioner of such validity.

(b) C-I-L shall never directly or indirectly question or contest the validity of any patent of Canadian Titanium or of the companies co-operating with Canadian Titanium in any part of the world in the Licensed Field nor infringe the same nor directly or indirectly connive with or afford any pecuniary or other assistance to any contestant or questioner of such validity.

9. C-I-L undertakes to use all endeavors and take all measures in its power to ensure that its subsidiary and as-

sociated companies shall respect this Agreement as if they were parties to it and that they shall do nothing contrary to the interests in the Licensed Field of Canadian Titanium or its sub-licensees. It is understood that for the purposes of this Clause, duPont shall not be deemed to be an associated Company of C-I-L.

IN WITNESS WHEREOF the parties hereto have duly executed these presents the day and year first above written.

Exhibit K-3

AN AGREEMENT dated the 1st day of January 1937 Between NATIONAL LEAD COMPANY, a corporation organized and existing under the Laws of the State of New Jersey U. S. A. and having an office at 111 Broadway New York City U. S. A. (hereinafter referred to as "National") of the one part and CANADIAN TITANIUM PIGMENTS LIMITED a corporation organized and existing under the Laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec (hereinafter referred to as "Canadian Titanium") of the other part.

WHEREAS it is provided in that certain agreement of even date herewith between National and Canadian Industries Limited that the authorized share capital of Canadian Titanium shall be $1,300,000 divided into 5,000 "A" shares of $100 each and 8,000 redeemable "B" shares of $100 each, carrying respectively the dividends and rights which are fully set forth in such agreement and with all of which the parties hereto are fully familiar.

NOW IT IS HEREBY AGREED AND DECLARED as follows:—

1. National shall transfer to Canadian Titanium as at opening of business January 2, 1937, by appropriate Bill of Sale or other instrument, the existing business and goodwill of National in titanium compounds (as defined in that certain separate Agreement between the parties hereto of even date herewith providing for the reciprocal grant of licenses under patents and patent rights) in the Dominion

Exhibit K-3

of Canada and the Colony of Newfoundland, including trade marks, unfulfilled contracts and marketing facilities.

2. National also agrees to give and make available to Canadian Titanium all technical knowledge and experience at its disposal in the manufacture of such titanium compounds or relating to the marketing thereof in the Dominion of Canada and the Colony of Newfoundland.

3. In consideration of the foregoing Canadian Titanium agrees to allot to National 8,000 redeemable "B" shares of $100 each of Canadian Titanium credited as fully-paid and numbered 1 to 8000 inclusive.

IN WITNESS WHEREOF the parties hereto have duly executed these presents the day and year first above written.

Exhibit K-4

THIS AGREEMENT made in duplicate as of the fourth day of December, 1937.

BETWEEN: B. LAPORTE LIMITED, a corporation organized under the laws of England and having its head office in the Borough of Luton, County of Bedford hereafter called "Laporte"

of the First Part,

CANADIAN TITANIUM PIGMENTS LIMITED a corporation of the Dominjon of Canada, havings its head office in the City of Montreal, Province of Quebec, hereafter called "Canadian Titanium"

of the Second Part.

WHEREAS Canadian Titanium is engaging in the business of manufacturing and selling titanium dioxide pigments in the Dominion of Canada and the Colony of Newfoundland hereinafter referred to as "the said territory"; and

WHEREAS Laporte, National Titanium Pigments Limited (hereinafter called "National Titanium") of Luton, England, Titanium Limited of Outremont, Canada, and La Societe de Produits Chimiques des Terres Rares (hereinafter called "S.T.R.") of Paris, France, own or control patent rights and processes for the manufacture and/or use of titanium dioxide pigments within the said territory; and

Exhibit K-4

WHEREAS Canadian Titanium desires to acquire and Laporte has agreed on behalf of itself and of National Titanium, Titanium Limited and S.T.R. (which latter three companies are hereinafter sometimes referred to as "its associates") to sell and transfer to Canadian Titanium the said patent rights and processes together with the existing business and goodwill of Laporte and of each of its associates relating to the manufacture and/or sale of titanium dioxide pigments in the said territory.

NOW THIS AGREEMENT WITNESSETH AND IT IS HEREBY AGREED by and between the parties as follows:—

1. The expression "titanium dioxide pigments" whenever used in this agreement means all forms of the element titanium and all substances, materials and compositions containing two percent (2%) or more of that element in a chemically, mechanically or physically combined state (including simple mixtures thereof), which can be used as pigments, whether or not adapted for other uses, but does not include finished articles such as paint, rubber, glass, etc.

2. Laporte shall assign, transfer and transmit and shall cause to be assigned, transferred and transmitted to Canadian Titanium for use within the said territory all Canadian Letters Patent owned by Laporte and/or any of its associates as at 1st January, 1937, and all Canadian Applications for patents filed by Laporte and/or any of its associates on or before such date, relating to the manufacture and/or use of titanium dioxide pigments. Such patents and applications are listed in Schedule "A", attached hereto, which list is intended to be accurate and

complete, but should any of the said patents or applications issued or pending as at 1st January 1937 and covered hereunder have been omitted, such schedule shall be amended to include any patent or application so omitted. Laporte on behalf of itself and of its associates warrants that there are no outstanding licences under the said patents and no obligation or encumbrance affecting the said patents and applications which would prevent the full use and enjoyment thereof by Canadian Titanium.

3. Laporte agrees to execute and cause any of its associates to execute forthwith, at the request of Canadian Titanium, any further documents that may be necessary to complete the assignment of the said patents and applications and Canadian Titanium agrees to pay all expenses in connection with the registration of such assignments at the Canadian Patent Office.

4. Should Laporte, National Titanium or Titanium Limited, during the life of this agreement, become entitled to grant rights under any Canadian patent relating to the manufacture and/or use of titanium dioxide pigments, Laporte shall promptly inform Canadian Titanium of such patent and shall, at the request of Canadian Titanium, grant or cause to be granted to Canadian Titanium,

a) whenever exclusive rights may be granted under the said patent, an exclusive royalty-free licence or sub-licence thereunder until the termination of this agreement with, if possible, the right to sub-licence.

b) whenever only non-exclusive rights may be granted under the said patent, a non-exclusive royalty-free licence

or sub-licence under such patent for the life of this agreement with, if possible, the right to sub-licence.

Any licence or sub-licence provided for under this clause shall be granted to Canadian Titanium without cost other than any expense directly applicable to the grant thereof, and the out-of-pocket expenses, if any, incurred by the licensor in procuring the issue of any such Canadian patent.

5. In the event that Laporte, National Titanium or Titanium Limited should now own or should during the life of this agreement, either develop or acquire with the right of disposal in the said territory a y process relating to the manufacture and/or use of titanium dioxide pigments and with respect to which a patent application shall have been filed for any country outside of the said territory, Laporte shall inform Canadian Titanium forthwith of such process, and, at the request of Canadian Titanium shall file or cause to be filed a patent application in Canada at the expense of Canadian Titanium; and shall grant or cause to be granted to Canadian Titanium without royalty an exclusive licence, with the right to sub-licence, under the said application and any patent issued thereon until the termination of this agreement.

6. Should Laporte, National Titanium or Titanium Limited acquire, during the term of this agreement, any rights under any patent relating to the manufacture and/or use of titanium dioxide pigments, with respect to any country outside of the said territory but not with respect to the said territory itself, Laporte agrees to use its best endeavours to ensure that similar rights are offered forthwith to Canadian Titanium for the said territory with respect to the invention covered by said patent. Should any such

rights originate from S.T.R. and not fall within the scope of the preceding Clauses 4 and 5 hereof, it is intended that such rights made available to Canadian Titanium shall not involve the payment of any royalty or other compensation for the use thereof by Canadian Titanium.

7. It is understood and agreed that neither Laporte, nor National Titanium, nor Titanium Limited shall in any way be obliged to supply technical aid or collaboration to Canadian Titanium with respect to any patent rights that may be granted to Canadian Titanium under Clauses 4, 5 and 6 hereof.

8. Laporte shall transfer and cause to be transferred to Canadian Titanium as at 1st January, 1937, the business carried on by Laporte and any of its associates in the said territory with respect to the manufacture, use or sale of titanium dioxide pigments, together with the goodwill attaching to such business, and including marketing facilities and unfulfilled contracts other than those hereinafter mentioned but excluding trade marks and trade names. Laporte agrees to execute and cause to be executed any documents necessary to effect such transfer.

9. Canadian Titanium may, at its option, take over any unexpired sales contracts of Laporte or of any of its associates covering the supply of titanium dioxide pigments in the said territory, a complete list of which contracts shall be furnished to Canadian Titanium forthwith by Laporte. Such of these contracts as are not taken over by Canadian Titanium may be carried out by Laporte and its associates from their stocks already in Canada, or if necessary, from stocks specially imported for that purpose with the knowledge and consent of Canadian Titanium.

Exhibit K-4

It is further agreed that Laporte and its associates may fill such orders for titanium dioxide pigments in the said territory as they had on their books on 18th December, 1936, and which still remain unfilled, from their stocks already in Canada or if necessary from stocks specially imported for that purpose with the knowledge and consent of Canadian Titanium.

10. It is understood and agreed that except for such sales contracts as it may specifically take over, Canadian Titanium does not assume and shall not be responsible for any obligations whatsoever assumed by Laporte and by its associates with regard to the manufacture and/or sale of titanium dioxide pigments in the said territory, and Laporte agrees to indemnify Canadian Titanium and save it harmless with respect to any claims against Canadian Titanium resulting from any such obligations.

11. Laporte agrees on behalf of itself and its associates that it or they will not use or permit to be used in the said territory the trade marks and trade-names relating to titanium dioxide pigments which are now or may be the property of any of them during the term of this agreement.

12. Laporte undertakes and agrees that neither Laporte nor any of its associates will enter, engage in or interest themselves in, directly or indirectly, or assist others to interest themselves in the manufacture and/or sale of titanium dioxide pigments in the said territory for a period of fifteen (15) years from 1st January, 1937; provided however, that nothing in this clause shall be deemed to hinder or prevent the sale by Titanium Limited of that certain

ilmenite mine situated at or near Ivry, in the Province of Quebec, or of ore to be taken from such mine.

13. If the validity of any patent assigned to Canadian Titanium hereunder is attacked or if such a patent is infringed during the term of this agreement, Canadian Titanium shall be entitled to receive from Laporte, National Titanium and Titanium Limited all assistance other than technical that it may deem necessary to defend such patent or prosecute such infringer; provided however, that Canadian Titanium shall be responsible for the cost of such defence or prosecution.

14. If the validity of any patent under which Canadian Titanium is licenced or sub-licenced in accordance with the provisions hereof should be attacked or if any such patent should be infringed during the term of this agreement, Canadian Titanium may, if it sees fit, defend the said patent or prosecute such infringer, as the case may be, and for the purpose of any such defence or prosecution, Canadian Titanium shall be entitled if it so requires to receive from Laporte, National Titanium and Titanium Limited, all assistance other than technical that it may deem necessary; provided however, that Canadian Titanium shall be responsible for the cost of such defence or prosecution.

If Canadian Titanium shall not with reasonable promptness, in the event of any such attack or infringement, take steps either to defend the said patent or to prosecute the infringer, or if it shall have notified Laporte that it does not intend to take any such steps, then Laporte, National Titanium or Titanium Limited, may, if they see fit, defend such patent or prosecute such infringer; provided that the

party so defending or prosecuting shall be responsible for the cost of such defence or prosecution.

It is understood and agreed that all recoveries resulting from such defence or prosecution shall accrue to the party assuming the cost thereof.

15. As full consideration to Laporte and its associates for the business and goodwill transferred hereunder and for all the patents, licences, sub-licences, rights, benefits and privileges whatsoever that Canadian Titanium receives or may receive under this agreement from Laporte or any of its associates, Canadian Titanium shall pay the sum of Twelve thousand pounds (£12,000. 0. 0.) of which Five thousand pounds (£5,000. 0. 0.) shall be payable on the execution of this agreement, and seven instalments of One thousand pounds (£1,000. 0. 0.) each shall be payable on 1st January in each year during the years 1938 to 1944 inclusive. All such payments shall be made to Titanium Limited, whose receipt for the same shall be a complete acquittance and discharge therefor.

16. Canadian Titanium undertakes and agrees jointly and severally with Laporte and its associates that for the period of fifteen years from 1st January, 1937, it shall not enter or engage in the manufacture and/or sale of titanium dioxide pigments outside the said territory and shall not sell or export or knowingly permit any of its licensees or sub-licensees located within the said territory to sell or export any titanium dioxide pigments to any customer located beyond the limits of the said territory and it shall not knowingly sell or deliver any of the said products to a party within the said territory for export beyond its boundaries; provided, however, that Canadian Titanium or its licensees

or sub-licensees shall be permitted to make sales in bulk to E.I. du Pont de Nemours and Company, Inc. in the United States of America and to such Companies engaged in the production of titanium dioxide pigments outside the said territory as are on 1st January, 1937, and at the time of the bulk sales associated by financial links with National Lead Company of the United States of America or its successors or assigns, for the sole purpose of supplementing the production of the said product by the said companies.

17. Canadian Titanium, and Laporte on behalf of itself and of its associates agree that neither party will question in any way the validity of the patents covered by this agreement, whether such patents are assigned hereunder or are subsequently licenced to Canadian Titanium in accordance with the terms of this agreement.

18. Laporte on behalf of itself and of its associates declares that it has no reason to doubt the validity of the patents hereby assigned, but declines to guarantee the validity of all or any of them. Should any of the said patents be held invalid, Canadian Titanium hereby acknowledges and agrees that it shall have no claim whatsoever against Laporte or its associates, either for any reduction in the consideration payable hereunder or for any loss or damages thereby suffered.

19. Laporte covenants and agrees that Titanium Limited will not sell or otherwise dispose of any of its machinery or equipment at present in Canada without ensuring that such machinery or equipment will not or cannot be used for the manufacture of titanium dioxide pigments in the said territory.

Exhibit K-4

20. Wherever throughout this agreement, notification is required to be given by one party to the other, such notification shall be considered to have been given adequately if a written notice is mailed to the head office of such other party.

21. This agreement is made for the term of fifteen (15) years from the 1st day of January, 1937, to the 31st day of December, 1951.

22. This agreement shall enure to the benefit of and be binding upon the parties hereto and their respective successors and assigns and be enforceable by them or any one or more of them at such times and in such manner as they or it shall think fit and either collectively or individually.

23. And it is further hereby agreed that this agreement should be construed and be enforceable according to the Law of England.

IN WITNESS WHEREOF the parties hereto have caused their corporate seals to be hereunto affixed and attested by the hands of their proper officers.

Exhibit K-5

THIS AGREEMENT made this 27th day of February 1939, by and between National Lead Company, a corporation organized and existing under the laws of the State of New Jersey, U.S.A., having an office at 111 Broadway of the City and State of New York (hereinafter referred to as "NATIONAL", which expression includes its successors and permitted assigns) of the one part and Canadian Titanium Pigments Limited, a corporation organized and existing under the laws of the Dominion of Canada and having its head office at the City of Montreal, Province of Quebec (hereinafter referred to as "CANADIAN TITANIUM", which expression includes its successors and permitted assigns) of the other part;

WHEREAS it has been the practice between CANADIAN TITANIUM and NATIONAL to offer to each other inventions under certain patents owned or controlled either by CANADIAN TITANIUM or by NATIONAL or its associated companies and which cover subject matters partly or wholly outside the Licensed Field of CANADIAN TITANIUM as defined in the agreement of 1st January, 1937, between the parties hereto, but which are of interest for the production, use and sale of products within the Licensed Field of CANADIAN TITANIUM or the respective Licensed Fields of NATIONAL and its associated companies, as for instance: recovery of materials used in the titanium industry (e.g., sulfuric acid); utilization of by-products (e.g. copperas); production of extender pigments, apparatus, and the use of titanium pigments and compounds as well as of by-products and extender pigments; and

Exhibit K-5

WHEREAS it is the intention of the parties hereto to continue the aforesaid practice and it is deemed desirable to confirm the effective result which such practice is intended to achieve.

NOW, THEREFORE, THIS AGREEMENT WITNESSETH that the parties hereto have agreed as follows:

1. It is hereby agreed by and between the parties hereto that when the above described inventions are offered as aforesaid and accepted, it means—unless reservations are made—that whoever owns or controls such inventions is willing to give and thereupon gives to the party hereto who is offered and accepts such inventions (and to any of the associated companies of NATIONAL which thereafter may be offered and may accept such inventions in cases where such inventions are owned or controlled by CANADIAN TITANIUM), such rights as it is then empowered to give to use such inventions under patent applications and patents applicable outside its own territory, for the purposes of the production, use and sale of products falling within the Licensed Field of the recipient of such rights and upon the same conditions as those governing the exchange of other inventions falling witnin the scope of such Licensed Field.

2. It is specifically understood that in cases where the recipient of such rights is not interested in obtaining exclusive rights for the purposes mentioned under the preceding clause, it will so advise forthwith and it will thereupon be entitled to non-exclusive rights for such purposes.

3. It is further understood that the provisions of this agreement shall extend only to the benefit of such of the

Exhibit K-5

associated companies of NATIONAL which in general act or will act toward CANADIAN TITANIUM in a reciprocal manner.

4. The expression "associated companies" as used herein means all companies which have received or shall receive licenses in accordance with the conditions contained in Article XIV of the agreement of 30th July, 1920, between National Lead Company and Titanium Company Inc., and also includes Titanium Company Inc. and E. I. duPont de Nemours & Company.

IN WITNESS WHEREOF the parties hereto have caused their corporate seals to be hereunto affixed and attested by the hands of their proper officers.

Exhibit L

THIS AGREEMENT, made this 5th day of August, 1937, by and between E. I. DU PONT DE NEMOURS & COMPANY, a corporation organized under the laws of the State of Delaware (hereinafter referred to as "du Pont"), and VIRGINIA CHEMICAL CORPORATION, a corporation organized under the laws of the State of Delaware (hereinafter referred to as "Virginia").

WITNESSETH:

WHEREAS du Pont is engaged in the manufacture and sale of titanium dioxide (TiO_2) and related products, and is the owner of certain Letters Patent issued by the United States covering processes for the manufacture of titanium dioxide, all of which Letters Patent are described in Schedule "A", attached hereto and made a part hereof; and

WHEREAS Virginia is engaged in the manufacture and sale of titanium dioxide and related products, and desires to obtain a license under the aforesaid Letters Patent of du Pont;

NOW, THEREFORE, in consideration of the premises and of the covenants contained herein, the parties hereto have agreed as follows:

I.

(a) Du Pont hereby grants to Virginia a non-exclusive license to make titanium dioxide in the quantities specified in paragraph (b) of this Article, and to use and sell tita-

nium dioxide so produced, throughout the United States of America and the territories and dependencies thereof, under the Letters Patent described in Schedule "A" hereof and any reissues or divisions thereof.

(b) The total quantity of titanium dioxide (including the titanium dioxide content of all compounds, mixtures and other products) made by Virginia wholly or partly under the claims of the patents licensed to it hereunder, shall not exceed in any annual period during the continuance of this agreement the quantity specified for such year in the following table:

Annual Period	*Quantity*
October 1, 1937 to September 30, 1938	3,000 tons

" " 1945 " " " 1946	6,000 "
Each subsequent annual period	9,000 "

II.

(a) Virginia shall pay to du Pont a royalty at the rate per pound specified in paragraph (b) of this Article on the total quantity of all titanium dioxide, including the titanium dioxide content of all compounds, mixtures and other products, produced by Virginia during each calendar year throughout the period of this agreement; subject, however, to the provisions of Article III hereof.

(b) The amount of royalty payable by Virginia as aforesaid on each and every pound of titanium dioxide produced

by it shall be equal to two per cent. (2%) of the selling price per pound of titanium dioxide as contained in du Pont's published carload selling price to the general trade, in effect at the close of each quarterly period for which royalties are payable hereunder; provided, however, that the royalty so payable by Virginia shall be not less than one-fourth of one cent (¼¢) per pound.

(c) Royalties on titanium dioxide produced by Virginia during each calendar quarterly period shall be paid to du Pont, at its office at Wilmington, Delaware, within thirty (30) days after the end of such quarter.

(d) Virginia shall maintain suitable records showing the quantities of titanium dioxide produced by it during the period of this agreement, and the representatives of du Pont shall have the right to inspect such records at any time or times during business hours.

III.

(a) Virginia hereby grants to du Pont a non-exclusive, non-assignable royalty-free license to make, use and sell titanium dioxide throughout the United States of America and the territories and dependencies thereof under the inventions described in United States Letters Patent No. 2,066,074 and Application for United States Letters Patent Serial No. 138,104 (as submitted by Virginia to du Pont under date of July 7, 1937).

(b) In consideration of the license granted under paragraph (a) of this Article, du Pont agrees that titanium dioxide produced by Virginia solely by means of the calcium base process described in the patent and application mentioned in said paragraph (including any modifications of

said process which do not infringe any of the claims of the letters patent licensed hereunder) shall be exempt from the quantity limitation set forth in paragraph (b) of Article I and from the royalty obligations set forth in Article II hereof; provided, however, that this exemption shall apply only where said process includes the rapid mixing of titanium dioxide sulfate solution and calcium sulfate slurry within a period of less than two minutes and forty-five seconds (2′ 45″).

(c) Virginia shall permit the representatives of du Pont at all reasonable times to make a full inspection of Virginia's manufacturing operations for the purpose, and only for the purpose, of verifying that all or part of such operations conform to the process and speed limits referred to in paragraph (b) of this Article.

IV.

If at any time during the life of this agreement du Pont should grant a license under any or all of the patents enumerated in Schedule "A" hereof, and should charge therefor a royalty lower in rate than the royalty terms herein set forth, the royalty imposed hereunder shall be reduced to correspond to such lower rate so long as the latter is payable by any other licensee of du Pont. The provisions of this Article shall not be deemed to apply to the granting of any license by du Pont primarily for a consideration other than the payment of cash royalty by the licensee.

V.

(a) Virginia admits the validity of each of the Letters Patent listed in Schedule "A" hereof, and agrees that it will

not directly or indirectly infringe or contest the validity or scope of any of the claims thereof, or aid or encourage others in so doing. The termination of this license for any cause prior to its normal expiration shall not affect the provisions of this Article or release or discharge Virginia from the admission and estoppel herein set forth.

(b) Du Pont admits the validity of United States Letters Patent No. 2,066,074 and of any Letters Patent issued on Application for United States Letters Patent Serial No. 138,104 (insofar as the Letters Patent so issued cover the invention or inventions claimed in said Application as submitted by Virginia to du Pont under date of July 7, 1937), and agrees that it will not directly or indirectly infringe or contest the validity or scope of any of the claims thereof, or aid or encourage others in so doing. The provisions of this paragraph (b) shall be effective so long as du Pont is licensed under said Letters Patent.

VI.

(a) Virginia agrees that it will affix to the containers of all products made and sold by it under the license granted in Article I hereof, such notices or markings as may be required by du Pont to designate the Letters Patent under which such products shall have been produced.

(b) Du Pont agrees that it will affix to the containers of all products made and sold by it under the license granted in Article III hereof, such notices or markings as may be required by Virginia to designate the Letters Patent under which such products shall have been produced.

Exhibit L

VII.

This agreement shall remain in full force and effect until the expiration of all the Letters Patent listed in Schedule "A" hereof; provided, however, that if Virginia shall fail to perform any of the provisions to be performed by it hereunder, and shall fail to remedy such default within thirty (30) days after notice from du Pont specifying such default, du Pont may terminate this agreement at any time by so notifying Virginia in writing; and provided further, that Virginia may terminate this agreement at any time after the expiration of ten (10) years from the date hereof, if the products then made by it and the methods of producing the same do not infringe the claims of any of the unexpired Letters Patent licensed hereunder, and if it makes available to du Pont all information evidential of such non-infringement. The termination or expiration of this agreement for any cause shall be without prejudice to the rights and remedies of du Pont for any royalties then accrued or earned hereunder, or for any antecedent breach hereof.

VIII.

The rights and obligations under this agreement shall inure to and be binding upon du Pont, its successors and assigns but shall not be assigned or transferred by Virginia without the written consent of du Pont, except to a corporation into or with which Virginia shall be merged or consolidated, or which shall acquire all or substantially all of its assets.

IN WITNESS WHEREOF the parties hereto have caused this agreement to be executed by their officers thereunto

duly authorized and their corporate seals to be hereunto affixed, as of the day and year first above written.

LICENSE AGREEMENT

This agreement, made and entered into this 27th day of July, 1937, by and between E. I. DU PONT DE NEMOURS AND COMPANY, hereinafter referred to as DU PONT, a corporation organized and existing under and by virtue of the laws of the State of Delaware, with its principal place of business at Wilmington, Delaware, and TITAN CO., INC., hereinafter referred to as TITAN, a corporation organized and existing under the laws of the State of Delaware, having its principal place of business in New York.

WITNESSETH THAT

WHEREAS, DU PONT is the owner of the entire right, title and interest in and to the following letters patent and applications therefor, filed by James E. Booge as inventor, and relating to Blended Titanium Dioxide Pigments,

Country	*Date*	*No. of Patent*
Great Britain	April 26, 1937 (Accepted)	464,836
Italy	Oct. 29, 1935	
France	Jan. 27, 1936	796,587
Germany	Appln. filed Oct. 28, 1935	Ser.No.K.139.771 IV b/22 f
Czechoslovakia	Appln. filed Oct. 29, 1935	Ser.No. P6251/35

WHEREAS, TITAN desires to obtain and DU PONT is willing to grant an exclusive (except as herein limited), non-

assignable, royalty-free license to practice the inventions and to manufacture, use and/or sell the products covered by the aforesaid letters patent and applications throughout the countries in which said letters patent have been granted or in which patents may be subsequently granted, as a result of said applications.

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of and conditional upon the true and faithful performance by the parties hereto of all the undertakings and covenants hereafter set forth, it is mutually agreed as follows:

1. DU PONT hereby grants to TITAN an exclusive (except as herein limited) royalty-free, non-assignable license, under the aforesaid letters patent and applications therefor relating to blended titanium oxide pigments, to-wit:

Country	*Date*	*No. of Patent*
Great Britan	April 26, 1937 (Accepted)	464,836
Italy	Oct. 29, 1935	336,407
France	Jan. 27, 1936	796,587
Germany	Appln. filed Oct. 28, 1935	Ser.No.K.139.771 IV b/22 f
Czechoslovakia	Appln. filed Oct. 29, 1935	Ser.No. P6251/35

and under any prolongation or extension in terms thereof, to practice throughout the United Kingdom of Great Britain, Ireland and the Isle of Man, France, Italy, Germany and Czechoslovakia only, any process disclosed or

claimed in said letters patent or applications therefor, and to make, use and/or sell throughout each of the aforesaid countries, any products described and/or claimed in said letters patent and/or applications. The license herein granted shall extend to the full end of the term for which said letters patent have been granted or may be subsequently granted in said countries, and the expiration of a patent in one or more of said countries shall not abrogate the license or licenses in any of the remaining countries.

2. It is understood and agreed by and between the parties hereto that the rights and licenses herein vested in TITAN shall be subject to the right of DU PONT, or any of its controlled subsidiaries, to freely use and employ said inventions comprised within said Letters Patent and/or applications throughout the countries mentioned, as well as the right of Imperial Chemical Industries, Limited, of London, England, to use and employ said inventions throughout the United Kingdom of Great Britain, Ireland and the Isle of Man.

3. TITAN may grant royalty-free sub-licenses hereunder to the following specific associate companies, to-wit:

(1) Titangesellschaft m.b.H., Leverkusen, Germany

(2) British Titan Products Co., Billingham, England

(3) Societe Industrielle du Titane, Paris, France;

and may, upon consent in writing of DU PONT first obtained and under such terms and conditions as DU PONT in its sole discretion shall deem acceptable, grant additional sub-licenses hereunder to any other person, firm, company or corporation.

Exhibit M

4. In the event TITAN shall grant sub-licenses hereunder to any person, firm or corporation for a stated royalty, it is understood and agreed that TITAN shall pay to DU PONT fifty per cent (50%) of the gross royalties received as a result of any such sub-license or sub-licenses. The said royalties shall be payable directly from TITAN to DU PONT within thirty (30) days after the close of each calendar quarter for the preceding three calendar months during which said royalty shall have been received by TITAN.

5. TITAN hereby accepts the license herein granted and agrees to pay all necessary maintenance fees and/or taxes and effect all necessary workings to maintain said letters patent or those which may subsequently issue as a result of said applications throughout the term covered by this license and within the countries specified. TITAN also agrees not to permit the abandonment of any of said letters patent or of any which may issue as a result of said applications, and in the event TITAN decides to abandon said letters patent, it will notify DU PONT promptly of such intention.

6. TITAN, during the period of this license, acknowledges each of the above patents and any patent or patents which may subsequently issue as a result of the aforesaid applications, as good and valid and agrees not to directly or indirectly contest the validity of such patents, nor to assist others in any infringing operation, but as far as reasonably possible agrees to assist DU PONT in maintaining the validity of each of said patents.

7. It is understood and agreed that the herein created license shall pertain to the Blended Titanium Dioxide Pig-

ment patents and applications hereinabove set out, and that no rights whatsoever are granted herein under any other inventions, patent applications and/or patents now owned or hereafter acquired by DU PONT.

8. DU PONT shall be under no obligation to defend TITAN against suits for infringement arising out of TITAN'S operations under the license herein granted, nor shall DU PONT be liable to any extent for damages assessable against TITAN by virtue of any such infringement.

9. In the event any of the aforesaid letters patent or any letters patent which may issue as a result of said applications are infringed by third parties, then TITAN shall have the right to bring suit against such infringers and for the purposes of said suit shall have the right to sue in DU PONT'S name, or include DU PONT as a nominal party-plaintiff with DU PONT'S prior written approval thereof. DU PONT shall be under no obligation to be other than a nominal party to said suit and under no obligation to share the expenses of such suit, provided, however, that DU PONT may at its election bring suit against infringers in its own name and/or join with TITAN in other than a nominal capacity.

10. Any recoveries in litigation arising in accordance with the provisions of the next preceding paragraph shall accrue to the party by whom the expenses of such litigation are borne, and in cases where such expenses are borne jointly by TITAN and DU PONT, such recoveries shall be divided between said parties proportionately to their share in such expenses. Where DU PONT elects to bring suit in its own name, TITAN agrees to assist DU PONT to obtain evidence to be used by DU PONT in the prosecution of suits for

infringement hereunder to the extent to which TITAN is reasonably able to do, and to otherwise assist DU PONT in the prosecution of such suits to the same extent.

11. This agreement shall be binding upon and inure to the benefit of the parties hereto, their successors, assigns and legal representatives.

LICENSE AGREEMENT

This agreement, made and entered into this day of June, 20th, 1938, by and between E. I. DU PONT DE NEMOURS AND COMPANY (hereinafter referred to as DU PONT), a corporation organized and existing under and by virtue of the laws of the State of Delaware, and having its principal place of business at Wilmington, Delaware, and TITAN COMPANY, INC. (hereinafter referred to as TITAN), a corporation organized and existing under and by virtue of the laws of the State of Delaware, having its principal place of business in the city and state of New York;

WITNESSETH THAT

WHEREAS, DU PONT is the owner of the entire right, title and interest in and to certain inventions more particularly described in the following pending applications for letters patent of the United States, to-wit:

(a) Application (701-K) of Robert M. McKinney for Process of Producing White Titanium Dioxide Pigments of Predetermined Subordinate Tints, Serial No. 69,888, filed March 20, 1936

(b) Application (743-K) of Gordon D. Patterson for Pigments for Use Particularly in Outside Paints, Serial No. 33,264, filed July 26, 1935

(c) Application (867-K) of Roy W. Sullivan for Pigments and Process for Treating the Same, Serial No. 134,577, filed April 2, 1937

and is about to file corresponding applications for letters patent on said inventions in certain countries foreign to the United States, as follows, to-wit:

(a) In Great Britain:

Application (701-K) of Robert M. McKinney for Process of Producing White Titanium Dioxide Pigments of Predetermined Subordinate Tints;

(b) In Germany:

Application (743-K) of Gordon D. Patterson for Pigments for Use Particularly in Outside Paints, and

(c) In France, Holland and Belgium:

Application (867-K) of Roy W. Sullivan for Pigments and Process for Treating the Same;

WHEREAS, TITAN desires to obtain and DU PONT is willing to grant an exclusive (except as herein limited), non-assignable, royalty-free license to practice the inventions and to manufacture, use and/or sell the products described in said applications, or any letters patent which may subsequently issue thereon, throughout the designated foreign country or countries in which the aforesaid applications shall be respectively filed;

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of and conditional upon the true and faithful performance by the parties hereto of all the undertakings and covenants hereafter set forth, it is mutually agreed as follows:

Exhibit N

1. DU PONT hereby grants to TITAN an exclusive (except as herein limited), royalty-free, non-assignable right and license under the following about-to-be-filed foreign applications for letters patent, to-wit:

(a) Application (701-K) of Robert M. McKinney for Process of Producing White Titanium Dioxide Pigments of Predetermined Subordinate Tints, throughout the United Kingdom of Great Britain, Ireland and the Isle of Man;

(b) Application (743-K) of Gordon D. Patterson for Pigments for Use Particularly in Outside Paints, throughout Germany;

(c) Application (867-K) of Roy W. Sullivan for Pigments and Process for Treating the Same, throughout the countries of France, Holland and Belgium

to practice any process and to make, use and/or sell any products disclosed or claimed in said applications or any letters patent which may issue as a result thereof; the right and license herein granted, however, shall exist only throughout the respective foreign country or countries mentioned, and in which such application shall be subsequently filed, and shall continue during the pendency of said application and the existence of any letters patent, prolongations or extensions which may issue thereon.

2. It is understood and agreed by and between the parties hereto that the rights and licenses herein vested in TITAN shall be subject to the right of DU PONT or any of its controlled subsidiaries to freely use and employ, throughout said foreign countries, the inventions described and

claimed in said applications and/or any letters patent which shall issue as a result thereof; as well as to the right of Imperial Chemical Industries, Limited, of London, England, to freely use and employ the inventions described and claimed in said applications and/or any letters patent which may issue as a result thereof, throughout the United Kingdom of Great Britain, Ireland and the Isle of Man.

3. TITAN may grant royalty-free sublicenses hereunder, within the licensed territory to its associated companies, as follows:

(1) Titangesellschaft m.b.H., Leverkusen, Germany

(2) British Titan Products Co., Billingham, England

(3) Societe Industrielle du Titane, Paris, France;

and may, upon consent in writing from DU PONT first obtained, and under such terms and conditions as DU PONT shall in its sole discretion deem acceptable, grant additional sublicenses within the licensed territory to any other person, firm, company or corporation.

4. In the event TITAN shall grant sublicenses hereunder to any person, firm or corporation for a stated royalty, it is understood and agreed that TITAN shall pay to DU PONT fifty per cent (50%) of the gross royalties received as a result of any such sublicense or sublicenses. The royalties so accruing shall be payable directly from TITAN to DU PONT within thirty (30) days after the close of each calendar quarter for the preceding calendar quarter during which said royalty shall have been received by TITAN.

5. TITAN hereby accepts the license herein granted and agrees to assume and pay all costs incidental to the prepara-

tion, filing and prosecution of said foreign applications for letters patent; it also agrees throughout the term covered by this license to assume and pay all necessary maintenance fees and/or taxes, and endeavor to effect all necessary workings to maintain any letters patent issuing as a result of the filing of said applications. TITAN also agrees that it will not permit the abandonment of any letters patent which may issue as a result of the filing of said applications, and in the event TITAN shall desire to abandon any such issued letters patent, it will, prior to actual abandonment, promptly notify DU PONT of its decision to abandon, and within ample time to permit DU PONT to maintain said patents in its own behalf and at its own expense, should DU PONT so desire.

6. TITAN, during the period of this license, acknowledges as good and valid any patent or patents which may subsequently issue as a result of the aforesaid foreign applications, and agrees not to directly or indirectly contest the validity of said patents or to assist others in any infringing operation, but as far as reasonably possible agrees to assist DU PONT in maintaining the validity of each of said patents.

7. It is understood and agreed that the license herein created shall pertain to the above-identified inventions and applications and within the licensed territory, and that no rights whatsoever are granted herein under any other inventions, applications and/or patents now owned or hereafter acquired by DU PONT.

8. DU PONT shall be under no obligation to defend TITAN against suits for infringement arising out of

TITAN's operations under the license herein granted, nor shall DU PONT be liable to any extent for damages assessable against TITAN by virtue of any such infringement.

9. In the event any of the aforesaid letters patent or any letters patent which may issue as a result of said applications are infringed by third parties, then TITAN shall have the right to bring suit against such infringers and for the purposes of said suit shall have the right to sue in DU PONT's name, or include DU PONT as a nominal party-plaintiff with DU PONT's prior written approval thereof. DU PONT shall be under no obligation to be other than a nominal party to said suit and under no obligation to share the expenses of such suit, provided, however, that DU PONT may at its election bring suit against infringers in its own name and/or join with TITAN in other than a nominal capacity.

10. Any recoveries in litigation arising in accordance with the provisions of the next preceding paragraph shall accrue to the party by whom the expenses of such litigation are borne, and in cases where such expenses are borne jointly by TITAN and DU PONT, such recoveries shall be divided between said parties proportionately to their share in such expenses. Where DU PONT elects to bring suit in its own name, TITAN agrees to assist DU PONT to obtain evidence to be used by DU PONT in the prosecution of suits for infringement hereunder to the extent to which TITAN is reasonably able to do, and to otherwise assist DU PONT in the prosecution of such suits to the same extent.

Exhibit O

THIS AGREEMENT made this 28th day of March, 1939 by and between National Lead Company, a corporation organized and existing under the laws of the State of New Jersey, having an office at 111 Broadway of the City and State of New York (hereinafter referred to as "National", which expression includes its successors and permitted assigns) of the one part and Titan Company, Inc., a corporation organized and existing under the laws of the State of Delaware, having an office at 111 Broadway of the City and State of New York (hereinafter referred to as "Titan", which expression includes its successors and permitted assigns) of the other part;

WHEREAS, it has been the practice between National and Titan to offer to each other inventions under certain patents owned or controlled either by National or by Titan or their associated companies, and which cover subject matters partly or wholly outside the Licensed Field as defined in the agreement of 30th July, 1920, between the parties hereto, but which are of interest for the production, use and sale of products within that said Licensed Field, as for instance: recovery of materials used in the titanium industry (e.g. sulfuric acid); utilization of by-products (e.g. copperas); production of extender pigments, apparatus, and the use of titanium pigments and compounds as well as of by-products and extender pigments; and

WHEREAS, it is the intention of the parties hereto to continue the aforesaid practice and it is deemed desirable to confirm the effective result which such practice is intended to achieve

Exhibit O

NOW, THEREFORE, THIS AGREEMENT WITNESSETH that the parties hereto have agreed as follows:

1. It is hereby agreed by and between the parties hereto that when the above described inventions are offered as aforesaid and accepted, it means—unless reservations are made—that whoever owns or controls such inventions is willing to give and thereupon gives to the party hereto who is offered and accepts such inventions (and to any of the associated companies of National and Titan which thereafter may be offered and may accept such inventions), such rights as it is then empowered to give to use such inventions under patent applications and patents applicable outside its own territory, for the purposes of the production, use and sale of products falling within the Licensed Field of the recipient of such rights and upon the same conditions as those governing the exchange of other inventions falling within the scope of such Licensed Fields.

2. It is specifically understood that in cases where the recipient of such rights is not interested in obtaining exclusive rights for the purposes mentioned under the preceding clause, it will so advise forthwith and it will thereupon be entitled to non-exclusive rights for such purposes.

3. It is further understood that the provisions of this agreement shall extend only to the benefit of such of the associated companies of National and Titan which in general act or will act in a reciprocal manner.

4. The expression "associated companies" as used herein means all companies which have received or shall receive licenses in accordance with the conditions contained in afore-

mentioned Article XIV of the Agreement of 30th July, 1920, and also E. I. du Pont de Nemours & Company.

IN WITNESS WHEREOF, the parties hereto have caused their corporate seals to be hereunto affixed and attested by the hands of their proper officers.

INTERNATIONAL PULVERIZING CONTRACT

(Micronizer Matter)

AGREEMENT made this 10th day of April, 1939, by and between INTERNATIONAL PULVERIZING CORPORATION, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at Moorestown, New Jersey, (hereinafter called "the Licensor") and NATIONAL LEAD COMPANY, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at 111 Broadway, in the City and State of New York, (hereinafter called "the Licensee").

WITNESSETH

WHEREAS, the Licensor is the owner of United States letters Patent No. 2,032,827, in the name of Norwood H. Andrews, dated March 3rd, 1936, and Canadian Letters Patent No. 359,089, which Letters Patent relate to both the equipment known as the "Micronizer Reduction Mill" and methods for the production of finely divided materials, and as owner of the said Letters Patent has the power to grant licenses thereunder; and

WHEREAS, the Licensee desires to secure a right and license to use the equipment and employ the methods described and claimed in the said Letters Patents, and the Licensor is willing to grant the same pursuant to the terms hereinafter set forth;

Exhibit P

NOW, THEREFORE, in consideration of these premises and of the mutual terms and conditions herein contained, the Licensor and the Licensee mutually agree and covenant as follows:

1. The Licensor agrees to grant and hereby grants to the Licensee and the Licensee accepts from the Licensor a license exclusive of all others, including the Licensor, together with the right to grant sub-licenses hereunder of the character herein defined to others throughout the United States of America under the said United States Letters Patent No. 2,032,827 covering the said Micronizer Reduction Mill and its use, and any re-issue thereof, and under any and all present and future pending applications for United States Letters Patents and Letters Patents and re-issues thereof in reference to the subject matter of the said Patent No. 2,032,827 which the Licensor may own, or which throughout the term of this license it may acquire, or under which it may become entitled to grant licenses to use the said Micronizer Reduction Mill and the inventions described and/or claimed therein for the processing of titanium pigments, (except titanated lithopones, for which material a non-exclusive license is hereby given with the right to grant sub-licenses of the same character), and titaniferous ores in the production of titanium pigments and for the processing of such other materials as may be agreed upon from time to time by the parties hereto in writing. The license shall continue until the expiration of the said United States Patent No. 2,032,827, or any re-issue thereof; provided, however, that if upon such expiration there shall be in existence any United States Letters Patent under which a license has been granted hereunder, the Licensee

and/or any sub-licensees hereunder upon election may retain a license thereunder at a royalty rate per ton to be agreed upon but in no event to exceed the royalty herein specified. The Licensee agrees not to use any said mills for the processing and sale of materials other than titanium pigments and titaniferous ores in the production of titanium pigments without the written consent of the Licensor. It is also understood and agreed that the right to grant sub-licenses hereunder shall continue for only so long as the exclusive feature of this license shall remain in force and that in granting any sub-licenses hereunder the Licensee will require that the Sub-Licensees conform to the same obligations directly with respect to the Licensor as are accepted in Articles 2, 3, 4, 5, 6, 7, 8, 9, 10, and 13 of this License Agreement by the Licensee and that if the exclusive feature of this License shall be terminated in the manner hereinafter specified any licenses already granted shall continue in force. In all sub-license agreements it will be provided that all payments of license fees and royalties for the use of the Micronizer Reduction Mills shall be made directly to the Licensor; and the Licensee agrees that it will not endeavor throughout the term of this license to secure or secure for its own benefit any additional license fees and/or royalties for the use of the said Micronizer Reduction Mills. Copy of each and every sublicense agreement shall be furnished to the Licensor by the Licensee.

2. The Licensor will manufacture and deliver to the Licensee and/or Sub-Licensees three Micronizer Reduction Mills designed to operate with a capacity of about 3500 lbs. of steam per hour. The first of these mills will be ready for delivery to the Licensee at the plant of the Licensor in

Moorestown, New Jersey, within six weeks from the date hereof, the second within seven weeks from the date hereof, and the third within eight weeks from the date hereof. The Licensee shall make a down payment which shall be considered as a license fee of Twelve Thousand ($12,000) Dollars; of which Eight Thousand ($8,000) Dollars will be paid by the Licensee to the Licensor upon the execution hereof and the balance of Four Thousand ($4,000) Dollars upon the delivery of the last of the said mills as aforesaid. These mills will be constructed after consultation between the engineers of the Licensor and the Licensee and such Mills shall be of material and design as are acceptable to the Licensee and Sub-Licensees hereunder, and the Licensor will furnish the services of its engineers in connection with the installation and operation of these mills and any other mills that may be subsequently manufactured for the use of the Licensee and/or Sub-Licensees hereunder, at the plants of the Licensee, and Sub-Licensees without any further obligation on the part of the Licensee.

The Licensor will be prepared to manufacture for the use of the Licensee and/or Sub-Licensees hereunder such other Micronizer Reduction Mills as may be required by them either collectively or individually during the term of this agreement upon the following conditions; (a) if an order be received by the Licensor from or on behalf of the Licensee or any Sub-Licensee hereunder, within thirty days from the date of execution of this agreement for three (3) mills in addition to those provided for in Article 2, hereof, the license fee per mill shall be Three Thousand ($3,000) Dollars; but if said next three (3) additional mills be not ordered within 30 days from the date of this agreement then, when ordered, the license fee therefor shall

be Four Thousand ($4,000) Dollars per mill; (b) if at any time subsequent to the date of this agreement two or more mills be concurrently ordered, and in addition to those six already provided for, by the Licensee and/or Sub-Licensees hereunder the license fee per mill shall be Three Thousand ($3,000) Dollars; (c) the License fee on orders for single mills shall be Four Thousand ($4,000) Dollars; provided, however, that if the purchase value of the dollar should materially decrease, then a proper allowance will be made by the Licensee and/or Sub-Licensees for the payment to the Licensor of a sum in excess of the license fees above specified; and, further, provided that the Licensee shall have the right to make or to have made for its use any Micronizer Reduction Mills it may require subsequent to the delivery of the first three mills above provided for, and any Sub-Licensee hereunder shall have the right to make or to have made for its use any Micronizer Reduction Mills it may require subsequent to the delivery of the next three mills also provided for above, and that thereafter any subsequent Sub-Licensee hereunder after fulfilling its initial requirements for the said Micronizer Reduction Mills from Licensor on the terms above specified, i.e. if two or more mills are ordered the license fee for each shall be Three Thousand ($3,000) Dollars; if only one mill is ordered the license fee shall be Four Thousand ($4,000) Dollars, shall have the right to make or to have made for its own use any Micronizer Reduction Mill it may require, in which event the Licensor shall be advised in writing and said mills shall be considered as falling under this agreement to the same extent as if manufactured by the Licensor.

Exhibit P

The Licensor guarantees that any mills delivered to the Licensee and/or Sub-Licensees hereunder shall be free from defects in design, workmanship and materials and the Licensor shall place at the disposal of the Licensee and/or Sub-Licensees the services of its engineers and facilities of its laboratories and experimental plant, at the request of the Licensee and/or Sub-Licensee, for which the Licensee and/or Sub-Licensee shall pay the actual expenses incurred by the Licensor.

3 (a). Commencing July 1, 1939, the Licensee and its Sub-Licensees hereunder shall pay to the Licensor a royalty for the processing of all titanium pigments and titaniferous ores in the said Micronizer Reduction Mills, of fifty cents (50¢) per ton of 2,000 pounds on dry basis for the first 4,000 tons and 25¢ for each ton over 4,000 tons processed in any accounting year; said royalty shall be based on the aggregate tonnage processed by the Licensee and that of all other parties to whom licenses have been granted pursuant to Article 1, above.

3(b). Should the Licensor for any contract year commencing with July 1, 1941, have failed to receive from the Licensee and/or Sub-Licensees hereunder royalties totaling at least $10,000 per annum, or a total sum of $10,000 for said year should the royalties not amount to such sum, the Licensor shall have the right upon written notice to the Licensee after the expiration of any contract year provided for herein to terminate the above defined exclusive feature of the license; and, thereafter, provided that the Licensee shall not within 30 days from the receipt of such notice make up the deficiency in said total royalty

to maintain this license exclusive, the license shall become non-exclusive to the Licensee and the royalties will continue to be at the above specified rate; provided, however, that whenever, after termination of the exclusive feature of this license, the Licensor shall notify the Licensee that it has granted a bona fide license to a responsible party within the field of this agreement at a higher rate of royalty which in the aggregate will yield and does yield a return as great or greater than the yearly total dollar royalty payment of the Licensee and all other parties to whom licenses may be granted pursuant to Article 1 above, then it is agreed that the Licensee and/or Sub-Licensees hereunder shall pay royalties in pursuance of Section 3(a) hereof at the same rate as that which may be specified in that other agreement; and provided, further, that in the event a non-exclusive license shall be granted at a royalty rate lower than that specified in Article 3a hereof then the Licensee and Sub-Licensees hereunder shall thereafter be obligated only to pay royalties to Licensor at such lower rate.

4. The Licensee shall furnish to the Licensor quarterly statements showing the amount of net production of properly ground, good material which shall have been processed by the Licensee in any Micronizer Reduction Mill, in accordance with the license herein granted, together with a settlement of any royalty which may be payable to the Licensor, which statements and settlements shall be made within thirty days after the close of each quarterly period. Licensee shall keep separate books of account and records with respect to all titanium pigments and titaniferous ores used in the production of titanium pigments processed in licensed Micronizer Reduction Mills by it and by all Sub-

Licensees hereunder, such accounts and records to be in sufficient detail to enable Licensor to determine the royalties payable hereunder. From time to time during business hours and to the extent required to verify the accounts herein provided for, Licensee shall permit Licensor through its designated accountant to examine said books and records.

5. Title to all Micronizer Reduction Mills delivered by the Licensor to the Licensee and/or Sub-Licensees hereunder or manufactured for use of the Licensee and/or Sub-Licensees under Article 2, above, shall be retained by the Licensor, but the same shall be considered leased to the Licensee or Sub-Licensee by the Licensor, which lease shall be co-temporaneous with the period of the license herein granted under U. S. Patent No. 2,032,827 and upon the expiration thereof or in the event that a Court of competent and final jurisdiction from which no appeal is or can be taken, declare the said patent invalid the title to any Micronizer Reduction Mills under lease to the Licensee or respective Sub-Licensee pursuant hereto shall at once pass to the Licensee or Sub-Licensee together with title to any improvements thereon made by Licensee; provided, however, that if this license agreement or any sub-license agreement shall be otherwise terminated as in Section 13 hereof any and all Micronizer Reduction Mills covered by the terminated license shall be delivered to the Licensor together with title to any improvements made by Licensee or Sub-Licensee; it being understood for the purpose of this Article that should the Licensee or Sub-Licensee be then using, in connection with Micronizer Reduction Mill, described and/or claimed in the said Patent No. 2,032,827, any improvement covered by subsequent other United States Letters Patent included in the license herein granted, such use

shall not operate to prolong vesture of title to the said mills in the Licensor beyond the expiration of this license, but title to any improvement shall remain in the Licensor.

6. The Micronizer Reduction Mills licensed hereunder shall have a marker placed thereon showing ownership in the Licensor, which said marker shall not be removed by the Licensee. The Licensee will not hold itself out to any person as being the owner of any Micronizer Reduction Mill licensed hereunder, unless it shall have acquired title in accordance with the provisions of this agreement.

7. Each party will place at the disposal of the other all information and data which it may secure from time to time in reference to the operation and construction of the said Micronizer Reduction Mills provided, however, that there shall be no obligation on the part of either party to furnish to the other information which may be in the nature of trade or manufacturing secrets, regarding materials processed.

8. The Licensor by its duly accredited representatives shall have the right to inspect any Micronizer Reduction Mill licensed to the Licensee and Sub-Licensees hereunder at any time during usual business hours and also at the close of each year it shall have the right to examine by its duly authorized accountant the books and records of the Licensee and all Sub-Licensees hereunder insofar as the same may relate to the amount of material which shall have been processed in the aforesaid Micronizer Reduction Mill by the Licensee and Sub-Licensees.

9. All inventions and discoveries of a patentable nature which may be made during the term of this license by the

Licensee and Sub-Licensee or those in their control, relative to the patented invention described and/or claimed in the said U. S. Patent No. 2,032,827 or patented invention described and/or claimed in any subsequent United States Letters Patent, under which Licensee shall have a license pursuant with this agreement shall belong to and be assigned to the Licensor, both as to the United States and any foreign country where the Licensor may desire patent protection, and the preparation and filing of any patent application shall be at the expense of the Licensor; provided, that Licensor within 90 days from the date of submission to it of any such invention advise the Licensee and/or Sub-Licensee of its election to procure patent protection thereon; otherwise title to said invention or inventions shall become vested in the Licensee and/or Sub-Licensee, further provided however, that these provisions as to foreign patents shall be subject to any present contractual commitments on the part of the Licensee which at the request of the Licensor shall be certified to the Licensor when the question of filing any such foreign patent application shall arise and; provided, further, that the Licensee or Sub-Licensee shall enjoy after the termination of this license for any reason, the free right of use of any and all improvements made by the Licensee or Sub-Licensee whether the same be patented or unpatented.

10. The Licensee agrees that during the term of this license agreement it will not contest in any manner the validity of any patent under which it is licensed by the Licensor and that it will exercise all reasonable endeavor to use the Micronizer Reduction Mill, to extend its uses, and to make improvements in the operation and construction of the said mill.

Exhibit P

11. The Licensor agrees that during the term of this license agreement it will defend at its own expense any action which may be brought by a third party against the Licensee and/or any Sub-Licensee hereunder or their agents or subsidiaries, claiming that the use of said Micronizer Reduction Mill infringes upon any other United States Letters Patent, providing that the Licensee promptly advise the Licensor of any notice it may receive in reference to any such infringement and cooperate, at the Licensor's expense in such action, and that it will save the Licensee and/or any Sub-Licensee hereunder free and harmless of any expense whatever in connection therewith, whether based upon recovery under an infringement suit or by reason of a settlement of a threatened infringement suit growing out of Licensee's and/or Sub-Licensee's use of the said Micronizer Reduction Mill; provided, however, and notwithstanding anything contained in this agreement to the contrary, that when the total royalties paid to the Licensor by this Licensee and all other Sub-Licensees hereunder shall amount to the sum of Twenty-five Thousand ($25,000) Dollars then no further royalty payments shall be made either by this Licensee, or by any Sub-Licensees hereunder to the Licensor but any such royalties subsequently due the Licensor shall be held in escrow for the benefit of the Licensor, until the final judicial determination of the question as to whether the Micronizer Reduction Mills and its use infringe upon certain United States Letters Patents granted to one Henry G. Lykken, or until this question is settled by agreement between the proprietor of the said Lykken patents and the Licensor, and the Licensee and Sub-Licensees shall be entitled to deduct from such moneys held in escrow such sum or sums as each of them may become liable by

reason of its infringement of the said Lykken patents on account of the use by each of them of the said Micronizer Reduction Mill after which deduction any balance remaining shall be paid over to the Licensor together with such interest as may accrue thereon; and, provided, further, that if at any time after the Licensee and Sub-Licensees hereunder shall have paid to the Licensor as royalties the said sum of Twenty-five Thousand Dollars the Licensee and/or Sub-Licensees shall be made defendants in any infringement action by reason of their use of the said Micronizer Reduction Mills then all royalties accruing thereafter shall be held in escrow for the benefit of the Licensor in the same manner as provided hereinabove.

12. The Licensor agrees, with respect to Canadian Patent No. 359,089, that for a period of three years from July 1, 1939, it will not license or offer to license any party under the said patent to use the Micronizer Reduction Mill and the methods described and claimed therein for the processing of titanium pigments and titaniferous ore for the production of titanium pigments and that if, after July 1, 1942, the Licensor receive a bona fide request for a license it will first offer to the Licensee's associate, Canadian Titanium Pigments, Ltd., the opportunity to acquire a license of the same character and scope and upon the same terms and conditions as those of the bona fide request; provided, however, that should Licensee's associate, Canadian Titanium Pigments, Ltd. at any time prior to or, in the event no other license has been granted by the Licensor, subsequent to the three-year option period herein established desire to obtain a license under the said Canadian Patent No. 359,089, of the same character and scope as hereunder granted the

Licensee, Licensor will grant such license upon the same terms and conditions as hereunder defined except that for the purposes of establishing the rate of royalty and minimum royalty guaranty Canadian Titanium Pigments, Ltd. shall be considered as another Sub-Licensee under Article 1, hereof; and provided, further that the provisions in this Article 12 shall be subject to any present contractual commitments on the part of the Licensor which at the request of the Licensee shall be certified to the Licensee when the question shall arise.

13. In the event of a breach in the terms of this contract by the Licensee, or of a breach by any Sub-Licensee in the terms of its contract, the Licensor shall notify the delinquent party in writing of such default, and should the said delinquent party fail to remedy the said default within 30 days after the receipt of said notice, then the Licensor shall have the right at its election to terminate the license or sub-license agreement and to become repossessed of the Micronizer Reduction Mills licensed to the said delinquent party but such termination shall not in any way affect the licenses enjoyed by non-delinquent Licensee and/or Sub-Licensees; and the Licensee and Sub-Licensees hereunder may cancel their respective license or sub-license agreement for any reason at any time upon three months written notice to the Licensor, in which event the Licensee or respective Sub-Licensee shall be obligated to pay to the Licensor only such royalties as have accrued at the rate above specified to the date of the termination of the terminated agreement; it being understood for the purpose of this Article that if the said Patent No. 2,032,827 be judicially declared invalid by a Court of competent and final jurisdiction from which no appeal is or can be taken all royalty payments shall cease

and determine immediately and the rate of royalty to be paid by the Licensee and Sub-Licensees hereunder to the Licensor for the use of any other patent under which in accordance with this agreement it may enjoy a license shall be made the subject of negotiations between the parties hereto, but in no event to exceed the royalty herein specified.

14. This license shall be non-assignable except to the successors in business of the parties hereto and except that the right to receive royalties hereunder may be assigned by the Licensor without however, relieving the said Licensor of any of the obligations taken herein.

IN WITNESS WHEREOF, the parties hereto have caused this agreement to be executed by their duly authorized officers and their corporate seals to be affixed hereto the day and year aforesaid.

Exhibit P-1

AGREEMENT

This agreement, made and entered into this 14th day of April 1939 by and between NATIONAL LEAD COMPANY, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at 111 Broadway in the City and State of New York (hereinafter referred to as NATIONAL) and E. I. DU PONT DE NEMOURS AND COMPANY, a corporation organized and existing under the laws of the State of Delaware, having its principal place of business at Wilmington, Delaware (hereinafter referred to as DU PONT),

WITNESSETH THAT,

WHEREAS, INTERNATIONAL PULVERIZING CORPORATION, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at Moorestown, New Jersey (hereinafter referred to as INTERNATIONAL) is the owner of the entire right, title and interest in and to a certain United States Letters Patent No. 2,032,827, dated March 3, 1936, for a Micronizer Reduction Mill, and

WHEREAS, pursuant to an agreement dated April 10th, 1939, between INTERNATIONAL and NATIONAL, the latter has become possessed of certain limited, exclusive rights to use together with the right to sub-license others to use non-exclusively the inventions described and/or claimed in said Letters Patent No. 2,032,827, or any reissue thereof, and

Exhibit P-1

WHEREAS, under said agreement of April 10th, 1939, INTERNATIONAL covenants and agrees to grant and accord to any sub-licensee of NATIONAL thereunder the same rights, benefits, privileges and immunities which INTERNATIONAL grants to NATIONAL thereunder, and

WHEREAS, DU PONT desires to obtain and NATIONAL is willing to grant a non-exclusive license to use said Micronizer and employ the methods described and/or claimed in said letters patent or any reissue thereof, throughout the United States of America, and du Pont desires to acquire all benefits, privileges and immunities which may be conferred on a sub-licensee pursuant to said agreement with INTERNATIONAL dated April 10th, 1939.

NOW, THEREFORE, in consideration of the mutual benefits flowing from each party to the other and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of the mutual promises, covenants and undertakings herein set forth and to be duly kept and performed, it is mutually agreed as follows:

1. NATIONAL hereby grants to DU PONT throughout the United States of America a non-exclusive license under United States Letters Patent No. 2,032,827, for a Micronizer Reduction Mill, or any reissue thereof, and under any and all present and future pending applications for United States letters patent, or letters patent or reissues thereof, in reference to the subject matter of said Patent No. 2,032,827, which NATIONAL may now possess or which throughout the term of this license it may acquire, or under which it may become entitled to grant licenses under said

agreement of April 10th, 1939, to use said Micronizer and the inventions described and/or claimed in said Letters Patent No. 2,032,827 for the processing of titanium pigments (including titanated lithopone) and titaniferous ores in the production of titanium pigments and for processing of such other materials as the parties hereto, in writing, may agree upon from time to time. The license herein granted shall continue until the expiration of said Letters Patent No. 2,032,827 or any reissue thereof, provided, however, that if upon such expiration there shall be in existence any United States letters patent under which a license has been granted hereunder, DU PONT, at its election, may retain said license but at a royalty per ton to be agreed upon; but in no event to exceed the royalty herein provided for. NATIONAL furthermore hereby grants, but without itself guaranteeing the performance thereof by INTERNATIONAL, to DU PONT all the rights, benefits, privileges and immunities which are provided and granted for a sub-licensee of NATIONAL pursuant to the terms of the aforesaid contract of April 10th, 1939 between NATIONAL and INTERNATIONAL, including particularly the provisions of Sections 1, 2 and 11 therein.

2. DU PONT agrees that during the period of this license it will not contest in any manner the validity of any patent under which it is sub-licensed hereunder and that it will exercise all reasonable efforts to use the Micronizer Reduction Mills, to extend their uses, and to make improvements in their operation and construction.

3. Commencing July 1, 1939, DU PONT agrees to pay and remit directly to INTERNATIONAL, as a royalty hereunder, for all properly ground, good titanium pigments and

titaniferous ores used in the production of such pigments processed in the licensed Micronizers, fifty cents (50¢) per ton (of 2,000 pounds and on a dry basis) for the first 4,000 tons, and twenty-five cents (25¢) for each ton over 4,000 tons in any accounting year; said royalty to be computed and based upon the aggregate tonnage of licensed materials which NATIONAL and DU PONT, and/or any other sub-licensee or sub-licensees of NATIONAL shall process in said Micronizers in pursuance of said agreement of April 10th, 1939 between INTERNATIONAL and NATIONAL. In order that DU PONT may correctly arrive at any royalties due from it in pursuance of this section, NATIONAL agrees to promptly furnish DU PONT, prior to the due date of any such royalties, with quarterly statements showing the tonnage of micronized licensed materials which NATIONAL and/or its other sub-licensees shall have processed during the preceding quarter in each accounting year; and DU PONT likewise agrees to furnish NATIONAL with similar quarterly statements showing the tonnage of micronized licensed material which DU PONT shall so process.

The royalties herein provided for shall be computed quarterly as of the first day of July, October, January and April, for the preceding quarter, and the net production of properly ground, good material which shall have been processed by DU PONT in any Micronizer Reduction Mill in accordance with the license herein granted during each quarter, shall be reported directly to INTERNATIONAL, accompanied by a check payable to INTERNATIONAL for the royalty due thereon, not later than thirty (30) days after the end of the quarter to which such report relates. A copy of any such quarterly report shall be concurrently forwarded by DU PONT to NATIONAL.

DU PONT agrees to keep separate and accurate books of account and records with respect to all properly ground, good material which it shall process in accordance with this license in the licensed Micronizers; such accounts and records to be in sufficient detail to enable INTERNATIONAL to determine the royalties payable hereunder. DU PONT, from time to time, during business hours, and to the extent required to verify the records herein provided for, shall permit its books and records to be examined by INTERNATIONAL'S authorized agent or officers.

4. Should NATIONAL grant to another party a license under said Patent No. 2,032,827 on a lower royalty basis than that hereinbefore specified, then DU PONT shall be entitled to make its further royalty payments on such lower royalty basis from and after the effective date when said lower royalty basis takes effect for the other party. It is also agreed that in the event NATIONAL'S license under said Patent No. 2,032,827 shall become non-exclusive and INTERNATIONAL pursuant to the terms of said agreement of April 10, 1939, shall notify NATIONAL that it has granted a bona fide license to a responsible party within the licensed field of this agreement at a higher rate of royalty which in the aggregate will yield and does yield a return as great or greater than the yearly total dollar royalty payments of NATIONAL and its sub-licensees under said agreement, then DU PONT shall be obligated to pay royalties hereunder in pursuance of Section 3 hereof, at the same rate as that which may be specified therefor in such other bona fide agreement; and provided, further, that in the event INTERNATIONAL shall grant a non-exclusive license at a royalty rate lower than that specified in Section 3 hereof,

then DU PONT shall thereafter be obligated to pay royalties hereunder only at such lower rate.

5. It is understood and agreed that title to all Micronizer Reduction Mills which DU PONT shall acquire pursuant to this license shall be retained by INTERNATIONAL, such Micronizers to be considered as leased to DU PONT, which lease shall be co-temporaneous with the period of this license and upon the expiration thereof, or in the event that a Court of competent and final jurisdiction, from which no appeal is or can be taken, shall declare said Patent No. 2,032,827 is invalid, the title to any Micronizer Reduction Mills under lease to DU PONT shall thereupon at once pass to DU PONT, together with title to any improvements thereon made by DU PONT; provided, however, that if this license agreement shall be otherwise terminated, as provided in Section 10 hereof, any and all Micronizer Reduction Mills covered by the terminated license shall be delivered to INTERNATIONAL, together with title to any improvements made by DU PONT: it being understood for the purpose of this Section that should DU PONT be then using, in connection with the Micronizer Reduction Mill described and/or claimed in said Patent No. 2,032,827, any improvement covered by subsequent United States letters patents included in the license herein granted, such use shall not operate to prolong vesture of title to the said Mills in INTERNATIONAL beyond the expiration of this license, but title to any improvements shall remain in INTERNATIONAL.

6. It is understood and agreed that Micronizer Reduction Mills licensed hereunder shall have a marker placed thereon showing ownership thereof in INTERNATIONAL,

which said marker shall not be removed by DU PONT. DU PONT will not hold itself out to any person as being the owner of any Micronizer Reduction Mill licensed to it hereunder unless it shall have acquired title thereto in accordance with the provisions of this agreement.

7. The parties hereto agree to place at the disposal of each other all information and data which either may secure from time to time in reference to the operation and construction of the licensed micronizer reduction mills. DU PONT shall also be obligated to furnish such information and data respecting said Mills which it shall develop to INTERNATIONAL; provided, however, that there shall be no obligation on the part of DU PONT to furnish information or data to INTERNATIONAL regarding the licensed materials processed which may be in the nature of trade or manufacturing secrets.

8. The parties hereto, through their duly accredited and authorized representatives, shall have the right at any time and during usual business hours to inspect any Micronizer Reduction Mill which either may install in pursuance of this or said agreement of April 10, 1939. DU PONT also agrees that INTERNATIONAL, through its duly accredited and authorized representatives, shall have the right at any time and during usual business hours to inspect any Micronizer Reduction Mill which DU PONT shall install in pursuance of this agreement.

9. All inventions and discoveries of a patentable nature which may be made during the term of this license by DU PONT relative to the patented invention described and/or

claimed in the said United States Patent No. 2,032,827, or the subject matter claimed in any subsequent United States letters patent under which DU PONT shall have a license pursuant to this agreement, shall belong to and be assigned to INTERNATIONAL, both as to the United States and any foreign country where INTERNATIONAL may desire patent protection, provided INTERNATIONAL shall, within ninety (90) days from the submission of any such invention or discovery to it by DU PONT, notify DU PONT, in writing, that it so elects to acquire said inventions or discoveries; otherwise, title to such inventions or discoveries shall become vested in DU PONT. In the event of such election and preparation, filing and prosecution of any patent application by INTERNATIONAL on said inventions or discoveries, the costs and expenses therefor shall be borne by INTERNATIONAL; provided, however, that the provisions of this Section as to foreign patents shall be subject to any present contractual commitments on the part of DU PONT which, at the request in writing of INTERNATIONAL shall be certified to INTERNATIONAL when the question of filing any such foreign patent application shall arise; and provided, further, that DU PONT shall enjoy after the termination of this license for any reason the free right of use of any and all improvements made by DU PONT or NATIONAL, whether the same be patented or unpatented.

10. If DU PONT shall fail to comply with the obligation herein undertaken and shall continue in such failure for thirty days after written notice from INTERNATIONAL of its default, then NATIONAL may terminate this license agreement, in which event INTERNATIONAL shall become repos-

sessed of the Micronizer Reduction Mills licensed hereunder. DU PONT may cancel this agreement for any reason at any time upon three (3) months' written notice to NATIONAL and INTERNATIONAL, in which event DU PONT shall be obligated to pay only such royalties as have accrued at the rate above specified to the date of termination of the agreement. It is expressly understood for the purpose of this Section that if said Patent No. 2,032,827 shall be judicially declared invalid by a Court of competent and final jurisdiction from which no appeal is or can be taken, all royalty payments herein shall immediately cease and determine and the rate of royalty to be paid by DU PONT hereunder for the use of any other patent under which, in accordance with this agreement, it may enjoy a license, shall be made the subject of negotiations between the parties hereto, but in no event to exceed the royalty herein specified.

11. This agreement shall inure to the benefit of the parties hereto, their successors and assigns, of substantially the entire business relating to the licensed subject matter, and shall not otherwise be assignable.

12. This written license contract embodies all the understandings and agreements between the parties concerning the licensed subject matter, there being no other previous or contemporaneous understandings or agreements, oral or written, between the present parties on the foregoing subject.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be signed in duplicate by their respective and duly authorized officers and their respective corporate

seals to be hereunto affixed on the day and year above written.

Exhibit P-2

AGREEMENT

This agreement, made and entered into this 19th day of December, 1940 by and between NATIONAL LEAD COMPANY, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at 111 Broadway in the City and State of New York (hereinafter referred to as NATIONAL) and AMERICAN ZIRCONIUM CORPORATION, a corporation organized and existing under the laws of the State of Maryland, having its principal place of business at Baltimore, Maryland (hereinafter referred to as AMERICAN).

WITNESSETH THAT,

WHEREAS, INTERNATIONAL PULVERIZING CORPORATION, a corporation organized and existing under the laws of the State of New Jersey, having its principal place of business at Moorestown, New Jersey, (hereinafter referred to as INTERNATIONAL) is the owner of the entire right, title and interest in and to a certain United States Letters Patent No. 2,032,827, dated March 3, 1936, for a Micronizer Reduction Mill, and

WHEREAS, pursuant to an agreement dated April 10th, 1939 between INTERNATIONAL and NATIONAL, the latter has become possessed of certain limited, exclusive rights to use together with the right to sub-license others to use non-exclusively the inventions described and/or claimed in said Letters Patent No. 2,032,827, or any reissue thereof, and

Exhibit P-2

WHEREAS, under said agreement of April 10th, 1939 INTERNATIONAL covenants and agrees to grant and accord to any sub-licensee of NATIONAL thereunder the same rights, benefits, privileges and immunities which INTERNATIONAL grants to NATIONAL thereunder, and

WHEREAS, AMERICAN desires to obtain and NATIONAL is willing to grant a non-exclusive license to use said Micronizer and employ the methods described and/or claimed in said letters patent or any reissue thereof, throughout the United States of America and AMERICAN desires to acquire all benefits, privileges and immunities which may be conferred on a sub-licensee pursuant to said agreement with INTERNATIONAL dated April 10, 1939.

NOW, THEREFORE, in consideration of the mutual benefits flowing from each party to the other and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of the mutual promises, covenants and undertakings herein set forth and to be duly kept and performed, it is mutually agreed as follows:

1. NATIONAL hereby grants to AMERICAN throughout the United States of America a non-exclusive license under United States Letters Patent No. 2,032,827, for a Micronizer Reduction Mill, or any reissue thereof, and under any and all present and future pending applications for United States letters patent, or letters patent or reissue thereof, in reference to the subject matter of said Patent No. 2,032,827, which NATIONAL may now possess or which throughout the term of this license it may acquire, or under which it may become entitled to grant licenses under said

Exhibit P-2

agreement of April 10, 1939, to use said Micronizer and the inventions described and/or claimed in said Letters Patent No. 2,032,827 for the processing of titanium pigments (including titanated lithopone) and titaniferous ores in the production of titanium pigments and for processing of such other materials as the parties hereto, in writing, may agree upon from time to time. The license herein granted shall continue until the expiration of said Letters Patent No. 2,032,827 or any reissue thereof, provided, however, that if upon such expiration there shall be in existence any United States letters patent under which a license has been granted hereunder, AMERICAN, at its election, may retain said license but at a royalty per ton to be agreed upon, but in no event to exceed the royalty herein provided for. NATIONAL furthermore hereby grants, but without itself guaranteeing the performance thereof of INTERNATIONAL, to AMERICAN all the rights, benefits, privileges and immunities which are provided and granted for a sub-licensee of NATIONAL pursuant to the terms of the aforesaid contract of April 10, 1939 between NATIONAL and INTERNATIONAL, including particularly the provisions of Sections 1, 2 and 11 therein.

2. AMERICAN agrees that during the period of this license it will not contest in any manner the validity of any patent under which it is sub-licensed hereunder and that it will exercise all reasonable efforts to use the Micronizer Reduction Mills, to extend their uses, and to make improvements in their operation and construction.

3. Commencing as of July 1, 1940 AMERICAN agrees to pay and remit directly to INTERNATIONAL, as a royalty hereunder, for all properly ground, good titanium pigments

Exhibit P-2

and titaniferous ores used in the production of such pigments processed in the licensed Micronizers, fifty cents (50¢) per ton (of 2,000 pounds and on a dry basis) for the first 4,000 tons, and twenty-five cents (25¢) for each ton over 4,000 tons in any accounting year; said royalty to be computed and based upon the aggregate tonnage of licensed materials which NATIONAL and AMERICAN, and/or any other sub-licensee or sub-licensees of NATIONAL shall process in said Micronizers in pursuance of said agreement of April 10, 1939, between INTERNATIONAL and NATIONAL. In order that AMERICAN may correctly arrive at any royalties due from it in pursuance of this section, NATIONAL agrees to promptly furnish AMERICAN, prior to the due date of any such royalties, with quarterly statements showing the tonnage of micronized licensed materials which NATIONAL and/or its other sub-licensees shall have processed during the preceding quarter in each accounting year; and AMERICAN likewise agrees to furnish NATIONAL with similar quarterly statements showing the tonnage of micronized licensed material which AMERICAN shall so process.

The royalties herein provided for shall be computed quarterly as of the first day of July, October, January and April, for the preceding quarter, and the net production of properly ground, good material which shall have been processed by AMERICAN in any Micronizer Reduction Mill in accordance with the license herein granted during each quarter, shall be reported directly to INTERNATIONAL, accompanied by a check payable to INTERNATIONAL for the royalty due thereon, not later than thirty (30) days after the end of the quarter to which such report relates. A copy of any such quarterly report shall be concurrently forwarded by AMERICAN to NATIONAL.

Exhibit P-2

AMERICAN agrees to keep separate and accurate books of account and records with respect to all properly ground, good material which it shall process in accordance with this license in the licensed Micronizers; such accounts and records to be in sufficient detail to enable INTERNATIONAL to determine the royalties payable hereunder. AMERICAN, from time to time, during business hours, and to the extent required to verify the records herein provided for, shall permit its books and records to be examined by INTERNATIONAL'S authorized agent or officers.

4. Should NATIONAL grant to another party a license under said Patent No. 2,032,827 on a lower royalty basis than that hereinbefore specified, then AMERICAN shall be entitled to make its further royalty payments on such lower royalty basis from and after the effective date when said lower royalty basis takes effect for the other party. It is also agreed that in the event NATIONAL'S license under said Patent No. 2,032,827 shall become non-exclusive and INTERNATIONAL, pursuant to the terms of said agreement of April 10, 1939, shall notify NATIONAL that it has granted a bona fide license to a responsible party within the licensed field of this agreement at a higher rate of royalty which in the aggregate will yield and does yield a return as great or greater than the yearly total dollar royalty payments of NATIONAL and its sub-licensees under said agreement, then AMERICAN shall be obligated to pay royalties hereunder in pursuance of Section 3 hereof, at the same rate as that which may be specified therefor in such other bona fide agreement; and provided, further, that in the event INTERNATIONAL shall grant a non-exclusive license at a royalty rate lower than that specified in Section 3 hereof,

then AMERICAN shall thereafter be obligated to pay royalties hereunder only at such lower rate.

5. It is understood and agreed that title to all Micronizer Reduction Mills which AMERICAN shall acquire pursuant to this license shall be retained by INTERNATIONAL, such Micronizers to be considered as leased to AMERICAN, which lease shall be co-temporaneous with the period of this license and upon the expiration thereof, or in the event that a Court of competent and final jurisdiction, from which no appeal is or can be taken, shall declare said Patent No. 2,032,827 is invalid, the title to any Micronizer Reduction Mills under lease to AMERICAN shall thereupon at once pass to AMERICAN, together with title to any improvements thereon by AMERICAN; provided, however, that if this license agreement shall be otherwise terminated, as provided in Section 10 hereof, any and all Micronizer Reduction Mills covered by the terminated license shall be delivered to INTERNATIONAL, together with title to any improvements made by AMERICAN: it being understood for the purpose of this Section that should AMERICAN be then using, in connection with the Micronizer Reduction Mill described and/or claimed in said Patent No. 2,032,827, any improvement covered by subsequent United States letters patents included in the license herein granted, such use shall not operate to prolong vesture of title to the said mills in INTERNATIONAL beyond the expiration of this license, but title to any improvements shall remain in INTERNATIONAL.

6. It is understood and agreed that Micronizer Reduction Mills licensed hereunder shall have a marker placed thereon showing ownership thereof in INTERNATIONAL,

which said marker shall not be removed by AMERICAN. AMERICAN will not hold itself out to any person as being the owner of any Micronizer Reduction Mill licensed to it hereunder, unless it shall have acquired title thereto in accordance with the provisions of this agreement.

7. It is agreed that AMERICAN shall place at the disposal of INTERNATIONAL all information and data which it may develop from time to time in reference to the operation and construction of the licensed Micronizer Reduction Mills; provided, however, that there shall be no obligation on the part of AMERICAN to furnish information or data to INTERNATIONAL regarding the licensed materials processed which may be in the nature of trade or manufacturing secrets.

8. It is agreed that INTERNATIONAL, through its duly accredited and authorized representatives, shall have the right at any time and during usual business hours to inspect any Micronizer Reduction Mill which AMERICAN shall install in pursuance of this agreement.

9. All inventions and discoveries of a patentable nature which may be made during the term of this license by AMERICAN relative to the patented invention described and/or claimed in the said United States Patent No. 2,032,827, or the subject matter claimed in any subsequent United States letters patent under which AMERICAN shall have a license pursuant to this agreement, shall belong to and be assigned to INTERNATIONAL, both as to the United States and any foreign country where INTERNATIONAL may desire patent protection, provided INTERNATIONAL shall, within ninety (90) days from the submission of any such invention or discovery to it by AMERICAN, notify AMERI-

CAN, in writing, that it so elects to acquire said inventions or discoveries; otherwise, title to such inventions or discoveries shall become vested in AMERICAN. In the event of such election and preparation, filing and prosecution of any patent application by INTERNATIONAL on said inventions or discoveries, the costs and expenses therefor shall be borne by INTERNATIONAL; provided, however, that the provisions of this Section as to foreign patents shall be subject to any present contractual commitments on the part of AMERICAN which, at the request in writing of INTERNATIONAL shall be certified to INTERNATIONAL when the question of filing any such foreign patent application shall arise; and provided, further, that AMERICAN shall enjoy after the termination of this license for any reason the free right of use of any and all improvements made by AMERICAN or NATIONAL, whether the same be patented or unpatented.

10. If AMERICAN shall fail to comply with the obligations herein undertaken and shall continue in such failure for thirty days after written notice from INTERNATIONAL of its default, then NATIONAL may terminate this license agreement, in which event INTERNATIONAL shall become repossessed of the Micronizer Reduction Mills licensed hereunder. AMERICAN may cancel this agreement for any reason at any time upon three (3) months' written notice to NATIONAL and INTERNATIONAL, in which event AMERICAN shall be obligated to pay only such royalties as have accrued at the rate above specified to the date of termination of the agreement. It is expressly understood for the purpose of this Section that if said Patent No. 2,032,827 shall be judicially declared invalid by a Court of competent and final jurisdiction from which no appeal is or can be taken, all royalty payments herein shall immediately cease and de-

termine and the rate of royalty to be paid by AMERICAN hereunder for the use of any other patent under which, in accordance with this agreement, it may enjoy a license, shall be made the subject of negotiations between the parties hereto, but in no event to exceed the royalty herein specified.

11. This agreement shall inure to the benefit of the parties hereto, their successors and assigns, of substantially the entire business relating to the licensed subject matter, and shall not otherwise be assignable.

12. This written license contract embodies all the understandings and agreements between the parties concerning the licensed subject matter, there being no other previous or contemporaneous understandings or agreements, oral or written, between the present parties on the foregoing subject.

IN WITNESS WHEREOF, the parties hereto have caused these presents to be signed in duplicate by their respective and duly authorized officers and their respective corporate seals to be hereunto affixed on the day and year above written.

LICENSE AGREEMENT

This agreement, made and entered into this 21st day of April, 1939, by and between E. I. DU PONT DE NEMOURS AND COMPANY (hereinafter referred to as DU PONT), a corporation organized and existing under and by virtue of the laws of the State of Delaware, and having its principal place of business at Wilmington, Delaware, and TITAN COMPANY, INC. (hereinafter referred to as TITAN), a corporation organized and existing under and by virtue of the laws of the State of Delaware, having its principal place of business in the city and state of New York;

WITNESSETH THAT

WHEREAS, DU PONT is the owner of the entire right, title and interest in and to certain inventions more particularly described in the following United States Letters Patent and pending applications therefor, to-wit:

(a) Application (466-K) of Roy W. Sullivan for Process of Making Calcium Sulfate, Serial No. 17,379, filed April 20, 1935;

(b) Application (632-K) of Gordon D. Patterson for Titanium Oxide Pigments and Process for Producing Same, Serial No. 136,584, filed April 23, 1937; 8 CBR

(c) Application (634-K) of Gordon D. Patterson for Titanium Pigments Containing Water-Soluble Salts of Organic Acids, Serial No. 147,485, filed June 10, 1937;

(d) Application (754-K) of D. H. Dawson, I. J. Krchma and R. M. McKinney, for Preparation of Compounds of Titanium Serial No. 26,790, filed June 15, 1935; (Now Pat. 2,127,247, dated August 16, 1938)

(e) Application (768-K) of W. W. Heckert, for Process for Producing Calcium Sulfate, Serial No. 145,051, filed May 27, 1937;

(f) Application (769-K) of M. L. Hanahan and R. A. Gagnon for Process for Producing Blended Pigments, Serial No. 145,044, filed May 27, 1937;

(g) Application (K-830-A) of A.M. Erskine for Titanium and Zirconium Hydrate Treated TiO_2 Pigments, Serial No. 155,231, filed July 23, 1937

(h) Application (834-K) of M. L. Hanahan and R. M. McKinney for Titanium Pigments and Process for Producing Same, Serial No. 138,583, filed April 23, 1937;

(i) Application (K-834-B) of W. H. Madson for Titanium Pigments and Process for Producing the Same, Serial No. 139,497, filed April 28, 1937;

(j) Application (868-½-K) of J. E. Booge for Water Dispersing Titanium Pigments, Serial No. 145,930, filed June 2, 1937;

(k) Application (871-K) of R. L. McCleary for Water-Insensitive Hydrophillic Pigments, Serial No. 144,759, filed May 25, 1937;

(l) Application (872-K) of R. M. McKinney for Treatment of Titanium Pigments, Serial No. 146,541, filed June 5, 1937;

and has filed corresponding applications for letters patent on said inventions in certain countries foreign to the United States, as follows, to-wit:

(a) In France:

Application (466-K) of Roy W. Sullivan for Process of Making Calcium Sulfate;

Application (768-K) of W. W. Heckert for Process for Producing Calcium Sulfate;

Application (769-K) of M. L. Hanahan and R. A. Gagnon for Process for Producing Blended Pigments;

Application (872-K) of R. M. McKinney for Treatment of Titanium Pigments;

Application (K-830-A) of A. M. Erskine for Titanium and Zirconium Hydrate Treated TiO_2 Pigments

(b) In Great Britain:

Application (768-K) of W. W. Heckert for Process for Producing Calcium Sulfate;

Application (769-K) of M. L. Hanahan and R. A. Gagnon for Process for Producing Blended Pigments

(c) In Holland:

Application (632-K) of Gordon D. Patterson for Titanium Oxide Pigments and Process for Producing Same

(d) In Germany and Japan:

Application (632-K) of Gordon D. Patterson for Titanium Oxide Pigments and Process for Producing Same;

Application (634-K) of Gordon D. Patterson for Titanium Pigments Containing Water-Soluble Salts of Organic Acids;

Application (754-K) of D. H. Dawson, I. J. Krchma and R. M. McKinney, for Preparation of Compounds of Titanium;

Application (834-K) of M. L. Hanahan and R. M. McKinney for Titanium Pigments and Process for Producing Same;

Application (K-834-B) of W. H. Madson for Titanium Pigments and Process for Producing the Same;

Application (868½-K) of J. E. Booge for Water Dispersing Titanium Pigments;

Application (871-K) of R. L. McCleary for Water Insensitive Hydrophillic Pigments

WHEREAS, TITAN desires to obtain and DU PONT is willing to grant an exclusive (except as herein limited), non-assignable, royalty-free license to practice the inventions and to manufacture, use and/or sell the products described or claimed in said applications, or any letters patent which may subsequently issue thereon, throughout the designated foreign country or countries in which said applications shall be respectively filed; and

Exhibit Q

WHEREAS, TITAN warrants that it has the right to grant the licenses hereinafter set forth under the following United States patents and applications therefor, to-wit:

1. Application (Case T.120) of Karl W. Petersen for Titanium Dioxide Pigments, Serial No. 33,383, filed July 26, 1935;

2. Application (Case T.125-C) of Paul Weise, et al. for Preparation of Titanium Oxygen Compounds, Serial No. 136,502, filed April 12, 1937;

3. Patent No. 2,118,916 (Case T.126-B) dated May 31, 1938, to Julius Drucker for Titanium-Containing Pigments;

4. Application (Case T.155) of Karl W. Patersen for Titanium Dioxide Pigments, Serial No. 119,625, filed January 8, 1937;

5. Application (Case T.157) of Ekbert Lederle, et al. for White Pigments, Serial No. 137,494, filed April 17, 1937;

6. Application (Case T.170) of Georg Meder, for Titanium Pigments, Serial No. 137,044, filed April 15, 1937 (Now Patent No. 2,138,384);

7. Patent No. 2,111,460 (Case T.112), dated March 15, 1938, for Alkali Metal Titanates, to Joachim Rockstroh;

8. Application (Case T.115) of Ekbert Lederle, et al. for White Pigments, Serial No. 11,164, filed March 14, 1935;

9. Application (Case T.115-B) of Ekbert Lederle, et al. for White Pigments, Serial No. 142,918, filed May 15, 1937;

10. Application (Case T.115-C) of Ekbert Lederle, et al. for White Pigments, Serial No. 142,928, filed May 15, 1937;

11. Application (Case T.136) of Pierre Lusseyran for Pigment Suspensions and Methods of Preparing Same, Serial No. 88,851, filed July 3, 1936;

12. Application (Case T.165) of Robert W. Ancrum, et al. for Manufacture of Titanium Pigments, Serial No. 155,040, filed July 22, 1937

WHEREAS, DU PONT desires to obtain and TITAN is willing to grant a non-exclusive, non-assignable, royalty-free license to practice, throughout the United States of America, its territories and dependencies, the inventions, and to manufacture, use and/or sell the products described or claimed in said letters patent and/or applications, or in any letters patent which may subsequently issue as a result of any of said applications;

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of and conditional upon the true and faithful performance by the parties hereto of all the undertakings and covenants hereafter set forth, it is mutually agreed as follows:

1. DU PONT hereby grants to TITAN an exclusive (except as herein limited), royalty-free, non-assignable right

Exhibit Q

and license under the following foreign letters patent and/or applications therefor, to-wit:

(1) Throughout France:

(a) French application corresponding to U.S. Application (466-K) of Roy W. Sullivan for Process of Making Calcium Sulfate, Serial No. 17,379, filed April 20, 1935;

(b) French application corresponding to U.S. Application (768-K) of W. W. Heckert for Process for Producing Calcium Sulfate, Serial No. 145,061, filed May 27, 1937 (Now French Patent No. 838,478);

(c) French application corresponding to U.S. Application (769-K) of M. L. Hanahan and R. A. Gagnon for Process for Producing Blended Pigments, Serial No. 145,044, filed May 27, 1937;

(d) French application corresponding to U.S. Application (872-K) of R. M. McKinney for Treatment of Titanium Pigments, Serial No. 146,541, filed June 5, 1937;

(e) French application corresponding to U.S. Application (K-830-A) of A. M. Erskine for Titanium and Zirconium Hydrate Treated TiO_2 Pigments, Serial No. 155,231 filed July 23, 1937

(2) Throughout the United Kingdom of Great Britain, Ireland and the Isle of Man:

Exhibit Q

(a) British application corresponding to U.S. application (768-K) of W. W. Heckert for Process for Producing Calcium Sulfate, Serial No. 145,051, filed May 27, 1937;

(b) British application corresponding to U.S. application (769-K) of M. L. Hanahan and R. A. Gagnon for Process for Producing Blended Pigments, Serial No. 145,044, filed May 27, 1937.

(3) Throughout Holland:

(a) Dutch application corresponding to U.S. application (632-K) of Gordon D. Patterson for Titanium Oxide Pigments and Process of Producing Same, Serial No. 138,584, filed April 23, 1937

(4) Throughout Germany and Japan:

(a) German and Japanese applications corresponding to U.S. application (632-K) of Gordon D. Patterson for Titanium Oxide Pigments and Process for Producing Same, Serial No. 138,584, filed April 23, 1937;

(b) German and Japanese applications corresponding to U.S. application (634-K) of Gordon D. Patterson for Titanium Pigments Containing Water-Soluble Salts of Organic Acids, Serial No. 147,485, filed June 10, 1937;

(c) German and Japanese applications corresponding to U.S. application (754-K) of D. H.

Exhibit Q

Dawson, I. J. Krchma and R. M. McKinney, for Preparation of Compounds of Titanium, Serial No. 26,790, filed June 15, 1935;

(d) German and Japanese application corresponding to U.S. application (834-K) of M. L. Hanahan and R. M. McKinney for Titanium Pigments and Process for Producing Same, Serial No. 138,583, filed April 23, 1937;

(e) German and Japanese application corresponding to U.S. application (K-834-B) of W. H. Madson for Titanium Pigments and Process for Producing the Same, Serial No. 139,497, filed April 28, 1937;

(f) German and Japanese applications corresponding to U.S. application (868½-K) of J. E. Booge for Water-Dispersing Titanium Pigments, Serial No. 145,930, filed June 2, 1937;

(g) German and Japanese applications corresponding to U.S. application (871-K) of R. L. McCleary for Water-Insensitive Hydrophillic Pigments, Serial No. 144,759, filed May 25, 1937.

to practice any process and to make, use and/or sell any products described or claimed in said applications or any letters patent which may issue as a result thereof; the right and license herein granted, however, shall exist only throughout the respective foreign country or countries mentioned, and in which said applications have been filed, and shall continue during the pendency of any such application

Exhibit Q

and the existence of any letters patent, prolongations or extensions which may issue thereon; provided, however, that in respect to applications 466-K of Sullivan and 768-K of Heckert aforesaid, the rights of TITAN hereunder shall be limited and restricted to the employment of the inventions of said 466-K and 768-K applications in the manufacture of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from TITAN and/or its sub-licensees hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products in accordance with any of said licensed inventions.

2. TITAN hereby grants to DU PONT a non-exclusive, royalty-free, non-assignable right and license under the following United States letters patent and/or applications therefore, to-wit:

1. Application (Case T.120) of Karl W. Petersen for Titanium Dioxide Pigments, Serial No. 33,383, filed July 26, 1935;

2. Application (Case T.125-C) of Paul Weise, et al. for Preparation of Titanium Oxygen Compounds, Serial No. 136,502, filed April 12, 1937;

3. Patent No. 2,118,916 (Case T.126-B) dated May 31, 1938, to Julius Drucker for Titanium-Containing Pigments;

4. Application (Case T.155) of Karl W. Petersen for Titanium Dioxide Pigments, Serial No. 119,625, filed January 8, 1937;

5. Application (Case T.157) of Ekbert Lederle, et al. for White Pigments, Serial No. 137,494 filed April 17, 1937;

Exhibit Q

6. Application (Case T.170) of Georg Meder, for Titanium Pigments, Serial No. 137,044, filed April 15, 1937;

7. Patent No. 2,111,460 (Case T.112), dated March 15, 1938, for Alkali Metal Titanates, to Joachim Rockstroh;

8. Application (Case T.115) of Ekbert Lederle, et al. for White Pigments, Serial No. 11,164, filed March 14, 1935;

9. Application (Case T.115-B) of Ekbert Lederle, et al. for White Pigments, Serial No. 142,918, filed May 15, 1937;

10. Application (Case T.115-C) of Ekbert Lederle, et al. for White Pigments, Serial No. 142,928, filed May 15, 1937;

11. Application (Case T. 136) of Pierre Lusseyran for Pigment Suspensions and Methods of Preparing Same, Serial No. 88,851, filed July 3, 1936;

12. Application (Case T.165) of Robert W. Ancrum, et al. for Manufacture of Titanium Pigments, Serial No. 155,040, filed July 22, 1937

to practice throughout the United States of America, its territories and dependencies, any inventions, and to make, use and sell any products described or claimed in said letters patent and/or applications, or in any patent or reissue which shall subsequently be granted thereunder; said rights and licenses to exist throughout the life of said letters patent and/or applications or any patent or reissue which may be subsequently granted thereunder; provided, however, that in respect to Cases T.112 of Rockstroh and T.136 of Lusseyran aforesaid, the rights of DU PONT hereunder shall

be limited and restricted to the employment of the inventions of said T.112 and T.136 cases in the manufacture of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from DU PONT and/or its subsidiaries hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products in accordance with any of said licensed inventions.

3. It is understood and agreed by and between the parties hereto that the rights and licenses herein vested in TITAN shall be subject to the right of DU PONT or any of its controlled subsidiaries to freely use and employ, throughout said foreign countries, the inventions described and claimed in said applications and/or any letters patent which shall issue as a result thereof; as well as to the right of Imperial Chemical Industries, Limited, of London, England, to freely use and employ the inventions described and claimed in said applications and/or any letters patent which may issue as a result thereof, throughout the United Kingdom of Great Britain, Ireland and the Isle of Man.

4. TITAN may grant royalty-free sub-licenses hereunder within the licensed territory to its associated companies, as follows:

(1) British Titan Products Co., Billingham, England

(2) Societe Industrielle du Titane, Paris, France

(3) Titangesellschaft m.b.H., Leverkusen, Germany

(4) Titan Kogyo Kabushiki Kaisha, Kobe, Japan

and may, upon consent in writing from DU PONT first obtained, grant within the licensed territory additional sublicenses to any other person, firm, company or corporation.

Exhibit Q

5. In the event TITAN shall grant sub-licenses hereunder to any person, firm or corporation for a stated royalty, it is understood and agreed that TITAN shall pay to DU PONT fifty per cent (50%) of the gross royalties received as a result of any such sub-license or sub-licenses. The royalties so accruing shall be payable directly from TITAN to DU PONT within thirty (30) days after the close of each calendar quarter for the preceding calendar quarter during which said royalty shall have been received by TITAN.

6. TITAN and DU PONT hereby accept the licenses herein granted and TITAN agrees to assume and pay all costs incidental to the preparation, filing and prosecution of said foreign applications for letters patent; it also agrees throughout the term covered by this license to assume and pay all necessary maintenance fees and/or taxes, and endeavor to effect all necessary workings to maintain any letters patent issuing as a result of the filing of said applications. TITAN also agrees that it will not permit the abandonment of any of said applications or of any letters patent which may issue as a result of the filing of said applications, and in the event TITAN shall desire to abandon any such issued letters patent, it will, prior to actual abandonment, promptly notify DU PONT of its decision to abandon, and within ample time to permit DU PONT to maintain said patents in its own behalf and at its own expense, should DU PONT so desire. DU PONT shall be free from paying any expense incidental to the preparation, filing and prosecution of said United States applications in respect of which licenses are herein granted to DU PONT.

7. TITAN and DU PONT, during the period of this license, acknowledge as good and valid the herein-involved

letters patent of the other or any letters patent which may issue as a result of the herein involved applications; and each agrees not to directly or indirectly contest the validity of said letters patent or to assist others in any infringing operation, but as far as reasonably possible, agree to assist each other in maintaining the validity of each of said patents.

8. It is understood and agreed that the license herein created shall pertain to the above-identified inventions and applications and within the licensed territory, and that no rights whatsoever are granted herein under any other inventions, applications and/or patents now owned or hereafter acquired by DU PONT or TITAN.

9. DU PONT and TITAN shall be under no obligation to defend each other against suits for infringement arising out of their operations under the licenses herein granted, nor shall either party be liable to any extent for damages assessable against the other by virtue of any such infringement.

10. In the event any of the aforesaid letters patent or any letters patent which may issue as a result of said inventions are infringed by third parties, then DU PONT or TITAN, as respective licensee, and upon consent in writing first obtained from the respective licensor, shall have the right to bring suit against said infringers, but shall be under no obligation to do so. For purposes of said suit, DU PONT or TITAN shall have the right to sue in the respective licensor's name, or include such licensor as a nominal party-plaintiff therein, provided the involved licensor consents thereto in writing. DU PONT or TITAN, as licensors, shall be under no obligation to be other than a nominal party to said suit and shall be under no obligation to share

the expenses thereof; provided, however, that DU PONT or TITAN, as licensors, may bring suit at their election in their own name against such infringers and/or join the other as licensee therein in other than a nominal capacity, provided the involved licensee consents thereto in writing.

11. Any recoveries in litigation arising in accordance with the provisions of the next preceding paragraph shall accrue to the party by whom the expenses of such litigation are borne, and in cases where such expenses are borne jointly by DU PONT and TITAN, such recoveries shall be divided between said parties proportionately to their share in such expenses. Where either party hereto brings suit against an infringer upon a patent licensed hereunder, the other party agrees to assist in the prosecution of said suit to the extent of making available any pertinent evidence in its possession.

12. This agreement shall be binding upon and inure to the benefit of the parties hereto and their successors.

LICENSE AGREEMENT

This agreement, made and entered into this 10th day of May, 1940, by and between E. I. DU PONT DE NEMOURS AND COMPANY (hereinafter referred to as DU PONT), a corporation organized and existing under and by virtue of the laws of the State of Delaware, and having its principal place of business at Wilmington, Delaware, and TITAN COMPANY, INC. (hereinafter referred to as TITAN), a corporation organized and existing under and by virtue of the laws of the State of Delaware, having its principal place of business in the city and state of New York;

WITNESSETH THAT

WHEREAS, DU PONT is the owner of the entire right, title and interest in and to certain inventions more particularly described in the following United States Letters Patent and pending applications therefor; to-wit:

(a) Application (738-K) of Ray L. McCleary for Procedure for Treating Residual Sulfuric Acid Liquors, Serial No. 183,127, filed January 3, 1938;

(b) Application (873-K) of Roy W. Sullivan for Process for Making Anhydrite, Serial No. 177,739, filed December 2, 1937;

(c) Application (876-K) of Robert K. Whitten for Process for Production of Improved Titanium Pigments, Serial No. 166,943, filed October 2, 1937;

Exhibit R

(d) Application (882-K) of Roy W. Sullivan for Calcium Sulfate Pigments, Serial No. 166,564, filed September 30, 1937 (Now Pat. 2,163,385, dated June 20, 1939);

(e) Application (884-K) of Robert M. McKinney for Process for Making Titanium Pigments, Serial No. 172,378, filed November 2, 1937 (Now Pat. 2,150,236 dated March 14, 1939);

(f) Application (885-K) of Roy W. Sullivan for Stabilization of Soluble Crystalline Materials, Serial No. 183,322, filed January 4, 1938;

(g) Application (K-885-A) of George L. Schwartz for Dispersible Pigments, Serial No. 183,311, filed January 4, 1938;

(h) Application (892-K) of Roy W. Sullivan for Pigment Materials and Process of Producing, Serial No. 211,797, filed June 4, 1938;

(i) Application (893-K) of Charles R. Hager for Titanium Oxide Pigments and Process of Producing Same, Serial No. 181,990, filed December 27, 1937;

(j) Application (894-K) of M. L. Hanahan and James D. Prince for Pigment Milling Process, Serial No. 192,314, filed February 24, 1938;

(k) Application (898-K) of Robert M. McKinney for Pigment Treating Process and Agents Therefor, Serial No. 191,967, filed February 23, 1938;

Exhibit R

(m) Application (905-K) of James E. Booge for Preparation of Titanium Concentrates, Serial No. 200,748, filed April 7, 1938;

and has filed corresponding applications for letters patent on said inventions in certain countries foreign to the United States, as will more particularly appear in Section 1 hereof;

WHEREAS, TITAN desires to obtain and DU PONT is willing to grant an exclusive (except as herein limited), non-assignable, royalty-free license to practice the inventions and to manufacture, use and/or sell the products described or claimed in said applications, or any letters patent which may subsequently issue thereon, throughout the hereinafter designated foreign country or countries in which said applications shall be respectively filed; and

WHEREAS, TITAN warrants that it has the right to grant the licenses hereinafter set forth under the following United States patents and applications therefor, to-wit:

1. Application (Case T-187) of Tillman, et al., Serial No. 204,838, filed April 28, 1938,

2. Application (Case T-227) of Tillman, et al., Serial No. 238,358, filed November 2, 1938,

3. Application (Case T-208) of Robert W. Ancrum and Assur Gjessing Oppegaard, Serial No. 228,326, filed September 3, 1938, for Methods of Dispersing Titanium Dioxide Pigments;

4. Application (Case T-232) of George F. New, Serial No. 247, 843, filed December 27, 1938,

Exhibit R

5. Patent No. 1,539,996 (Case T-37) dated June 2, 1925, to Peder Farup, for Process of Recovering Titanic Oxide from Titanium Nitrogen Compounds;

6. Patent No. 1,919,425 (Case T-42), dated July 25, 1933, to Peder Farup, for Process for Dissolving Titaniferous Materials in Acids;

7. Patent No. 2,055,221 (Case T-82), dated September 22, 1936, to Andreas Johan Ravnestad, for Process of Producing Titanium Pigments.

WHEREAS, DU PONT desires to obtain and TITAN is willing to grant a non-exclusive, non-assignable, royalty-free license to practice, throughout the United States of America, its territories and dependencies, the inventions, and to manufacture, use and/or sell the products described or claimed in said letters patent and/or applications, or in any letters patent which may subsequently issue as a result of any of said applications;

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, and of other good and valuable considerations, the receipt whereof is hereby acknowledged, and in further consideration of and conditional upon the true and faithful performance by the parties hereto of all the undertakings and covenants hereafter set forth, it is mutually agreed as follows:

1. DU PONT hereby grants to TITAN an exclusive (except as herein limited), royalty-free, non-assignable right and license under the following foreign letters patent and/or applications therefor, to-wit:

Exhibit R

(1) Throughout France:

(a) French application corresponding to U.S. Application (738-K) of Ray L. McCleary for Procedure for Treating Residual Sulfuric Acid Liquors, Serial No. 183,127, filed January 3, 1938;

(b) French application corresponding to U.S. Application (873-K) of Roy W. Sullivan for Process for Making Anhydrite, Serial No. 177,739, filed December 2, 1937;

(c) French application corresponding to U.S. Application (884-K) of Robert M. McKinney for Process for Making Titanium Pigments, Serial No. 172,378, filed November 2, 1937;

(d) French application corresponding to U.S. Application (885-K) of Roy W. Sullivan for Stabilization of Soluble Crystalline Materials, Serial No. 183,322, filed January 4, 1938;

(e) French application corresponding to U.S. Application (K-885-A) of George L. Schwartz for Dispersible Pigments, Serial No. 183,311, filed January 4, 1938;

(f) French application corresponding to U.S. Application (893-K) of Charles R. Hager for Titanium Oxide Pigments and Process of Producing Same, Serial No. 181,990, filed December 27, 1937;

(g) French application corresponding to U.S. Application (894-K) of M. L. Hanahan and

James D. Prince for Pigment Milling Process, Serial No. 192,314, filed February 24, 1938;

(h) French application corresponding to U.S. Application (898-K) of Robert M. McKinney for Pigment Treating Process and Agents Therefor, Serial No. 191,967, filed February 23, 1938;

(2) Throughout the United Kingdom of Great Britain, Northern Ireland and the Isle of Man:

(a) British application corresponding to U.S. Application (876-K) of Robert K. Whitten for Process for Production of Improved Titanium Pigments, Serial No. 166,943, filed October 2, 1937;

(b) British application corresponding to U.S. Application (884-K) of Robert M. McKinney for Process for Making Titanium Pigments, Serial No. 172,378, filed November 2, 1937;

(i) Japanese application corresponding to U.S. Application (899-K) of Louis C. Eckels for Production of Titanium Pigments, Serial No. 198,899, filed March 30, 1938;

(j) Japanese application corresponding to U.S. Application (905-K) of James E. Booge for Preparation of Titanium Concentrates, Serial No. 200,748, filed April 7, 1938;

(6) Throughout Italy:

(a) Italian application corresponding to U.S. Application (873-K) of Roy W. Sullivan for Process for Making Anhydrite, Serial No. 177,739, filed December 2, 1937;

(7) Throughout Belgium:

(a) Belgian application corresponding to U.S. Application (873-K) of Roy W. Sullivan for

Exhibit R

Process for Making Anhydrite, Serial No. 177,379, filed December 2, 1937

to practice any process and to make, use and/or sell any products described or claimed in said applications or any letters patent which may issue as a result thereof; the right and license herein granted, however, shall exist only throughout the respective foreign country or countries mentioned, and in which said applications have been filed, and shall continue during the pendency of any such application and the existence of any letters patent, prolongations or extensions which may issue thereon; provided, however, that in respect to the aforesaid applications of Sullivan K-873, K-882, K-885, K-892; Schwartz K-885-A; Eckels K-899; McKinney K-898; and Booge K-905, the rights granted TITAN hereunder shall be limited and restricted to the use of the inventions involved in said applications K-873, K-882, K-885, K-885-A, K-892, K-898, K-899 and K-905, in the manufacture, use and/or sale of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from TITAN and/or its sub-licensees hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products within the licensed territory of this section in accordance with any of said licensed inventions.

2. TITAN hereby grants to DU PONT a non-exclusive, royalty-free, non-assignable right and license under the following United States letters patent and/or applications therefor, to-wit:

Exhibit R

1. Application (Case T-187) of Tillman, et al., Serial No. 204,838, filed April 28, 1938, for Process for the Preparation of Titanium Dioxide;
2. Application (Case T-227) of Tillman, et al., Serial No. 238,358, filed November 2, 1938, for Process for the Manufacture of Titanium Dioxide;
3. Application (Case T-208) of Robert W. Ancrum and Assur Gjessing Oppegaard, Serial No. 228,326, filed September 3, 1938, for Methods of Dispersing Titanium Dioxide Pigments;
4. Application (Case T-232) of George F. New, Serial No. 247,843, filed December 27, 1938, for Preparation of Chalk Resistant Titanium Dioxide Pigment;
5. Patent No. 1,539,996 (Case T-37) dated June 2, 1925, to Peder Farup, for Process of Recovering Titanic Oxide from Titanium Nitrogen Compounds;
6. Patent No. 1,919,425 (Case T-42) dated July 25, 1933, to Peder Farup, for Process for Dissolving Titaniferous Materials in Acids;
7. Patent No. 2,055,221 (Case T-82) dated September 22, 1936, to Andreas Johan Ravnestad, for Process of Producing Titanium Pigments

to practice throughout the United States of America, its territories and dependencies, any inventions, and to make, use and sell any products described or claimed in said letters patent and/or applications, or in any patent or reissue which shall subsequently be granted thereunder; said rights and licenses to exist throughout the life of said letters patent and/or applications or any patent or reissue which

may be subsequently granted thereunder, provided, however, that in respect of the aforesaid applications of Tillman Case T-187 and T-227 aforesaid patents of Farup Case T-37 and Case T-42 and aforesaid patent of Ravnestad Case T-82 the rights granted Du Pont hereunder shall be restricted to the use of the inventions involved in said applications T-187, T-227 and said patents T-37, T-42 and T-82 in the manufacture, use and/or sale of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from DU PONT and/or its subsidiaries hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products within the licensed territory of this section in accordance with any of said licensed inventions.

3. It is understood and agreed by and between the parties hereto that the rights and licenses herein vested in TITAN shall be subject to the right of DU PONT or any of its subsidiaries to freely use and employ, throughout said foreign countries, the inventions described and claimed in said applications and/or any letters patent which shall issue as a result thereof; as well as to the right of Imperial Chemical Industries, Limited, of London, England, to freely use and employ the inventions described and claimed in said applications and/or any letters patent which may issue as a result thereof, throughout the United Kingdom of Great Britain, Northern Ireland and the Isle of Man.

4. TITAN may grant royalty-free sub-licenses hereunder within the licensed territory to its associated companies, as follows:

(1) British Titan Products Co., Billingham, England,

(2) Société Industrielle du Titane, Paris, France,

(3) Titangesellschaft m.b.H., Leverkusen, Germany,

(4) Titan Kogyo Kabushiki Kaisha, Kobe, Japan

and may, upon consent in writing from DU PONT first obtained, grant within the licensed territory additional sub-licenses to any other person, firm, company or corporation.

5. In the event TITAN shall, provided DU PONT consents, grant sub-licenses hereunder to any person, firm or corporation for a stated royalty, it is understood and agreed that TITAN shall pay to DU PONT fifty per cent (50%) of the gross royalties received as a result of any such sub-license or sub-licenses. The royalties so accruing shall be payable directly from TITAN to DU PONT within thirty (30) days after the close of each calendar quarter for the preceding calendar quarter during which said royalty shall have been received by TITAN.

6. TITAN and DU PONT hereby accept the licenses herein granted and TITAN agrees to assume and pay all costs incidental to the preparation, filing and prosecution of said foreign applications for letters patent; it also agrees throughout the term covered by this license to assume and pay all necessary maintenance fees and/or taxes, and endeavor to effect all necessary workings to maintain any letters patent issuing as a result of the filing of said applications. TITAN also agrees that it will not permit the abandonment of any of said applications or of any letters patent which may issue as a result of the filing of said applications, and in the event TITAN shall desire to abandon any such application and/or issued letters patent, it will, prior to actual abandonment, promptly notify DU PONT of its decision

to abandon, and within ample time to permit DU PONT to take over the prosecution of said applications and to maintain said patents in its own behalf and at its own expense, should DU PONT so desire. DU PONT shall be free from paying any expense incidental to the preparation, filing and prosecution of said United States application in respect of which licenses are herein granted to DU PONT.

7. TITAN and DU PONT, during the period of this license, acknowledge as good and valid the herein-involved letters patent of the other; and each hereby releases the other from any and all liability for infringement of such letters patent arising previous to this agreement. Further, each agrees not to directly or indirectly contest the validity of said letters patent or to assist others in any infringing operation, but as far as reasonably possible, agrees to assist the other in maintaining the validity of each of said patents.

8. It is understood and agreed that the license herein created shall pertain to the above-identified inventions and applications and within the licensed territory, and that no rights whatsoever are granted herein under any other inventions, applications and/or patents now owned or hereafter acquired by DU PONT or TITAN.

9. DU PONT and TITAN shall be under no obligation to defend each other against suits for infringement arising out of their operations under the licenses herein granted, nor shall either party be liable to any extent for damages assessable against the other by virtue of any such infringement.

10. In the event any of the aforesaid letters patent or any letters patent which may issue as a result of said in-

ventions are infringed by third parties, then DU PONT or TITAN, as respective licensee, and upon consent in writing first obtained from the respective licensor, shall have the right to bring suit against said infringers, but shall be under no obligation to do so. For purposes of said suit, DU PONT or TITAN shall have the right to sue in the respective licensor's name, or include such licensor as a nominal party-plaintiff therein, provided the involved licensor consents thereto in writing. DU PONT or TITAN, as licensors, shall be under no obligation to be other than a nominal party to said suit and shall be under no obligation to share the expenses thereof; provided, however, that DU PONT or TITAN, as licensors, may bring suit at their election in their own name against such infringers and/or join the other as licensee therein in other than a nominal capacity, provided the involved licensee consents thereto in writing.

11. Any recoveries in litigation arising in accordance with the provisions of the next preceding paragraph shall accrue to the party by whom the expenses of such litigation are borne, and in cases where such expenses are borne jointly by DU PONT and TITAN, such recoveries shall be divided between said parties proportionately to their share in such expenses. Where either party hereto brings suit against an infringer upon a patent licensed hereunder, the other party agrees to assist in the prosecution of said suit to the extent of making available any pertinent evidence in its possession.

12. For the purpose of this instrument, a subsidiary of either party hereto is defined as a company in which said party owns more than fifty per cent (50%) of the subsidiary stock which is entitled to vote for directors.

LICENSE AGREEMENT

This agreement, made and entered into this 23rd day of June, 1941, by and between E. I. DU PONT DE NEMOURS AND COMPANY (hereinafter referred to as DU PONT), a corporation organized and existing under and by virtue of the laws of the State of Delaware, and having its principal place of business at Wilmington, Delaware, and TITAN COMPANY, INC. (hereinafter referred to as TITAN), a corporation organized and existing under and by virtue of the laws of the State of Delaware, having its principal place of business in the city and state of New York;

WITNESSETH THAT

WHEREAS, DU PONT is the owner of the entire right, title and interest in and to certain inventions more particularly described in the following United States Letters Patent and pending applications therefor, to-wit:

(a) Application (689-K) of Winfield W. Heckert for Glue Treatment of Calcium Sulfate, Serial No. 225,716, filed August 19, 1938.

(b) Application (888-K) of James E. Booge for Titanium Pigment Production, Serial No. 215,218, filed June 22, 1938.

(c) Application (900-K) of James H. Peterson for Process of Preparing Alkaline Earth Metal Titanates, Serial No. 213,835, filed June 15, 1938.

(d) Application (911-K) of Ignace J. Krchma for Titanium Oxide Suspensions, Serial No. 219,601, filed July 16, 1938.

(e) Application (912-K) of John A. Geddes for Improved Titanium Oxide Pigments and Process of Making Same, Serial No. 228,926, filed September 8, 1938.

(f) Application (915-K) of Holger H. Schaumann for Oxidation Treatment of Tinted Titanium Oxide, Serial No. 228,403, filed September 3, 1938.

(g) Application (917-K) of Ignace J. Krchma for Process for Production of Titanium Solutions, Serial No. 233,749, filed October 7, 1938.

and has filed corresponding applications for Letters Patent on said inventions in certain countries foreign to the United States, as will more particularly appear in Section 1 hereof;

WHEREAS, TITAN desires to obtain and DU PONT is willing to grant an exclusive (except as herein limited), non-assignable, royalty-free license to practice the inventions, and to manufacture, use and/or sell the products described or claimed in said applications, or any letters patent which may subsequently issue thereon, throughout the hereinafter designated foreign country or countries in which said applications shall be respectively filed; and

WHEREAS, TITAN warrants that it has the right to grant the licenses hereinafter set forth under the following United States patents and applications therefor, to-wit:

Exhibit S

1. Application of A. J. Oppegaard et al., for Manufacture of Titanium Dioxide Pigments, Serial No. 277,870, filed June 7, 1939.

2. Application of F. Raspe and R. W. Ancrum, for Titanium Dioxide Pigment and Printing Inks Containing Same, Serial No. 283,986, filed July 12, 1939.

3. Application of Herman Giese, for Methods of Making Improved Titanium Dioxide Pigments, Serial No. 300,004, filed October 18, 1939.

4. Patent No. 1,852,510, dated April 5, 1932, to Peder Farup, for Process of Treating Titaniferous Materials with Acids

WHEREAS, DU PONT desires to obtain and TITAN is willing to grant a non-exclusive, non-assignable, royalty-free license to practice, throughout the United States of America, its territories and dependencies, the inventions, and to manufacture, use and/or sell the products described or claimed in said Letters Patent which may subsequently issue as a result of any of said applications;

NOW, THEREFORE, in consideration of the mutual covenants and agreements hereinafter set forth, and of other good and valuable consideration, the receipt whereof is hereby acknowledged, and in further consideration of and conditional upon the true and faithful performance by the parties hereto of all the undertakings and covenants hereafter set forth, it is mutually agreed as follows:

1. DU PONT hereby grants to TITAN an exclusive (except as herein limited), royalty-free, non-assignable right

and license in the following countries and under the following foreign applications for Letters Patent, to-wit:

(1) Throughout France:

(a) French application corresponding to U.S. Application (888-K) of James E. Booge for Titanium Pigment Production, Serial No. 215,218, filed June 22, 1938.

to practice any process and to make, use and/or sell any products described or claimed in said applications or any Letters Patent which may issue as a result thereof; the right and license herein granted, however, shall exist only throughout the respective foreign country or countries mentioned, and in which said applications have been filed, and shall continue during the pendency of any such application and the existence of any Letters Patent, prolongations or extensions which may issue thereon; provided, however, that in respect to the aforesaid applications of Winfield W. Heckert 689-K, James E. Boobe 888-K, John A. Geddes 912-K, and Holger H. Schaumann 915-K, the rights granted TITAN hereunder shall be limited and restricted to the use of the inventions involved in said applications 689-K, 888-K, 912-K and 915-K, in the manufacture and sale of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from TITAN and/or its sub-licensees hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products within the licensed territory of this section in accordance with any of said licensed inventions.

2. TITAN hereby grants to DU PONT a non-exclusive, royalty-free, non-assignable right and license under the following United States Letters Patent and/or applications therefor, to-wit:

1. Application (Case T.217) of A. J. Oppegaard, et al., for Manufacture of Titanium Dioxide Pigments, Serial No. 277,870, filed June 7, 1939.

2. Application (Case T.240) of F. Raspe and R. W. Ancrum, for Titanium Dioxide Pigment and Print-

ing Inks Containing Same, Serial No. 283,986, filed July 12, 1939 (now Pat. 2,224,987 dated Dec. 17, 1940).

3. Application (Case T.242) of Herman Giese, for Methods of Making Improved Titanium Dioxide Pigments, Serial No. 300,004, filed October 18, 1939.

4. Patent (Case T.43) No. 1,852,510, dated April 5, 1932, to Peder Farup, for Process of Treating Titaniferous Materials with Acids.

to practice throughout the United States of America, its territories and dependencies, any inventions, and to make, use and sell any products described or claimed in said Letters Patent and/or applications, or in any patent or reissue which shall subsequently be granted thereunder; said rights and licenses to exist throughout the life of said Letters Patent and/or applications or any patent or reissue which may be subsequently granted thereunder; provided, however, that in respect of aforesaid application of Raspe and Ancrum, Case T.240, and aforesaid patent of Farup, Case T.43, the rights granted DU PONT hereunder shall be restricted to the use of the inventions involved in said application T.240 and said patent T.43 in the manufacture, use and/or sale of titanium compounds which can be used as pigments.

It is understood and agreed that purchasers from DU PONT and/or its subsidiaries hereunder of pigments and other coloring materials manufactured in pursuance of this license shall be free to use said products within the licensed territory of this section in accordance with any of said licensed inventions.

Exhibit S

3. It is understood and agreed by and between the parties hereto that the rights and licenses herein vested in TITAN shall be subject to the right of DU PONT or any of its subsidiaries to freely use and employ, throughout said foreign countries, the inventions described and claimed in said applications and/or any Letters Patent which shall issue as a result thereof; as well as to the right of Imperial Chemical Industries, Limited, of London, England, to freely use and employ the inventions described and claimed in said applications and/or any Letters Patent which may issue as a result thereof, throughout the United Kingdom of Great Britain, Northern Ireland and the Isle of Man.

4. TITAN may grant royalty-free sub-licenses hereunder within the licensed territory to its associated companies, as follows:

(1) Britain Titan Products Co., Billingham England

(2) Societe Industrielle du Titane, Paris, France

(3) Titangesellschaft m.b.H., Leverkusen, Germany

(4) Titan Kogyo Kabushiki Kaisha, Tokyo, Japan

and may, upon consent in writing from DU PONT first obtained, grant within the licensed territory additional sublicenses to any other person, firm, company or corporation.

5. In the event TITAN shall, provided DU PONT consents, grant sub-licenses hereunder to any person, firm or corporation for a stated royalty, it is understood and agreed that TITAN shall pay to DU PONT fifty per cent (50%) of the gross royalties received as a result of any such sublicense or sub-licenses. The royalties so accruing shall be

payable directly from TITAN to DU PONT within thirty (30) days after the close of each calendar quarter for the preceding calendar quarter during which said royalty shall have been received by TITAN.

6. TITAN and DU PONT hereby accept the licenses herein granted and TITAN agrees to assume and pay all costs incidental to the preparation, filing and prosecution of said foreign applications for Letters Patent; it also agrees throughout the term covered by this license to assume and pay all necessary maintenance fees and/or taxes, and endeavor to effect all necessary workings to maintain any Letters Patent issuing as a result of the filing of said applications, and TITAN also agrees that it will not permit the abandonment of any of said applications or of any Letters Patent which may issue as a result of the filing of said applications without first promptly notifying DU PONT of its intention to so abandon and within ample time to permit DU PONT to take over the prosecution of said applications and to maintain said patents in its own behalf and at its own expense, should DU PONT so desire. DU PONT shall be free from paying any expense incidental to the preparation, filing and prosecution of said United States applications in respect of which licenses are herein granted to DU PONT.

7. TITAN and DU PONT, during the period of this license, acknowledge as good and valid the herein-licensed Letters Patent of the other; and each hereby releases the other from any and all liability for infringement of such Letters Patent arising previous to this agreement. Further, each agrees not to directly or indirectly contest the validity of said Letters Patent or to assist others in any infringing

operation, but as far as reasonably possible, agrees to assist the other in maintaining the validity of each of said patents.

8. It is understood and agreed that the license herein created shall pertain to the above-identified inventions and applications and within the licensed territory, and that no rights whatsoever are granted herein under any other inventions, applications and/or patents now owned or hereafter acquired by DU PONT or TITAN.

9. DU PONT and TITAN shall be under no obligation to defend each other against suits for infringement arising out of their operations under the licenses herein granted nor shall either party be liable to any extent for damages assessable against the other by virtue of any such infringement.

10. In the event any of the aforesaid Letters Patent or any letters Patent which may issue as a result of said inventions are infringed by third parties, then DU PONT or TITAN, as respective licensee, and upon consent in writing first obtained from the respective licensor, shall have the right to bring suit against said infringers, but shall be under no obligation to do so. For purposes of said suit, DU PONT or TITAN shall have the right to sue in the respective licensor's name, or include such licensor as a nominal party-plaintiff therein, provided the involved licensor consents thereto in writing. In the event of such consent, DU PONT or TITAN, as licensors, shall be under no obligation to be other than a nominal party to said suit and shall be under no obligation to share the expenses thereof;

provided, however, that DU PONT or TITAN, as licensors, may bring suit at their election in their own name against such infringers and/or join the other as licensee therein in other than a nominal capacity, provided the involved licensee consents thereto in writing.

11. Any recoveries in litigation arising in accordance with the provisions of the next preceding paragraph shall accrue to the party by whom the expenses of such litigation are borne, and in cases where such expenses are borne jointly by DU PONT and TITAN, such recoveries shall be divided between said parties proportionately to their share in such expenses. Where either party hereto brings suit against an infringer upon a patent licensed hereunder, the other party agrees to assist in the prosecution of said suit to the extent of making available any pertinent evidence in its possession.

12. Governmental objection or prohibition shall be a valid plea on the part of either of the parties hereto to decline to disclose or to grant rights with respect to any invention, patent and/or application therefor which, but for such objection or prohibition, would come within the operation of this agreement.

13. For the purpose of this instrument, a subsidiary of either party hereto is defined as a company in which said party owns more than fifty per cent (50%) of the subsidiary stock which is entitled to vote for directors.

Exhibit S

14. This agreement shall be binding upon and inure to the benefit of the parties hereto and their successors.

Exhibit 40

Imports of Titanium Pigments
Into the United States and Canada

1931—None

1932—None

1933—275.575 tons as Pure Titanium Oxide
Imported from Titangesellscheft m.b.h., Leverkusen, Germany
For the Account of Titan Co. A.S.

1934— 55.115 tons as Pure Titanium Oxide
Imported from Titangesellscheft m.b.h., Leverkusen, Germany
For the Account of Titan Co. A.S.

33.600 tons as Pure Titanium Oxide
Imported from British Titan Products Co., England

1935—268.422 tons as Pure Titanium Oxide
Imported from Titangesellscheft m.b.h., Leverkusen, Germany
For the Account of Titan Co. A.S.

162.400 tons as Pure Titanium Oxide
Imported from British Titan Products Co., England

Exhibit 40

1936— 45.01 tons as Pure Titanium Oxide
Imported from Titangesellscheft m.b.h., Leverkusen, Germany
For the Account of Titan Co. A.S.

538.890 tons as Pure Titanium Oxide
Imported from British Titan Products Co., England

1937 To Date—None Imported Into The United States

While our records do not disclose the exact distribution of the above imports between the United States and Canada, we believe that all shipments made by Titangesellscheft for the account of Titan Co. A.S. were imported into the United States, and all imports from British Titan Products Co. were for Canada 12-5-44.

In compliance with the du Pont subpoena, the following schedules and statements are furnished, the number before each designating the involved paragraph of the subpoena:

18. The annual production of TiO_2 and composite titanium pigments by du Pont and/or its subsidiaries from January 1, 1928, these figures showing the production of the commodity by its trade names "TI-PURE" (pure TiO_2); "TI-BAR" (barium sulfate-extended TiO_2 in which the barium sulfate content ranges from 70-75%); and "TI-TINT" (TiO_2 colored with small amounts (not to exceed 2%) of various colored metal oxides); "TI-CAL" (calcium sulfate-extended TiO_2 containing 70% calcium sulfate); "TI-SIL" (TiO_2 extended with 70% magnesium silicate); and "DUOLITH" and "TI-TONE". The two latter trade names designate titanated lithopones in which a 15% TiO_2 content is present.

22. Annual sales of Krebs Pigment and Color Corporation and du Pont of TiO_2 and composite pigments from January 1, 1928, in the form of the trade names "TI-PURE", "TI-BAR", "TI-TINT", "TI-CAL", "TI-SIL" and "DUOLITH" and "TI-TONE". The annual production figures requested in this paragraph 22 are shown by the figures already given in response to Paragraph 18 of the subpoena.

It is to be understood that all production figures given for "TI-BAR", "TI-CAL", "TI-SIL", "TI-TINT" and "DUOLITH" and "TI-TONE" include their TiO_2 contents, which also are included in the "TI-PURE" production figures.

Also, all sales and transfers of all pigments shown are on a commodity basis, that is, all quantities include the TiO_2 content.

TITAN COMPANY, INC.

Minutes of a Special Meeting of the Board of Directors held December 12, 1929.

A special meeting of the Board of Directors of Titan Company, Inc., was held at No. 120 Broadway, in the Borough of Manhattan of The City of New York, in the County and State of New York, on the 12th day of December, 1929, at two o'clock in the afternoon, pursuant to the following written waiver of notice signed by all the directors and fixing the time, place, and purpose of the meeting.

TITAN COMPANY, INC.

Waiver of Notice of Special Meeting of Board of Directors to be held December 12, 1929.

We, the undersigned, being all the directors of Titan Company, Inc., do hereby waive any and all notice whatsoever of a special meeting of the Board of Directors of said corporation and of the time, place, and purpose thereof, and do hereby designate and fix the 12th day of December, 1929, at two o'clock in the afternoon as the time, and No. 120 Broadway, in the Borough of Manhattan of the City of New York, in the County and State of New York, as the place of said meeting; and do hereby waive any and all

notice of said meeting and of the time, place, and purpose thereof, required by the statutes of Delaware, the by-laws of the corporation, or otherwise, and we do hereby consent that any and all business may be transacted at said meeting that may be deemed desirable by the directors present thereat.

Dated, December 12, 1929.

s/ JOHN MILTON FERRY

s/ F. M. SCHMIDT

.....

s/ L. A. SCHMIDT

.....

There were present John Milton Ferry, Adolph Denzau, Clarence W. Copping, L. A. Schmidt, and F. M. Schmidt, being all the directors of the corporation and constituting a quorum of the Board.

The meeting having been duly called to order, upon motion duly made, seconded, and carried, Mr. John Milton Ferry was chosen Chairman of the meeting and Mr. Adolph Denzau Secretary thereof.

Exhibit 49

It was reported that the meeting was held pursuant to the foregoing written waiver of notice and consent signed by all the directors and, on motion duly made, seconded, and carried, it was ordered that a copy thereof be spread upon the minutes of the meeting.

On motion duly made, seconded, and carried, the following preambles and resolution were duly and unanmiously adopted:

WHEREAS, Titan Co. A/S of Fredriksstad, Norway, has offered to sell, assign and transfer to this corporation as of January 1, 1929, all its certain patents and patent rights relating to the manufacture of titanium and titanium compounds and, subject to the consent of the other parties thereto, all its right, title, and interest under certain contracts as specified in the Agreement hereinafter mentioned, in consideration of the payment by this corporation to said Titan Co. A/S of certain royalties as provided in said Agreement and the further sum of one million six hundred thousand (1,600,000) Norwegian Kroner, payable if desired by the cancellation by National Lead Company as of January 1, 1929, of a corresponding amount of the indebtedness of said Titan Co. A/S to it, and has submitted for acceptance and execution by this corporation an Agreement designed to effectuate said assignment and more fully describing the terms and conditions thereof, executed by said Titan Co. A/S under date of March 23, 1929; and

WHEREAS, I. G. Farbenindustrie A. G. and Titangesellschaft m.b.H., of Leverkusen, Germany, parties to certain of the contracts so offered to be assigned under said Agreement, have consented to such assignment only upon the conditions (1) that National Lead Company shall at all times own at least eighty-six per cent (86%) of the capital stock

of this corporation from time to time issued and outstanding and shall agree not to permit any reduction of its said stock interest without the prior consent of said German companies in writing, and (2) that said Titan Co. A/S, in addition to this corporation, shall remain liable to said German companies for the performance of all obligations applicable to the contract interests so to be assigned; and said I. G. Farbenindustrie A. G. has stipulated the same conditions for its consent to the assignment by National Lead Company to this corporation of the former's proprietary one-half interest in said Titangesellschaft m.b.H., accepted by this Board at it meeting held March 28, 1929; and

WHEREAS, said National Lead Company has given this corporation satisfactory assurances that it will not permit its stock interest in this corporation to fall below eighty-six per cent (86%) of the total capital stock of this corporation from time to time issued and outstanding, without having first obtained the written consent of said German companies to such reduction; and

WHEREAS, said Titan Co. A/S has consented to remain liable for the performance of all obligations applicable to the proprietary one-half interest in said Titangesellschaft m.b.H. and to the contract interests so assigned or to be assigned as aforesaid, provided this corporation indemnifies it and saves it harmless from the consequences of such continued liability; and

WHEREAS, National Lead Company has offered to effect payment of the consideration of one million six hundred thousand (1,600,000) Norwegian Kroner stipulated for the

assignment first above mentioned, by cancellation on its books as of January 1, 1929, of a corresponding amount of the indebtedness of said Titan Co. A/S to it, in consideration of the issue to said National Lead Company of four hundred twenty-eight thousand eight hundred dollars ($428,800) in par value of the fully paid capital stock of this corporation; and

WHEREAS, in the judgment of this Board it is for the best interests of this corporation that the offer of assignment by said Titan Co. A/S hereinabove mentioned be accepted upon the various conditions hereinabove recited; therefore, be it

RESOLVED, that the officers of this corporation be and they hereby are authorized, empowered, and directed (1) to execute and deliver on behalf of this corporation the above-mentioned Agreement submitted by said Titan Co. A/S to effect said assignments and executed by it under date of March 23, 1929; (2) to issue to National Lead Company four thousand two hundred and eighty-eight (4,288) fully paid shares of the capital stock of this corporation upon receipt from said National Lead Company of satisfactory evidence of the cancellation by it as of January 1, 1929, of one million six hundred thousand (1,600,000) Norwegian Kroner of indebtedness of said Titan Co. A/S to it; (3) to execute and deliver on behalf of this corporation such instruments as may be proper to indemnify said Titan Co. A/S for all the consequences of its continued liability for the performance of all obligations applicable to the contract interests and to the proprietary one-half interest in said Titangesellschaft m.b.H. so assigned to this corpo-

ration; and (4) generally to take any and all such steps and to execute and deliver any and all such instruments as may in their judgment be necessary or expedient in the premises.

On motion duly made, seconded, and carried, the following preambles and resolution were duly and unanimously adopted:

WHEREAS, since the acquisition by this corporation from National Lead Company of the former's proprietary one-half interest in Titangeselleschaft m.b.H., said National Lead Company, at the request and for the account of this corporation, has expended the sum of sixty-six thousand one hundred twenty dollars and twenty-eight cents ($66,120.28) for the development of the properties and business of said Titangesellschaft m.b.H.; and

WHEREAS, said National Lead Company has advanced certain additional funds in connection with the business of this corporation and is willing to increase said advances to a total amount of ninety-nine thousand four hundred seventy-nine dollars and seventy-two cents ($99,479.72) to provide working capital necessary to the business of this corporation; and

WHEREAS, said National Lead Company has offered to accept fully paid and non-assessable shares of the capital stock of this corporation at par for all the expenditures and advances so made or to be made by it as hereinabove stated, to a total sum of one hundred sixty-five thousand six hundred dollars ($165,600); therefore be it

RESOLVED, that the officers of this corporation be and they hereby are authorized and directed to issue and deliver

to said National Lead Company or its nominee or nominees one thousand six hundred and fifty-six (1,656) shares of the fully paid and non-assessable capital stock of this corporation of the par value of one hundred dollars ($100) each upon cancellation by said National Lead Company of the present indebtedness of this corporation to it as aforesaid and upon the payment by said National Lead Company to this corporation in cash of an amount equal to the difference between the total par value of the shares herein authorized to be issued to it and the amount of said indebtedness.

On motion duly made, seconded, and carried, it was duly and unanimously

RESOLVED, that the action of Dr. Gustav Jebsen, at a proprietors' meeting of Titangesellschaft m.b.H., held October 22, 1929, in consenting to and effecting on behalf of this corporation an increase in the capital of said Titangesellschaft m.b.H. from one million five hundred thousand Reichsmark (R.M. 1,500,000) to three million Reichsmark (R.M. 3,000,000), and assuming in the name and on behalf of this corporation one-half of said increased capital or seven hundred and fifty thousand Reichsmark (R.M. 750,000), be and it hereby is in all respects approved, ratified, and confirmed, and that the officers of the corporation be and they hereby are authorized and directed to execute and deliver such instrument as may be proper to confirm said action.

On motion duly made, seconded, and carried, it was duly and unanimously

RESOLVED, that the action of the officers of the corporation in agreeing on its behalf with I. G. Farbenindustrie A.G., co-proprietor with this corporation of Titangesell-

schaft m.b.H., that each proprietor allow one million five hundred thousand Reichsmark (R.M. 1,500,000) of its investment in said Titangesellschaft m.b.H., over and above its share of the fixed capital thereof, to remain as a fixed loan to said Titangesellschaft m.b.H. bearing interest at rates from time to time current in Germany, and in assigning this corporation's share of said fixed loan to Metallurgical and Chemical Corporation, a New Jersey corporation, having investments in Germany, in exchange for the promissory note of said Metallurgical and Chemical Corporation to the order of this corporation for an equivalent amount in dollars, payable on demand after December 31, 1931, and bearing interest at a rate substantially equivalent to the rate payable on said fixed loan, be and it hereby is in all respects approved, ratified, and confirmed.

* * * *

The meeting then adjourned to No. 111 Broadway, in the Borough of Manhattan of the City of New York, in the County and State of New York.

The following resignation of F. M. Schmidt as a director of the corporation was presented to the meeting:

Titan Company, Inc., December 12, 1929.

Ragnar Juell,	Assistant Treasurer,
Sverre Henrikssen,	Assistant Secretary
(any two of them).	

On motion duly made, seconded, and carried, it was duly and unanimously

RESOLVED, that Titan Co. A/S, of Fredriksstad, Norway, be and it hereby is constituted and appointed the sole agent and representative of the corporation for the sale of its products in all markets in which the corporation or its predecessor has reserved the right to sell, said Titan Co. A/S to be compensated for its services as said agent and representative by a commission on all sales made by it at a rate to be fixed from time to time by this Board and now for the time being fixed at a five per cent (5%); with power to said Titan Co. A/S to appoint subagents for such sale in any country, for the account and risk of the corporation, subject always to the approval of the corporation of all subagents so appointed and of the terms and conditions of their appointments; and that said Titan Co. A/S be and it hereby is granted the privilege of selling for its own account in the Scandinavian countries, including Finland and the Baltic States, at such prices and upon such terms as it may desire, any and all products purchased by it from the corporation.

Exhibit 49

On motion duly made, seconded and carried, it was duly and unanimously

RESOLVED, that Dr. Gustav Jebsen, a Vice President of the corporation, be and he hereby is appointed General Manager of the business and affairs of the corporation in all countries foreign to the United States of America, with full power and authority to act for the corporation upon all matters arising in the ordinary course of its business in said countries, including the representation of the corporation at all proprietors' meetings of shareholders' meetings of companies in which the corporation owns a proprietary or stock interest, but subject always to the approval of this Board with respect to all matters involving the sale or pledge of, or grant of licenses under, or other disposition of the processes, patents, and patent rights of the corporation, or of its contract rights with respect thereto, or of any other fixed assets or properties of the corporation; and with specific authority for and on behalf of the corporation to file applications for letters patent or similar rights and extensions and renewals thereof in all countries of the world including the United States of America.

On motion duly made, seconded, and carried, it was duly and unanimously

RESOLVED, that the contract of October 3/20, 1927, between Titan Co. A/S and Titangesellschaft m.b.H., heretofore transferred to this corporation, be modified so as to include in the designation "Territory of Titangesellschaft", therein employed, Poland and Portugal and, in the discretion of Dr. Gustav Jebsen, a Vice-President of the corpora-

tion, Italy, and the said Dr. Gustav Jebsen as Vice President of this corporation is hereby authorized, directed, and empowered to take all such steps as in his judgment may be advisable to effect a modification of said contract so as to include Poland and Portugal and, in his discretion, Italy in said designation "Territory of Titangesellschaft", employed in said contract.

On motion duly made, seconded, and carried, it was duly and unanimously

RESOLVED, that the officers of this corporation be and they hereby are authorized and directed to reimburse Titan Co. A/S from time to time for such proportion of the salaries of its employees and employees of A/S Titania as corresponds to the services rendered by such employees in the business of this corporation, and that the total increase in annual salaries of the employees of said companies in the amount of fourteen thousand Norwegian Kroner (Kr. 14,000), as submitted by Dr. Jebsen at this meeting, in so far as it affects this corporation under the above authorization, be and it hereby is approved.

There being no further business, on motion duly made, seconded, and carried, the meeting duly adjourned.

Letterhead of

SOCIÉTÉ MINIÈRE & INDUSTRIELLE FRANCO-BRÉSILIENNE

Paris, le 24th December 1925

EVANS McCARTY ESQ.,
Vice President of the United Lead Co.,
111 Broadway, NEW YORK.

CONFIDENTIAL. Dear Mr. McCarty,

Confirming my letter of the 13th ult. Mr. White is still in treaty with the Brimsdown Company. He has just informed me that Hopkin & Williams do not wish to part with any of their preference shares and he has asked me if my Company would consent to sell to the Brimsdown its 10,000 preference shares, being half of the preference Capital of the Company.

My co-Directors here being all on leave and having to consult also our Brazilian colleagues, I will not be able to decide before beginning of next month, but my personal opinion is that owing to the present exchange rate of the franc, our Company would perhaps have interest to sell its shares at £2.—keeping only its ordinary shares.

I wonder how the Brimsdown Co. has the financial means to make this purchase. I suspect that the Auer Co., which is said to control already the Travancore Minerals Co., expects to get also the control of Hopkin & Williams Travancore Co. in order to control also its monazite and zircon production, but this cannot harm the interests of our Company as our monazite and zircon deposits are far more important than the Indian ones.

Exhibit 52

Should the question of purchase of these 10,000 preference shares interest your Company, you could send us a cable and I would ask Mr. White if the Hopkin & Williams Travancore's Board would approve a transfer to your Company or to an English firm representing the interest of your Company as the Board has the right to refuse transfer. Of course, such purchase should give you the control of the ilmenite production.

With my renewed best wishes to you for the coming Year,

I remain, dear Mr. McCarty,

yours very truly,

EMILE LOBSTEIN.

Exhibit 53

January 8, 1926

MR. EMILE LOBSTEIN
Societe Miniere & Industrielle Franco-Bresilienne
20, Boulevard Montmartre, Paris, France

DEAR MR. LOBSTEIN:

I am very much interested in your letter of Dec. 24th regarding the possible sale to us of your preference shares in Hopkins & Williams (Travancore) Ltd., and have just telegraphed you as per copy enclosed.

The Brimsdown Lead Company is now owned by the Associated Lead Manufacturers, Ltd., a very strong and well financed company. As stated in my letter to you of Dec. 28th, I do not see how they can carry on successfully the business of manufacturing titanium pigments on a commercial basis without infringing the patents owned by the Titanium Pigment Co., Inc., or the Titan Company.

As stated in my telegram, I think that the Titanium Pigment Co. would be interested in the purchase of your preference shares in Hopkins & Williams (Travancore) Ltd., provided such purchase would give them the control of the present stock of ilmenite and the future production.

I hardly know enough about the present position of the Company to know whether or not £2.0.0 per share is a fair price. A memorandum made when you and I discussed this subject with Mr. White in London in 1924, states that the properties, leases, etc. stand on the books at £41,000, and that the Company had on hand at that time 3,000 tons of Monazite valued on the books at £12.0.0 per ton. At that date, advances to the Company amounted to £25,000 including directors fees renounced by the directors amounting

to £9,000. We do not, however, know what changes may have taken place in the Company's position since that time. We would also be interested in learning whether the preference shares have any voting rights, and if so, under what conditions. Inasmuch as you do not mention the common shares held by your Company I assume that you do not care to sell them at this time.

It is immaterial to the Titanium Pigment Company whether title to the shares be taken in the name of an English or an American corporation.

Hoping to hear further from you regarding this matter, and thanking you for bringing it to our attention, I am, with kind regards,

Yours very truly,

Vice President

P. S. Are dividends being paid on the preference shares, and if so, at what rate?

---

20 Boulevard Montmartre—
Paris, le 1st April 1926

Evans McCarty Esq.
Vice President of the United Lead Company,
111, Broadway, NEW YORK

Dear Mr. McCarty,

I beg to confirm my letter of the 12th ult.

I inform you confidentially that the Brimsdown Co. has purchased our preference shares at the price of £2 per share which we had fixed.

I regret that I have not been able to secure for your group the control of our friends' deposits of ilmenite to which our purchaser attaches a great importance.

Our Directors in Brazil inform us that the Works have been disturbed by torrential rains.

We have received last week a cable from the Director of our Works informing us that the stock amounted to 900 tons and that he expected to produce 500 tons till end of April, and our Directors cabled that bags were on the way to the Works, that they could not ship in March but would ship on the 11th April.

I hope that there will be no new delay.

With kind regards, I remain, dear Mr. McCarty,

Yours very truly,

SOCIETE MINIERE & INDUSTRIELLE FRANCO-BRESILIENNE
Le President

s/ EMILE LOBSTEIN

Exhibit 56

April 16, 1926

Mr. Emile Lobstein, President
Societe Miniere & Industrielle Franco-Bresilienne
20 Boulevard Montmartre
Paris, France

Dear Mr. Lobstein:

I beg to acknowledge receipt of your letter of the 1st inst. and note that the Brimsdown Lead Company has purchased your preference shares in Hopkins & Williams (Travencore, Ltd.) at £2.0.0 per share, and presume that the Brimsdown Company has also purchased the ilmenite which Hopkins & Williams had on hand.

Your interest in attempting to secure this material for us is very much appreciated. I am not sure that the Brimsdown Lead Company will be successful in their proposed attempt to manufacture titanium pigments, and it may be that we will have another opportunity to purchase the Hopkins & Williams ilmenite should we care to do so at that time.

We have received a cable from your office in Brazil informing us that 500 tons of ilmenite would be shipped this month on the S/S "Manchurian Prince", and we are hopeful that shipments will be made regularly from now on.

We have not as yet received the map of Guaraparie harbor which you promised to send us so that we have been unable to do anything toward chartering a vessel to carry bulk cargoes.

With kind regards, I am,

Yours very truly,

Vice President

Exhibit 57

Letterhead of

SOCIÉTÉ MINIÈRE & INDUSTRIELLE FRANCO-BRÉSILIENNE

Paris, le 24th September 1926

Evans McCarty Esq.,
Vice President of the United Lead Co,
111, Broadway, NEWYORK.

Dear Mr. McCarty,

I hope you had a pleasant trip home.

We have received advice of the shipment of 294 tons ilmenite shipped on the 1st August on s/s "Campos" and 205T980 shipped on the 20th September on s/s "Camamau".

I informed you that we have secured again the directorship of our Works by our former Director, Mr. P. Barrozo; he has only been able to take charge of the Works beginning of this month and we hope that he will secure now regular shipments.

We have transmitted to our Directors in Brazil your wish to receive a chart of the port of Guarapary as soon as possible.

Our Company is presently completing an agreement with the Auergesellschaft which will stabilize the prices of our rare earths products. At the exchange, shares of our Company which had been neglected last month are again in sensible demand.

I am, dear Mr. McCarty,

yours very truly,

EMILE LOBSTEIN

Exhibit 58

October 8, 1926.

Mr. Emile Lobstein, President
Societe Miniere & Industrielle Franco-Bresilienne
20 Boulevard Montmartre, Paris, France

Dear Mr. Lobstein

I have your letter of Sept. 24th which crossed mine of the same date, and note that your new director Mr. Barrozo was not able to take charge of the work until Sept. 1st. I hope that he will soon have the situation in hand, and be able to make regular shipments of ilmenite.

Referring to your comment regarding the shares of your Company, I will appreciate it if you will let us know if anything develops in that connection that you think would be interesting to us. I have in mind your statement to me that it might be quite possible to secure a sufficient number of shares so that between your interests and our own we could control the Company. Any time that you have anything definite to suggest in regard to that matter, we will be glad to consider it.

With kind personal regards, I am,

Yours very truly,

Vice President

Exhibit 59

Letterhead of

SOCIÉTÉ MINIÈRE & INDUSTRIELLE FRANCO-BRÉSILIENNE

Paris, le 22nd October 1926

EVANS MCCARTY ESQ.,
Vice President of the United Lead Co.,
111, Broadway, NEW-YORK.

DEAR MR. MCCARTY,

I duly received your favours of 24th ult: and 8th inst.

We have not yet received any letter from Mr. Barrozo since he resumed the directionship of our Works. On the 9th inst. we received a cable from Mr. Pierre Lobstein who was, as I told you, Director of the Works on account of the Syndicate, advising us that his return back to France was postponed owing to the absence of Mr. Barrozo, we concluded from this cable that the arrival of Mr. Barrozo had been delayed.

We have been advised by our co-Directors at Rio that they sent you under registered cover on the 13th ult. the charter of the harbour of Guarapary; we hope that it will convince your shipping Agents of the possibility to enter into the port.

Our Company still recently bought the warehouse and wharf belonging to Mr. Borges alongside which formerly came 1200/1500 tons steamers. This wharf is a few hundred meters far from our works with which it is connected by railway and shipping in bulk or in bags is very easy.

Our Directors in Rio wrote to us that unhappily small tonnage steamers do no more arrive in Brazil, coal ships

Exhibit 59

and Lloyd Brazileiro's steamers have from 4,000 to 5,000 tons and are then too large to easily work in the port.

If the charter you have received confirms that the depths are sufficient, we are convinced that in acquiring a 1500 tons steamer freight would be very cheap and bags would be spared.

I answer to the part of your letter referring to shares of our Company. In our meeting of 28th July last, I mentioned to you the rather important purchases made by an American Bank and that it seemed likely to me that your Company and Auer Company alone were interested in these purchases.

I told you that with the former capital of our Company of Frs: 4.000.000, divided into 40.000 shares—out of which 30.000 capital shares not reimbursed and 10.000 reimbursed shares—, the Directors' group and their friends had up to now controlled the Company, but with the issue of 50.000 new shares the situation could be modified. You told me that your Company would perhaps foresee the purchase of shares in order to reinforce the position of the leading group.

The market of our Company's shares having been nearly void during the holidays' period, I could not give you any new information about the buyers' group.

From information which was given me since beginning of this month, there were uninterrupted transactions at the rates of 220 to 230 Frs. for capital shares; owing to the general reaction of the Stock Exchange they have fallen to Frs: 210.—but it is most probable that they will rise again.

I have been told that considering the great division of shares, it seems impossible to be able to obtain some thou-

sand shares on the market unless to pay for them much higher prices, but that it would perhaps be possible to get 10.000 shares which belong to a group who would perhaps decide to make a sale in order to realize an immediate profit if they can obtain a sufficient price which I was told would be about 250 Frs.

I believe that if your group possessed on its side 10.000 shares, we would have practically the control of the business of the Company.

I send you herewith Statutes, report and balance sheet of our Company up to 31st December 1925. Our Assets in Brazil which are mentioned on this balance sheet for Frs: 1.186.000.— had been redeemed for more than Frs: 600.000.— and these Assets of Frs: 1.800.000.— are at their value estimated before 1914; we have since the settlement of this balance sheet reimbursed 112 contos of reis to the Syndicate which had undertaken the works on account of our Company.

As to our Assets in France, they can be considered nearly for the whole as Gold Assets.

As I told you, since the increase of its Capital, the Company has reimbursed all its debts; it now has an easy treasury and it realises satisfactory profits from the manufacture of various chemical products. I let it to you to examine whether it may be convenient for your Company to acquire this important lot of shares in case it should be possible to obtain it.

If your Company is willing to conclude the purchase of these 10.000 shares which I am told to be eventually free for sale, I am at your disposal to have the business negociated with the Bank which you would design to conclude this purchase. But owing to the uninterrupted demand

which exists on the shares of our Company and on the other side the interest you may have to take advantage of a favorable rate of exchange of the dollar, it is necessary that your Company should hurry to take a decision and charge me even by cable to make a purchase proposal.

With kind regards,

yours very truly,

EMILE LOBSTEIN

Exhibit 60

November 3, 1926.

Mr. Emile Lobstein, President
Societe Miniere & Industrielle Franco-Brasilienne
Paris, France

Dear Mr. Lobstein:

Many thanks for your very interesting letter of October 22nd with enclosures.

Other matters have prevented my giving these documents the study and attention which their importance warrants, and I am, therefore, unable to give you a quick decision in the matter. The subject is of interest to us, however, and will have our serious attention.

I regret to have to tell you that the chart of the Guarapary harbor which your directors at Rio informed you was sent under registered cover on Sept. 13th has not been received either by the Titanium Pigment Company or myself. This is unfortunate as nothing can be done toward chartering a small steamer until we have the necessary information regarding the harbor.

I am sorry that Mr. Barrozo's return was delayed, and hope that under his management there may be an important increase in the production of ilmenite. The Titanium Pigment Company is not in immediate need of supplies, but it will be more satisfactory for you and for us to have a larger production.

Thanking you for your suggestion with respect to the possible purchase of a block of shares in your Company, a matter to which I will return at the first opportunity, I am, with kind personal regards,

Yours very truly,

Vice President

6683

Exhibit 61

Dr. G. Jebsen

Berlin,
Hotel Der Kaiserhof
March 4, 1927

Evans McCarty, Esq.
c/o United Lead Co.,
111 Broadway,
New York, U. S. A.

Dear Mr. McCarty:—

I left Norway, as intended, Saturday the 19th of February and called at Mr. Warburg's office, Hamburg, Monday, using the opportunity at the same time also to see our representatives in Hamburg, Messrs. Christensen, Schwartz & Co., 40, Jungfernstiog. I left Monday night and arrived in Paris Tuesday afternoon. Mr. Lobstein was interested to know whether we had talked together about his propositions regarding the acquisition by the National Lead Co. of shares in his Company. I told him that we had not discussed it much and that I had understood that you had written to him about the matter. I gave him to understand that you considered the situation with regard to his deliveries of ore unsatisfactory and that you also were awaiting information as to the export harbour near his mines. He said he had sent you a chart of the harbour. He was, of course, very interested with regard to the position the Titan Co. will take as to the purchase of the shares in Société Industrielle du Titan belonging to the group of Société Minérais et Métaux.

I negotiated that matter with Mr. Morigeault on the basis of the balance sheet of the Company of the 1st of January of this year. You remember perhaps that this Com-

pany has a share capital of 10 Million Francs, of which 2½ Million Francs are paid in. The Company has operated since the 4th of July 1925. Its profit and loss account shows a loss of about 285.000 Francs. Further appears under the assets "Frais de Constitution" to an amount of 136.000 Francs. Further grinding machinery and a shed to the amount of 111.000 Francs. The rest is working capital.

In the balance there are 500.000 Francs in banks and on the other hand the Company owes to the Société Minérais et Métaux 1.200.000 Francs. The Company has a stock of raw material for more than necessary which, however, stands in the balance at reasonable prices, that the realization of the stock under the present circumstances is calculated to give a surplus of about 80.000.—Francs after deduction of general expenses and interest on the loan, the realization to take place in 3 to 6 months. A dissolution of the Company will probably bring the shareholders loss of between 400.000 and 500.000 Francs on the paid in amount of 2.500.000 Francs giving 2.000.000.—Francs or 20 francs per share, on which 5 Francs have been paid in. I offered this sum of 20 Francs per share to Société Minérais et Métaux and the transaction to take place at once. Mr. Morigeault pointed out, however, that when we will continue with the Company, the "Frais de Constitution" of 136.000.—Francs and the sum of 111.000 Francs paid for publicity, which were transferred to the profit and loss account, could not be considered losses, neither would there be any realization of the machinery and the shed, and also the work done represented a certain goodwill, wherefor 25 Francs per share should be a reasonable price. I told him that I had not made up my mind whether to continue with this Company or to dissolve it and start on an entirely

new basis. I reminded that when Société Minér is et Métaux entered into the arrangements with Lobstein, I had frankly asked him and Mr. Vincent on what basis they were interested in this matter, as I could not see that they had any special reason for taking up the development of this industry. They had, however, assured me about their interest and out of loyalty to Mr. Lobstein and his group, who were desirous to have this arrangement done before the expiration of the contract of 3 years of co-operation which we had with Mr. Lobstein—I agreed to certain alterations in order to enable the arrangement to be done. I told him further that it was not my intention to complain about the change of attitude, which Société Minérais et Métaux had taken, as I was convinced that Mr. Vincent and Mr. Mérigeault had gone into the enterprise in perfectly good faith and that it was only later that they had found out that the enterprise was not in their line being much more of a chemical industry than a metallurgical one.

But anyhow, the result was that they had placed us in an inconvenient position leaving us with the Company and bound to certain arrangements, which may make it more difficult for us to find other co-operators in France, if we wanted this. On the other hand, if we dissolve the Company, we will be free and can take up negotiations on a clear basis. I told him further that the Société Minérais et Métaux had reserved for themselves the right of support from the other shareholders until the end of June, if they wanted to dissolve the Company, I would ask him that our agreement should be arranged so that there would be still an opportunity of using that right and that I was willing to pay 25 Francs per share, if we did not make use of that right to dissolve the Company. After some considera-

tions on the part of Mr. Mérigeault he preferred then to have the price for the shares

a) in the case of the dissolution of the Company fixed at 21 Frcs. per share,

b) in the case of the continuation of the Company fixed at 24 Frcs. per share, which I agreed to.

I enclose a copy of the contract, from which you will see that the transaction has to take place on July 1st, 1927 and that the Société Minérais and Métaux sells us 50.000 shares; with which follow 16667 "Parts de Fondateurs" (1 part de fondateurs on 3 shares). Further we will probably also get in 2500 shares from 2 smaller shareholders of his group, and we have also taken the obligation to buy what may be offered us of 12.500 shares, which Société Minérais et Métaux desires to protect. Together with those shares follows also the corresponding quantity of "parts de fondateurs". We will have to inform the Société Minérais et Métaux within the end of May whether we wish the Company dissolved or not, in order to enable Société Minérais et Métaux to take the necessary steps with regard to the general meeting, etc., before the end of June, or exactly before July 7th.

In the meantime the Company will operate as hitherto, and Mr. Mérigeault has kindly offered in the management of the Company to follow my advice. The Company's activities at the present moment are practically only a development of the market, and as Mr. Gilbert is the selling agent and also a member of the Board of Directors, he will in reality be the man of activity in the Company under the present circumstances. I have talked the programme for the operation over with him, and it is understood that he

Exhibit 61

and Mr. Mérigeault will co-operate. I have not told Mr. Lobstein and Mr. Gilbert about my arrangement with Mr. Mérigeault with regard to the shares, but only informed them that no definite decision is taken; Société Minérais at Métaux are willing to leave the question open 3 to 4 months which suits us well, as we are not prepared at the present moment to decide about the future management of the Company.

I am afraid that you will find this very complicated and that I trouble you with a considerable amount of details. My excuse is that I presume it is better to give you rather too much than too little information, and the whole situation over here is naturally complicated during the interval, until the National Lead Co. has taken over the Titan Co. shares and more definite lines are drawn up for our policy in Europe. In short, the decision with regard to the French situation is postponed as far as it can be done.

However, if we are not able within the middle or end of May to definitely decide what should be done in France, I think we will have to take over the shares on the basis of a continuation of the Company, and if we want after that time to make arrangements with any other group in France, the basis for an arrangement with Lobstein and his group will not be so good.

In order to resume the position in France with regard to the future, I beg to put down the following:

In favour of a continuation with Lobstein's group on the present basis speaks the following:

(1) We keep a certain control on the mines of "Franco-Brasilienne" through our contracts, the practical lines of which you are already informed about.

(2) The possible interests of the National Lead Co. for "Franco-Brasilienne".

(3) The avoidance of a dissolution of Société Minérais et Métaux.

Against the continued co-operation with Lobstein and his group on the present basis speaks the following:

(1) The group of Lobstein has not a technical and administrative organization of much value. The have one chemist, M. Sequard, who is very good for laboratory work of a high quality, and is probably of much value for their own chemical problems and may be useful to us, but that is all.

(2) Mr. Lobstein is a man of 76 years of age, and the Company has nobody to take his place when he retires.

The selling organization of the "Franco-Brasilienne" is represented by Etablissement Gilbert, which is the sales agent for the Ste. Ind. du Titane, and which, I think, will be available to us anyhow.

In a later letter I shall write you more with regard to the elements of a future organization as they exist at the present moment.

We have nobody able to take the whole management, and the development of an organization in France will probably demand a lot of my personal attendance. However, once formed, we will have an organization we can handle ourselves and which may in time be useful also in other respects for the National Lead Co.

It will though mean a slower development than if a satisfactory arrangement can be made with an important existing organization.

During my negotiations with Mr. Merigeault, he offered his advice as to which groups he considered of in-

Exhibit 61

terest to cooperate with in France. He mentioned St. Gobain and Kuhlmann, but considered St. Gobain too little active, whereas Kuhlmann is very progressive.

I have always considered that Kuhlmann may be of interest because of its importance as a chemical industrial firm, and would probably have approached them a year ago, if Minerais et Metaux had not entered into the arrangement with Franco Brasilienne.

Of more interest from my conversation with Merigeault was however that he mentioned also Pissard and referred to him several times.

Pissard is, as you perhaps know, member of the Board of Minerais et Metaux and Mr. Vincent is a member of Pissard's French firm Ste. Couleurs. Although Merigeault said that he had not talked with Pissard, I can not entirely dismiss the thought that Merigeault acted on more than his own mind.

I mentioned to Merigeault Pissard's approach to you some years ago and said to him further that I was willing to discuss the question with Pissard, to see if an arrangement could be of mutual interest, but I would not call on Pissard on my own initiative. Mr. Merigeault was willing to talk to Pissard and write me.

In view of your mention of Pissard last time in New York, I thought, a conversation might be of interest, and it will not oblige you or me in any way.

During my negotiations with Merigeault I did not mention your purchase of the shares in the Titan Co., but I should not be surprised if they have an inkling of it. An arrangement with Pissard or Kuhlmann will probably lead to quicker results, but then we will be dependent on these cooperators and not be our own masters in the industry in France.

610

Exhibit 61

I have been trying to give you the position without having made up my mind—what to advise to do. The situation is not cleared up sufficiently to have a definite opinion. The German situation is also to be considered in this connection. I am, however, afraid that the time from now until the end of May will be too short to have the situation as clear as desirable with regard to the question of a dissolution of Ste. Titane, if an arrangement with Pissard or Kuhlmann shall be considered seriously. Negotiations in Germany and France simultaneously, with the question of the concession from the Norwegian Government and the management of the Titan Co.'s current business can probably not be carried so far in three months—especially when I have just been away 2½ months in U. S. A., and when, moreover, your opinion and decision is wanted.

I am trying to keep you informed as things advance step by step and will appreciate very much to hear from you as soon as possible.

I write you another letter to-day, with regard to the German situation.

Mr. Thomsen was very satisfied with the sales in England last year, showing an increase of 61% above 1925.

In France the sales in 1926 were only very little above the previous year, as the exchange situation in the last part of the year had a very bad effect. Mr. Gilbert meant that Titaniumwhite has a good reputation in France as a product of high quality, but the tendency goes to the cheapest possible products at present and the trade has altogether been bad because of the exchange.

With kindest regards,

Yours very truly,

G. JEBSEN

Kindly excuse the appearance of these letters, but they were written by various typists in a typewriting office.

Exhibit 62

March 18, 1927

DR. G. JEBSEN
Titan Co. A/S
Fredriksstad, Norway

DEAR DR. JEBSEN:

I have time this afternoon for only brief comment with respect to your letter of March 4th regarding the position in France.

The situation is, as you say, quite complicated and it will take a little time to digest the information your letter contains. Apparently as a result of your conversations in Paris final decision with regard to the French company can be postponed for several months.

Should it be necessary, however, to make a decision in the meantime I would be inclined to favor taking over the shares of the Societe Minerais et Metaux and continuing the Societe Industrielle du Titane. This would at least insure the continuity of the business, and probably leave you in almost as good a position to deal with other interests as you would be if you dissolved the company. In this case as in other matters, however, we would, of course, be guided by your advice.

I find it a little difficult to form an opinion with respect to the desirability of an association with Mr. Pisart. He is an old acquaintance, and a very capable man, and his company is a very important one. On the other hand, his interests in lithopone are so large that it might be difficult to find a common interest. I hope to see him sometime during my visit to Europe, and to talk over the position with him. In the meantime, however, I see no reason why you should not talk with him if the opportunity offers.

Exhibit 62

March 18, 1927

DR. G. JEBSEN

The firm of Kuhlmann is unknown to me, but I judge from your letter that they are chemical manufacturers of some importance. Copy of the contract for the purchase of the shares owned by the Societe Minerais et Metaux was not enclosed with your letter, but will probably follow by a later post.

I was very much pleased with the conditions I found in the St. Louis factory when I was there last week. The product is now of exceptionally good quality, and very uniform. Costs are being reduced, and as our sales are not quite up to production it has occurred to me that we might find it advantageous to ship some of the product to Europe during the summer instead of waiting for the German factory to be completed. This is a matter you might keep in mind although you perhaps will not want to come to a decision regarding it until you have Mr. Washburn's opinion as to the possibilities of the Norwegian factory, particularly in view of your new Blanc Fixe process.

I have also a long letter from Mr. Lobstein to which I will reply next week, and to which I will refer in my next letter to you.

With kind regards, I am,

Yours very truly,

.....

Vice President

Exhibit 63

COPY

November 4, 1927

Dr. G. Jebsen
Societe Industrielle du Titane
23 Rue Ballu, Paris, France

Dear Dr. Jebsen:

Mr. Pisart has been in New York for several weeks, and is returning to Europe tonight on the Majestic. He called on us here one afternoon a short time ago, and we had a very interesting talk on the subject of the sale of titanium, lithopone and other pigments in Europe.

He appeared to have two points in mind; first, the sale of zinc oxide to the Titan Company and the Societe Industrielle du Titane, and second, the possible use of his manufacturing and distributing facilities in France, Belgium and Holland for the sale and distribution of titanium pigments.

With respect to the first point he stated that while the Titan Company and the French company bought some zinc oxide from his companies he did not furnish your entire supply, and that he would like very much to make a contract with you to supply the entire requirements of the two companies on a sliding scale of prices on the market at the time of shipment.

He further stated that owing to the fact that the Titan Co., was a customer his people had so far refrained from selling Trimetal which, as you know, is a combination lithopone and zinc oxide paste, in Scandinavia, and that they would continue to leave this market to you if you would

purchase your zinc oxide exclusively from them. If, however, they did not enjoy your entire business he felt that they should be at liberty to offer their paste products in Scandinavia.

I do not know all of the circumstances; but from the information at hand it seems to me that it will be in your interest to accept Mr. Pisart's proposal.

With respect to the second point, Mr. Pisart pointed out to me that beside his two grinding plants, one in Paris and the other in the north of France, he had some thirty depots in France from which his products were distributed, and that he felt that they would not only be able to grind titanium pigments for us on an advantageous basis, but that his distributing facilities were infinitely better than anything that Mr. Gilbert could develop for many years.

When I spoke of the possible conflict of interest between lithopone and titanium he reminded me that his Belgian company Stella had ground important quantities of our white lead for many years with entire satisfaction to both parties to the transaction. He also stated that he had discussed with Mr. Vincent the possibilities of manufacturing titanium pigments at his (Pisart's) lithopone plant in the north of France where he has a sulphuric acid factory and an ample supply of black ash available. This situation would also apply to the lithopone plants in Holland and Belgium.

He stated that he was prepared to manufacture titanium pigments for us or, if we preferred, to enter into some joint arrangement similar to the one we have made with the I. G. There are, of course, two sides to such a proposal, but it is nevertheless one to which I think we should give very careful thought.

Exhibit 63

I told Mr. Pisart that while personal association with him would, of course, be very agreeable to us there was a possibility of a conflict of interest, and that we would not like to give him a definite answer immediately. I further told him that our titanium interests in Europe were under your management, and that we would depend upon you for advice in all matters of this kind, adding that I would write you at the first opportunity asking you to make arrangements to meet him at some time and place that suited your mutual convenience and discuss the whole position. This I would strongly recommend you to do.

You may develop relationships that will be profitable for both, and in any case you will find Mr. Pisart a very interesting and delightful man.

Yours very truly,

Vice President

Exhibit 64

Letterhead of

TITAN ~~CO.~~ A/S

Fredriksstad, April 8th 1927.

GJ/EH

Evans McCarty Esq.
c/o United Lead Co.
111, Broadway,
New York.

Dear Mr. McCarty,

I received your telegram today as follows:

> "Referring to my letter of 25th March can you tell
> "me when I shall be needed in Norway information
> "desirable in order to make other engagements,"

and have answered you as follows:

> "Believe best time your arrival Norway between
> "15th and 20th May and probably see IG ultimo May
> "stop "Kühne telegraphr proposal agreement sent me
> "and ask me come Leverkusen about 20th April as
> "he leaves 23rd April for 4 weeks."

I propose the above date of following reasons:

1) If there should be any question of doubt with regard to the conditions for the concession, your arrival between the 15th and 20th of May will be of much value.
2) Mr. Hallett will probably have been able to finish his report.

Exhibit 64

3) Referring to my letter of yesterday, Dr. Kühne returns about the 23rd of May and consequently the end of May or beginning of June will be a suitable time to negotiate with them, which will be facilitated in case you have been in Norway and looked over the situation here beforehand and you may find time to take a part in the negotiations or anyhow talk matters over with me.

4) We may also have a talk with regard to the French situation before the last term for decision as to Société Industrielle du Titane, which is the end of May, although I believe the best thing to do is to follow your view in your letter of 18th of March, i.e. to continue with the company.

5) From your interesting letter of 25th of March, for which my best thanks, I understand that this time also will suit you.

Possible arrangements regarding the future of the Titan Co. I presume can be talked through and fixed during your stay and carried through without troubling you to come to Norway again—the actual receipts of the shares against payment do probably not need your personal presence.

I have noted with much interest, that a member of your auditing staff is now in Hamburg and believe it will be a very good thing if he will visit us with regard to the mentioned examinations of the books. I hope that our Mr. Knudsen at the same time can have the opportunity to talk over with him any questions of interest with regard to the future book-keeping and the reports you wish to have in future.

Exhibit 64

Any suggestions as to simplifying and modernization of the book-keeping I am sure Mr. Knudsen will receive with interest.

If you will let us know in time when we can expect his visit, we shall arrange matters to facilitate his work as far as possible.

We make up a raw-balance every month and it is ready in general about 4-5 weeks after the end of the month. In case of necessity and if it is known sufficiently in advance, we can have it done earlier, probably within about three weeks.

With regard to Mr. Washburn I beg to write you a little later, as I do not see quite clear at present when his visit will be most useful. I think anyhow that it is desirable that he finishes his work with the ilmenite from Sogndal before he leaves and I will be obliged if you will arrange to send us the results soonest possible. His visit will especially be of interest with the view to the factories to be erected in Germany and France. If the experiments in St. Louis give a satisfactory result, this question will be simplified.

With kind regards,

Yours very truly,

G. JEBSEN

619

Exhibit 65

Paris, June 18, 1927.

Mr. E.J. Cornish,
President,
National Lead Company,
111, Broadway,
NEW. YORK.

Dear Mr. Cornish,

I am enclosing copy of a cable sent you from Hamburg on Wednesday of last week. I thought that the information would be of interest both to you and to the Board.

To state the arrangement briefly: a German company is to be formed, in which the "I.G." and ourselves will each hold a half interest. The Company will be registered with an initial capital of 500,000 Marks, but this amount will of course be insufficient for the Company's business, and additional capital will have to be supplied by increases in the capital stock, or by loans to the Company, as may seem best.

The "I.G." will lease to the new Company a factory located on its own property of Leverkussen, near Cologne, and will supply to the new Company Sulfuric acid and such other necessary materials as it manufactures, at factory cost plus 10%, and will sell the product of the new Company through its various branches at an agreed upon commission.

The "Titanium" Company will supply ore from its mine in Norway on an agreed upon basis, and give the new Company an exclusive license in the territory assigned to it under its patents.

6:20

Exhibit 65

A very valuable part of the arrangement is a continuing option or "call" given to the "Titanium" Company on ½ of the product of the new German factory for shipment outside German territory at actual factory cost.

If, as now seems possible, Germany is going to be the cheapest place in the world to manufacture "Titanium" products, this provision in the arrangement is likely to be of great value.

Dr. Jobsen and I visited the works of the "I.G." at Leverkussen on Friday of last week and had a very interesting day. The plant occupies between 1½ to 2 square miles of ground, and employs about 12.500 workers. With the limited time at our disposal, we confined our visit to the heavy chemical department in which we were especially interested.

To give an account of the day would be rather a long undertaking which I will defer until my return. Mr. Warburg did not participate in our conference with the "I.G." people in Hamburg, but his influence had been very helpful in preparing the way. Dr. Jobsen has, I think, handled the negotiations very skillfully.

A year or two ago a Company was formed in France to exploit the business in this country, and 25% of the capital was paid in. The business has not, however, reached a tonnage that would warrant building a factory. The Titanium Company's interest in the French Company was originally a small one, but an opportunity was afforded this year to acquire 50% of the shares which had originally been subscribed for by Société des Minerais et Métaux, a Company whose interests as you know are principally in the metal business, and had no real interest in the Titaniuin Pigment business.

Exhibit 65

Under the present circumstances, I agree with Dr. Jobsen that the Titanium Company should acquire these shares, and arrangements have been made to take them over this week. When this transaction has been concluded, the Titanium Company will own a majority of the shares in the French Company.

It is not probable that we shall fish the Titanium Company to continue to hold the shares in the French and German Companies, and arrangements have been made permitting the Titanium Company to transfer these shares either to the National Lead Company, or to some other Company formed for this purpose.

A telegram was received from Norway on Saturday stating that the by-laws of the Titanium Company had been changed; and the certificates and other documents delivered to the bank in Oslo. Payment will be made to-day.

The foregoing will, I think, give you a fairly good idea of the position as it is up to date, and I will not burden you with a general letter now.

With kind regards,

I am,

Yours respectfully,

Exhibit 65

Copy of Telegram

Leadco New York.

Cornish reached satisfactory agreement with I.G. Stop Jebsen and I visit their plant near Cologne Friday. Papers ready for signature next week Initial capital German company 500,000 Marks First payment 25% Titanco will also take up 50% shares French Company Requiring one million five hundred thousand francs Has funds on hand for payments. Will need advances later on stop Dolm Hotel COLOGNE Friday Paris next week.

Regards. McCarty.

Exhibit 66

Dr. G. Jebsen
Titan Company A/S
Fredriksstad, Norway

August 18, 1927

Dear Dr. Jebsen:

On my return to the office I found a long letter from Mr. Vogt under date of July 29th enclosing translations of various documents in connection with the claims of the Fredriksstad Privatbank and Elektrokemisk against the Titan Company. Mr. Vogt's letter deals with these transactions in detail, and the whole position seems now to be in order.

We have also received from den Norske Creditbank a final statement of sums expended for our account. The statement, however, covers only transactions up to and including July 15th, and a separate statement will have to be rendered for any transactions after that date.

I am enclosing copy of my reply to Mr. Vogt's letter which explains itself.

Mr. Vogt's services as counsel for the National Lead Company terminated with his election as a Director of the Titan Company, and we shall, of course, leave in your hands all questions relating to the services he may be expected to render as a Director, and also any legal services he may render which cannot properly be considered his duties as a Director in the Company. I am very much pleased with the way in which our business has been handled by Mr. Vogt, and am glad that he is to continue to be associated with us.

I am also enclosing copy of a letter just at hand from Mr. Lobstein and copy of my reply. I presume that the Auer Company is the German group referred to in the last paragraph of Mr. Lobstein's letter.

624

Exhibit 66

After considering the matter carefully we have come to the conclusion that it will be better for the National Lead Company to hold the half interest in the Titan Gesellschaft and the shares of Minerais et Metaux in the French company in its own name, and I, therefore, telegraphed this information to you yesterday as per copy enclosed. Please advise us when the first payment in connection with the Titan Gesellschaft is required, and remittance will be made promptly. The Titan Company has already paid for the shares in the French company which were held by Minerais et Metaux, and if you will send us a memorandum of the amount paid we will send you a check to reimburse you. I think that there is no immediate hurry to transfer to the National Lead Company the shares in the French company which were originally subscribed for by the Titan Company although we may wish to do so later.

You will be interested to learn that the price of Titanox in the United States has been reduced to ten cents per pound. It is, however, too early to tell what affect this reduction will have upon the volume of the sales. I am arranging to send a small shipment of Titanox to Greeff & Company in London as Mr. Thompson is very anxious to have some of our product there to submit to certain custombers for trial. I do not know just what price I will be able to arrange with Mr. Meredith, but will advise you later when the matter has been settled. As the first shipment will probably not exceed five tons the price is not really a great matter.

With kind personal regards, I am,

Yours very truly,

Vice President

Fredriksstad, September 6, 1927.

Mr. Evans McCarty,
Vice-President,
National Lead Company,
New York.

Dear Mr. McCarty,

On my return to Fredriksstad yesterday, I received your letter of August 18th, for which my best thanks.

I am glad to note that you are satisfied with Mr. Vogt's work.

Franco-Bresilienne

I have noted the contents of your correspondence with Mr. Lobstein. If matters develop so that the contract for ilmenite over a period of years should be seriously considered, it may be wise also to consider at the same time the restrictions regarding deliveries to titanium manufacturers which Franco-Bresilienne accepted in 1922.

Societe Industrielle du Titane has the exclusive right to deliveries in France; but if this company only takes its supplies from Norway, we do not know what attitude Franco-Bresilienne will take. I also presume that it is the "Auer" Company to which Mr. Lobstein has referred.

The Agreement of October 18, 1922, between the Titan Co. and Franco-Bresilienne contains the following stipulations regarding deliveries of ilmenite:

Exhibit 67

Extract Art.IV

The Titan Co. undertakes to furnish ilmenite to Franco-Bresilienne, leader of the participation, the mineral which it produces in Norway at the most favoured customer's price.

Franco-Bresilienne reserves to the participation for all the requirements of its manufacture of products in the licensed field the exclusivity of all the titaniferous ore which it disposes from the mines or concessions which it possesses or from the exploitation of deposits belonging to companies which it controls.

Extract Art.V

Further deliveries of mineral which the participation may need will be made under the same terms of payment by the producer, be it Titan Co., be it Franco-Bresilienne, whoever may furnish at the lowest price.

With regard to further deliveries of ilmenite which Franco-Bresilienne may make to the participation, in virtue of the exclusivity accorded to the latter for the manufacture of products in the licensed field for France and its colonies, Franco-Bresilienne will invoice these deliveries at their self-cost price, including general expenses of exploitation, amortization at 10% per annum of its installations, export duties, and a profit of 10%.

Extract Art.XIII Transformation into a Limited Company

The statutes of the limited company shall be made on the following basis:

Advantages brought by the Titan Co., consisting of: Obligation to furnish or on the conditions foreseen for

Exhibit 67

the participation; it being understood that from the date of the termination of the exclusive licenses, the Titan Co. will be relieved of any obligation of delivery of ore and will resume its entire liberty of action.

During the existence of the exclusive licenses the obligations of delivery of ore by the Titan Co. are limited to the quantities which the Titan Co. can deliver from its deposits in working order at the time the orders are passed by the company in surplus of the supply of the Titan Co.s own factories and of the fulfillment of contracts already existing at that time.

Advantages brought by Franco-Bresilienne, consisting of: The advantages granted to the participation, it being understood that deliveries of ore will be ruled by the same conditions which are stipulated above for the deliveries from the Titan Co.

Extract Art. XIV—Additional Agreements:

Subject to the conditions fixed for deliveries of ore in Art. IV, V, and XIII, Franco-Bresilienne grants to the Titan Co. during the existence of the participation and the limited company, which will replace this, the exclusive right to buy ilmenite for the manufacture of products in the licensed field for countries outside of France and its colonies which Franco-Bresilienne may dispose in surplus of the requirements of the participation or the limited company for their manufacture.

Franco-Bresilienne is free to fix its sales price to the Titan Co. for its deliveries. If the Titan Co. does not take deliveries at the minimum self-cost price, calculated as in Art. V, plus a profit of 25%, Franco-

Bresilienne can resume its entire liberty of sale for countries outside of France, but Franco-Bresilienne cannot sell its products in the licensed field under the price fixed to the Titan Co.

If Franco-Bresilienne can dispose of ilmenite quantities more than those necessary for the production in the licensed field, it keeps its liberty of sale for metallurgical uses or for products other than those in the licensed field. Franco-Bresilienne informs the Titan Co. of the sales which it effects.

May 7, 1925, in connection with the formation of Societe Industrielle du Titane, Mr. Lobstein proposed some amendments in the obligations towards the Titan Co., amongst which was the following:

"Franco-Bresilienne shall be free from all obligations of delivery of titaniferous ore and resume its liberty of action at the end of 1936, at which time the exclusive licenses under the patents of the Titan Co. in France expire."

After several verbal discussions on the matter, I wrote on June 1, 1926 (the following year) a letter to Mr. Lobstein accepting the following amendments proposed by him:

"Franco-Bresilienne is free to fix its sales price to the Titan Co. for its deliveries.

"If the Titan Co. does not take deliveries at a self-cost price, delivered from works, which includes the production costs, general expenses, amortization of materials and installations at 10% per annum; this price augmented with a profit of 25% of the total, and still augmented with 5,000 Reis per ton for amortization of

the deposits, Franco-Bresilienne resumes its full liberty of sale for countries outside of France, but it cannot sell for the manufacture of products in the licensed field under the price fixed to the Titan Co."

Further, I accepted the same stipulations as previously with regard to sales for uses outside of the licensed field and with regard to the information to the Titan Co. of its sales.

With regard to the expiration of these obligations, I proposed the term of the end of 1945.

In a letter of June 26, 1926, Mr. Lobstein accepted my proposal of the term "to the end of 1945".

He added further, that in the case Societe Industrielle de Titane should be dissolved, Franco-Bresilienne should be entirely free.

I have not answered this last letter.

I beg you to excuse my taking up your time with this detailed information; but I thought it would be well that you had a record of it.

Re Shares Minerais & Metaux

This I have dealt with in my letter of from Paris.

Re Titangesellschaft

No payments have been made yet.

The first payment will be made by the I.G. for the Titan Co. in connection with the formalities carried out by Dr. Kühne. I.G. will immediately send us a debit note, and I will inform you to pay this to the I.G. for the Titan Co's account.

Exhibit 67

A transfer of the interests from the Titan Co. to the National Lead Company cannot take place before the Titangesellschaft m.b.H. formally exists.

For following payments and further requirements of capital, we agreed that, as soon as it can be foreseen, a plan shall be worked out for payments to be made at certain intervals—both partners should then pay equal sums on an account to be arranged to this purpose, which account shall serve to cover the expenditures of the Titangesellschaft.

In another letter I shall deal with various matters concerning Titangesellschaft m.b.H., its organization, self-cost schedules, etc.

Re R. W. Greeff & Co. Ltd.

I met Mr. Thompson in Paris. He seemed to have found difficulties in increasing the price of Extra X. He proposed instead to cut the rebates both for Extra X. and Standard X. and improve the situation in that way. As this, however, does not meet the purpose to improve the relation in the prices between Extra X. and Standard X. I did not follow his proposal.

I have noted the shipment of 5 tons Titanox to London. As you say, the price of those 5 tons is not a great matter. I shall, however, be interested to know as early as possible whether the Titanium Pigment Co. will deliver us Titanox for next year at the price we can pay, as our production and sales policy for next year will be influenced by this.

Some information regarding the acquirement of the majority of the shares in Societe Industrielle du Titane and

Exhibit 67

the arrangement with the I.G. has circulated through the European Press and is said to have emanated from New York.

In a German monthly they quote "The Chemical Trade Journal" and "Chemical Engineering" London, Vol. LXXX, pages 405-406, 414 and 433, No. 2083 of April 22, 1927—an article which probably is inspired by Monk & Irwin of Montreal.

With regard to the competition, the following—which I beg you to receive as confidential information—will certainly interest you:

When last in Leverkusen, I was shown a letter from a connection of the I.G. in U.S., Mr. Albert P. Rippenbein. He has been in connection with a Mr. Chase, who tries to do something in the titanium industry and has formed a group whose members are said to be of substantial means and are members of the Commercial Solvents Corporation. There is talk of a factory to be erected in Baltimore on the basis of ilmenite from Virginia.

Mr. Schleussner, of Roessler & Hasslascher, urged Mr. R. to inform Mr. C. that his company was ready to discuss affiliation with Mr. C. in a syndicate. The Chase group has, however, all the money they can use and Mr. R. did not consider that they would be interested with R. & H. unless they can offer something of special interest.

Another man, by the name of Mr. Litter, has been authorized by the oldest white lead manufacturer in U.S.A. to attempt to arrange an affiliation with Mr. C's group. The reputation of this white lead firm should help the introduction. He offered his entire white lead business to be thrown into the titanium combination. Mr. C. says he

bases himself upon such patents that he can control all the manufacture of titanium in U.S.

Funny enough, Mr. R. considers Mr. C. to be a man whose statements should be taken seriously.

Do you know anything of this?

The above are notes which I took just before I left Leverkusen. Dr. Raspe promised to send me copies of the letters.

With kind personal regards,

Yours very truly,

G. JEBSEN

Exhibit 68

September 23, 1927

Dr. G. Jebsen, Managing Director
Titan Company A/S
Fredriksstad, Norway

Dear Dr. Jebsen:

I have your letter of September 6th, and am interested in the extracts from the contracts with the Franco-Bresilienne. Apparently the Titan Company or the Societe Industrielle du Titan has a call or option on the ilmenite produced by the Franco-Bresilienne, and in no case can the latter company sell its ilemnite elsewhere at a lower price than cost plus twenty-five percent.

You are correct in your presumption that the Auer Company is the company to which Mr. Lobstein refers in his letter. The Auer Company has offered to pay 100 mil-reis per ton for ilmenite in bulk f.o.b. Guarapary. I doubt very much, however, whether this figure is equal to cost plus twenty-five percent. The whole matter hinges, however, upon the ability of the Franco-Bresilienne to make arrangements for forwarding shipments in bulk.

If this can be done I think that the Titanium Pigment Co., will be in a position to take all of the ilmenite Mr. Lobstein's company is apt to produce, but if these arrangements cannot be made it will be very difficult for Mr. Lobstein to compete with other sources of supply. I have had no recent news regarding the shipping situation, but a number of people are working on the problem, and I am hopeful that it will eventually be solved.

The five tons of Titanox for London will not be dispatched from New York until sometime next week. I think that if the experience with this five ton lot is encouraging arrangements can be made to ship larger quantities at a

price that will be satisfactory to you, but I will write you more definitely on this point after I have had a further talk with Mr. Meredith.

The comments in the European press to which you refer were probably the result of some news items which appeared quite generally in the American papers about the middle of August. I am enclosing clipping from the Wall Street Journal which is typical.

The information received from Dr. Raspe regarding possible competition in America is very interesting.

The Mr. Chase referred to is Mr. March Chase a chemical engineer of high standing and well known to us. Mr. Chase is a man whose statements would ordinarily be taken quite seriously, but it is, of course, possible that he may be

We are also acquainted with Mr. Schleussner who is, as your letter indicates, of the firm of Roessler & Hasslascher. We had heard that the Commercial Solvents Corporation were interested in titanium, but did not know that they were one of the group for which Mr. Chase has been acting.

We are a little puzzled by the reference to the "oldest white lead maufacturers in the United States". Wetherill & Brother of Philadelphia are the oldest white lead manufacturers in this country, but their business is not large, and we would not consider that their reputation would be of material assistance in the development of the titanium business. We will be very interested to receive copies of the letters which Dr. Raspe has promised to give you.

Yours very truly,

Vice President

TITANIUM PIGMENT CO., INC.

Niagara Falls, N.Y. Jan. 20, 1926.

Mr. Evans McCarty, V. P.,
Titanium Pigment Co., Inc.,
111 Broadway
New York City.

My dear Mr. McCarty:—

In considering the policies to be adopted by this Company in the future I believe that some of the points referred to in the following paragraphs may prove of interest to you.

All of the controlling United States patents of this Company with the exception of two will expire on or before September 18, 1934. The two patents which expire after that date are U.S. Patent No. 1,313,874 covering pigments or paints in which our composite pigments and zinc oxide are used, which expires August 26, 1936, and our so-called "Blanc Fixe Case" covered by U.S. Patent No. 1,409,648, which expires March 14, 1939.

It is probable, therefore, that the Company's patent control will practically cease during the Fall of 1934, which means in approximately 9¼ years.

The National Lead Company purchased control of the Titanium Pigment Company as of August 1, 1920, or approximately 5½ years ago.

Neither this Company nor the Titan Company has any patent which controls the manufacture of titanic oxide as such and we know there are other companies now offering titanic oxide for sale.

Until very recently we have never seen a titanic oxide pigment that had tinting strength of over 700 (compared to white lead as 100). During the latter part of 1925, however, we have made in our small chemical plant at Niagara Falls titanic oxide products of good color of which the tinting strength has been as high as 1200, and in one case the tinting strength ran 1400.

So far as I am aware there is nothing in our patents or those of the Titan Company which would prohibit another manufacturer from making a mechanical mixture of such a titanic oxide with an extender pigment. Such a mechanical mixture might conceivably have tinting strength nearly equal per unit of titanic oxide contained to our composite pigments.

This Company has three U.S. patents Nos. 1,205,267, 1,205,268 and 1,205,269, all of which expire on November 21, 1933, which broadly cover paint containing amorphous titanic oxide and iron oxide, paint containing amorphous titanic oxide and white lead, and paint containing amorphous titanic oxide and zinc oxide.

If the validity of these three patents can be sustained they would undoubtedly prevent the use of mechanical mix-

tures of titanic oxide and extenders or of titanic oxide itself in paint mixtures containing the titanium pigment alone or mixed with either white lead or zinc oxide.

Assuming, therefore, that these three patents could be sustained this Company might be able to preclude the sale of titanic oxide or mechanical mixtures of titanic oxide and extenders for use in paints until November 21, 1933, or approximately 8¾ years hence.

It is apparent, therefore, in a general way, that this Company's patent control of the situation is a matter of less than ten years, or less than twice the period since the National Lead Company purchased control of this Company.

I believe that all of us, who have watched the rapidly developing use of Titanium pigments, are convinced that ultimately these pigments will be used in large tonages.

I believe also that there has been sufficient activity on the part of others in connection with the research and development of manufacturing processes to indicate that were it not for the strength of the patents of this Company and the Titan Company other Titanium pigments would have been manufactured and marketed on a much larger scale before this and certainly will be as soon as the patent protection expires.

In view of the above it seems to me self evident that the policy of this Company should be to rapidly increase the production and use of Titanium pigments during the next eight or ten years, to enlarge our research development and to *obtain control of the most available sources of raw materials*, so that the Company's position at the expiration of its patent protection would be as strong as we can make it.

Exhibit 69

I do not feel that any of us can be entirely satisfied with what has been accomplished during the past eight or ten years, during which we have been working on the development of Titanium pigments.

In the following schedules are shown the cost of Titanox at St. Louis for the first eleven months of 1925—what these costs would have been had our digestion equipment been adequate and our recoveries of Titanic Oxide and Acid been equal to those at Niagara Falls during the run on Titanox at that plant from April to October, 1925. The two other schedules are my estimates of cost of Titanox and C-Pigment on basis of 1,000 tons per month of each pigment using domestic ore—figured at $15.00 per ton at plant.

Ilmenite from North Carolina or Virginia could be delivered at St. Louis or Niagara Falls for less than that figure, I believe.

St. Louis Plant—1st 11 Months 1925.

		Titanox Cost per Ton
Operating Costs	$ 405,421.57	$ 58.33
Materials		
H_2SO_4	208,373.12	29.97
Ilmenite	234,279.15	33.70
Blanc Fixe	337,874.10	48.61
	$1,185,947.94	$170.61
Production Titanox	6,951.042 Tons	

Had we made as good recoveries at St. Louis from ore and acid as were made at Niagara Falls during run in 1925

Exhibit 69

should have produced 9,200 tons. On that basis figures would have been—

		Cost per Ton Titanox
Operating Costs	$ 405,421.57	$ 44.07
Materials		
H_2SO_4	208,373.12	22.65
Ilmenite	234,279.15	25.47
Blanc Fixe	447,212.00	48.61
	$1,295,285.84	$140.80

Production (11 Mo.) 9,200 Tons
836 tons per Month.

TITANOX

On 1,000 tons per Month (35 tons per Day)

St. Louis Plant
12 Months

		Cost Per Ton
Operating Costs—at $36,900.00 per Month	$442,800.00	$ 36.90
Materials		
9,000 tons Ilmenite at $15.00	135,000.00	11.25
27,000 " 66° H_2SO_4 at $12.50	327,000.00	27.25
9,360 " Blanc Fixe at $60.00	561,600.00	46.80
	$1,465,400.00	$122.20

Exhibit 69

C-PIGMENT

12 Months

On 4,000 tons per Month (35 tons per Day)

Operating Costs—at $36,900.00 per Month	$442,800.00	$ 36.90
Materials		
10,000 tons Ilmenite at $15.00	150,000.00	12.50
33,000 " 66° H_2SO_4 at $12.50	412,500.00	34.38
5,400 " Lime at $11.50	62,100.00	5.17
	$1,067,400.00	$ 88.95

	TITANOX	C-PIGMENT
Selling Price	$200.00	$160.00
Manufacturing Cost	122.20	88.95
Administration and Selling	12.50	10.00
Cost to make and sell	134.70	98.95
Balance	65.30	61.05
	$200.00	$160.00

Of course there are a great many factors which determine the value of a pigment for use in paints, enamels, etc., but assuming that a certain pigment has proven available for either exterior or interior exposure the degree of opacity would have a considerable or possibly controlling bearing on the value of a pigment to the trade. The best measure for testing comparative opacity except actually spreading tests is the tinting strength method, i.e., mixing the required amount of black with a definite amount of the pigment being tested and comparison with standard.

The following schedule shows the tinting strength of various pigments—and on basis of prices shown the cost per unit of tinting strength.

Exhibit 69

	Tinting Strength	Cost per Pound	Cost per 100 units Tinting Strength
White Lead	100	10¢	10¢
Zinc Oxide	200	7½¢	3.75¢
Lithopone	240	5¢	2.083¢
Titanox	350	10¢	2.857¢
C-Pigment	420	8¢	1.905¢
Titanic Oxide	1200	50¢	4.167¢

To sell same unit value as Lithopone, on this basis, Titanox would have to sell at 3.5 x 2.083 = 7.2905¢ per lb., whereas C-Pigment at 8¢ per lb. is cheaper than Lithopone at 5¢ per lb.

One other point in connection with the development in the use of Titanox in paint formulae that does not seem to have been given sufficient consideration is the fact that combinations of White Lead and Titanox, either with or without small percentages of Zinc Oxide, have proved exceptionally durable.

In this connection please refer to the conclusions in Mr. Barton's report of August 15, 1923, "Titanox-White Lead Paints for Exterior Work". This report covered a testing period of seven years during which many different formulae were exposed for test.

Mr. Barton's conclusions were:

1. "Titanox—Basic Carbonate White Lead Paints are exceptionally durable. In this respect being superior to paints made with straight White Lead, combinations of White Lead and Zinc Oxide or Titanox and Zinc Oxide."
2. "If the Titanox-White Lead Paints are properly proportioned they will remain clean and free from

accumulations of dirt and hold tints reasonably well."

3. "The characteristics of Titanox-White Lead Paints offer the opportunity to set a new and higher standard for exterior paints."

His recommendation in this report was:

"That the problem of industrial development of Titanox-White Lead Paints be made a joint investigation by the National Lead and the Titanium Pigment companies."

Further reference is made to a report of Mr. D. W. Edgerly, dated October 29, 1925, which covered his examinations of a series of panels exposed at the Experimental Station of The North Dakota Agricultural College in July and August, 1922, and examined at date of report.

Regarding the Titanox-White Lead combinations Mr. Edgerly commented, as follows:

"Not having a continuous record of the Fargo tests, decisive conclusions are impracticable. In general, however, it is evident that combinations of Titanox and Lithopone are considerably better than those of Lithopone and Zinc Oxide; that combinations of White Lead with Titanox give durable, protective coatings equal to the best results obtained from other combinations. At the present time I do not want to go on record that White Lead and Titanox combinations are better than others, altho that is my present impression based on both the Fargo and Sayville tests.

"Some of the Fargo tests of Titanox-Zinc Oxide combinations are giving excellent results and this has been confirmed by some of the similar types of semi-paste formulae made by paint manufacturers. All of the panel tests of White Lead-Titanox combinations have ranked among the

Exhibit 69

best as far as durability and protection is concerned, but they have shown a tendency to firmly hold dust and dirt which has its effect on appearance.

"The dirt collecting tendency of White Lead paint as often commercially applied, is at least an argument used by the paint manufacturer and a similar condition of a White Lead-Titanox coating would be a factor in the introduction of such combinations. However, in its final analysis, this will not be any more a detrimental or a serious handicap. (having arrived at the definite conclusion that such combinations give the best protective value, and by proper pigment and vehicle proportions the dirt collecting tendency can be practically eliminated), than the continuous medium heavy chalking and "fading" of tints has with the Titanox-Zinc Oxide combinations already on the market."

While I appreciate my lack of experience in this field in which that of others in our organization has been so g I cannot escape from the conviction that failure to develop the market for Titanium pigments to the fullest extent, during the patent protection period, by maintaining high prices and low production, is a policy which will be regretted at a not distant date.

Yours very truly,

TITANIUM PIGMENT CO., INC.,

(Sigd) A. Thompson
2nd Vice President.

AT/K
Copy of this letter to
Messrs. Gregg and Meredith.

Exhibit 70

Letterhead of
NATIONAL LEAD COMPANY

January 12, 1927.

MR. EVANS MCCARTY, Vice President
United Lead Company
111 Broadway, New York

DEAR MR. MCCARTY:

To correct any erroneous impressions I have and to suggest matters for further discussion, kindly permit the following:

1. The Titanium patents expire in 1936 unless extended in ways not at present known to us.
2. Dr. Jebsen's proposal would leave us free to adopt and pursue whatever policy we may desire.
3. Probably the patent rights would fail unless manufacturing is done in Germany, England and possibly other countries.
4. Arrangements can be made for the manufacture of Titanium pigments by one of two companies now existing in Germany; one of which being the chemical corporation (probably the most important in the world), one of whose products now being manufactured is lithopone. The other is a smaller corporation near Berlin.
5. Arrangements with either of these companies would contemplate payment of royalties.

Exhibit 70

6. Nothing definite is at present in contemplation to manufacture or market, either in England or other parts of Continental Europe; although efforts have been made to sell and familiarize the public with Titanium pigments.

7. The Norwegian company has been losing money.

8. It probably will continue to lose money until it reaches a point where it breaks even, and thereafter increasing sales will result in rapidly increasing profits.

9. On a conservative analysis of the business and prospects, you estimate that, should we buy these properties, there would be no profits above cost of promotion for the first two years. That for the first five years we could reasonably expect a return of 6% on our investment. That for the following four years we could reasonably expect 20% to 25% on our investment; so that we would get our money back by the time the patent rights expired, and would have as our profit whatever prestige or good-will or other properties the Norwegian company might possess at that time.

10. You called attention to the fact that, if the Norwegian company or its successor enters into license arrangements for the payment of royalty during the life of the patents, at the expiration thereof the company manufacturing the goods would have the plant, the experience and the working force, and could easily recover the trade of all the concerns that had theretofore been selling the goods to the consuming public.

Exhibit 70

If in the foregoing I have correctly reproduced your statements, it seems to me that there could be but one answer to Dr. Jebsen's proposition. I would be sorry, however, to dismiss it in this way. I believe in the future of Titanium pigments, but their development will be slow. The inertia of ignorance and prejudice cannot be overcome except over a term of years. European brands of white lead were imported into the United States for fifty years after prohibitive duty had been placed upon them. Titanium pigments will probably not find their ultimate place in this world for two or three generations. With all our advantages—by means of which we have caused between three and four hundred different concerns to experiment with Titanox—we still find a fear and misgiving that has apparently stopped further increase in sales until the test of time and reaction of consumers justify a further aggressive sales policy.

Therefore, with us in the United States and with the Norwegian company, there is a common need to exploit Titanium pigments and, at the same time, protect ourselves; so that after the expiration of patent rights, we may have the manufacture and sale thereof under our control so as to continue to reap the harvest from the seed we are now sowing. If you, therefore, could formulate a plan satisfactory to Dr. Jebsen, whereby we could arrange to pay a royalty to the Norwegian company similar to that he proposed to ask from the German company, under an agreement that the National Lead Company would endeavor to organize companies in Germany, England and such other European countries as it desired—in each of which companies the National Lead Company should acquire and own

Exhibit 70

at least one-half of the capital stock outstanding—I would personally look with favor upon such an arrangement.

I would be willing to buy the physical assets, including the mine of the Norwegian company; so that the only thing remaining in that company would be its right to draw royalties until the termination of its patent rights.

In the formation of companies in Germany, England and elsewhere, I would be glad to have the present stockholders in the Norwegian company join us to the extent they desire, subject to the limitation that the National Lead Company should own one-half the stock in such companies, and that there should be a local ownership by residents of the country where such plants are located who would have the active management of the company.

I would also desire that arrangements should be made with Dr. Jebsen to retain his interest and continue as manager of whatever business the National Lead Company should acquire. This last is particularly urgent, as we have no one in mind to promote the work that we consider Dr. Jebsen, both by education and character, is especially fitted to do.

Very respectfully,

E. J. CORNISH
President.

Exhibit 71

Book D—page 100 and 101

Minutes of Regular Meeting of the Board of Directors of National Lead Company held at No. 111 Broadway, New York City, on Thursday, November 17, 1927, at 10 o'clock A.M.

Present: Messrs. Beale, Beschorman, Brodrick, Carpenter, Carter, Cornish, Croft, Field, McCarty, Rockwell, Sidford, Taylor, Thompson and Wettstein

WHEREAS, pursuant to authority given by resolution of this Board adopted January 20, 1927, this Company now owns a substantial majority interest in Titan Co. A/S, a Norwegian corporation, owner and licensor of patents relating to the manufacture of titanium pigments in various countries of Europe and Asia, and

WHEREAS, in furtherance of the interest of this Company in the foreign manufacture and sale of titanium compounds thus acquired said Titan Co. A/S has purchased for account of this Company at a price of 24 francs per share 56,888 shares and corresponding "parts de foundateurs" out of a total issue of 100,000 shares and 66,666 "parts de fondateurs" of Societe Industrielle du Titane, licensee of said Titan Co. A/S for the sale of titanium products in France; and has also for account of this Company entered into a contract with Die Interessengemeinschaft Farben industrie Aktiengesellschaft, of Germany, known as "the I. G.", for the organization, under the name Titangesellschaft m.b.H., of a German corporation for the manufacture and sale of titanium pigments in other coun-

Exhibit 71

tries of Europe and Asia, with an initial capital of 500,000 marks; to be jointly owned and directed by said Titan Co. A/S or this Company on the one hand and said "I.G." on the other, and

WHEREAS, in the judgment of this Board it is for the best interests of this Company and of all concerned that the interests in said French and German companies so acquired or contracted for should be taken in the name of this Company and paid for by it; be it

RESOLVED, that the officers of the Company be and they hereby are authorized and directed to cause to be registered in the name of this Company the shares in said Societe Industrielle du Titane and the interest in said Titangesellschaft m.b.H. so acquired by said Titan Co. A/S for account of this Company and to assume in the name and behalf of this Company all obligations incident to the ownership of such shares and interest; and that said officers be and they hereby are further authorized and directed to reimburse said Titan Co. A/S for the cost of said 56,888 shares of Societe Industrielle du Titane, including expenses in connection therewith, in the total amount of Kr. 209,272.55, with interest thereon to date of reimbursement, and similarly to reimburse said Titan Co. A/S for the cost of any additional shares in said Societe that may hereafter be purchased by it for account of this Company, up to a total of 65000 shares in all, at the price of 24 francs per share plus expenses and interest; and that said officers be and they hereby are further authorized and directed to reimburse said Titan Co. A/S for that portion of its preliminary expenses in the organization of said Titangesellschaft m.b.H. which is chargeable to the capital inter-

est therein acquired by this Company as aforesaid, amounting to Kr. 9,229.22, and from time to time to reimburse "the I.G." for the proportionate share of expenditures made by the latter in the organization and capitalization of said Titangesellschaft m.b.H. which are chargeable to this Company as half owner; and that said officers be and they hereby are further authorized and directed to take any and all such steps and to execute any and all such instruments as may in their judgment be necessary or expedient to carry out the intent of these resolutions and of the transactions herein referred to.

Exhibit 72

Letterhead of

TITAN CO. A/S.

Fredriksstad, October 2, 1926.

EVANS MCCARTY, ESQ.,
c/o United Lead Company,
111 Broadway,
NEW YORK.

DEAR MR. MCCARTY.

The financial and business conditions in Europe after the war has as you know also had its very bad effects on the scandinavian countries.

Here in Norway we have had very severe crisis in banking, industry and shipping. I shall not take your time by a more fully description of the effect of these on the norwegian financiel conditions, the fluctuations of our currency etc.—and their effect on the Titan Co.

It has all the time been agreed upon by all concerned, that the regular business and the development of the Titanium industry was not be interfered with, and you know in a general way the work done and the results we have achieved.

In the spring 1924 a financiel reconstruction of the Titan Co. was effected whereby the original shares were written down from 9.000,000:-kr. to 900.000:-kr. and the share capital than augmented to 7.000,000:-kr., partly through cash payment and partly through the conversion of debts.

Exhibit 72

The Titan Co.'s share capital after the reconstruction is:

Kr. 2.500,000:- pref. shares A 8% cumulative
" 1.000,000:- " " B 8% —"—
" 3.500,000:- ord. shares,

besides which it has a loan from two creditors of together ca. kr. 5.020,000:-.

The pref. shares A and B have two votes pr. share whereas the ordinary shares have only one vote. Of the two creditors the one has kr. 4.850,000:- and is at the same time the holder of a majority of the shares.

It has been thought that these holdings should be kept until the business was sufficiently developed, the company could pay dividends—and the shares could be brought on the market.

The rapid rise of the norwegian exchange has delayed this development.

My investigations this summer as well as my pending negotiations with the Interessengemeinschaft have shown clearly that Titaniumwhite can be more advantageously made outside of Norway than here.

During the negotiations with I. G. the above mentioned largest shareholder and creditor has been approached by an intermediary here in Norway with the purpose of a purchase of their interest in the Titan Co.

The approach is such that a disposal of the interests is considered.

When I was informed of this I thought it only fair to let you know and give the National Lead Co. or Titanium Pigment Co. the first opportunity, and as I have received the mandate to sell their interest, I write you herewith to ask if the matter is of interest to your companies.

Exhibit 72

It is understood, that the other shareholders shall be protected, or with other words an opportunity given them of a sale of their holdings on the same terms.

I presume that they will follow the majority and the entire interest in the Titan Co. can be acquired.

The shares I dispose through the mandate and personally are:

Kr. 1.133,200:- pref. shares A
" 1.000,000:- " " B
" 2.514,500:- ord. shares.

It is not necessary for me to point out to you the advantages for the development of the industry and for your interests to have the whole matter in one hand and personally I will look upon this with sympathy.

It is not known, who the above intermediary represents, but it is not difficult to guess, as he generally has german connections.

The most important of the Titan Co.'s assets are in short:

1). The patents, experiance etc.

a) North America or our contract with your companies.

b) The rest of the world under which our license to Sté Industrielle du Titane.

2). *The factory in Fredriksstad*, which you saw in 1921. Since then supplementary installations have been made for ca kr. 700.000:- and during the last winter and this year we are making various installations besides a factory for a weekly production of 100 tons Blanc

Fixe paste representing an expenditure of ca kr. 200.000:-. The Blanc Fixe. factory is calculated to reduce our costs on that account with about kr. 50:- pr. ton of 70% Blanc Fixe paste.

3). All the shares in *A/S. Titania*, a company which possess the *mining rights* of the ilmenite deposits in Sogndal.

This are estimated to give at least 5 to 6 million tons of 40% ilmenite concentrates.

It has plants for a yearly production of 10.000 tons ilmenite with 40% TiO_2 with 3 shifts operation.

This autumn will be installed a magnetic separator (Ullrich system) which shall concentrate the ore to 44% TiO_2.

Installation cost kr. 20.000:-.

The capacity of the plant is calculated then to be yearly 8.000 tons ilmenite 44% TiO_2 in 3 shifts operation.

The mine and the plant is connected with the Raegefjord harbour, where we have a silo and loading arrangements, by a railway of 8 km. length belonging to the company.

4). 889 shares of a total of 900 in *Lysaker kemiske Fabrik*, near Oslo, which is a company established about sixty years ago for the manufacture of sulphuric acid and superphosphate. It has a production capacity of about 9.000 tons sulphuric acid monohydrate of which the Titane Co. was supplied last year with about 5.000 tons and the rest was used in the manufacture of super-

phosphate besides a small quantity sold as such. It works with the chamber process and its plant for concentration has only this capacity of about 5.000 tons 92% acid; which is fully occupied by the deliveries to our factory in Fredriksstad.

5). A working capital as per enclosed extract from the balance sheet of 31, August in total *kr. 2.258,886:50.*

On the above mentioned installation of together kr. 220.000:- payments have been made per 31 August of kr. 40.000:-.

It is impossible in a letter to give you a detailed account of the various interests and I suggest therefore if your companies are seriously interested that I come to New York with all necessary to negotiate the matter.

Under the present circumstances I should appreciate a cable from you, and will on the receipt of same arrange my passage soonest possible.

With the kindest regards,

Yours sincerely,

E. JEBSEN

Enclosure.

Exhibit 72

EXTRACT FROM TITAN CO.'S BALANCE SHEET PER AUGUST 31, 1926

WORKING CAPITAL:

1) *Materials in stock*			
Sundry materials	Kr.	39,489:—	
Raw materials	"	191,511:11	
Products partly prepared	"	612,389:37	
Pigments and Pastes	"	279,521:54	
Consignment stocks	"	106,223:60	
Raw materials for grinding paste in Belgium	"	8,686:40	Kr. 1,237,821:08
2) *Debtors*	Kr.	434,004:87	
Less Creditors *)	"	232,274:52	" 201,730:35
3) *Bank Deposits*			
Fredriksstad og. Omegns Bank A/S.	Kr.	300,477:89

FREDRIKSSTAD NORWAY

HAVE DISCUSSED SUBJECT YOUR LETTER SECOND WITH MY ASSOCIATES INFORMATION NOT SUFFICIENT TO REACH DEFINITE CONCLUSION BUT VERY INTERESTING WOULD LIKE TO DISCUSS MATTER WITH YOU HERE

MCCARTY

Exhibit 74

DR. G. JEBSEN.
Titan Co. A/S
Fredriksstad, Norway

October 25, 1926

DEAR DR. JEBSEN:

I was greatly interested in your letter of October 2nd, but did not reply immediately as the transaction contemplated is an important one, and I wished to have an opportunity to discuss it with Mr. Cornish before communicating with you. I had this opportunity the latter part of last week, and on the 23rd instant sent you a cable as per copy enclosed.

Your letter gives quite complete information as to the capitalization of the Titan Company and the sums invested by the original shareholders, but makes no mention of the price at which the shares you are authorized to sell can be purchased. Without this information we cannot, of course, reach a definite conclusion, but we presume that if you come to New York you will bring with you full information on that point.

Whether the interest in your Company which has been placed in your hands for sale is purchased by the National Lead Company or by the German interest to which you refer, the subject is of great interest to us, and we would like very much to have an opportunity to discuss it with you before any transaction is concluded. In considering purchase of this interest by the National Lead Company, we would do so with the hope and expectation that your personal interest and connection with the business would be continued.

Anticipating the pleasure of seeing you in the near future, I am with kind personal regards,

Yours very truly,

.....

Vice President

77

Exhibit 75

January 13, 1927

Mr. E. J. Cornish, President
National Lead Company
Building

Dear Mr. Cornish:

In your letter to me of the 12th instant regarding the proposal made to us by Dr. Jebsen you speak of your willingness to buy the physical assets of the Titan Company including the mine in Norway.

I have been unable to get Dr. Jebsen to express a definite opinion as to the proper value to be placed upon this mine, and I have found some difficulty in forming an opinion of my own as so much depends upon the future of the industry. Dr. Jebsen tells me, however, that not less than $500,000 have been spent upon the development of the mine and the installation of mining and concentrating equipment and in the rehabilitation of the railway connecting the mine with the harbor.

I think, therefore, that for the purpose of further study of Dr. Jebsen's proposal we may consider the following statement of the relative values of the Titan Company's properties as approximately correct:

Liquid Assets (Cash, Merchandise, Customers Accounts, etc.	$440,000
Sulphuric Acid Works at Oslo	125,000
Factory at Fredriksstad (Scrap value)	50,000
Mine	500,000
Patents, trade-marks, good-will, etc.	1,190,000
Total Purchase Price	$2,305,000

Exhibit 75

Should we accept Dr. Jebsen's offer and purchase the shares of the Titan Company we could follow whatever policy we may desire with respect to licensing other manufacturers in Europe such for instance as the I. G. in Germany. Should we elect to develop the industry by building factories in Europe additional capital will be required.

From the information at hand it is difficulty to tell the exact amount, but it will probably be between $1,500,000 and $2,000,000 so that if we go into the enterprise we should contemplate a total investment of approximately $4,000,000 within the next two or three years. This amount would probably be reduced by whatever amount of European capital we might associate with us.

Assuming that a titanium pigment similar to our Titanox can be sold in Europe at a price 60% above the present price of lithopone, we may, I think, look forward at the end of the first five years to a minimum return of $450,000 or something over 11% on this investment after allowing for European income taxes. If the enterprise is successful the returns would, of course, be much larger.

In making this estimate of possible profits no account has been taken of royalties from America. It is obvious, however, that if the business of the Titanium Pigment Company grows as we expect it to the European company will receive revenue in the form of royalties if its own business does not develop at an equally rapid rate. If the European business does develop as rapidly as the American business there will be increased profits due to increased sales.

It seems to me, therefore, that unless we are mistaken in the outlook for the titanium industry the prospects for the business in Europe are promising although the venture

is not free from the hazards which attend all new enterprises and the initial investment is rather large.

I have discussed with Dr. Jebsen your suggestion of developing the business under a license from the Norwegian Company which would contemplate the payment of royalties instead of the purchase of the patents etc., for cash, but he holds out no hope that the suggestion would find favor with the Fredriksstad Privatbank who now control the Company.

As this is Dr. Jebsen's last week with us I should like to discuss the matter a little further with you this afternoon if convenient for you.

Yours respectfully,

Vice President

Exhibit 76

GJ/HS

Letterhead of
TITAN CO. A/S
No. 84.

Paris, May 10th. 1928.
Sté Industrielle du Titane,
26 Rue de la Pépinière.

Evans McCarty Esq.,
Vice-President,
National Lead Company,
111 Broadway,
New York, N.Y., U.S.A.

Dear Mr. McCarty:

I beg to acknowledge receipt of your favours of April 13th., 18th., 20th. and 27th..

Your letter of April 13th.

I have read the information about the I.C.I. with interest. The news of the Anglo-American Corporation—of a capital of $10.000.000 has been published in Europe—and I have noted that besides Sir Harry McGowan also Mr. Mittchel of the I.C.I. is a member of the Board of the new company. As far as I can see, the American interests are chiefly financial, whereas the British interests are from industrial circles. I wonder why the Dupont company, which is so closely connected with the I.C.I.—especially personally with Sir Harry McGowan—through their explosive interests—has not taken a part in the company.

I have read with interest the press cutting enclosed in your letter of April 20th. regarding a British patent granted to Laporte. As Monk & Irwin already have a patent in Great Britain re calcining with carbonaceous ma-

Exhibit 76

terial, I presume that the patent of Laporte concerns a specific feature, probably the use of the specific Blanc Fixe referred to. Laporte has a patent process for the production of Blanc Fixe—we have tried this but could not obtain a satisfactory tinting strength with it.

I have read with much interest your comments in your letters of April 18th. and 20th. as to Montecatini and the Auer Co.

You are right that there is a co-operation between the I.G.I. and the Montecatini in certain matters. You will have seen from my letter of April 5th., page 4, that I indicated to Dr. Kühne, that we may be inclined to make some sacrifices with regard to Italy and Montecatini—and Dr. Kühnes answer that Montecatini's factory's capacity is based on export as well as sales in Italy. The I.G. has a factory for Lithopone in Italy, and as they have previously wanted Italy included in the Titan G.m.b.H.s territory,—the idea indicated may not appeal to Dr. Kühne.

However, the situation has not yet developed far enough to give a clear picture, and as you say it shall be very interesting to see how Dr. Kühne's ideas in these matters will develop. (in view of the I G's experience in patent matters).

It looks to me that we for the time being only can watch developments as closely as possible, and where opportunity comes establish contacts.

It is too early to measure the strength of the various companies as to their commercial and manufacturing position.

Montecatini seems to be the most interesting because of the importance of the company and its Sulphuric Acid position, and it is also to be presumed that the policy of Mussolini will be in their favour.

A fight on the basis of our patents can not very well be started in Germany before we manufacture there—and

Exhibit 76

in France not before the new law regarding the working of patents mentioned by me in New York has come into effect. The position in England as to this question I will take up with an expert when I arrive there.

As mentioned the stipulations of the law in these matters are under reconsideration in nearly all European countries, and I was told when last in Leverkusen, that the last Hague Conference went in favour of making these stipulations less demanding.

If we win a patent fight in Germany, I think this will have a moral effect on the others.

There is also the question of making use of our patents to prevent import, but this is a more complicated procedure, as a law suit will be conducted in a country where the infringers do not produce, and the proof being on the basis of a manufacturing process will mostly need evidence taken in another country. I looked into this matter in Denmark last year, and understood that any evidence we wanted from Germany for a law suit in Denmark necessitates the aid of the diplomatic representatives.

I note that you expect Mr. Robinson in the latter part of this month and shall be much interested in any news regarding his enterprise in Avonmouth. There has recently been a Conference in Brüssels, where all European Zinc manufacturers were represented, which had the purpose to regulate the production and prices in order to stabilize the last. Mr. Pisart mentioned that the idea was to keep the price for Zinc about £26.0.0d. From the newspapers it seems that the Conference was a success. This may have a stabilizing effect also on the prices of White Zinc in Europe.

With kindest regards,

Yours very truly

G. Jebsen

Exhibit 77

TITAN COMPANY

NEW YORK, N. Y.
December 23, 1926

TITANIUM PIGMENT CO., INC.
94 Fulton Street
New York, N. Y.

DEAR SIRS:

Referring to conferences with Mr. McCarty last summer and during my stay here and with Mr. Meredith last week, I beg to submit the following:

During this year negotiations have been carried on between the Interessengemeinschaft Farbenindustrie Aktiengesellschaft (I. G.) and the Titan Company regarding a license under our patents and under the agreement between your company and us of 1920.

The I. G. is a limited company formed by a fusion of the important German dye manufacturing firms as well as several other chemical industries. Its activities are so manifold and varied that there are comparatively few lines of chemical industries in which the firm is not active. Although I presume this is well known to you I mention it because of its bearing on our negotiations and eventual relation to the I. G.

In view of this situation namely it was already at the first stage of the negotiations clear that I. G. could not be expected to enter into an arrangement based on mutual exchange of patents, method, experience, etc., to such an

Exhibit 77

extent as is foreseen and natural for firms of the character and purpose as your company and ourselves.

During Mr. McCarty's visit in Europe last summer I took the opportunity to discuss the matter several times with him as well as representatives of the I. G. with the result that the I. G. and I agreed upon a restriction of the definition of the licensed field to be applied in the eventual agreement with them. This should also express the views which were the result of Mr. McCarty's and my conferences. I enclose herewith the definition which I have already had the pleasure to submit to and discuss with Mr. McCarty and Mr. Meredith and will be obliged to hear from you if you are willing to accept an amendment in our agreement of 1920 permitting us to make an agreement with the I. G. with a definition of the licensed field amended according to the proposal. I shall not nearer point out the advantages and disadvantages of such an amendment as this has been discussed with your Mr. McCarty and Mr. Meredith.

I beg only to mention that I consider this condition from I. G. as reasonable in view of their various activities and believe that the drawbacks will be balanced by the advantages of the cooperation with this concern, and probably will more than so in your case as it adds to the mutual development work the technical and scientific forces of the I. G. which are generally considered very important.

During my latest conferences with Mr. McCarty and Mr. Meredith some alterations of the enclosed proposal have been discussed. If you consider such desirable or necessary and as our interests in this matter are parallel I beg to suggest that your proposals leave open a certain liberty of action for instance by sending me various alternatives in order to further the negotiations. I beg at the

Exhibit 77

same time to mention that the further negotiations with the I. G. will probably lead to proposals re other amendments of the contract of minor importance. It is, however, too early to submit anything definite in this respect. I may mention that during my negotiations following points have been taken under consideration, and will appreciate to hear from you if you consider that changes in these directions are objectionable to you.

ad art. V.

It is not possible for the I. G. to exchange its inventions within two months after a patent application is made because the inventions made within the I. G. concern according to their own regulations are exchanged within their own organization only within two months and the further exchange with the Titan Company is then only possible after this period.

As the Titanium Pigment Company and the Titan Company have agreed until further to operate in a somewhat different way from what is foreseen in Art. V I suggest that this article is made the subject of discussion during my visit here.

art. VI. b.

Re statement of the yearly production of TiO_2 under which royalty is to be paid.

Statement under oath is not general practice in Europe. I. G. proposes to give statements as generally practiced and oblige themselves to let us control the statement by a confidant if we so desire.

670

Exhibit 77

I beg to remark that the consent of the National Lead Company and the Titanium Alloy Manufacturing Company as parties to the agreement of 1920 also will have to be acquired regarding the amendments, and will appreciate if you will submit the matter to these two companies already now if you consider that it will meet with any objection on their part.

As the I. G. at our last meeting expressed the desire to see the agreement made and cooperation started with the least possible delay and this presumably also is in the interest of your company and ourselves, I beg to suggest that you make arrangements to deal with the least possible delay with the final agreement between I. G. and the Titan Company which is supposed to be negotiated and submitted to you as soon as possible after my return to Europe.

Yours very truly,

G. JEBSEN.

671

Exhibit 78

Berlin W.
March 3, 1927

Evans McCarty Esq.
c/o United Lead Co.
160 Broadway
New York.

Dear Mr. McCarty:—

I arrived here Tuesday morning from Paris and was received by Mr. Warburg in the afternoon in a most friendly way.

Mr. Warburg asked me to extend to Mr. Cornish and yourself his kindest regards.

After I had explained the question to him, he proposed to consult his special confidential adviser in matters of chemical industry. We discussed then the situation Wednesday and Thursday mo morning about an hour and a half each day and Mr. Warburg was so kind to give the question a very intent and serious consideration.

Following firms were named in connection with a development in Germany:—

Auergesellschaft
Kunheim
I. G.
Sachtleben

The two first were dismissed practically immediately.

Mr. Warburg's opinion of the leading personalities of the Auer Co. confirmed my impression mentioned to you. Kunheim is financially weak. It remains J. G. and Sachtleben.

Sachtleben as I recently wrote you belongs to Metallbank and forms a part of the Gelsenkirchener concern

Exhibit 78

A. J. Thomsen informed me in Paris that the Metallbank group has acquired several smaller Lithopone factories and Richard Merton is the most important personality in Lithpone today in Germany. Mr. Warburg's adviser who seemed to be very well informed said that Metallbank together with J. G. controlled today 82% of the German Lithopone production. You know that J. G. and Sachtleben work together with regard to sale and exchange of experience.

Further has J. G. its supplies of Barytes from Sachtleben who owns important deposits in Westphalia.

As to the question of a choice between the J. G. and Sachtleben (Metallbank) I understood that Mr. Warburg considered J. G. more sympathetic with regard to the leading personalities.

I put frankly before him the question of the future of the J. G. whose organization is in a melting pot. He thought it would turn out allright, but I understood that it mostly depends upon the one man, Mr. Porsch, at present who however had assured him, that he was arranging for successors.

Mr. Warburg had quite an open eye for the imperialistic tendency of the J. G. and was especially during the first and second conversation much inclined to the alternative Mr. Cornish touched in a conversation with me to go with us half and half for Germany and neighbour countries to the east and southeast. I understood he was very satisfied with his cooperation with National Lead Co. and appreciated this.

In favor of the first speaks the important position of I.G. with regard to prestige, selling organization, eventual consumption of Titaniumproducts in other parts of their organization, production facilities and inventive power.

673

Exhibit 78

In the other case a slower development of the sale must be expected, and we will have to be prepared on a fight with the J.G. not only in Germany but also elsewhere.

Mr. Warburg expressed the situation very good in the following few words:—

In the one case there may be trouble at home in the other case outside of the home.

We finished that second conversation with a request on my part of information as to certain factors of importance if we started without J.G. Mr. Warburg thought it would not be difficult to find reliable and able men for the organization to be formed. Sulfuric acid will also easily be available.

As to Barytes, his adviser would tell me the next day. There are many deposits of Barytes in Germany but not all equally good. We adjourned the deliberations to the nxt day.

Mr. Warburg's adviser confidentially informed us next day, that he thought a certain deposit of Barytes of the very best could be acquired because of the difficult financial position of the owners, and as Mr. Warburg should meet their bankers within short, he would try to take a feeling with regard to this.

I understood that his adviser was much in favor of an arrangement with the J.G. and that we even should try also to have Sachtleben with us.

He meant that with the productionprices for Titaniumwhite which I had indicated, we need have no fear that the Lithopone makers will not push Titaniumwhite anyhow, and it will give them *a strength vis à vis Pissard* with whom they are now fighting.

He meant that an arrangement guaranteeing the future good cooperation was a juridical question.

Mr. Warburg agreed however with me that a contract never works, if the parties are not satisfied and it not only *is*

to mutual advantage but it must also be believed to be to mutual advantage.

However, Mr. Warburg finished with the advise that I ought first to try to make an arrangement with J. G. and eventually if during the negotiations I felt it could be done also to try to have Sachtleben (Richard Merton) into the combination.

I understood that Mr. Warburg coming to this conclusion considered it a great advantage that we then will have no competition with J. G. in the other countries, but that J. G.'s interest with us would rather be an important advantage in these countries.

I pointed out that National Lead Co. wanted in all cases to have 50% of the shares and Mr. Warburg meant that the other 50% will have to be divided between those.

It was agreed that I take up the matter with J. G. and see Mr. Warburg in Hamburg after I had seen J. G.

He mentioned the thought that we should buy the Barytes deposit first and than go to J. G. in order to have a stronger position. However my negotiations with J. G. have been such that I do not think this will create a favorable impression, and Mr. Warburg agreed when I informed him that it was J. G. who had approached me last year and not the opposite. He kindly offered me the use of his name if this should be advisable. It will depend a little upon circumstances when it will be wise to do so.

These deliberations with Mr. Warburg were very interesting and will certainly prove to be very useful and I will now take up the question with the J. G. on the basis of 50% and 50%, which from the talks I had with Mr. Cornish and you I understood will be in accordance with your views.

Exhibit 78

I think however that we ought to be prepared that the J. G. will refuse to negotiate on this basis, being far away from its principles in these matters.

Mr. Warburg's technical adviser pointed out that this principle of 50 and 50 was J. G.'s own for foreign countries, and therefore they should not be against it. However J. G. may consider that differently. If J. G. will negotiate on that basis, it will be very interesting to see if there is any opportunity also to draw in Sachtleben.

A division between J. G. and Metallbank of 50% of the business will though probably be too small an interest for any of them, and I am therefore afraid that this will be a trial to grasp over too much and that neither Mr. Warburg nor his adviser are fully aware that the development of the sale of a new pigment is a comparatively slow business and Titaniumwhite is not old and established enough to be used in such way.

If however, the opportunity is there for such a combination, then the situation of Lithpone in Germany must be a desperate one.

(Mr. Thomsen informed me that Lithopone is now down to £ 18.10.-0. They are trying to make arrangements to increase the price to £ 20.0.0 but have not been able to come to an agreement.)

Another danger with such a plan is the point that such negotiations are likely to take more time than we should loose on such a trial. This can be avoided to a part by acquiring the deposit of Barytes and making other preparations for an independent development of the industry which also will have a moral effect on the negotiations.

The purchase of a good deposit of Barytes in Germany I will beg you to consider seriously and write me your opinion as this is a matter of importance for our future operations.

676 *Exhibit 78*

The fact that J.G. has no Barytes deposits may bring them to consider this purchase.

The deposit is next to the deposits of Sachtleben and belongs at present to Rhenania.

Rhenania you will remember has joined together with Kunheim and furnishes us with Bariumcarbonate.

I have above tried to give you a survey of the whole situation and I shall appreciate very much to hear from you.

I must confess that I find it a certain difficulty to know how far I can go in the various matters and on the other hand things cannot be held up too long if results shall be achieved.

I understood from Mr. Cornish and you that you both were willing to look upon the development in Europe with broad views, but you will understand that I feel to be in the dark to what extent you will go and especially how quick you will go.

For instance when Mr. Warburg offered to investigate the question of the Barytes mine, I did feel not to have any authorization to encourage this at present.

We have not discusses such a matter in New York and I have not considered it necessary to go to a purchase already now, but if a special opportunity offers itself, it is of such an importance* that I did not feel it wise to restrain Mr. Warburg in his investigations.

Looking very much forward to a letter from you, I beg you to extend my very best regards to Mr. Cornish and your colleagues,

and am with my kindest regards

Yours very truly

G. JEBSEN

*eventually also for our supply of a factory in France and England.

Exhibit 79

Letterhead of

TITAN CO. A/S.

Fredriksstad, March 12th 1927.

Gj/EH

EVANS MCCARTY, ESQ.,
United Lead Company,
111, Broadway,
New York.

DEAR MR. MCCARTY:

I arrived from the Continent yesterday and received your letter of the 23rd of February today, as it had been forwarded to Hamburg and arrived there a few hours after I had left. Your letter deals with my letter of the 12th of February. In the meantime I have sent you letters the 15th, 16th and 19th of February and 3rd and 4th of March, from which you will have seen what has happened in the meantime with regard to the situation in France and Germany.

Tuesday morning the 8th I arrived in Cologne and saw Director Kühne of "I.G." in Leverkusen together with his secretary Dr. Raspe and Dr. Weber, the patent lawyer of that part of the organisation of "I.G." (formerly Bayer).

I informed them of the National Lead Company's purchase of the shares of the Titan Co. and also that you are willing to cooperate with the "I.G.", the basis, however, to be that the Titan Co. is interested with 50% in the German enterprise. A limited company will have to be formed to that purpose and we were willing to have the works erected in connection with their works or at another suitable place,

Exhibit 79

and they deliver raw materials as sulphuric acid and blanc fixe etc. and we the ore. This will have the great advantage that we can reduce the royalty to Kroner 25.—per ton of TiO_2 to be paid as long as our obligation lasts vis-a-vis "Elektrokemisk". This proposal is according to the basis we agreed upon.

This proposal should facilitate the solution of several questions as for instance also the minimum royalties then will fall away.

I also presented him the definition of "licence field". He objected to the word "marketing" in provision 1. with the remark that if nitro-cellulose laquer should become a very important article for white lacquer, their method of incorporating pigments in this lacquer will be included in the "licence field" and they will be prevented from any arrangements with for instance DUPONT, their most important competitor.

Nitro-cellulose lacquer they think seems to have large possibilities; personally he thought that Titanium white always will have its main outlet as an oil-pigment but—!

I told him that National Lead Co. did not object to the instances put forward amongst which nitro-cellulose lacquer. On the other hand the word "marketing" could not be left out.

If there shall be any possibility that "I.G." develops a method resulting in a consumption of Titanium white of such importance that it will have an influence on the production cost and the risk that "I.G." will give for instance DUPONT the exclusive licence enabling this firm provided it will start manufacture of Ti-white to cut us out from this market for Titanium white, then we will prefer to work without "I.G.".

Exhibit 79

It is not the intention of the National Lead Co. and the Titan Co. to prevent "I.G." to exploit inventions like nitro-cellulose lacquer and take the profit of such exploitations themselves, but we will be secured to deliver the Titanium white at competitive prices and not risk that any such invention shall be used as a basis to breed a competitive production.

Mr. Kühne seemed to understand that standpoint. He said however only that he was afraid that "Badische" will not agree because of the nitro-cellulose lacquer.

This point in general I am afraid will be a very difficult one. It will be a question for the "I.G." which interest will be the most important for them in such case.

Let me take another example.

If "I.G." should find an ideal medium to replace linseed oil for paint purposes in general and which also solves for instance our problem of chalking,—shall the "I.G." then be bound to give it to us or can "I.G." exploit it for themselves provided they do not act in such way that we are prevented from marketing our Titanium white to the producers of paints made with such a new product?

Personally I interprete the definition of the "licence field" (as worked out in New York) in the latter way and think this is the best we can do with the "I.G." situation.

If "I.G." makes an invention of that kind, they are likely to do it also without us and if we cooperate together with them, it is more likely that an arrangement with them can be made than else.

If we had had an organisation for the exploitation of Titanium white and other Titanium products developed to the extent that we manufactured all kinds of "finished articles", our situation would be a different, and if the

Exhibit 79

organisation of National Lead Co. and the Titan Co. is developed further on the lines indicated by Mr. Cornish at the lunch with you shortly after my arrival, we will also if such case arises, present more of interest for "I.G.". However, this brings the thoughts into questions which are not to be dealt with at present.

Mr. Kühne asked if it is our intention to continue the factory in Fredriksstad or that the German company produce for us. I told him that we did not intend to change this part of the program from what was previously forseen. We are still willing to take from the German company and have in our program also to erect factories in France and England or elsewhere where it is opportun.

I gather this is an important point to him in order to reduce the production cost in the first years.

Mr. Kühne told me he would present the matters to his co-directors at a meeting to be held in Frankfurt Thursday and Friday this week and inform me soonest possible afterwards. If the basis was accepted by the board, he would write me and wanted that we should start immediately to draw up the agreements, as he considered it very important to start operations without losing any time.

He mentioned the competition of the Auer-company. Although their products were not satisfactory and had a bad color, they may improve this and it was very important that we take hold of the market before the competitors.

He also mentioned Montecatini in Italy. I could tell him that my French friends (it was Merigeault) had informed me that Blumenfeld, Thann & Mulhouse, (Montecatini's collaborators) do not seem to represent a danger. It seems to be much more talk than facts.

I asked them if they had met Mr. Blumenfeld. This question seemed to take them by surprise. They answered

Exhibit 79

"Yes" and Dr. Weber characterized him as a smart fellow (gerissener Kerl).

They talked to me about the process of MacArthur Irwin in Canada and on my question if they had seen him, they also with some hesitation confirmed this, hasting to explain that they for years already have had connection with him. Your letter informing me of MacArthur Irwin's arrival in Europe came in well there.

At a suitable moment I touched the question of "I.G." taking "Sachtleben" into the Titanium enterprise. Mr. Kühne however, was against this saying he could see no reason. "I.G." is not dependent upon Sachtleben with regard to barytes, as they own one deposit together. Sachtleben has touched the question of making Titanium white with "I.G." but they have made no work whereas "I.G." has done considerable. If and when Titanium white develops to a competitor with lithopone, then would be the time for "I.G." to consider to take their friends in lithopone into cooperation, but at the present moment Sachtleben could not bring anything of interest.

I did not insist on this further partly because I see his point of view and also partly because I understand Mr. Warburg did not consider a cooperation with these people very appealing.

Sachtleben has a large pyrites mine containing a certain percentage of zinc and after the sulphure has been burnt off, they extract the zinc of the cinders. Consequently the zinc in that material has only the value which the lithopone gives it. They have large barytes deposits at Meggen and besides these "I.G." and Sachtleben own a large deposit at Meggen together. Mr. Kühne said that these Meggener

Exhibit 79

deposits deliver the best quality of barytes for the production of black ash and the products de be derived therefrom.

My general impression has been this, but the information is of interest in view of the barytes deposit of RHENANIA in the same district, which I mentioned in my letter of the 3rd of March.

As I told Mr. Kühne that an agreement with the "I.G" could not be definitely concluded before the concession of the Norwegian Government was granted and you had taken over the shares, he got very impatient saying that they had now waited 4 months* because of my trip to U.S.A. and it could no go on like that with indefinite postponement.

Novbr,
Decbr,
January
February

I told him that the National Lead Co. and the Titan Co. had all interest to push the grant of the concession and as there were all reasons to consider that the concession will be given and the National Lead Co.s purchase of the shares be effected, negotiations between the "I.G." and the Titan Co. could be done in the meantime, so that little time will be lost.

I believe his impatience was partly an expression of his disappointment that the "I.G." has not acquired the shares of the Titan Co. Some remarks later from his secretary leads me to these thoughts. However, they have the right to demand consideration with regard to the furtherance of the negotiations without any delay on our part.

I therefore believe it will be wise to take up the negotiations with them immediately in the case they accept our basis of 50:50, and beg you to cable me on receipt of this if anything in the present or previous letters makes it desirable to postpone matters, or you wish me to receive a letter from you before going further.

Exhibit 79

During the conversation with Mr. Kühne I mentioned that the National Lead Co. already cooperated with Mr. Warburg in an enterprise in Germany and that Mr. Warburg had expressed to me his great satisfaction with this cooperation and also expressed himself in the highest terms regarding the leading personalities of the National Lead Co.

I mentioned this in connection with discussin of the "licence field" and also told him about the spirit and relation which has existed between the National Lead Co. and the Titan Co. during the last 6 years.

I suppose you have returned from your trip to the South at this time and hope you have enjoyed the trip.

With kindest regards,

Yours truly
G. JEBSEN

P.S. Wednesday the 9th I saw Mr. Max Warburg in Hamburg and informed him about my visit to Leverkusen. He had no remarks to make.

I asked him kindly, if he had the opportunity to express to Mr. Bosch his views upon the National Lead Co. especial with regard to the characters of the leading personalities of the company. He told me that Mr. Bosch was a man of sentiment (Gefühlsmensch) and that he will tell him that in cooperating with the National Lead Co. and the Titan Co., the "I.G." will come into a good family.

He awaited a visit of Geheimrat Bücher, the secretary of Mr. Bosch, the next week and will use that opportunity.

He asked me to keep him informed and offered to do the same to me, for which I am much obliged to him.

Exhibit 80

March 25, 1927

Dr. G. Jebsen
Titan Co. A/S
Fredriksstad, Norway

Dear Dr. Jebsen:

Since writing you on the 18th instant I have received your very interesting letter of the 12th telling of your interview with Director Kuhne of the I. G.

We are in entire sympathy with the course you have been following as it is in accord with our conversations when you were in New York. It is, therefore, unnecessary to make any further comment until we have your report of the I. G.'s reply to your proposals. In the meantime, we will give some thought to the points suggested by Mr. Kühne.

There are, however, a few matters in connection with the visits of our engineers and others to Europe about which I would like to have your advice. In previous letters I have informed you that we are arranging to have the mine examined by our Mr. Hallett, and in my letter of February 23rd I enclosed a letter from Mr. Hallett asking for some information and outlining some preliminary work that would expedite the inspection. Mr. Hallett now informs me that owing to some work he has in hand here it will be inconvenient for him to arrive in Norway before the 1st of May. It is quite possible that this will be in ample time, but I should like to have your opinion on that point; also advices from you as to whether it would suit you to visit the mine with Mr. Hallett in the early days of May.

Exhibit 80

Mr. WASHBURN: I think that we are now in a position to spare Mr. Washburn for a short visit to Europe at whatever time will be productive of the best results provided that the visit can be made sometime during the next three or four months. I do not know just what your thought is on the subject, but it has occurred to me that if you think it wise to have Mr. Washburn come over before the new concessions have been granted we could have an understanding that Mr. Washburn's expenses would be paid by the Titan Company. These expenses would, therefore, be for your account if the concessions were not granted, and for our account if the purchase of the Titan Company was concluded in accordance with our arrangement with you.

One of the members of our auditing staff is now in Hamburg where he has been located for the past two years. He expects to return to America on the 1st of July, but it has occurred to me that if agreeable to you we could have him make such examination of the books and accounts of the Titan Company as to verify the amount of working capital, thus saving the expense of employing an outside auditor such as Price Waterhouse & Company. If this is agreeable to you we will make the necessary arrangements, but if not, we would suggest that Price Waterhouse & Company be employed for that purpose.

There have been some new developments in connection with the white lead business in England, and it is possible that I may find it desirable to go to London before going to the Continent. In that event I shall probably leave here early in May, and after spending a short time in England be in a position to meet you in Norway or at some other point on the Continent the latter part of the month. This

plan, however, is only tentative, and can be changed to suit conditions as they develop.

As we may have to move rather quickly at the end, I would suggest that you use the cable freely in keeping us advised as to developments on your side and your advice respecting them.

With kind personal regards, I am,

Yours very truly,

Vice President

Exhibit 81

Letterhead of

TITAN CO. A/S

Fredriksstad, March 16th 1927.

GJ/EH

Evans McCarty, Esq.
United Lead Co.
111, Broadway,
New York.

Dear Mr. McCarty:

I have today received a letter of March 14th from Mr. Kühne of "I.G." as copy enclosed. The following is a rough translation:

> "According to wish, I should like to inform you today of the result of the consideration of your proposals at the Board Meeting in Frankfurt.
>
> "The "I.G." agrees in principle to form a company together with the Titan Co. in which both parties have an interest of 50%.
>
> "The fixation of further particulars can now, as discussed, be proceeded with as soon as possible."

Referring to my letter of the 12th instant, I shall appreciate to hear from you as soon as possible in this matter.

I suppose it will not be long before I receive a proposal to an agreement regarding the "G.m.b.H." (Ltd. company), which it was agreed Mr. Kühne would send me, and I shall have to make a draft for a license agreement as soon as possible.

Exhibit 81

I was in Oslo yesterday, and will have to go in there again the day after tomorrow (Friday) regarding the Concession.

The application for the Concession has been delivered to the Government by Mr. Vogt, and matters are proceeding at present without delay. This case absorbs however rather more time than one would think, because so many persons are involved.

With kind regards,

Yours very truly

G. JEBSEN

Enclosure.

Exhibit 82

April 8, 1927

Dr. G. Jebsen
Titan Co. A/S
Fredrikstad, Norway

Dear Dr. Jebsen:

I am enclosing copy of my telegram of yesterday asking if you could tell me when I shall be needed in Norway, the information being desirable in order that I might make some other engagements. This morning I have your reply reading as follows:

> "Believe best time your arrival Norway between fifteenth and twentieth May and probably see IG ultimo May stop Kuehne telegraphs proposal agreement sent me and ask me come Leverkusen about twentieth April as he leaves twentythird April for four weeks"

In view of the information in your telegram I shall probably follow the plans already tentatively formed and sail from here for England on the 30th of this month. This will enable me to spend a week or ten days in London as may be necessary, and to arrive in Norway before the end of May. I do not believe that it will be possible for me to arrive as early as the 20th.

In connection with the visit to Norway I am wondering whether in the month of May it will be more favorable for us to go via Newcastle and Bergan or by rail through Germany. In the latter case I am under the impression that we could leave the train at Fredrikastad without going as far as Oslo. Will appreciate your advice. If time does not

permit communicating with me before I leave New York, a note to London care of Greeff & Company will answer the purpose.

Anticipating the pleasure of seeing you again before many weeks, I am, with kind regards,

Yours very truly,

Vice President

Exhibit 83

Mr. McCarty.

COPY

April 29, 1927.

My dear Mr. Warburg:

Our Mr. Evans McCarty, whom you met when we were in Hamburg, is sailing today duly authorized to represent the National Lead Company in all matters in which it is interested in Europe. His particular duties at this time are in connection with the Titan Company of Norway, whose purchase he negotiated, and any developments that may take place in Germany looking to the manufacture of titanium pigments there.

Needless to say, Mr. McCarty is one of our most capable and trustworthy officers, and any assistance that you may give to him will be very much appreciated by us.

Sincerely yours,

(Signed) EDWARD J. CORNISH

Exhibit 84

Letterhead of

TITAN CO. A/S

FREDRIKSSTAD August 17th 1927.

GJ/EH

Evans McCarty Esq.
United Lead Company,
111, Broadway,
New York.

Dear Mr. McCarty,

Re Agreement.

At the end of July I received a letter from the I.G in which they enclosed the agreement A. signed by the I.G. with datum and the other agreements except B. signed without datum. The I.G. mentioned that the date was not put in because the agreements are to be made with the Titangesellschaft when this company is constituted. I returned the agreements to be signed by the Titan Company with signatures in the same manner. I sent them, however, first to Dr. Mathies with request to forward them if he found everything in order. According to information from Dr. Mathies the agreements have been forwarded.

The I.G. did not enclose the schedules for self-cost price and plan of the site, proposing that these matters should be definitely decided upon when Dr. Kühne was here in Fredriksstad. The matter is, however, again postponed until our arrival in Leverkusen, as time was very short here. It seems to me also better that Mr. Moses could have a look at the site beforehand.

Exhibit 84

In the letter from the I.G. of 26th of July the company writes me amongst others:

(Translation from German). "In order to exclude misunderstandings we beg to lay down in writing our understanding regarding agreement D, II section 4.

As already mentioned verbally several times during the negotiations, the case may arise, that our firm comes into the position to import into the American countries Titanium White for instance in "spraying enamels"—that is in mixtures, which falls under "Finished Article" because we can or will not manufacture there.

In this case we are of the opinion, which also you have expressed at these occasions, that our firm must buy the Titanium products from the German Titangesellschaft, but that as a client of this company it can export the finished article to the American countries, as long as the quantities of the Titanium products which are imported there in such manner, do not substantially restrain (wesentlich behindern) the Titanium business there. Otherwise after six months an agreement between the producing parties (Titanium Pigment Co. Inc. and the German Titangesellschaft) should be done (müssten wohl getroffen werden).

As soon as our firm will and is in the position to produce itself or through licensees the finished article in America, then the titanium products according to agreement must be taken from the Titanium Pigment Co. Inc. respectively its representatives.

We shall be thankful if you will confirm your principal accordance with this interpretation of our agreements."

I answered to this:

(translation from German).

Exhibit 84

"In our agreement with T.P.Co. Art. VI (c) B, it is foreseen, that an import of "Finished Article" can be made to a certain degree.

The limitation is that this import must not "substantially interfere" with the sales of the T.P.Co. and its eventual licensees. If the American company finds that such interference, however, is the case, then the Titangsellschaft must endeavour to prevent such import, but at the same time the T.P.Co. is obliged not to sue the importer under their patents in the first six months.

It has also to be a presumption for the action of the T.P.Co. that the Titanium product shall constitute an important part of the finished article. Whether the importance of this part (the titanium product) is to be estimated according to its weight or otherwise, is not expressed, and must presumably be considered from the point of view of its effect on the sales of the American company.

Your thought, that one should seek to make an agreement if the case arises, seems to me a natural solution of the situation in the interest of all parties concerned."

The I.G. has not answered this letter, but Dr. Kühne and Dr. Raspe declared my interpretation to be satisfactory. I don't think there is any reason to put this question of interpretation before the Titanium Pigment Co., but will like to have your private opinion if you disagree with my view.

I have noted with interest that the I.G. has mentioned this matter as I interprete this as a sign of their willingness conscientiously to keep the agreement in this respect, which is a matter of much importance to the Titanium Pigment Co.

Exhibit 84

Reading through the agreements on my return after my holidays I found that a slip had taken place, namely the following:

The I.G. has agreed to oblige all licensees of processes which imply an application of Titanium compounds to cover their requirements of these from the Titangesellschaft or its licensees respectively sublicensees according to agreement C. Article IX and to cover its own requirements of Titanium compounds in the territory of the Titangesellschaft exclusively from this company, but nothing is said about the case of I. G. manufacturing itself in our territory. Of course it has all the time been understood that the I.G. will be under the above obligation also in this case.

When I was in Hamburg 29/7 I called on Dr. Mathies and drew his attention to this slip, which I consider he beyond any body ought to have observed. He agreed to write to Dr. Brüggemann and ask for a letter confirming our view.

Dr. Mathies has written to me that he has received such a confirmation and Dr. Kühne, when he was here, agreed to have it added to the agreements when these were finally written.

Dr. Mathies charged me 300 Mark for this. In view of your critisism of his last bill I mentioned this to Mr. Warshow and suggested that he should take the matter up with Dr. Mathies when he passed Hamburg for the purpose of having him drop the bill. Mr. Warshow suggested before he left that he would say to Dr. Mathies that I had found the bill to be too high and as Mr. Warshow felt himself responsible for the recommendation of Dr. Mathies, he would ask him to refrain from the additional bill, which made not a good impression. I left the matter in Mr. Warshow's hand.

Exhibit 84

By the way in the letter from I.G. of 26th of July as above translated the I.G. has already acknowledged the obligation.

There are in the additional agreements with the I.G. which you will remember, several points which we have to place before the Titanium Pigment Co. I shall deal with this in another letter, which I beg, however, to send you when I have been in Leverkusen, as there are certain stipulations with regard to the exchange of patents which I think should be somewhat improved in the interest of all parties concerned.

With kind regards,

Yours very truly,

G. JEBSEN

P.S. August 18th 1927.

I have today received a letter from Dr. Mathies in which he defends his bill in view of the work done—especially all the night work with the reworking and the translations of the agreements and in consideration of the press of time. He mentions that in total the work represents about 14 days. He believes that his bill is throughout within regular practice. At last he says that he will, however, refrain from the additional bill, as it is an unpleasant thought to him that one of his clients should find his bill too high.

I have also today received a letter from Mr. Warshow from which I see that Mr. Mathies has sent him copy of the letter.

Exhibit 85

Letterhead of
TITAN CO. A/S

GJ/AK Paris, November 3rd 1928.

Evans McCarty Esq.
Vice-President
National Lead Company
111 Broadway
New-York City, U.S.A.

Dear Mr. McCarty,

Many thanks for your letter of October 23rd.

I beg to confirm my cable of yesterday as follows:

"REFERRING LETTER 130 IG'S AGREEMENT IN PRINCIPAL RECEIVED"

and your answer received to-day :

"REFERRING TO YOUR TELEGRAM 2nd DO YOU RECOMMEND IMMEDIATE "INCORPORATION NEW COMPANY,"

as well as my cable of today :

"AWAIT FURTHER NEWS BEFORE INCORPORATION".

I enclose translation of the following correspondence: Letter from the Titan Co A/S to I.G. Farbenindustrie of 10th of October, requesting their agreement to the transfer of the interests to the Titan Co Inc.;

Letter from the I.G. Farbenindustrie to Titan Co A/S of 25th of October, giving their consent.

I also enclose translation of a letter from me to Dr. Brüggemann of 10th of October, concerning the details in question.

Exhibit 85

I have not had the opportunity to talk this matter over with Dr. Brüggemann and would like to have done so before you incorporate the company.

I do not see any difficulties before us in this matter, but would like to have gone actually through each point with Dr. Brüggemann in order to ascertain that his point of view agrees with mine.

I had yesterday a message from Mr. Washburn, according to which the calcination will start the 5th or 6th of November and a marketable product may be had in the middle of the month.

I have had so much to do and have still before me, that I have had to postpone my visit to Leverkusen, but hope to be able to go there in the middle of next week.

I have kept in touch with Mr. Washburn and Dr. Raspe partly by letters and partly through the telephone, following the progress of the operations.

The day before yesterday they have made 130-140 tons of precipitate.

The material has reached the second Dorr tank and has by washing and calcination in the laboratory given a quality equal to St-Louis N° I and better.

I shall feel very happy the day we have got our first marketable pigment, provided we have it within the time expected so that we can start the introduction into the market.

During my stay in Leverkusen, we agreed that the price for Standard T to be foreseen for Germany, should be 5 Mk. above the price for White Zinc which is 65 Mk. per 100 Kos delivered franco. The definite fixation of the price was postponed until the product was actually available.

Dir. Holm of the I.G., who is in charge of the sale of titanium white as well as lithopone, insisted upon an in-

crease of the commission of 5%. He argued that it was necessary to give a commission of 5% to the representatives in the foreign countries and the I.G. will have nothing for their work.

He further considered it necessary to have an increase of the commission on goods sold through Christensen Schwartz & Co, as the I.G. will have to give this firm 4% (Christensen Schwartz has to give 2% to their sub agents).

The idea of giving an extra commission to I.G. for goods sold through Christensen Schwartz did not appeal to me. Accepted as principle it can be used as a basis for I.G. later to argue a cancellation of the arrangement.

With regard to the 5% to their foreign representatives, I think Mr. Holm is right.

I suggested that Titangesellschaft should pay to the I.G. for the first year a fixed sum in addition to the commission for the introduction work, the amount of this to be revised next year when we have more experience with regard to the business. We agreed on a sum of 60.000 Mk.

You may consider this rather high. I thought it wise however, to have the I.G.'s commercial department feel that their efforts should not be limited by a too small budget. The commercial department is interested not only to have a success as to the quantities of sales done, but also I presume, to have their budget showing balance or a profit and it would not be wise if they felt titanium white to be an extra burden involving a deficit for them.

All propaganda cost is paid by the Titangesellschaft.

In the agreements is, as you will remember, not foreseen that the I.G. shall stand delcredere.

I was asked if we wanted the I.G. to be responsible for payments, in which case there will be a question of remuneration, but I told Dir. Holm that the idea was that

Exhibit 85

the I.G. being interested in Titangesellschaft with 50%, will be sufficiently interested to see the payments coming in.

With reference to your interview with Dr. Kühne and Dr. Raspe they wanted to take over Portugal, Poland and talked also about Italy. I confirmed that we had agreed upon that they could take over Portugal at once and that it is foreseen that they could take over Poland. This is in accordance with your interview. I said however that I wanted not to give them Poland immediately. We will let the I.G.'s representative undertake the sales in Poland but I wanted the actual transfer of Poland to the Titangesellschaft as a part of their territory not done at the present. (We will ultimately have to give them Poland, but I should prefer to keep the matter pending until I see the attitude of the I.G. in various other questions, which I presume will turn up.)

Dir. Holm mentioned that they were very well represented in Italy through Italian firms and had a good basis for negotiations with Montecatini.

Purchase of White Zinc. I pointed out to them that it would be preferable to buy White Zinc from Pisart if this was possible against the Custom tariffs.

Dir. Holm who knows Pisart very well from negotiations regarding Lithopone, understood my point of view and said he was willing to do so in case Pisart could offer a better price than German White Zinc makers; at equal price he thought that they will have to give German makers preference.

Dir. Holm promised to keep me informed of the negociations with Pisart.

Hoping that what has been agreed upon above, falls in with your views, I am, with kind regards,

Yours very truly,

G. JEBSEN

Translated from German

MINUTES N° 3, 1930.

May 3, 1930.

MINUTES FROM CONFERENCES RE TITANIUM WHITE MATTERS AT LEVERKUSEN, MARCH 24TH AND 25TH 1930.

Present: Dir. Dr. Jebsen
" " Kühne
" " Brüggemann
" " Jähne
" " Raspe

1°—With regard to the offer made by Lickfett, to acquire the titanium ore mines near Egersund, belonging to the Christiania Minekompani A/S, no decision is to be taken for the time being. It is decided in the meantime to acknowledge receipt of Lickfett's letter, stating that at the price mentioned by him, the company is not interested in taking an option.

2°—Kühne and Jähne will examine with Hilpert the question as to whether about 10 workmen could be taken over by the Titangesellschaft in order to reduce the cost of repairs, and whether the 30% extra charge, recently applied, could be exceptionally dropped for the Titangesellschaft.

3°—Raspe is to prepare an estimate of the expenses in connection with tests, and submit it at the next conference.

4°—The sale of ground ilmenite under the mark "Kronos" and the name "Ilmenite Black" is agreed.

763

Exhibit 86

5°—In order to release Schwenk from correspondence duties, a secretary is to be engaged for Raspe.

6°—Mr. Reinhardt, director of the "Vereinigung Deutscher Zinkweiss-Fabriken", is to be informed in reply to his last letter addressed to Titangesellschaft, that in future would be abstained from distribution of the pamphlets in question at exhibitions. We hoped that the same policy would be adopted with regard to the pamphlets issued by the zinc white and white lead manufacturers against titanium white.

7°—In our monthly calculations the specifications of repairs should be made, as far as possible, on similar lines to what is done by the I. G. in this connection.

8°—The project concerning the clarification of the titanium solution by means of filtration with preceding crystallisation of the iron sulfate (estimated cost RM. 110.000) was approved, the apparatus to be installed in "Querbau" II on the blanc fixe filtration platform.

9°—In order to increase the production of blanc fixe, it is to be tried to raise the capacity of the preevaporation by means of a previous concentration of the too thin original solution. At the same time the manufacturing of blanc fixe from barium carbonate and sulphuric acid and also from BaS and sulphuric acid, is to be thoroughly studied. Kühne's suggestion to produce Blanc Fixe from carbonate in a wooden precipitation tank and to let the mixture run immediately afterwards into the Dorrtank 4, seems to be the quickest and cheapest way to solve the question. Proposals in this connection are to be submitted as soon as possible.

Exhibit 86

10°—Raspe is requested to submit at the next conference an exact plan for the production of a high percentage composite pigment with CaSO4 and a 100% TiO2.

11°—The transport costs of the raw materials have up to now been calculated on a wrong basis. They should in future be added after the addition of the percentages. A retroactive credit statement should be rendered.

12.—In order to reduce the patent expenses, foreign patents of small importance are to be dropped.

13.—In order to avoid fluctuations in the "Gestehungspreise," caused by the quarterly amendments, Kühne and Brüggemann propose that half-yearly or annual average "Gestehungspreise" be applied in the future.

With regard to the BaS price, Kühne will examine more thoroughly the estimate and the calculation of the sales prices and then make a proposal.

14.—Raspe submitted his calculation of the "Gestehungspreise" for TiC14. Dr. Jebsen observed that the price stated of RM. 1.50 per Kg. of TiO2 was too high, considering the production costs of the Titanfabrik, agreed, however, to the proposed "Gestehungspreis" of RM. 2.00 per Kg. TiC14 being applied for the settlement until further notice. All the gentlemen present agreed to this.

15.—It is agreed that the interest on the loans contracted by Titangesellschaft be booked over profit and loss account. The interest on accounts for services rendered (merchandise, repairs, etc.) will be charged to production.

Exhibit 86

16.—The company tax is also to be booked over profit and loss account (amount for 1929 RM. 10.000 of the RM. 100.000 paid in 1929). According to conference with Dr. Brüggemann on March 27, 1930, the notary fees in connection with capital increases, are to be booked over the profit and loss account, similarly to the company tax.

17.—It is agreed that the special expenses incurred in connection with the starting of the Titanfabrik and amounting to RM. 21.000 be debited production.

18.—The share in the general expenses on the stocks of goods ready for sale, stored at Leverkusen or elsewhere, is to be capitalised.

19.—In view of a somewhat different method of calculating the general expenses of the I. G. Farbenindustrie; an addition to the "Einstandspreis" established under the new calculation methods of the I. G., of 10% for general expenses, instead of 15% as heretofore, is to be made, effective as from Jan. 1, 1930. This arrangement is to be considered as temporary and neither the Titangesellschaft m.b.H. nor the I. G. Farbenindustrie are to be definitely bound by the same.

Dr. Brüggemann believes, on the basis of previous calculations, that a settlement on the above mentioned basis will be equal to that hitherto applied, suggests however, that some experience be gathered before a final decision is taken.

20.—Dr. Jebsen stated that he had received an inquiry from Fredriksstad as to whether they should continue to work Italy from there and that considering the

information received from Mr. Holm and Arca, according to which our sales prospects in Italy were unfavorable, he had advised Fredriksstad that they could continue their work. He thought that it would be better if the Titan Co. A/S would continue to handle the sales in Italy, since the work on this market has in the first place a tactical interest, in view of the activities of Montecatini outside Italy.

Dr. Kühne asked if the profits of the sale could not be left to Titangesellschaft. Dr. Jebsen expressed the opinion that, according to the investigations made, large quantities could not be expected and the amounts would not be of importance. Dr. Jebsen asked if the Titangesellschaft would also support eventual losses.

Titan Co. A/S was inclined to let Montecatini take over Italy if the latter agreed to keep away from the other countries

Dr. Kühne asked if we would also at the same time protect Germany and Dr. Jebsen pointed out that the interest of the Titan Co. in the Titangesellschaft were in favour of this. . . . He had, already at an earlier date, expressed the assumption, in connection with a transfer to the Titangesellschaft, that, in case of an agreement with Montecatini, the markets of the Titan Co. should also be protected, and for this no compensation could be given the Titangesellschaft for giving up the Italian market.

(sign.) RASPE.

Paris, June 18th 1930.

Evans McCarty Esq.
Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. McCarty,

Enclosed please find translations from German of the Minutes numbered 1, 2 and 3, 1930 from the Board Meetings held in Leverkusen on January 4, 6 & 7, February 5 to Febr. 8 and May 3, 1930, as well as translation of the Minutes from t annual Partners Meeting held in Leverkusen on April 2nd this year.

These papers were examined by you during your stay in Paris.

Yours very truly,

S. J. HENDRIKKSEN

Translated from German.

Minutes No 1—1930.

Minutes from conference in Leverkusen re titanium matters, January 4, 6 and 7, 1930.

Present: Dir. Jebsen
" Kühne
" Holm
" Brüggemann
Beckmann
Dr. Raspe

1.) A change in the prices for Standard T, Standard A and Paste is not found right at the present state of the market. Rebates can in certain cases be allowed on the list prices, but the net proceeds from the sale should not be under RM. 66.

2.) With regard to sales expenses, another conference is to be held in the next few weeks.

3.) The modified final proposal for the publicity expenses for 1930 will be sent Dr. Jebsen from Frankfurt soonest possible.

4.) Dr. Jebsen mentions that he had discussed with the National Lead Co. the proposal regarding a 10% increase on the deliveries to Titan Co., subject to I.G. dropping the 10% increase on the raw material prices. This question, however, is not to be decided at present. It is desirable to await further developments.

Exhibit 87

5.) The I.G.'s proposal—which has already been discussed previously—to apply a rate of 15% as general expenses in connection with deliveries to T.G.m.b.H., was accepted by Dr. Jebsen on behalf of Titan Co. Inc. it being understood that this should be considered as a maximum rate. This reservation was accepted by the gentlemen of the I.G.

6.) With regard to South America, Dr. Jebsen mentioned that the quesetion put forward by the gentlemen of the I.G. could not be decided at the present, in view of the option of the Titanium Pigment Co.

The Titan Co. is represented in some South American countries by branches of the I.G. and Dr. Jebsen declares himself ready, subject to the approval of his Board of Directors, to transfer to the T.G.m.b.H. the profit realised by sales made through these representatives.

7.) Further, Dr. Jebsen declares that the Titan Co. Inc. is willing to let the T.G.m.b.H. take over Italy, according to the wish of the I. G. Dir. Holm wishes to examine once more the sales possibilities in Italy before a decision is taken in this connection.

Exhibit 87

8.) Dr. Raspe is requested to prepare a detailed annual report regarding the factory operations of the Titan G.m.b.H.

9.) Dr. Jebsen proposes that tests be made with regard to the possibility of using Standard T as a paint for indoor use.

10.) Dr. Jebsen proposes that numbered minutes be made out, placed in a minute-book and signed each time. Dr. Raspe is requested to take care of this.

11.) Of the M. 100.000, taxes on the capital increase, M. 10.000.—is to be written off for the year 1929.

12.) Dr. Jebsen requests that a record of all titanium patents of the Titan G.m.b.H. be prepared for the management. The patents which are being filed for inventions of the T.G.m.b.H.'s organisation, are to be filed in the name of his company. It is to be examined under which names such patents are to be filed which are the result of cooperation with the Gentlemen of the I.G. Dr. Kühne will examine this question specially.

13.) The amount of the royalty is to be fixed according to the exact percentage of contents.

14.) The monthly deliveries to the Titan Co. Inc. will not, as has been the case hitherto, be debited immediately, but debited, value 15th of the month.

(sign.) Dr. Raspe
(sign.) Dr. Brüggemann
(sign.) Dr Jebsen
(sign.) Dr. Kühne.

Paris, July 23rd. 1931.
Dr. G. Jebsen,
26 Rue de la Pépinière, Paris 8e.

Evans McCarty Esq.,
Vice-President,
National Lead Company,
111 Broadway,
New York, N.Y., U.S.A.

Dear Mr. McCarty:

I returned last night from Leverkusen.—Matters have improved considerably there.

The production of Standard "T" was started in the latter part of June. The first product came out of the furnace about 10 days ago, and I was informed, that they yesterday reached a daily production of 40 tons Standard "T", and that the product is the same as in November last, perhaps slightly better.— The start of this manufacture has taken place without any special or unforeseen difficulties, and the operations are running normally. — The spirit of the organisation is better with less or no nervousness.

Dr. Raspe and Dr. Weise have made a lot of experiments in the laboratory this winter and spring, studying the Blumenfeld methods, and are in hope to develop a process on the same lines in principle, without infringing the Blumenfeld patents, obtaining a product with a tinting strength of 14/1500. In the laboratory they have even obtained a higher tinting strength; it is though still an open

Exhibit 88

question how it will work on an industrial scale, which can only be answered by experience.

Dr. Mayer of Aussig has sent to Titangesellschaft a sample of a product he has made in the laboratory with a tinting strength between 14/1500. He says to have made this by a new process with a titanium tetra chloride, and he says that he should be able to make it at a price between 5/600 Marks per metric ton.— From previous experience the statements are to be received with a certain precaution. Dr. Kühne doubts the figures, and believes that he will find the handling of ferrous chloride inconvenient.— You will also know that this kind of processes are likely to involve a lot of repairs. Dr. Kühne agreed with me, that the process has the drawback that it requires a very cheap source of supply of chlorine.

For the sake of information I shall appreciate if Mr. Hallett will send me the datas he developed by his investigation of the Sté Francaise du Titane's process.

Last Friday I had a meeting with Director Holm and Director Körffer.— The sales of the I.G. for the Titangesellschaft show quite an improvement in the last two months, and they are now in tonnage equal to last year.— The sale of Standard "A" has gone back, and has been replaced by a larger sale of Standard "T" and TiO_2. Contrary to England—where the sale of Extra "T" has gone back—the quantity in Germany is the same as last year.— I could though not agree with Director Holm, who thought we could be satisfied with the sales this year, and I told him so.

Dr. Schütz of Sachtleben has informed Dr. Kühne and Director Holm of his conversations with Mr. Cornish and Mr. Moses regarding Titanox versus Lithopone, and the

development in the United States had evidently impressed them.—

Dr. Schütz had suggested, that Sachtleben should take an interest in the Titangesellschaft, and Dr. Kühne told me, that they in principle were willing to make such an arrangement. The part to be transferred to Sachtleben should be taken from both of us (I.G. and Titan Co. Inc.). I doubted that the National Lead Company would agree to have less than 50%, and I could not see how a satisfactory arrangement could be reached. I was though willing to explore the situation. Dr. Kühne also thought it difficult to find a solution.

By arrangement of Dr. Kühne we had lunch together with Dr. Schütz yesterday at Leverkusen. Most of the time was spent in talking about the difficult financial and political situation at present.—

Dr. Schütz considered it not to be the moment for plans of this kind, but thought no harm done, if we talked over the matter. He had no definite proposals to make, but suggested for consideration that Sachtleben should become a partner in Titangesellschaft. Before this could be decided upon he thought it necessary that we agreed upon which place titanium should take in the market, as he considered that otherwise Sachtleben having an interest in Titangesellschaft, would only develop in an impossible situation. By making an arrangement on these lines, Sachtleben would have to let titanium have its way so far as agreed upon, and although this would be painful, they would have the consolation to be partly compensated by their interest in titanium. The situation would be clear, and not the inconvenient one of the I.G., which now was led by the obligations towards us to develop titanium against their own interest in Lithopone.

I expressed my appreciation of the frank and open way in which he stated his views, and that I would appreciate if a way could be found, by which we could make Sachtleben interested to mutual benefit. This seemed to me though difficult, but I was glad to explore the matter with him.

The situation with the I.G. at present is not as he sees it, because they do not have the whole lithopone market, and of every ton of lithopone which was replaced by titanium, the I.G. had only a part, and the part which they had in titanium I thought would compensate them.

If, however, Sachtleben also became interested, the I.G.'s part in lithopone will remain the same, whereas its part in titanium will be reduced.

I asked him what he thought the position of Pisart would be. Will we not risk that Pisart also will demand an interest in the titanium business? And if not, that he will start to send lithopone into Germany and take up a fight lowering the lithopone prices anyhow?

Dr. Schütz thought it rather likely that Pisart would do this in any case (which means that the Lithopone Convention may have a short life). I asked him what place he thought titanium white should be given in the market, but he would not express any opinion, and put it up to us to express our views.— He considered Mr. Cornish's point of view too optimistic. I agreed that Mr. Cornish was very optimistic in this matter, but thought that he had good reasons for it.

I did not consider the step of the American lithopone makers in reducing their prices very wise.

The New Jersey Zinc Co. had stated to Dr. Schütz, that they have still a good profit with their present price of

Exhibit 88

lithopone. I did not doubt this, but as Titanox gives a better profit, a price fight will not lead to the result intended by the lithopone makers. It would have been better to let titanium have its way, until it had got its position in the market—a position it will get in any case. This does not mean, that lithopone will be wiped out. I thought that there will always be a certain place for lithopone, which will be kept by lithopone makers who have at their disposal cheap sources for zinc.

Pisart's position was touched upon, and it was considered, that his sources of zinc were not favourable. He is buying some from the Duisburg Kupfer Hütte (I.G. plant), and the price is between £16 and £17 (confidential).

Dr. Schütz was in a very low spirit with regard to the general position of Germany, and hoped for a satisfactory solution of the present crisis. He thought that many of the business people had had so many difficulties during and since the war, that they were coming into a state of apathy. Dr. Kühne was somewhat more optimistic, although also he considered the situation very grave, and in case of no arrangement with regard to the German debts, riots and revolution are to be expected.

Dr. Schütz thought that France's purpose was through such a revolution to have Germany divided up in three parts: a northern, a southern and a western country, and that France immediately will offer financial aid to a political group in Munic and Cologne, provided a separation from the northern and eastern Germany takes place.

I told Dr. Schütz that I will meet Mr. Beschorman in London and take the opportunity to discuss his suggestions when he came.

Exhibit 88

Dr. Schütz took the opportunity to mention, that an agreement had been reached with the National Lead Company as to the conditions of a cooperation in the matters of Baroid and various Barium products, but although repeatedly requested, he had not been able to obtain from Mr. Harth copies of patents or patent applications or various other information confirming or substantiating the information Mr. Harth had given verbally, and thought that he was entitled to this, before he entered into any agreement.

I told him I would mention this to Mr. Beschorman, so that the matter could be cleared up.

Exhibit 88

In the meeting with Dr. Kühne and Director Holm I encouraged them to go ahead with the development of sales in South-America, without a definite promise of a transfer of Titan Co. Inc.'s rights in these markets.

The question of a reduction in the prices in Germany I did not take up, but in connection with the reference to Dr. Schütz's talks in the United States, the possibilities of competition between titanium and lithopone were openly discussed. Director Holm doubted much, that titanium ever could be produced at sufficiently low prices to compete with Lithopone, when the price of this was reduced to its very lowest. Dr. Kühne was inclined to agree with him, mentioning at the same time, that the production price of titanium may come down to ca. 30-35% above the production cost of lithopone. I thought it not advisable at this moment to enter into a discussion about the price ratio by which titanium would seriously compete with lithopone.

There was during this conversation no indication of an intention of the Germans not to let titanium have its free run. What develops from Frankfurt in this matter remains to be seen. I have the impression, that the technical organisation in Leverkusen are doing their best to get the production price down. Dr. Raspe is now trying to run the factory at its highest capacity for the sake of experience and also in order to be able to turn over to the production of TiO_2 pigment again soonest possible.

Exhibit 88

The stock in Leverkusen of pigments of 1st class quality was in the beginning of July—with the exception of the TiO_2 pigment, the production campaign of which had just been finished—very low, in fact lower than it ought to be. With the new production of Standard "T", however, now started, we will soon work up a considerable stock.

Hoping that your recovery is developing satisfactorily, I am, with kindest regards to Mrs. McCarty and yourself,

Yours very truly

G. JEBSEN

P.S. I had lunch with Mr. Wilson today, and had an interesting talk with him, which I much appreciated.

Mr. Warshow was in Leverkusen during my stay and went together with Mr. Juell and Mr. Ley through the office organisation there to the purpose of a reduction in the personnel. It was found, that by reducing the reports, a man and a stenographer could be spared, and that experience during the first half year to come may allow a further reduction. Mr. Warshow's visit to this purpose was quite agreeable to Dr. Kühne and Dr. Brüggemann.

Mr. Warshow has also made himself more acquainted with the organisation here in Paris, which I much appreciated.

After his visit to London, he will go to Norway to the same purpose, and I shall be glad to have his opinion and possible suggestions to economies there.

I leave tomorrow night for the coast to visit my family for a week before going to London to meet Mr. Beschorman and Mr. Sidford.

Copy sent
Mr. Cornish.

Exhibit 88

P.S. Mr. Thompson told me over the telephone to-day, that sales in titanium during the first three weeks of July had been quite good, whereas the general trade was slacking.

In London it was felt by many, that the Germans had exaggerated their condition and made the crisis worse in order to obtain the best possible arrangements.

In Cologne it was very calm on the surface. There is probably some truth in the London opinion, but no doubt the German Government has now taken very strict measures especially to force the Germans to give information as to what capital they have in foreign countries. Anybody knowing about somebody else having money put away in foreign banks, or having capital about which they have not given information to the Government, can be put into prison, if they do not inform the authorities. It was felt that this develops a very bad moral leading to attempt to blackmailing and denounciation.

On the other hand the German municipalities in general have been spending a lot of money for social improvements of no or little remunerative character. Already two years ago Director Holm and Dr. Kühne criticised this very heavily. It was the result of the internal political situation, forcing the more conservative to give concessions to the socialists. Whether though the Government will be able to keep the population in hand with the masses of unemployed is difficult to say, and I have asked Mr. Thompson to provide for a three months stock in England in order to be prepared if riots should come. Fortunately the districts around Cologne and Leverkusen are amongst the more quiet ones, but even so there may be transportation difficulties.

720

Exhibit 89

Translated from German.

CONFERENCE

September 24th. 1928 at Leverkusen.

Present: Dr. Jebsen
Dr. Brüggemann
Dr. Raspe.

1°. Regarding the supplementary agreement foreseen in paragraph 4. of the addition to the contracts C. and D. of 3/20 October 1927, Dr. Jebsen promises to communicate once more with the American Gentlemen, as to a definite settlement of this question in the form of a "Gentleman agreement". As far as Dr. Jebsen has understood the American gentlemen, the Titanium Pigment Co.'s interests, as far as can be seen, are not opposed to the principle idea. However, the American patent law and the practise of the American patent authorities can compel the Titanium Pigment Co. not to hold this engagement, and it is impossible to foresee, which may be the further developments of such an engagement. However, the principle idea is looked upon favourably.

2°. The date from which the rent should be calculated, according to paragraph 1. of contract E. dated 3/10. October 1927, is fixed to be July 1st. 1928.

3°. The date at which the operations were started—to be declared to the control and tax authorities—is fixed to be September 15th. 1928.

4°. The transfer of a certain amount of interests of the Titan Co. A/S. Fredriksstad, to a new American company, as mentioned in Dr. Jebsen's letter of September 15th. 1928, is motivated by:

1°. The necessity of a regulation of Dr. Jebsen's personal participation in the titanium-business contemplated by the Americans.

Exhibit 89

II°. The desire to avoid Norwegian taxes, which would result from the sale of the Leverkusen production through the Norwegian company, according to contract J. of 3/20. October 1927.

According to Dr. Jebsen's letter of September 13th.; it is intended to form the new American Company in such a way that the National Lead Co. participates with minimum 86% and Dr. Jebsen—up to 14%. Thus, the proportion, as regards the National Lead Co., would be the same as for our previous contract-opponent, the Titan Co. A/S., Fredriksstad. Therefore there are no principle objections to undertake this formal change in the person of the contract-opponent. For the purpose of a homogeneous conception ("Erfassung") of the titanium-agreement existing between the Americans and ourselves, by the new company, it is also intended to transfer to the new company the shares of the Titangesellschaft m.b.H., which up to now were the property of the National Lead Co., and also to transfer to the said company the new shares of the American group which will be created in connection with the intended increase of capital (of Titangesellschaft m.b.H.).

Dr. Jebsen will write us in the name of the Titan Co. A/S. a letter stating the proportion in which the National Lead will participate in the new company, and asking if we agree to the transfer of the rights to the new company, it being understood that the Titan Co. A/S. maintains their "Haftung".*) We have promised to confirm our agreement ("Einverstandnis") to the Titan Co. on receipt of this letter.

(Sign. BRÜGGEMANN).

*) The meaning is: maintain their responsibility for the fulfillment of the obligations.

Exhibit 90

RESOLVED, that the action of Dr. Gustav Jebsen, at a proprietors' meeting of Titangesellschaft m.b.H., held October 22, 1929, in consenting to and effecting on behalf of this corporation an increase in the capital of said Titangesellschaft m.b.H. from one million five hundred thousand Reichsmark (R.M. 1,500,000) to three million Reichsmark (R.M. 3,000,000), and assuming in the name and on behalf of this corporation one-half of said increased capital or seven hundred and fifty thousand Reichsmark (R.M. 750,000), be and it hereby is in all respects approved, ratified, and confirmed, and that the officers of the corporation be and they hereby are authorized and directed to execute and deliver such instrument as may be proper to confirm said action.

Exhibit 91

At the request of the Chairman Dr. Jebsen thereupon reported upon the general conduct of the business and affairs of the corporation in countries foreign to the United States, under his charge as General Manager, explaining that full details of this business were on file at the home office in the form of correspondence with Vice President McCarty and reports, financial statements and minutes of meetings which had from time to time been sent him; that with respect to specific authority given him by the Board he wished to report that pursuant to the Board resolution of December 12, 1929, he had confirmed by letter to Titangesellschaft m.b.H. the amendment of the contract with that company of October 3/20, 1927, so as to include Poland and Portugal in the "territory of Titangesellschaft" thereunder, as also the Free City of Danzig, mention of which had inadvertently been omitted from the resolution referred to, but had not yet thought it opportune to effect amendment of said contract so as to include Italy in such territory; that with respect to the various patents of the Company and applications for patent made on its behalf, he had thought it expedient in several instances, for reasons of economy or on other practical grounds, to allow certain patents to lapse through non-payment of maintenance charges and to withdraw certain pending applications, all as detailed in a typewritten memorandum which he had had prepared and now submitted to the meeting, and that he would like to have the Board's approval of his actions in that respect and its authority for him to deal with the patent situation in like manner in the future.

Exhibit 91

Upon separate motions duly made and seconded the following resolutions were thereupon unanimously adopted.

RESOLVED, that the various acts and proceedings of Dr. Jebsen as General Manager of the business and affairs of this corporation in all countries foreign to the United States, as orally reported by him at this meeting and as embodied in his various reports, statements, letters and minutes of meetings on file at this office, in respect not only of his management of the direct business of this corporation but also as its representative at meetings of companies in which this corporation owns a proprietary or stock interest, be and they hereby are in all respects approved, ratified and confirmed.

RESOLVED, that authority be and it hereby is granted Dr. Gustav Jebsen, Vice President of this corporation, to take such action with respect to the maintenance or non-maintenance of existing patents of the corporation and with respect to the prosecution or withdrawal of patent applications filed on its behalf as he may from time to time deem advisable, reporting from time to time to this Board appropriate details of action taken by him under this authority.

Evans McCarty Esq.
Vice President
National Lead Company
111 Broadway
New-York City, U.S.A.

Dear Mr. McCarty,

I arrived here yesterday after a very good passage and write already to-day re an incidental meeting on board, which may prove of interest.

Going through the list of passengers the second day, I found that on board was a Major Barley.

In 1924 and 25 a Major Barley of the Nobel Industries had tried to meet me to talk titanium. In the beginning of 1925 he wrote me that he would be in Oslo and we met there. I told him it was too early to think of the erection of a factory for titanium-white in England, as the market had to be more developed. He asked me to have them in mind when matters were ripe, which I promised him.

I had only a slight remembrance of his look, but found out who it was and renewed the acquaintance Saturday afternoon.

He was well informed about the arrangements of last year and said he knew that National Lead Co were very nice people. I told him I was studying the English situation

and thought we could use the opportunity to talk the matter over. He said they were now in I.C.I. occupied with so many big problems that he did not know if the board would be inclined to take up any more now. He remembered our first meeting with great pleasure and had always felt that he would like to see an arrangement done with me, and so on . . . .

I told we wanted cheap sulfuric acid and I was afraid it could not be made so cheap in England as on the continent. He said that they were erecting a factory in Billingham near Newcastle for sulphate of ammonia and there would make sulfuric acid from gypsum found on the place and were confident they could make it cheaper than anybody on the continent.

He thought it very lucky we had met and told me Sir Harry McGowan was on board. He asked me about our patent situation and "what about Weizmann." I told him briefly my view upon this—practically as I summarised it for you re the Titan Co's patents before I left,—and he told me to my surprise that he remembered I had said the same to him in 1925.

He thought the white lead manufacturers ought to be taken into a combination.

I told him that you and Cookson were personal friends and the best relations existed between you.

I did not think there would be any principal objections from your side, but I could not see what they could bring in of value. He meant they did not need to have a large interest.

Mr. Barley said he was very interested—he did however not know if there could be any principal political objections against a cooperation.

Exhibit 92

He thought we should make a cut and dry proposition to which the Board could take a standpoint.

Later I met Mr. Mittchell and Mr. Nicholson, members of the Board of I.C.I., and some other friends or acquaintances, amongst others a Mr. White of Union Carbon and Carbide Co, a young man who had a charming young wife visiting Europe for the first time.

Mr. Mittchell I knew by name through Norsk Sprangstof Industri—they are competitors in South America—and Mr. Mitchell told me they were not so bad as their reputation.

Monday I had a little talk with Major Barley and told him I would like to hear more of Billingham as I had got interested in what he said the other day. He could not expect a cut and dry proposition from us. I was talking only on my own behalf. An arrangement would have to be worked out together between the two parties. I did not think that National Lead Co would make a proposition. He said he understood that. He was afraid the I.C.I. at present could not think of cooperating with us as they had so many important things on their program and they would have no time and men available for it. They could not take the responsibility for the management at present. The Billingham factory would not be in operation before 18 months.

They would though always be willing to sell us sulfuric acid.

I had told him some of the lines of our agreement with I.G. and said we had a call on part of the production in Leverkusen and it may be of interest to organize the Company now and start manufacture later. We have good agents in England who could continue to sell. By making a company we would show our intentions.

He saw our interest in that respect he said.

I asked about the political objections he had mentioned there may be, but he thought there were none.

He asked me if the White Lead people would have to be in with them and National Lead have the fifty percent alone. This was his own idea as I had not suggested anything except told him the first time that in Germany we were fifty-fifty. I said though I considered this would have to be the case.

I said to him that I.G. at the time they were reorganizing their activities, had found titanium to be of such interest that they came to me already two years ago and had given a considerable attention to make an agreement with us. He thought the agreement with I.G. spoke a lot in favour of our patents.

I told him that our agreement with I.G. arranged for future cooperation in patents and the same would have to be the case with I.C.I. "Of course",—he said.

The talk was though short as he had an appointment. He wanted to have another talk before I left.

After my impression of our first talk, I was rather surprised that he did not try to have me meet Sir Harry McGowan, but I did not express any desire in that direction.

Sir Harry McGowan was on board chiefly together with Sir James Dunn and some other of the titled persons. Sir James I have met several times before, he invited me to see him in London, but I am not particularly keen on that. He has not a very good reputation as a businessman.

The next and last day I played a game of tennis with Major Barley and some others and had a little talk with him afterwards. He asked me what I thought should be done further.

Exhibit 92

I meant the matter had so far no hurry, he could study it on his side and I would study it on my side.

I precised that I had been talking only on my own behalf and did not know what you thought, except that it was your intention to put up a factory in England when convenient.

I would come to London in May and if convenient we could perhaps meet there. He seemed relieved and said that was very good.

He felt that if the matter should be put before the board now, they would not take it up because of fault of man and time.

In the evening I said good-bye to Mr. Mitchell who asked me to see them in London,—they were not a bad lot,—he thought the English stood much nearer to the Scandinavians than to the teutons—(Mitchell's expression)—they would take care of me, and so on.

Barley joined in and Sir Harry McGowan. When I told Sir Harry that I had heard a lot about him from mutual aquaintances, he said he was not so bad as his reputation, which seems to be a standing joke in that Company. Mitchell told that Barley had been talking a lot of titanium and me and commercial solvent and so on. I made the talk rather short and when I left them, invitations to see them in London were strongly renewed.

I do not know whether Sir Harry is a type you would like. However, I.C.I. is as you know a very important Company.

Mentioning to Sir Harry National Lead Co's interest in titanium in Europe and my representation of you, he seemed to know National Lead Co but did not make any comment.

You mentioned that Sir Alfred Mond had recommended Weizman to Mr. Cookson. I wonder how much connection there is there.

Exhibit 92

It is difficult to tell you in a letter many small incidents of indications.

I cannot free myself entirely from the impression that they were playing a little poker with me, with the idea of having me to commit myself by showing much eagerness—but I may be wrong.

I asked Major Barley what production price Billingham would have for sulfuric acid—he was very reluctant to give any figure, but mentioned at last 25 shillings for 92% acid but said this was a figure I could not refer to later. I appreciated that but told him they would have to give us figures later.

I asked him if they had operated their process on an industrial scale; he said no, but they had no doubt that it would work out all right.

I do not know exactly Major Barley's position in the Company. He is probably investigating and preparing various projects for the board, but without any influence beyond that.

I hope this letter will reach you before Mr. Robinson leaves New-York, as it may be of interest to you in connection with your talks with him.

My travelling plans have been a little changed as the I.G. have asked me to come to Leverkusen on Monday. Thompson has written me that he will be here the 3rd and I have proposed to meet him here the 5th. He will be away from London until the sixth of May and I thought to go to London then.

My intention is then also to call on Mr. Robinson. Between the 15th and 30th of April I will try to meet Mr. Pisart.

Exhibit 92

I mentioned Avonmouth the first day to Mr. Barley as a possible source of sulfuric acid. He said the situation would be different in 1930 when the advantageous ore contracts had run out.

Later I expressed a surprise that they had not connected with Avonmouth when they needed so much acid and there was a new source which probably needed an outlet. He did not react on that remark.

Billingham is near Newcastle and steamers up to 6000 tons can go in there.

You will yourself see the advantages and disadvantages of Billingham contra Avonmouth. I may though mention that deposits of Barytes are chiefly in North Wales, which according to Barley, are of quite good quality. Without having seen statistics, my impression is though that most Barytes for chemical purposes are imported from Germany (Sachtlebens mine at Meggen).

With regard to the lines on which a cooperation with I.C.I. eventually should be made, I have not indicated anything beyond what Barley may have concluded from my indications of the I.G. agreement.

As I mentioned to you, it seems to me difficult at all to make an arrangement which in view of our I.G. agreement will not mean a considerable sacrifice.

Considering the matter I came to the following which I permit myself to suggest, namely—an agreement with the I.C.I. on the same basis as with I.G. with the difference that instead of having a call on 50% of the production at self cost—we have 50% of the net profit of the company to be formed and fifty percent goes to the money invested of which we take the half—resulting in ¾ of the total profit to us.

Exhibit 92

This will probably look to I.C.I. as a very stiff proposition and it may have to be arranged with two series of shares—giving the invested cash money preference shares.

In that case it is still stiff but not without precedence.

We may of course also ask a part of the preference shares and a smaller part, for instance 1/3, of the common stock in exchange for patents, experience market and a right for the English company to a part of our call on the Leverkusen production.

You may think now that my mind is running pretty fast, but I cannot omit to think that sulfuric acid at 25 shillings, the situation of Billingham near Newcastle and cooperation with I.C.I. seems interesting, provided the people are all right.

You probably have or can have good information as to this last question.

I had a little talk the first day with Barley as to the I.C.I.'s plans of operation and he said they were very confident in the future. They were now trying to arrange the chemical industries of the Empire to avoid competition and rationalize, and they felt that although it may take time, they would come out all right.

Their field of operation would most likely be the Empire. It would be three large divisions: Europe, The Empire and U.S.A.

One day he asked me about ilmenite, the Indian, Brazilian, Norwegian and Canadian deposits.

I told him that as far as I know the Indian deposits are small, the Brazilian in which we have a hand are neither very large. Both may prove rather expensive to operate, the Canadian were not easily accessible, whereas our Norwegian were near the sea on the south west coast of

Exhibit 92

Norway. He asked if the quality was good in Norway. When I said yes, he commented: well they are very convenient placed for Billingham.

He asked what we would do in Canada. I told him I had nothing to do with Canada. The market was small but my impression was that it was in your mind to put up a local factory there. He mentioned they had a sulfuric acid factory there: I do not remember whether it was in Quebec or Montreal.

I did not see much of Mr. Klein.

We had one talk together, but he was very careful not to say much of his work.

He considered Titanium-White a good pigment and meant he had shown it by taking up his experimental work.

He had managed not to infringe our patents. He did not say when he would be manufacturing.

I told him I had heard that Cookson was putting a high percentage TiO_2 on the market. He seemed very surprised, denied it and added—unless something new has turned up since I left in January.

He asked me if I knew anything about Monk and Irwin's Baryum-Titanate which they will put on the market. I said no and thought he would make Baryum-Titanate. He agreed, but only as an intermediary product. He said we will both have to make the pigment much cheaper—to which I agreed. It was the industrial conditions in Norway which had prevented us so far. He knew that, he said.

Everywhere in U.S.A. he had heard complaints that your prices in U.S.A. were too high. If only prices would come down, they would use more.

He did not speak highly of Blumenfeld's patents which he thought were our process Blumenfeld had tried to trim.

Exhibit 92

This has been a longer letter than intended. I hope though it has not bored you and I look much forward to your early comments, especially as to my talks with I.C.I. I should much appreciate to hear from you whether you want me to continue with I.C.I. and if so, to what extent and on which lines.

Please extend my very best regard to all your colleagues and express my appreciation of all the kindness shown to me.

I hope Mrs. Cornish is recovering from her serious illness and beg you especially to convey my sympathy and best regards to Mr. and Mrs. Cornish.

With the kindest regards to Mrs. McCarty and yourself and Mr. and Mrs. Spalding and many thanks for all your hospitality which I enjoyed very much,

Yours sincerely

G. JEBSEN

Exhibit 93

April 11, 1928

Dr. G. Jebsen
Societe Industrielle du Titane
26 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

Your telegram of the 31st ultimo from Paris was received in due course as was also your telegram of the 7th instant from Leverkusen. The latter, however, was not delivered until after office hours so that we did not receive it until Monday morning.

I immediately telegraphed to St. Louis regarding the drawing for the conveyor, and on receipt of their reply cabled to Leverkusen that the drawing had been despatched on March 22nd. It should be in their hands by this time.

I note the information in your telegram that it is expected that the factory at Leverkusen will be completed by the 15th of August, and that our German friends desire that Mr. Washburn arrive at Leverkusen by the 15th of July. At the moment I can see no reason why this cannot be arranged, but will advise you definitely a little later on.

I am also in receipt of your letter of March 30th from Paris which is both interesting and entertaining. I met Sir Harry McGowan in New York a few years ago at a luncheon given by Mr. Felix du Pont, but do not know him at all well.

You are no doubt correct in your impression that Sir Harry and his friends were trying to play a little poker with you and learn as much as they could. I am confident, however, that you were quite able to take care of yourself,

Exhibit 93

I have felt for some time, and I think on one occasion mentioned to you that we would probably have an opportunity to make some connection with the Imperial Chemical Industries if we desired to do so. I am not sure, however, that it would be a better connection for us than Mr. Robinson and his friends. It is a situation in which I think we can keep our own counsel and await developments.

When I last saw Mr. Robinson he told me that he would be in New York on or about the 7th of April, but I have heard nothing from him since Christmas, and do not know whether or not his plans have been changed.

Mr. Hagar has just returned from a two weeks trip in Canada. There appears to be no indication as yet that McArthur Irwin have actually done anything toward builgins a factory in Canada. Apparently they have shipped some ore to England and possibly to your friends from whom you formerly bought blanc fixe, and the development work is being done over there. Mr. Monk one of McArthur Irwin's men reported to one of our friends in Montreal that he expected to have sample shipments of satisfactory quality from England in the very near future.

I think that the time has arrived for us to actively enter the Canadian market, and we are making arrangements to do so.

We hear reports that the Commercial Pigments Company's factory in Baltimore is now in production, but we have as yet had no samples of their product.

A pure titanium oxide of fair quality said to be manufactured by P. Schueller & Son of Hannover, Germany, is being offered here at 16¢ per pound, and one of our friends has placed an order for a five ton lot.

Exhibit 93

I will be very much interested in learning the results of your conference with Mr. Thompson.

You will be pleased to learn that Mrs. Cornish is improving, and that Mr. Cornish hopes to bring her home at the end of this week.

With kindest regards for Mrs. Jebsen and yourself, I am,

Yours sincerely,

Vice President

Exhibit 94

Letterhead of

TITAN CO. A/S

No. 272

GJ/AK

Paris, October 3rd 1929.

Evans McCarty Esq.
Vice-President
National Lead Company
111 Broadway
New-York City, U.S.A.

Dear Mr. McCarty,

Re Mr. Robinson and Avonmouth.

Last week—the same day as you talked with him over the telephone—I had, as you know, lunch with Mr. Robinson and his son, and told him my impression of Mr. Tilden Smith's plant.

Mr. Robinson told me that he would not go ahead titanium in competition with you.

I told him that last time I saw him, I had been frightened by the high price for Sulphuric Acid which he had mentioned. I thought his manufacturing situation would allow him to make any price for Sulphuric Acid, but understood he was under an arrangement with the other English Sulphuric Acid manufacturers regarding his sales-price. I also had received information to the effect that freight rates in England and between English ports were rather unfavourable compared with freight rates from the Continent.

Mr. Robinson said he was at full liberty to do as he wanted down at Avonmouth and mentioned a price of 35/- for 70% acid. I considered this price far too high. We had

originally in mind to put up a factory in England, France and Germany. I had, though, been under the impression that the manufacturing conditions on the Continent were such that a factory in England would work under unfavourable conditions, but when he had found Avonmouth to be a suitable place for a Lithopone factory it ought also to be suitable for a Titanium plant. Mr. Robinson thought he could make us conditions at Avonmouth which would enable us to meet any competition from the Continent.

I told him that with the old friendship between him and you, we ought to be able to find a basis for an arrangement. Mr. Robinson said that if we would go together with him he would be glad to do so. If we preferred to put up a factory alone he would like to see it at Avonmouth.

On my question about Barytes he thought he would be in no difficulty to get this, as he, on advertisement, had had many offers of deposits in England. He could also have Barytes from the South of Europe and his relations with the Metallbank were such that they would not decline to let him have Barytes from Meggen.

Saturday I spent a very pleasant time with Mr. Robson at Avonmouth.

They have a very large site, so that there is plenty of space for Titanium and other factories. The Otenan plant looked well. The site is near the harbour. The water supply at the present was very limited, but Mr. Robson thought they could be able to make arrangements to meet our requirements at reasonable conditions.

Apart from Sulphuric Acid, the manufacturing conditions in Avonmouth are probably equal to most places in England. Mr. Robinson considers labour conditions to be better and I have no reason to doubt this.

Exhibit 94

The site is placed on a low flat land near the sea and some foundation work will probably be necessary.

With regard to freight rates within England and for export, information will be sent me either by Mr. Robson or Mr. Robinson junior as soon as they have got it. Mr. Robinson senior mentioned that he was closely connected with the railway companies in England and the policy of these companies was, on demand, to reduce the freight rates if necessary, provided they thereby did not put other industries out of business, which of course is not the case with Titanium, anyhow at present. Motor transports on the roads was used increasingly and may prove far more advantageous.

Mr. Robson told me that Barytes could be had at the price of £2.- per ton. If we mined it ourselves it could probably be had at the price of £1- or £1-5-0 (this is high, compared with I.G.'s and Pisart's conditions).

Monday I told Mr. Robinson senior confidentially, what our terms were with the I.G. and that in my opinion we should be interested in the erection of a factory in England, because of the advantages it presumably has to provide the British Empire with British goods, and the position it will give us in England. We could probably not expect to manufacture cheaper in England than on the Continent, but when putting up a factory we ought as far as it could be foreseen, ascertain that the conditions were such with regard to raw materials, labour and distribution facilities, that any competitor is not better placed and we were at least on equal foot with competition from the Continent. It was the lowest possible production price which should be the primary consideration. I had wished to mention this before he left on his winter trip and I would ask him

to consider the matter during his trip, from this point of view. His sulphuric acid prices were far too high and I asked him to consider to take his profit not in the sulphuric acid but through a participation in the Titanium enterprise.

Mr. Robinson thought this a very fair statement. He mentioned the importance of his enterprises and thought we should consider him a better partner than the I.G. which he knew and cooperated with in certain matters in Germany. His Zinc interest will lead him to the manufacture of Lithopone and he had had repeated approach from various sides with regard to Titanium.

He pointed out that the management of the Titanium enterprise would have to be made by us. He would give us every assistance from his concern, but we should have the management.

With regard to sulphuric acid, he suggested that we could buy this at a price equal to the I.G.'s and to be adjusted from time to time in periods of 5 to 10 years—in accordance with change of manufacturing conditions. Through his cooperation with the I.G. he knew their manufacturing prices. I did not mention our price in Leverkusen, as I did not think to be at liberty to do so.

I told him that I should have mentioned the longs years it had taken us to introduce the Titanium White into the English market, the conservative nature of this,—we were now selling at a rate of about 2500 tons Standard T p.a. and it looked as if it was a matter of price reduction to have this consumption considerably increased within a few years. Every English paint manufacturer was familiar with our material.

Mr. Robinson said that he found it perfectly justified that we should have a compensation for this. When we

had agreed upon the principle of the contracts, he would leave it to others of his organisation to work out these. He mentioned the mutual confidence you both had in each other and said that he was quite willing to leave it to you to fix the nearer conditions.

His idea was to have Mr. Robson and his son in the Board. We did not talk nearer as to what his participation would be. I only mentioned that we probably would not arrive at a basis that day and suggested that he thought over the matter and had a talk with you when he arrives in New-York during the spring.

The time for the erection of the factory, I thought, will have to be fixed under consideration of the development of the English market as well as the German, as we of course would like to start the new factory without impairing too much the manufacturing conditions of the German factory, but it might be well to make the arrangements in order to put ourselves on the English map.

I much enjoyed the talks with Mr. Robinson who asked me to give you his best regards.

I look forward to discuss this matter more fully with you on my arrival in New-York.

Yours very truly,

G. JEBSEN

Evans McCarty Esq.
Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. McCarty,

I beg to acknowledge with my best thanks the receipt of your letters of March 14th and 19th concerning your correspondence with Mr. Robinson.

I have been awaiting the informations mentioned in my earlier letters. These arrived yesterday and I am looking forward to go through the matter early next week.

Yesterday I also received a letter from Mr. Holm quoting his London representative, Mr. Harold Wilson, as follows:

" I have just been informed that the Imperial Chemi-
" cal Industries are contemplating very seriously the
" manufacture of Titanium in this country. I under-
" stand that it has gone a long way. These people, of
" course, know the future of Titanium and they also
" think that they will get protection. It is exactly the
" same as with the Imperial Smelting, they are all out
" for protection, so that is that."

I enclose copy of a letter to Mr. L.B. Robinson in view of the above and hope my letter is all right.

With kind regards,

Yours very truly,

G. JEBSEN

Dear Mr. Robinson,

Mr. McCarty has informed me of your correspondence with him concerning the visit of Messrs. Ticknor and Chase.

In this connection it may interest you that friends of ours have just been informed that the Imperial Chemical Industries are contemplating very seriously the manufacture of titanium. Whether the information is correct, I do not know. Some years ago they entertained the idea, but I was then informed—I believe your father was the source—that they had decided not to take it up.

With kind regards,

Yours very truly,

Exhibit 96

Dr. G. Jebsen
Societe Industrielle du Titane
24 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

I have yours of March 28th, No. 309, reporting the information your have received with respect to the plans of the Imperial Chemical Industries.

Last year Mr. W. S. Robinson was told by those in control of the Imperial Chemical Industries that they had definitely dropped any idea of manufacturing titanium products, but it may be that they have changed their mind.

It seems likely that we shall have to do something definite with respect to manufacturing in England, but the decision can be deferred until Mr. W. S. Robinson's return which will probably be late in June at which time I expect to be in London also.

Yours very truly,

Vice President

R. W. Greeff & Co Ltd London, 23rd Jan. 1931

Dr. G. Jebsen
The Titan Co A/S
26 Rue de la Pépinière
Paris
France

Dear Dr. Jebsen,

Mr. Noel Heaton has privately received information that the I.C.I. are investigating the possibility of Titanium pigments very closely. He was unable to get details as the information was of a confidential nature but the impression he formed was that extensive developments of the use of Titanium pigments were contemplated by this Company, and they were considering whether they could work with "Kronos" Brand, Blumenfeld or whether the Brown and Klein process would suit their purposes.

The information is vague in its character, but is passed on for what it is worth.

It is a matter for your consideration as to whether you wish to be in contact with the I.C.I. in the matter.

Yours sincerely,

ALFRED J. THOMPSON (sign.)

Exhibit 99

Letterhead of
TITAN COMPANY, INC.
7 West 10th Street
Wilmington Delaware, U.S.A.

Paris, July 15th, 1931.

GJ/HS.

Evans McCarty Esq.,
Vice-President,
National Lead Company,
111 Broadway,
New York, N.Y., U.S.A.

Dear Mr. McCarty:

I much enjoyed my visits with you and Mrs. McCarty and was very glad to see on my last visit how well you were on the way to recovery.

I hope Mrs. McCarty is well and join her in the hope, that you will take care and not resume work before you are strong enough to stand the strain, so that you do not risk a setback.

In accordance with Mr. Cornish I continue to write you about the matters here, it being understood that you will only take the trouble with them as far as circumstances permit.

I arrived last Sunday afternoon in London, and left for Paris on Thursday morning.

Monday and Wednesday I went over the sales situation with R. W. Greeff & Co.. The sale of Standard "T" has improved somewhat in the last month, so that they reckon the sales were the same as last year during the same period.

Exhibit 99

—The sale of Extra "T" has gone back, in view of the competition with TiO_2. They are now introducing the TiO_2 product from Leverkusen, and have hitherto sold about 40 tons. It is appreciated in the paint trade. In the rubber trade the opinion differs—some prefer the Montecatini product, whereas others find our material competitive. In the linoleum trade the product from Leverkusen does not, as mentioned, give the same effect as the Montecatini product. The reason for this is under investigation.

The question of a reduction of the prices was discussed. —Mr. Heaton expressed as a preliminary opinion, that in case we will fully compete with Lithopone in England, the price must allow a paint manufacturer to make a mixture of Standard "T" and Barytes of the same tinting strength as Lithopone at an expense of £16 per ton (the price of best grade Lithopone). At Barytes at £5 per ton, this means £21/8/0d. per ton of Standard "T".

The experience of United States points to a price of £23 for Europe. It may be this is due to the further development of the use of special vehicles in U.S.A. These special vehicles are coming more and more into use also here, and a lower price of Standard "T" will presumably add to this development. No definite conclusions were reached, and the matter postponed for further considerations.— The time for making a reduction will anyhow not be before in the beginning of September after the holidays. The Lithopone Convention will have a meeting at that time, and it may also be advisable to wait till that has taken place.

Tuesday I called on W. S. Robinson and his son. I had an interesting conversation with them and enclose a Memo. regarding my interview with Mr. W. S. Robinson, during which the son was present most of the time.

Exhibit 99

I had lunch with Mr. L. B. Robinson, who had continued to study the conditions for a factory in London compared with Avonmouth. The study was, however, not finished.

He has also been working on drafts of the contracts—apart from license agreement—and will send me these.

You will note from the Memo.—Mr. W. S. Robinson's proposal:—that I work out a general scheme for an arrangement.

I promised to consider this.

I would not decline his suggestion, as you may find advantages in having a scheme put forward at the right time to him from me instead of having it come direct from New York.

In view, however, of the matter still being under consideration in Broadway 111, and—as expressed in Mr. Cornish's letter to Mr. Robinson—no conclusions having been arrived at yet, it looks to me premature at the present—apart from the fact that I have not developed my own view sufficiently yet. Conditions are so changing, that it seems doubtful whether it is advisable to make any definite moves at all at present.

I will much appreciate to hear from you in this matter as well as of any developments in U.S.A. pertaining to this.

I had a short talk with Dr. Kühne over the telephone last Friday.— Dr. Schütz had told him, that Mr. Cornish had ~~expressed quite some~~ interest in his suggestion to have Sachtleben with us in the Titanium business.— Dr. Kühne seemed interested and asked me to consider this until we meet.— I go to Leverkusen tonight and will meet him either tomorrow or Friday.

When in London I called, as Mr. Cornish suggested, on Colonel Foster. He was not in town.— Next day I talked

Exhibit 99

with him over the telephone, and he very kindly offered to call on me in Greeff's office the following day as he would not be in his own office. As I had to leave for Paris, I proposed to call on him on my next visit to London in August.

Mr. Warshow came here to-day and will go to Leverkusen on Friday with Mr. Juell.

Mr. Wilson is in Leverkusen to-day.

I look forward to meet Mr. Beschorman and Mr. Sidford in London in the beginning of August.

Mrs. Jebsen leaves to-day with the children for the coast. Her recovery has gone well, but she is still somewhat weak. She sends her kindest regards to Mrs. McCarty and yourself, in which I heartily join.

Encl.

Yours Sincerely

G. JEBSEN

re interview with Mr. W. S. Robinson on July 7th, 1931.

Mr. W. S. Robinson told me, that he had answered Mr. Cornish's letter in the sense, that he will wait until we can form an opinion. He will be glad to cooperate with us in the Titanium matter, but in the case we take another decision he will understand, that this is a result of the circumstances of the situation. We must count that a tariff will be imposed within two years.

In one of his letters to Mr. Cornish he had mentioned —although this was no matter of his—the possibility that by continued export from Germany into England the Germans may consider to have a right to such, and a claim to be compensated if a tariff, or other reasons, brought us to erect a factory in England.

For instance the Germans had offered him to sell their goodwill in the Lithopone trade in case of a tariff. He had declined this and suggested, that they should put up a factory in England of their own—he had even offered to manufacture for them in Widnes, and they continue to sell to their customers.

I explained the difference between the situation of I.G. re the English market by the existing arrangement with us in Titanium, and their situation as Lithopone-manufacturers selling in the English market for their own account, and thought no such claim could rightly be raised in our case. — He was glad to hear this.

I asked him, if his objection to a compensation also applies to us. He said no, it was obvious that we should

have a compensation for the market we had developed.—He had only mentioned the above matter for our consideration—in view of his experience in Lithopone. I told him, that the question of cooperation with him had been under much consideration in the National Lead Co., but when I left, no definite opinion had been formed, and in short Mr. Cornish's letter gave the situation.— There was a desire in the National Lead Co. to cooperate with him, if it could be done to mutual advantage.

There were certain matters in his letter to Mr. Cornish in which I could not see clearly what he meant:

1) That he was afraid of being "left out" by not having the composite pigment included—he will remember that the compensation for the same could not be agreed upon—he had not accepted the formula of 8 times the profit, as he will do in case of Frickers Zinc Oxide business.

He thought it must be considered that Fricker has a factory and various assets besides the goodwill. I agreed, but it should also be considered, that our business, although established, is only in its infancy with a lot of ploughing work done, the value of which is not expressed by the present business.—Zinc Oxide is a product, the use of which is fully developed, and only grows with the general growth of the business.—He agreed—and as he may have appeared to be asking too much, and did not want to stand in a false light (I do not remember his expression)—he would suggest, that we go to one or two auditing firms of high standing and ask their opinion—as he had done when he purchased Orr.—I thought his suggestion very interest-

ing. In a case like this though—where an estimate of the future possibilities also enter into consideration—an auditing firm may not have sufficient competence. Their opinion may though be helpful.

2) How should his expression "avoiding wasteful competition" be interpreted? Competition between Titanium and Lithopone is unavoidable.—I had already, when Mr. L.B. Robinson informed me of their purchase of Orr mentioned, that I thought this will come.

Mr. Robinson had been thinking of unjustified cutting of prices to the expense of both. All pigments compete with each other, and cutting of prices will be to no one's advantage.

By having Zinc Oxide, Lithopone and Titanium under the same direction, their sale could be worked to better advantage of all. They should carry on as different organisations, but be directed from one source. Modern business should go for "Concentration of legislation" and "Decentralisation of administration." —I thought this may be all right if the economic interests were the same in all three industries, but when he had 25% interest in Titanium, and perhaps 100% in Lithopone, it may be difficult.

He proposed that I should work out:

1. a general scheme,
2. take up the question of compensation with Thompson & McLintock (auditing firm independent of him), and his son take it up with Honeymoon & Level (their auditors).

He asked me to keep in mind, that he had been holding back from Titanium in view of his friends. He

Exhibit 99

had been in Norway and seen the factory in Fredrikstad from outside before National Lead Co. had acquired it.—I told him, that when Titan Co. A/S. was for sale, I would in any case have given the National Lead Co. the first call in view of the previous cooperation.

I would think over his suggestion, but I could only consider it from the point of view of the Titanium industry—if the other relations between National Lead Co. and Imperial Smelting should be taken into account, it was beyond my competence.—He thought this all right.

I told him, I did not know how National Lead Co. will look upon bringing all into one pot.

Confidentially I mentioned, that Pisart had wanted an interest with us in Titanium, and I thought once, that the only way would be to bring all his pigment interests and ours—re the markets in question—into one pot, and both parties take a 50-50 interest, but neither McCarty nor Pisart was interested in that.

I told him that 50-50 arrangements had its advantages, but also decided disadvantages, and asked how he would look upon a 49-51% division.—He said this was of no importance to him.—When I had worked out a scheme, he would give me his frank opinion. I told him I will think the matter over, and that I will be back in London in the beginning of August. Mr. Robinson will, according to his present plans, be in London then. In the meantime his son will ask their auditor's opinion as to compensation for the goodwill.

Dr. G. Jebsen
Titan Co. Inc.
26 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

I have your letters of the 21st, 22nd and 23rd ultimo, Nos. 404, 405, 406, and have read them with a great deal of interest.

It is a little early as yet to tell what the exact position will be in England when governmental policies are fully developed, but we received a cable from Mr. W. S. Robinson a few days ago advising us that he expected import restrictions at an early date and a tariff in February. Mr. Robinson, as you know, is usually very well informed.

We are at a certain disadvantage in our English business in buying in a country that is on the gold standard and selling in one with a depreciated currency.

All of these indications indicate to me the desirability of manufacturing in England at an early date, but I find that my associates are not entirely in accord with this idea. However, we expect to discuss the matter fully in the near future, and see if we can come to some unanimity of opinion. In the meantime, we will be glad to have your views.

I am sorry that it was necessary for you to make the reductions in salaries referred to in your letter of October 22nd, but you really had little choice in the matter. It is gratifying to know that the reductions were received in

such good spirit by all of the staff. The action taken by you with respect to your own salary is particularly appreciated.

I am continuing to come to the office for a few hours each afternoon, and find it very interesting and enjoyable. So far there has been no indication of fatigue.

With kind regards, I am,

Yours very truly,

McCARTY
Vice President

Mr. Evans McCarty,
c/o National Lead Company,
New York.

Dear Mr. McCarty,

Many thanks for your two letters of October 30th and the one of November 6th. I received the first two the day before I left Paris for going to Norway and your letter of November 6th today.

I am very glad to see that you are recovering well and enjoy the return to the office for a few hours each day. I hope that you will be careful and not overtax your strength —better take it easy and not risk a set-back.

Re. the English position.

We have particularly two factors which may make it desirable to put up a factory in England:

1. The tariff question.

As far as this matter will influence, I would suggest that we await further developments.

The election has given a majority for a National Government and not specifically for a tariff policy, and drastic tariff measures, if not proven absolutely necessary, will by many be considered as a misuse of the mandate given. On the other hand, as time passes Mr. MacDonald and his

followers may find it more and more difficult to keep up their position against the pressure from the conservatives.

In Germany the situation is most seriously considered as to what measures should be taken to keep up their exports.

As the factory at Leverkusen is not yet fully occupied and in view of the latest low production prices, I am most inclined to think that we should still wait some time for further developments before making any decision, as far as being influenced by the English tariff policy.

2. The erection of a factory by competitors.

The danger of this should be followed closely. Mr. Beschorman informed me of the approach which has been made to the "Associated Lead", and I should appreciate much to hear from you whether your contact with Du Pont has developed any further information.

As to the National Titanium Pigment Company in England, there are no specific news. They have though not ceased their activity, as Greeff & Co. encounters their competition to the same extent as previously. Mr. Heaton mentioned today in a letter that he has authoritative information that our competitors are experimenting with precipitation of TiO_2 on colloidal clay—a matter which Mr. Heaton thinks of interest, as this base will show the advantage of less settling compared with Blanc Fixe and insolubility compared with calcium sulphate. Mr. Heaton does not though mention whether the competitors referred to are the National Titanium Pigment Company or Montecatini.

I have been in Fredriksstad a week, going through the position here.

I requested Mr. Knudsen some time ago to investigate the possibility of selling the dwellings we have for some of our employees, as these incur comparatively high expenses. We have three houses:

Exhibit 101

Kasernegaten 49 is a smaller property for which, with the reduction in the personnel, we have less use.

Fleischergaarden (the house occupied by Mr. Knudsen), for which it is considered not so easy to find a purchaser, and

Astrupgaarden, which, presumably, will not be so difficult to dispose of.

The yearly expenses will be less if we sell these properties and compensate the employees for the extra expense of renting apartments or houses elsewhere.

Since my suggestion was made, the Norwegian currency has depreciated and this may lead to higher prices, but people in Fredriksstad are not looking forward to any better times of local reasons.

My idea was that we should sell the houses at prices corresponding to the booked value. There are mortgages on the houses, so that the loss on depreciation of the currency is counterbalanced to a great extent by the loan.

It happens that we have found people who are interested in the two first-mentioned properties, and it looks as if we may obtain prices which Mr. Dahl, Mr. Vogt and Mr. Knudsen, who are better informed than I am about present values, recommend should be accepted and practically corresponds to booked value. I have asked them to try to make the sale subject to your approval; but if the purchasers will not agree to such a delay, we have thought it better to accept. I hope this will meet with your approval.

With regard to Astrupgärden, which is occupied by Mr. Mölbach and Mr. Hanssen, we have thought of waiting, as this property is easier to sell, and in case the depreciation of

the currency will effect higher prices as time goes, we may take advantage of this.

Considerable effort is made by the Government and authorities in Norway to keep the price level down, in spite of the currency movement, in order to keep the export industries going. Norges Bank (corresponding to Federal Reserve) wanted to follow the policy of keeping the Norwegian currency on a gold basis, but has been forced, partly by circumstances and partly by pressure from the other Scandinavian central banks, to depart from it. It seems that the stabilization cannot take place before the English currency is stabilized and that it will follow the movement of the £, as Norway by its export and important mercantile fleet is to a very great extent dependent on the English currency.

I leave tomorrow for Oslo and at the end of the week for the Mines at Rekefjord, to go through the new plant and will at the same time attend to the questions in Mr. Hallett's letter of September 25th. The production is about 750 tons a month at present and the TiO_2 content of the concentrates is 44.5% to 45%. Mr. Lenschow has the impression that the grinding installation is on the smaller side. With improvement of this, he estimates the capacity to 1000 tons per month, but hope to reach a higher figure. I will write you further about this after my visit at Rekefjord.

Mr. Dahl and Mr. Vogt requested me to send you their very best regards.

With kindest regards to Mrs. McCarty and yourself.

Yours very truly,

G. JEBSEN

THE ROOSEVELT HOTEL

NEW YORK CITY
NEW YORK

November 21, 1931.

Dear Mr. Cornish:—

I received a rather important telegram from Tasker (Associated Lead) last evening and I am sending along a copy to your hotel as I cant get hold of you at Broadway this morning. As you may wish to send a copy to Mr. McArthy, I am enclosing an extra one and if you would like to have a talk with me on it during the week-end, I shall be available. If not, I will telephone you first thing on Monday morning and arrange to come down to Broadway as soon as you are clear of your morning correspondence.

You will remember I have discussed the probability of some such move coming about with you several times and it is really an outcome of talks Tasker was having while Mr. Beschorman was in London. I hope, therefore, your own views as to the Titanium future in England can be easily adjusted to fit into this position so as to keep the British Empire market under our control. If you can fortify me with your views on a workable joint effort, I shall go back home quite happy.

Sincerely yours,

ROBERT BROWN

Dr. G. Jebsen
Titan Co. Inc.
24 Rue de la Pepiniere
Paris, France

December 14, 1931

Dear Dr. Jebsen:

I have your cable of December 2nd from Cologne in reply to mine of November 28th; also your letter of November 17th from Fredriksstad which was written before my telegram was dispatched.

Your recommendation that we await further developments before reaching a decision with respect to an English factory has much to commend it although it is always possible that our hand may be forced by competing interests.

So far we have had no advices of any duties being assessed upon titanium products by the British government. We read in the newspapers that the German government has been given authority to negotiate on all tariff matters, and it has occurred to us that a word from our friends in the I. G. might influence the government to make representations to England with respect to titanium directing the attention of the English government to the fact that titanium products are not made in England in an important way, and are being imported from Germany.

Mr. Robinson writes that there is a very wide move throughout the United Kingdom to extend local manufacturing, and titanium is definitely included.

In my letter of November 27th I sent you copy of a cable received from Mr. H. S. Tasker of the Associated

Exhibit 103

Lead Manufacturers telling of one project that is now being definitely considered.

In any event, I think our own minds should be as clear as possible as to what we want to do if we are forced to move quickly.

I do not know just what is the present position with respect to your negotiations with Mr. Robinson and the Imperial Smelting Corporation nor have I heard any final conclusions as to whether or not Avonmouth is a desirable point for the manufacture of titanium pigments. It seems to me that that is one of the first things we should clear up. I am under the impression that aside from the question of water supply Avonmouth is not so advantageous a point for the distribution of the finished product as is, for instance, London, but this may be offset by a lower price on sulphuric acid and partly also by concessions in freight rates from the Great Western Railway. Mr. Beschorman handed me some calculations bearing on this point, but I have not had an opportunity to consider them carefully.

Should the British government place a tariff on crude barytes our supply of that material might easily become an important question to us, and I have been wondering if in that event it would be advantageous for us to make some sort of an arrangement with LaPorte. As I understand it, LaPorte manufactures blanc fixe from Witherite obtained from a mine owned or controlled by them in the Newcastle district. If an advantageous arrangement can be made with LaPorte we would not only have a British source of supply, but would be saved the cost of a blanc fixe plant which is not inconsiderable.

You are naturally basing your calculations on the use of Norwegian ilmenite, but should Great Britain in pursuance of their present protective policy put a tariff on ilmenite we

might be forced to use Indian ore. At the moment there would be no difficulty in securing our supply of Indian ore should we think it wise to do so.

As I wrote you some time since, we have again been approached by Mr. Chase and his associates on the subject of an arrangement with respect to the Blumenfeld patents. These gentlemen would like to secure a working arrangement in the United States, and in order to get it are willing to be of any assistance they can in helping us to secure a similar arrangement in Europe. They claim that they have no interest in the European situation whatsoever. I understand that there is a possibility that Mr. Blumenfeld may be in New York on his way back from Japan before the end of this mouth in which case an opportunity will be afforded to discuss the matter of his personal interest with him. I have told Mr. Chase that this was his part of the project, and we would await some definite suggestion from him.

I do not know just how far it is wise for us to attempt to go in gathering all interests into one camp before starting an English factory, and it may be that we will do well to go ahead on our own, and deal with the other interests later.

It has been so long since I have had an opportunity to discuss these questions with you that I feel I am not very well acquainted with your views on the subject.

In connection with the negotiations with Mr. Robinson it will interest you to know that we have decided not to join him in his lithopone and zinc white businesses.

With kindest regards for you and Mrs. Jebsen, and every good wish for Christmas and the New Year, I am,

Yours very truly,

McCARTY

Exhibit 104

COPY

December 15, 1931

W. S. Robinson, Esq.
95 Gresham Street
London, England

Dear Bill,

Many thanks for your letters of the 25th and 30th November.

I am glad to hear that you escaped pneumonia, and hope that your stay at the seaside has put you on your feet again. These must be very difficult times for you, and you will have to take care of yourself in every way that you can.

Your letter to Mr. Cornish on the subject of exchange was very interesting indeed.

While we sustained some loss on our balances in London they were relatively small compared with the losses on open customers accounts and undelivered contracts for white lead sold in sterling. Fortunately, however, the loss on the exchange will not exceed the profit in the merchandise. We should have been warned by your letters and comments when you were here in June, but it seemed incredible to us that England would abandon the gold basis even temporarily.

Mr. Beschorman tells me that he has written you with respect to our participation in the Orrs and Frickers businesses.

In so far as titanium is concerned I think that both Mr. Cornish and Dr. Jebsen would like to postpone building a factory in England until there is more certainty as to sterl-

ing values and as to the policy of the English government with respect to a tariff on titanium. It seems to me quite likely, however, that if we wish to protect our position in Great Britain we shall have to act before these matters are definitely settled.

So many of our people have had a hand in these conversations, and I have been absent from so many of them that I am not sure just how matters stand at present.

One of the first things that we shall have to do, of course, is to determine whether or not Avonmouth is a desirable location for a titanium plant. My impression is that there was some question as to whether the supply of fresh water was adequate, and Mr. Robson was to investigate the matter. I have not, however, learned the results of his investigations. Apparently Avonmouth is at some disadvantage with respect to London in the matter of freight charges, but these can be offset to some extent by a lower cost for sulphuric acid, and it is also possible that in order to get a plant located on their lines some concessions may be obtained from the Great Western Railway. That is a matter you will no doubt discuss with Sir Robert Horn at the proper time.

Another question for us to decide is whether we wish to make an attempt to bring the several groups of patents under one control before embarking on the enterprise. This may be possible, but it is likely to delay matters, and it may be better for us to make a start, and deal with competing interests later.

I have written Dr. Jebsen with respect to all these matters. He has just returned to Paris from Norway, and is now in a position to deal with them all very promptly.

Exhibit 104

You probably have formed some fairly definite ideas yourself with respect to this business, and your views will have great influence with us.

Your letters give no information as to where you will b at Christmas time nor as to what your winter plans are. You have not spent a winter in England for many years, and I am wondering if you are going to risk it this year particularly in view of your recent illness. If Santa Barbara tempts you, and you can be away from London long enough for such a journey in these troublous times we will look forward to the pleasure of seeing you in New York.

Do not be disturbed about my health. My strength does not come back as rapidly as I had hoped, but it is returning slowly, and I am enjoying my office contacts very much.

Mel joins me in love and best Christmas wishes for you and Gertrude.

Sincerely yours,

7713

TITAN CO. A/S

Mr. Carter ✓
Mr. Beschorman ✓

No. 418.
GJ/AK

Paris, January 4th 1932.

Evans McCarty Esq.
Vice President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. McCarty,

Many thanks for your letter of December 14th. This has crossed my letters of December 8th and 9th, which partly answer the questions you put.

In the following I will try further to answer your various questions, as far as I can under the present circumstances.

The conditions of the world at the moment are such, that any definite engagement, based on politic movements, may prove wrong.

Personally I am at present inclined to think that when the economic war is over, we may find the various important European countries with moderate tariff barriers, which make it advisable to erect factories in markets like England and France when these markets are sufficiently developed. This development has, as you know, not been so rapid as it looked like some years ago and, although there may be a general change in 1932, we need also a considerable increase

of the sales before this point is reached. In the meantime, it will probably be more economical to base ourselves on the factory in Leverkusen, which is not fully occupied.

Re England.

Your thought of a possible effect of representations from the German Government to England, with respect to Titanium, did fall in with my own. Nothing has been done by the I.G. hitherto and Mr. Holm expressed over the telephone the opinion that the German Government has so much more important matters to deal with at present, that they will not consider it opportune to take up such a matter. (You will know that a 50% dumping duty has been put on Lithopone since you wrote, and Mr. Holm considered this caused by the forced import from Pisart.)

I am more afraid that the English Government's attention to Titanium will be drawn by English interests, than by German.

It will of course be unfortunate if an English Titanium factory should be erected by competitive interests, and the idea with the British Titan Products Company—as a sign that we intend to put up a factory in England—not meet the purpose.

It is difficult to understand that the Associated Lead Manufacturers will start a titanium manufacture, knowing as we do, what it costs to get a factory well operating as to time and money,—and with us as competitors. It seems to me that the only excuse of such a step would be ignorance. I hope it will be possible, with your 20% interest in Associated Lead, to make it clear that such an enterprise will mean a loss of money and no profit.

Exhibit 105

Re Mr. Robinson.

I have done nothing vis a vis Mr. Robinson (except inquiry re water-supply), as Mr. Beschorman last autumn, when leaving England, wrote me that "the situation would be discussed in New York and some sort of decision arrived at, of which I would be informed". It seemed mal à propos in the meantime for me to take up the matter with Mr. Robinson or his son.

You will remember from my correspondence, late autumn 1930, that Avonmouth is not well placed from the point of view of freight rates. This was chiefly based on rates for water transport or with trucks, this being cheaper than railway. Mr. L.B. Robinson expressed the opinion that various other factors may counterbalance this, and intended to make an investigation in this connection, which however had not materialised last summer. He had at that moment in thought later to put up a Lithopone factory in Avonmouth and, in view of this and his presumably better knowledge of English conditions than mine, I have postponed to form a definite opinion.

From our investigations hitherto, Liverpool, London or Newcastle are indicated as far as freight rates are concerned.

Laporte's position in Luton seems to me not favourable for a titanium factory—it being in the middle of the country, with extra costs of transport for incoming materials and probably difficulties with the disposal of our Sulphuric Acid—Iron Sulphate solutions. The Blanc Fixe we bought from them for Fredriksstad was not very satisfactory, wherefore we preferred to make our Blanc Fixe from Barium Carbonate.

Exhibit 105

It is difficult to believe that the English Government should go so far as to put a tariff on crude Barytes and Ilmenite.

With regard to the Indian Ilmenite, the freight rates will—I presume—represent some handicap and not always remain as low as at present.

Re Blumenfeld.

From Mr. Blumenfeld's office I am informed that he will be back here at the end of January or beginning of February.

Mr. Blumenfeld does not, as you know, inspire much confidence, and any arrangement with his group would, I believe, be facilitated if his interest was controlled by somebody else of his group, of a more responsible nature and trustworthiness.

The negotiations last spring developed the following points:

Commercial Solvents' interest in England was, according to Blumenfeld, limited so, that they could do nothing without him. It seemed, though, that Commercial Solvents had some rights to Blumenfeld's English Patents, and I have the impression that Mr. Ticknor and Mr. Chase thought, this, together with Blumenfeld's weak financial position, would enable them to bring about an arrangement giving them the control of his interest in England.

Montecatini entered, though, also into the picture, as it had a right for some years to export to England.

On Mr. Ticknor's and Mr. Chase's suggestion, based on their talks with Donegani, it was assumed by them that Donegani would accept a certain arrangement. When I met Donegani with Blumenfeld, it appeared, though, that

Exhibit 105

Donegani demanded considerably more and seemed to have no regard for his agreement with Blumenfeld, as this has been represented to me by B. Blumenfeld did not seem to have sufficient strength to keep Montecatini to their agreement, and suggested that we should make an arrangement with him and fight Donegani together afterwards. I declined to buy a law-suit, and the other alternative was to try to conciliate the two. Mr. Burton made an attempt with not much result. I would not follow their suggestion to go between; both Blumenfeld and Donegani seemed to hope that we would make a further sacrifice for the sake of an arrangement.

Also the English position with respect to the composite pigment was left open in your talks with Mr. Chase.

My impression, as the negotiations developed, made me less and less interested in an arrangement. I tried, though, to develop the matter as far as possible, up to such a point that an arrangement might be made in case this was considered desirable for your interests in U.S.A.

When Mr. Beschorman was in Leverkusen, it was agreed with Dr. Kühne that the contact with Dr. Mayer of Aussig, in this matter, should be continued, expressing to him that, with Dupont's entrance, the question had been postponed, but it might be advisable that he tried to make an arrangement with Blumenfeld, by which Aussig takes over the control of the same countries as T.G.m.b.H., as this might facilitate any future arrangements between these two companies.

Mr. Ticknor said to me last autumn that Mr. Ewing, Dupont's representative in London, would see Donegani this autumn, and, as Dupont has many points of interest together with Montecatini, Mr. Ewing might influence him.

It seems to me that Commercial Pigments or Dupont are nearest to clear up the matter between Blumenfeld and Montecatini. They must have a clearer view of the relations between these two, and should have influence with both. If Dupont took over Blumenfeld's European interests, we would have some more responsible people to deal with.

The value of the Blumenfeld French group is chiefly a nuisance value. What this represents is difficult to say under the present circumstances, as it—first of all—depends upon his ability to get capital. His reputation in France will make this difficult for him and, as far as I know, most of the important groups in France have got enough of him. He has, though, connections with Mines Domaniales de Potasse d'Alsace, which has a factory in Rouen, and Blumenfeld talked of putting up a factory with them. The present conditions in France are, though, not encouraging.

Blumenfeld's sales policy generally has been to cut prices. This is particularly experienced by Mr. Gilbert who meets him as competitor also in other products than Titanium.

I believe the wisest thing to do is, as you have done—await that Mr. Chase develops some suggestions.

I have noted with much interest your decision that you will not join Mr. Robinson in his Lithopone and Zinc White business.

In view of Mr. Beschorman's conversations in England and the above mentioned letter from him, and as I personally have considered it better to await developments—I have postponed any initiative on my part.

I think, though, it would be well to continue the study of the best place and conditions for an English factory.

Exhibit 105

On the other hand, any move by me may interfere with the conversations which have gone on by your people.

With regard to Mr. Tasker's plan, the only matter which seems to be of interest to us is the facilities offered by Chemical and Metallurgical Company as to Sulphuric Acid. It would be interesting to know on what terms the supply of Sulphuric Acid is thought to be.

Please extend my best wishes for the New Year to all friends in the National Lead Company.

With the kindest regards for you and Mrs. McCarty and every good wish for the New Year,

Yours very truly,

G. JEBSEN

P.S.—The calculations re freight rates from Avonmouth were based on rates for water or road transport. The railway rates were special—and even so they were higher—in some cases considerably higher.

I enclose a list of the rates from Avonmouth to various places.

Copy to Mr. Cornish.

Exhibit 106

January 8, 1932

Dr. G. Jebsen
Titan Co. Inc.
24 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

I have not written you in reply to your letters Nos. 407, 408 and 409 regarding the English position as there have been no developments during the holidays.

Our people here are inclined to share your views, and await developments, but Mr. Robinson writes that he considers it very unwise to delay.

My own opinion is that sooner or later we will have to have an English factory if we wish to maintain our position in the British market, and that the necessity for it may come sooner than some of us now anticipate. In view of this, I think, we should have as definite ideas as our present information permits as to what we want to do in the event that we decide to manufacture in England.

It may or may not be possible or desirable for us to clear up the patent situation before we start. Nothing has been heard from Mr. Blumenfeld since my last letter to you on the subject, and yesterday I suggested to Mr. Chase that he attempt to formulate some proposal for the rights to the Blumenfeld patents in England so that we might have something definite to begin with. I fear that the European situation is too complicated for us to deal with all countries at one time.

On November 27th I sent you copy of a cable from Mr. Tasker. We heard nothing further from him on the

subject until yesterday when a letter arrived stating that he would write us shortly with respect to titanium matters. We will try to keep you posted with respect to this correspondence, but there is no reason why you should not meet Mr. Tasker the next time you are in London, and discuss the position with him.

We have no desire to have the Associated Lead Manufacturers share in the management of the English business, but should we form an English company it might be wise to allow them to participate to a small extent as they are large potential buyers as well as potential competitors. In addition to this they are largely interested, as you know, in Hopkins & Williams Travancore Ltd.

I think that heretofore all your plans for an English factory have been based upon the use of Norwegian ore, but it may prove to be desirable to use ore of British origin in which case the Travancore deposits would be of interest. For your information, these sands containing 52% TiO_2 can now be bought for from 45 to 50 shillings per ton c.i.f. United States ports.

Please let us know by cable when you next visit London as there may be some matters we would like to put before you at that time.

Your letter of December 23rd, No. 417, has just been received, but I have not had the time to study it.

With kind regards and every good wish for the New Year, I am,

Yours very truly,

Vice President

Exhibit 107

January 12, 1932

Dr. G. Jebsen
Titan Co. Inc.
24 Rue de la Pepiniere
Paris, France

Dear Dr. Jebsen:

Some weeks after his return from Europe last autumn Mr. Beschorman handed me some draft copies of proposed agreements between the Imperial Smelting Corporation and British Titan Products which he said he had received from you. As far as I can find there is no further information here concerning them. They appear to be the result of your conversations with Mr. L. B. Robinson, but of that I am not sure.

Although I have not compared them carefully the agreement dealing with the license appears to follow the lines of the agreement of 1920.

The agreement respecting the price of acid is based partly upon the profits in the business.

We presume these contracts embody Mr. Robinson's ideas, but we have no expression of your views concerning them.

As a matter of fact, we over here do not know just how your negotiations with Mr. Robinson stand, and will appreciate it if you will let us know what the situation is.

With kind regards, I am,

Yours very truly,

McCARTY
Vice President

London. E.C.4.

18th Feb. 1932

Mr. Evans McCarty,
Vice President,
The National Lead Company,
111, Broadway,
New York. U.S.A.

Dear Mr. McCarty,

My best thanks for your two cables :-

(1) "Please consult W S Robinson and ask him to show you recent cables and correspondence stop will appreciate your opinion"

(2) "If you approve suggest that you propose to Robinson that deals Titan products have initial capital of £500,000 stop. £125,000 to be issued to Titan Co for license technical knowledge (of) and goodwill of established business further £125,000 to be issued to Titanco for cash and £125,000 to Imperial Smelting Corporation for cash remaining £125,000 to be sold for cash to ICI or other prospective partner stop question of location of plant contracts for acid and ore may be dealt with separately if desirable stop should retain Greeff as selling agents to preserve continuity of business stop If plan not approved by Robinson invite counter proposal"

Exhibit 109

I have had two talks with Mr. Robinson and submitted to him the suggestion contained in your last cable, however, without indicating that somebody else could be taken as partner instead of I.C.I. I also left out for the time being any special agreement for the supply of raw materials mentioning only that I presumed we would have these on the most favoured customer conditions.

I told him that I personally would prefer to have 51% interest as I thought this would be of advantage to all on the point of your management, but I did not make it a condition. He thought this might be arranged with voting shares. He mentioned that I.C.I. might say that this, being a British industry, the majority ought to be in British hands. On my reaction that that would be the end of our negotiations he expressed the view that we might always talk about it. We finished up that he would say to the I.C.I. that there was an opportunity for them and him to make an arrangement with us on the basis of 50:50 interest.

On his question I told him that a preliminary calculation for a factory of 1200 tons Ti02 and 5000 tons of Standard T annual output had shown a cost of about Kroner 4,000,000 or £220,000, not including a factory for barium sulphide, cost of site and various other minor items. The calculation was made by a Norwegian engineer—Mr. Mulbach—on the basis of Continental experience and the Pound or Kroner to have Gold value or that "£1 was still worth 20/- in England". With increasing domestic prices the figures must be different. To this should be added working capital. (Later I informed him that the capital employed in our German enterprise was around Marks 7,000,000.) He expressed the opinion that the domestic price level will not increase for some time to come.

He evidently thought £375,000 cash very much. The company should not do banking business. Capital could be provided for but not called in unless necessary. He would expect a company with £500,000 capital to show normally a nett earning of £50,000. I thought this could be expected as a normal nett profit of £6 per ton for Standard T and £19 per ton for Ti02 seemed reasonable. Our present English price would be too high to consider as a basis for a normal nett profit.

On his request I informed him confidentially of the quantities delivered to customers within the British Empire in 1931, and that a rough estimate had shown an earning of about Mks. 250,000—this last figure with the reservation that we had not yet definitely established it.

He mentioned his information to you that his output for Sulphuric acid on the basis of his present capacity in Avonmouth has its market. I told him I considered a higher freight rate from Avonmouth to consumers compared with London or Widnes corresponded to 5/- to 7/- lower price for Sulphuric acid in Avonmouth.

Mr. Robinson did not express a definite opinion as to the situation of a factory but from our conversation I gathered that he was still interested to have it in Avonmouth as he intends to increase his capacity by about 100,000 tons sulphuric acid a year. I could not see the advantages of Avonmouth and thought Widnes might be more interesting in view of a possible arrangement for delivery of barium sulphide from Orr's factory which would be to the advantage of both. I had, though, postponed any definite opinion as I had been told that he had planned putting up a lithopone factory in Avonmouth. He mentioned confidentially that Pisart was considering erecting

a factory in Avonmouth on the basis of supplies from him. (Pisart must then have changed very much his opinion of Avonmouth as expressed to me some years back).

I pointed out to Mr. Robinson that we produced Sodium Sulphide as a by-product and it may be of interest to the I.C.I. to have the opportunity to handle this material from us in order not to have the trade disturbed.

Mr. Robinson will see the I.C.I. people to-morrow and I have an appointment with him on Saturday.

Considering the advantages and disadvantages I believe an arrangement on the above lines is interesting to us. Apart from both companies' general position it will represent a combination with the two most important sulphuric acid manufacturers in England who can, presumably, make acid cheaper than anybody else—I.C.I. in Billingham and Imperial Smelting Corporation in Avonmouth.

It does not appear from Mr. Robinson's conversation that he would be willing to give us a price for sulphuric acid cheaper than what may be considered reasonable in consideration of the quantities we may consume and presumably the Imperial Smelting Corporation and I.C.I. will have an arrangement between them for the regulation of the market, but if combined with them we will probably have prevented anybody else from manufacturing on the basis of cheaper acid than us.

If a combination with these two companies prevents anybody else from entering the industry—anyhow on a basis representing serious competition—it can be worth while to have them as partners also in view of the strength and influence they otherwise can exercise.

I told Mr. Robinson that we had been in no hurry as to the erection of an English factory in view of the German

factory not being fully occupied, but if the present trend of policy develops further we will have to put up a factory sooner or later in this country as we, under no circumstances, will let the English market go and I.C.I. have to reckon with our competition.

With regard to the Barytes position Mr. Robinson mentioned first that he controlled the only two mines in the United Kingdom—his son informed though that negotiations for the second mine were not concluded yet. Mr. W. S. Robinson told me he had been investigating mines in Devonshire and intended also to investigate some old mines in the Midlands. In Wrentnall he had ore in sight for about three years' consumption and a year's supply in Widnes. He was still importing Barytes from Germany and I gathered that he intended to continue to do so in spite of the 10% duty.

Mr. Tasker is away on holiday and will return next week. I saw Colonel Foster to-day—he sends his best regards—and touched on the question of the interest Goodlass Wall & Lead Industries take in Titanium. I mentioned incidentally costs and the trouble we have had in acquiring our experience and also that it has taken us three years to educate the Germans in the matter. I did not think there would be room for two factories in England. Colonel Foster agreed with this and spoke on general lines of co-operation. I mentioned the importance of mixtures of white lead and titanium and suggested that the A.L.M. should work in this direction being supplied by us. Colonel Foster offered to arrange a lunch with Mr. Tasker on my plan to return to London in the first week of March.

I leave on Saturday evening for Frankfurt to deal with certa matters with Mr. Weber Andreae regarding sales.

Exhibit 109

Mr. Weber Andreae has expressed the desire to have me meet Dr. von Schnitzler who is leaving for New York on Tuesday the 23rd. He is one of the most important, if not the most important man on the commercial side of the I.G. He is a lawyer by education and somewhat of the type of the Germans of the families in the best positions before the war.

I had a visit of Mr. Weber Andreae in Paris in January and told him en passant that his visit once to The National Lead Company of New York was much appreciated and he suggested that von Schnitzler should make a call, which I encouraged—(I thought it would be well the closer the personal connection can be established)—and I understand Mr. Weber Andreae has arranged that Dr. von Schnitzler shall call on Mr. Cornish and you during his visit to New York.

With kind regards,

Yours very truly,

G. JEBSEN

P.T.O.

P.S. I enclose statement of deliveries to customers in the British Empire.

Exhibit 110

COPY March 5, 1932

ear Dr. Jebsen:

Your letter of February 18th to Mr. McCarty has been read by all of us with much interest. We expect another letter from you shortly.

I think that the sales that they have been making in England, and the profits made thereon, justify the demand for £125,000 for the good will and knowledge of our people. The losses suffered in this business in learning about its various conditions, our ability to overcome those losses and reduce the cost of making titanox from 28¢ a pound to its present price, entitled us to a fair compensation for that experience which would become available to a newcomer.

I would not like to make any arrangements whatsoever with people whom I would distrust if they had more than one-half the stock. If there is any reason in the laws or customs of England to preserve the theoretical control of the company in people living in England, I know of no reason why we should complain of that condition at this time. I therefore would not make it a sine qua non that we must have 51% of the stock—or even more than 49%—if the laws of England make that desirable.

I expect to hear from you very shortly and therefore will not at this time further discuss your very interesting letter.

Sincerely yours,

E. J. CORNISH

P. S. They hope to operate on Mr. McCarty about the middle of next week and I will keep you and his other friends advised when anything worthy of a cablegram happens.

Dr. Jebsen

Exhibit 111

No. 6
GJ/AK

..... Paris, April 7th 1932.

Edward J. Cornish Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Cornish,

I beg enclosed to send you copy of a letter from Mr. Robinson, which speaks for itself.

I leave for London next week in order to take up the matter with Major Barley and Robinsons.

It is of course not chiefly the patent situation which should be taken into account by the I.C.I., but our total position in the titanium industry, our sales and goodwill in the English market and our many years' experience from manufacture on a large scale.

I hope and think the I.C.I. will realise the fight they will have with us in case they want to take up the titanium industry with no agreement with us.

I.C.I. has last year shown quite some improvement in their position. Nevertheless they have had to go through a very difficult time and are not out of the woods yet, with their great variety of interests and the many new enterprises they started some time back.

If their reference to several of our basic patents expiring in a year or two, means that we should have to reckon with lower profits, it should be remembered that the profits I have taken as a basis are in ratio to the profits from litho-

pone, or even lower, and a reduction of the titanium profits would presumably lead to a still larger proportion of the lithopone business to be taken by titanium.

This is of course a somewhat delicate matter, in view of the Robinsons' interests, and I will have, before the conference with Major Barley, to hear from Robinson more in detail, in what way he has discussed these matters with I.C.I.

It will be of interest to hear Major Barley develop his ideas.

I understand from your letters that you do not lay stress upon the company being financed in the way proposed by us as long as we receive £125.000 for our going business and have 50% of the shares.

It may interest you that Major Barley called on me in Norway in 1924 or 1925, to the purpose of I.C.I. taking an interest in titanium at that time. I told him then, that it was too early to start a factory in England and he asked me to keep in contact with I.C.I. and remember them when we thought the time was ripe.

I saw him once or twice after that, and I met him, Sir Harry McGowan, Mr. Mitchell and Mr. Nicholsen on a boat leaving New York, I believe in 1928. Major Barley expressed then still interest for Titanium, but considered that the I.C.I. had their hands so full up with other matters, that they could not attend to the titanium question then.

I wrote Mr. McCarty about our conversations.

Major Barley gave me at the same time the interesting information, that he considered the new works which they were constructing at Billingham, able to deliver acid at 25/- a ton.

Exhibit 111

As this was no by-product acid from zinc roasting, I considered the price very cheap. Dr. Kühne told me afterwards that the acid in Billingham was to be made of gypsum with cement as by-product and under favourable conditions, as in Billingham, with gypsum deposits on the spot and cheap coal, and the market for cement, the acid was to be had as a by-product for nothing.

The Billingham works were erected for the production of ammonium sulphate and, as you probably know, this industry is in a deplorable state because of far too many factories having been erected.

With kindest regards,

Yours very truly,

Exhibit 111

COPY

IMPERIAL SMELTING CORPORATION LIMITED

95 Gresham Street

London E.C.2.

4th April 1932.

Dr. G. Jebsén PRIVATE and CONFIDENTIAL
Société Industrielle du Titane
26 Rue de la Pépinière
Paris

Dear Dr. Jebsen,

Following further discussions of a general nature with Imperial Chemical Industries on the question of their association with us in the White Pigment industry, certain letters have been exchanged with reference to the best course to be followed in submitting a definite detailed scheme for consideration of their Directors.

In writing on these matters, and particularly the question of the disclosure of the financial return to be expected from the various branches of the industry, Major Barley has made the following statement:

"With regard to titanium white, for instance, our conclusions show that 6000 tons of pigments could be provided for by an investment of the order of £150,000 which would not justify a scheme on the scale put forward by Dr. Jebsen. The point, therefore, arises, would the National Lead Company agree to a scheme which was capitalised on the actual requirements of the situation and which

Exhibit 111

would take into account the fact that the patent situation in this country becomes extremely weak by next year".

I do not know whether the reference to 6000 tons of *pigments* is intended to refer to pure TiO2 or the composite pigments but it appears that the I.C.I. have already drafted some scheme in relation to Titanium of which we have not previously been aware. In the circumstances we feel it would be preferable for Major Barley and yourself to discuss the matter direct rather than that we should attempt to enter into discussion on the details of your business and estimates of capital required.

If this course appeals to you, I would be glad to hear when you may be free to come to London so that we may make the necessary arrangements for a meeting. In the meantime, we have not communicated with Mr. Cornish as it appears preferable for this to be done by yourself—rather than have advices to them coming from two sources.

Kindest regards

Yours sincerely,

L.B. Robinson (sign.)

Exhibit 112

Paris, April 27th, 1932

GJ/HS

Major L. J. Barley,
c/o Imperial Chemical Industries Limited,
Millbank,
London S.W.1

Dear Major Barley:

As requested by you during my conversation on Wednesday the 13th, with you and Mr. L. B. Robinson, I have the pleasure to confirm the following:

National Lead Company is willing to co-operate with Imperial Chemical Industries and Imperial Smelting Corporation in the development of a titanium industry in the British Empire on the following basis:

A limited company to be formed with a capital of £500,000 divided as follows:

Imperial Chemical Industries	£125,000	against cash payment
Imperial Smelting Corporation	125,000	" " "
National Lead Co. or its subsidiary	125,000	" " "
do. do.	125,000	for compensation for patents, trade mark and goodwill.

A royalty of 25 Norwegian Kroner per ton produced of titanium dioxide or its equivalent to be paid by the Company until the end of 1936.

The British Company to erect a factory in England for a production capacity to be decided upon.

Exhibit 112

In case it should on closer study be found that less capital is required at the start, I am willing to recommend to the National Lead Company that only the amount of cash capital necessary will be called up, it being understood that in case an extension of the business is built up on profits remaining in the Company some method may be adopted in order to arrive at the result that the National Lead Company's group shall always retain one half of the voting power and shall receive one half of the profits either as dividend or by capitalisation of profits.

Thus on a capitalisation of £500,000, the whole of which is not required at present, the position would be:

125,000	(A)	shares allotted to N.L.Co. fully paid as consideration for goodwill and patent rights.
125,000	(B)	shares paid up only to the extent of one-third of the cash required and held by I.S.C.
125,000	(B)	shares paid up to the extent of another third and held by I.C.I.
125,000	(B)	shares paid up to the extent of another third and held by N. L. Co.
500,000		

The profits would be divisible equally among all the shares irrespectively of whether they are fully or partially paid. Thus the profits of any year would either be distributed as dividend or if it was desired that the bulk of them should be kept in the business one quarter would be paid in

dividend on the A shares and the balance utilized in paying up the uncalled capital on the B shares.

The following is intended as a brief statement of the main principles we agreed upon as a basis for the co-operation between the parties.

PERIOD.

We should co-operate for a minimum period of 30 years.

If any of the parties wish to terminate the arrangement at the end of this period the party shall at least 12 months previously offer its shareholding to the other parties pro rata with their interest in the Company at a price corresponding to the book value exclusive of any value for patents, trade marks and goodwill. (In default of agreement, the price to be settled by arbitration).

Shares not bought by one party can be purchased by the other parties in ratio to their holdings.

If no party wishes to terminate the arrangement, it continues in periods of ten years.

If no member is willing to purchase the shares offered for sale, they may with the consent of the remaining members be disposed of to other parties. Such consent not to be unreasonably withheld.

TERRITORY.

The British company shall manufacture and sell within the British Empire and Egypt with the exception of any part of North America.

LICENSES.

I beg further to state the following:

The titanium industry was originally started by the Titan Company A/S., Norway, and the Titanium Pigment Co., U.S.A., which in 1920 made an agreement of co-operation by exchange of all technical experience and exclusive

or nonexclusive licenses under their various patents for the production of titanium products.

In order to avoid competition and friction, it was agreed that each company should confine its activity of manufacture and sales to a definite territory; the Titanium Pigment Co. to North America and the Titan Co. A/S to Europe, Asia, Africa and Australia. As regards South America, this was left open for both companies.

National Lead Company acquired at that time a substantial and later a controlling interest in the Titanium Pigment Co.

In 1924 the National Lead Company acquired the controlling interest in Titan Co. A/S. and afterwards this company's patent interests were transferred to the Titan Co. Inc., U.S.A., which was formed and controlled by the National Lead Company.

In 1927 Titangesellschaft m.b.H., Germany, was formed by I.G.Farbenindustrie and Titan Co. A/S. (later subrogated by Titan Co. Inc.) for the purpose of developing a titanium industry within the territory of Germany, Poland, Russia, Austria, Hungary, Checkoslovakia, Switzerland, Roumania, Yougoslavia, Bulgaria, Greece, Turkey, Japan, China, Spain and Portugal.

This Company by agreement exchanged licenses with the Titan Co. Inc. for their respective territories and the Titan Co. Inc. in turn exchanged these with the Titanium Pigment Co.

Titangesellschaft is by agreement with I.G.Farbenindustrie the exclusive licensee under all patents and inventions of I.G. in the "Licensed Field" for the whole world with the right to give sub-licenses.

The I.G.Farbenindustrie has further undertaken, besides covering its own requirements of Titanium products, also when giving licenses on processes involving the use or consumption of Titanium products to oblige its licensees to cover their requirements from Titangesellschaft m.b.H. or its licensee or sub-licensees.

I beg to quote the definition of the "Licensed Field" agreed upon with the I.G.Farbenindustrie.

> "By this designation is meant all methods and "processes in the field of the manufacture of tita- "nium compound containing two per cent (2%) or "more of the element titanium as well as the titanium "compounds themselves. By titanium compounds "are understood substances, materials, and composi- "tions in which the element titanium is combined "in a chemically or physically combined state. For "instance the composition pigments of the character "of the titanox belong to them. Simple mixtures do "not come under this definition."

The agreements provide that export of products within the "Licensed Field" outside the territory of the licensee cannot be undertaken by the licensee which also shall endeavour to prevent its customers from doing so.

Articles manufactured by the customers of the licensee can be freely exported except to and from North America in respect of which the parties shall endeavor to prevent such exportation in case the titanium product constitutes such an important part of such finished article that its sale will substantially interfere with the sale of the titanium products of the licensee in the territory to which the export has taken place.

Exhibit 112

(One exception is made in so far as the Titan Co. A/S., Norway, in its agreement with Titangesellschaft m.b.H. is reserved the right to export and sell maritime paints through its maritime organization. This deals almost exclusively in supplying Scandinavian ships and the sales constitute a relatively small volume of export).

If any party should withdraw from the co-operation by selling as above foreseen its interest in the British company, the above mentioned exclusive licenses granted by that party to the company become nonexclusive licenses.

It is presumed by the National Lead Company that its co-operation with Imperial Chemical Industries Ltd. and Imperial Smelting Corporation Ltd. will be based on the same principles for the purpose of avoiding friction and establish confidence and good co-operation between the various companies.

In order to preserve the continuation of the sales, R. W. Greeff & Co. Ltd., who act as sole distributor for the United Kingdom, Ireland, Australia and New Zealand shall continue in this or a similar capacity for the British company. In view of your remarks regarding this matter I add, that in case the efficiency of R. W. Greeff should not be satisfactory, the Board of the new company must be free to make other arrangements in the interest of the British company.

The British Company to have the right to draw their requirements of raw materials from Imperial Chemical Industries Ltd. and Imperial Smelting Corporation on most favoured customers' terms.

For reasons verbally explained, the conditions of delivery of sulphuric acid and Bariumsulphide or Barytes should be agreed upon separately, before or at the time a co-operation is to be definitely decided upon.

Exhibit 112

Each party to vote at General Meetings and to be represented on the Board of the Company in proportion to its shareholding.

I wish to add further that in case it should be considered desirable that Goodlass Wall and Associated Lead Industries Ltd. should be associated with the British company as shareholder, this will be agreeable to the National Lead Company, and an arrangement will then of course have to be made with them based on the same principles as above outlined.

If the above principles are acceptable to the parties concerned, and when the same are accepted, I shall be glad to follow your suggestion and in co-operation with representatives of the companies undertake a study to establish an estimate of the cost of production and the erection of a factory in England.

If the result is satisfactory, agreements in detail are to be prepared.

As to the final plans for the factory to be made when co-operation is finally decided upon, we shall look forward with interest to follow your suggestion of co-operating with the organisations of the interested parties in the manner you suggested for the purpose of establishing the best possible plans for the factory and of finding the most suitable location for the manufacture.

Yours very truly

A. JEBSEN

Exhibit 113

No. 7. Received May 11/32

GJ/AK

..... Paris, April 29th 1932.

Edward J. Cornish, Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Cornish,

I returned from London at the end of last week, after having had various conversations there, with I.C.I., I.S.C. and Goodlass Wall & Lead Ind., and beg herewith to give a statement of the situation as I see it.

I.C.I. is seriously contemplating to take an interest in Titanium together with Lithopone and Zinc Oxide, considering that there is an opportunity at the present to arrange these industries so that they may develop on the basis of their merits without cutting each other's throat, and thus secure profits to all of them, and being of the opinion that each will have a place of its own and compete with each other in certain sections of the market.

It may be that I.C.I. also will consider Titanium alone, if they do not get together with I.S.C. in Lithopone and Zinc Oxide, but this has not been their starting point of view.

In this connection, I would mention that they have been experimenting with Titanium, but do not seem to have reached a basis by which they feel confident as to their calculation of possible cost.

Their interest in Titanium is probably also caused by its possible use in connection with various of their manufactured articles like Glyptal Resin and others. They have during last winter propagated formulas for paints, recommending the use of Titanium. It seems also that they seeuses for it in other industries, with which they are more or less connected.

The result of my conversation with Major Barley of I.C.I. in the presence of L.B.R., followed later by a meeting where also W.S.R., Mr. Clive Cookson and Mr. Tasker were present, is laid down in a letter to Major Barley, copy of which is enclosed and of which copies also have been sent to W.S.R. and G.W. & L. Ind.

At this last meeting W.S.R. criticised our proposal re the formation of a company, from the point of view that a compensation of £125,000 for our present business will represent ¼ of the interests in this industry for eternity, and he did not like that his part in the business should cost £1.- per share, whereas the price for ours in reality would be 10/- cash. He suggested that the compensation should be given in 6% limited preference shares—cumulative from the day the factory started its operations, which he reckoned to take 30 months in England (he may have included in this the first year of operations). The ordinary shares to be issued against cash. He did not express himself as to the division of the ordinary shares. Later he declared that he was willing to take a 17 to 25% interest.

Major Barley of I.C.I. had hoped that we all would enter the Company on the basis of only cash.

Mr. Cookson and Mr. Tasker talked about their patents and National Pigment Co's patents, which did not seem to interest anybody else much, except that W.S.R. seemed

inclined to buy them out against a small sum, in order to get rid of a possible nucleus of competition.

W.S.R. expressed rather strongly the view, that 51% of the Company should be in British hands, and felt confident that this would be accepted by the National Lead Company—on the basis of his experience with you.

I have not given up definitely the 50-50% proposition, but asked them what reasons they have for their point of view, mentioning that I thought National Lead Co. would not insist upon 50% if they had good reasons for 51-49%.

It seems that it is chiefly a matter of national feeling and pride.

We may have to give in in this question, which from your letters I understand will be accepted by you, but I believe a discussion of the reasons will be somewhat useful with regard to the future.

I did not enter into any discussion of W.S.R.'s comments on our proposal, but suggested that the three companies should all consider the matter and make us a proposal.

Before that meeting Mr. Robinson was informed about our present profits on the business in the British Empire, but not the others. I afterwards informed Major Barley of the same, which seemed to impress him considerably. The figures were:

Net profits on the present business in the British Empire after deduction of commission and publicity expenses.

Profit 1931

1°—based on average of production price plus general expenses in Leverkusen (incl. research) and large stock per 1/1-1931 $44.000.-

2°—based on production price
plus general expense in 1931 "53.600.-

Calculated profit in 1932

based on present sales prices and sales
in ratio to the first 3 months—
and expected production price
plus general expense

Sales: 375 t. TiO2 *Profit:* £18.400 = gold £14.350.
250 t. Extra T
1363 t. Standard T

He thought this information adds considerable strength to our claim of compensation, etc.

I have been somewhat hesitant to give this information before I new more about their attitude towards us.

I have the impression that it is not the intention of the I.C.I. to start a competition with us in case we do not come together, as they have their hands otherwise full up and will hesitate to make a fight—the matter not being of sufficient interest to them in such case, at the present. I believe, though, that, as time goes on, their interest in Titanium will be increasing, and therefore it would be wise to have an arrangement with them and their assistance already now, as they presumably can assist considerably in the development of the uses of Titanium.

With regard to G.W. & Lead and., I do not feel so certain that they will not try to develop a production on the basis of the National Pigments Co.—if they do not come together with us—although they no doubt will hesi-

tate before doing so. I believe they feel that they do not know much about production and costs of Titanium. Mr. Tasker expressed to me that they considered they should take up Titanium, but felt the situation was difficult, in view of the National Lead Company having not shown any reaction to their suggestions (or proposals).

Major Barley and I were not much inclined to bring G.W. & L. Ind. into discussion at the present stage, but this was more or less forced upon us by W.S.R. (We thought it was better to take up the matter with them later, as they presumably would have to accept the basis we agreed upon, anyhow.) From my conversations with his son and previous comments of W.S.R. regarding G.W. & L. Ind's management and their ability to compete, this was an unexpected change of W.S.R.'s attitude regarding this firm; it seems to have been the result of a conversation between him and Mr. Clive Cookson and Mr. Tasker.

The deciding influence regarding the conditions of an arrangement will rest with I.C.I., if they go in.

W.S.R. will, I believe, not like then to be left out in view of his interests in Lithopone and Zinc Oxide, even if Robinson and I.C.I. should not come together in this matter.

Re Sulphuric Acid.

Major Barley has based his calculations on 45/- per ton of 78% acid. Expressing my view on this price, he seemed first inclined to think that a reduction could be made, but at a later meeting he thought we would have to pay 45/-. He brought me together with a Mr. Wallis of I.C.I., who seemed to take care of their sulphuric acid interests. Mr. Wallis argued strongly for this price being reasonable, and

pointed out that the Metallurgical and Chemical Co. in Runcorn, who had put up a very modern factory, was selling at the same price, without employing their factory at full capacity, and [illegible] evidently not found it to their account to try to develop the market with lower prices. They had now an arrangement with the other sulphuric acid manufacturers. This factory is owned by a very rich and independent group. I suggested that there may have been other reasons for this result, but Mr. Wallis assured me that it was due to their production costs.

Major Barley said openly that we would have to meet the united policy of I.S.C. and I.C.I. with regard to sulphuric acid.

Asking me regarding Robinson's idea as to sulphuric acid, I mentioned the principle of the proposal worked out by L.B.R. and myself, according to which the sulphpric acid price should be based on a low basic price and a part of the profit calculated on the profit on pure Ti02. This idea seemed to interest him.

I presume it will be very difficult to break the convention regarding sulphuric acid prices and get better conditions than most favoured customers. The I.C.I. will presumably never accept that we put up a factory of our own, but will probably meet us with a price which will correspond to what it will cost us if we make it ourselves,—either alone or in conjunction with somebody else,—in order to get a lower production cost resulting from a larger output. It may be then, that a price based on selfcost incl. depreciation but no interest, plus a part of the profit, will be a better arrangement.

I should appreciate if you will have time to send me your comments to this.

Exhibit 113

With regard to W.S.R.'s suggestion as to the compensation for our business and the capital structure of the Company, I shall be much obliged for your comments. It will probably not be the final proposition from the other parties, but it would be of great help, for my guidance, to have your opinion. From your letters I have the impression that in such case you would like to see us having 50% of the shares issued against cash. This will mean an obligation on our side to put up £187.500 cash, if and when £375.000 are required; I do not, though, definitely know whether you are prepared to do this. From our investigations hitherto it is likely that the means required for the start of the business will not be so much as foreseen by our proposal, but it seems advisable to make an arrangement by which the Company can call in sufficient means to make its development unhampered and not be obliged to go to all partners for consent as to the extension of the factory.

I must confess that W.S.R.'s proposal surprised me somewhat, as it is rare in my experience to see goodwill compensated by preference shares. It may be a desire on his part, not to engage himself with too much cash.

You will note from my letter to Major Barley the program laid down for the further negotiations.

Major Barley was very desirous of discussing the possible cost of the production and erection of the factory. I was, though, not inclined to do this before his Company had agreed to the main principles, as such a discussion would involve a lot of detailed information to be given to him. He did not hide that his calculations had shown a nice profit, but that he did not feel that he could trust them.

I have the impression that Major Barley does not consider the National Pigments Co's patents and position to be of any interest and, on Mr. Clive Cookson's question as

to Blumenfeld, he answered that they had no trade in the British Empire. He said that Dupont had a factory based on Blumenfeld and also Montecatini; Dupont, however, was not interested to erect a factory in the British Empire. He was interested in the information that Dupont and National Lead Company were good friends, and I have the idea that he may ask Dupont's point of view before I.C.I. takes a standpoint. This may lead to some complications, in view of Dupont's desire to make an arrangement with you for U.S.A. and the difficulty there is in doing so, without an arrangement also on this side. — I just mention this, in case you should hear anything from Dupont.

Major Barley expressed very definitely that a Company formed with National Lead Co., I.C.I. and I.S.C. as partners, in his opinion, would leave no chances for National Pigments Co. or Blumenfeld, and you will know from my previous letters, that this seems very likely also to me.

Looking forward to hear from you, I am, with kindest regards,

Yours very truly,

G. JEBSEN

P.S.—It will interest you that the factory in Leverkusen produced:

		Prod. cost per 100 Kg. excl. packing & general expense
January	211 t. TiO2 at	M. 74.52
February	271 t. " "	" 69.65
March	400 t. " "	not established yet.

Last year the production costs were: M. 95.34.

P.P.S.—For the sake of order, I enclose copies of my letters of today to Goodlass Wall & Lead Industries, and Mr. L.B. Robinson.

Dr. G. Jebsen
26 Rue de la Pépinière
PARIS
France

Dear Dr. Jebsen,

I have read through the copy of the letter you have addressed to Major Barley and the A.L.M. following the conversations that took place here in London, and I would just like to repeat that I do not think the proposals for the capital structure of the proposed company will be found acceptable by our friends.

In determining what might prove to be so, one must bear in mind that nothwithstanding our repeated advice to establish some form of works in this country, you have not done so. You are therefore today facing the certainty of competition unless an agreement is made with your most likely competitors. The latter, we are bound to say, are not likely to accept any proposal which did not give *cash capital* a *first* charge on profits.

We are inclined to think that their views will be towards something on the following lines—

The Company to be formed with a capital of £500.000, divided as follows:

"A" Shares—375.000 for cash

"B" Shares—125.000, issued as fully paid to the N. L. Group for patents, Trade mark, good-will etc.

The profits, after amortization and reserves, to be divided—

1. In paying 7% on cash capital—"A" Shares.
2. Balance to be divided—25% to "B" Shares
   75% to "A" Shares.

I have not discussed this in any way with our mutual friends, and we believe that the business is one primarily affecting the National Lead Company and yourself.

Best regards,

Yours sincerely,
W.S. ROBINSON (sign.)

Exhibit 115

No. 11. Received May 20/32

GJ/AK

..... Paris, May 10th 1932.

Edward J. Cornish Esq.
President
National Lead Company
111 Broadway
New York City, U.S.A.

Dear Mr. Cornish,

Referring to my letter No. 7, I beg to add the following information:

In my first meeting with Major Barley, he had objections to our proposal that R.W. Greeff & Co should have the sales, and asked if this should be for ever. I pointed out that the National Lead Company wanted R.W. Greeff & Co as sales organisation, in order to preserve the continuity of the sales work, and I considered this condition prompted by the desire to have the sales developed as well as possible. Major Barley thought I.C.I.'s organisation could do better than R.W. Greeff & Co in the dominions and the colonies, and also with regard to certain industries where they have special influence. This is quite likely, and I did not think we should object to I.C.I. doing the sales in such cases. (R.W. Greeff & Co have the sales at present for the United Kingdom and Ireland, Australia and New Zealand. In South Africa, India, Egypt and other places, we work through other agents and connections.)

In the meeting with Mr. Clive Cookson and Mr. Tasker, Mr. Tasker also objected to R.W. Greeff & Co. Major Barley there expressed his satisfaction with the explana-

tion I had given him as to R.W. Greeff & Co continuing the sales.

These are the reasons for my corresponding remark on page 6 of my letter of April 27th to Major Barley.

From my last conversation with Major Barley alone, the following may be of interest:

We talked about the competition between Lithopone and Titanium, and I expressed your view in this respect. Major Barley very strongly assur[illegible]e, that their principle was, never to stand in the way [illegible] progress. They would be interested to develop ta[illegible] ongly, but price-cutting competition should not be allowed. Wishing to have this more clearly defined, I asked if he meant, that for instance it would be reasonable to make a price for Titanium White, which in relation to production price, gave the same profit as Lithopone in relation to its production price, and further, that, in case the production price of Titanium being relatively high because of a smaller outlet, the price to be fixed to stand in ratio to the production price to be expected when a larger production was reached. He accepted this as a reasonable way to look at it.

If our reasons for R.W. Greeff & Co as sales organisation were fear of the Lithopone interests, he thought we need not to fear this. I told him, I considered our standpoint was prompted, as mentioned, by the desire to see the sales develop in the best way. Major Barley mentioned, that they for instance had been developing a new method of making linoleum, which they will give to the linoleum manufacturers and alter their industry, and they might in that connection be able to create a large outlet for Titanium, which it would take us considerably more time to open up. I agreed to his point of view there.

I asked him if his remark, that the Titanium is linked up with Lithopone and Zinc Oxide, was to be understood so, that if they did not agree to W.S.R.'s proposal re these last, they would not be interested in Titanium. He thought he could not answer this at present. I.C.I. was looking over various industries at present, in groups, and they considered them in groups. It may be that they would also consider Titanium separately. It would be, though, a comparatively small thing to them then. I told him I would like to see I.C.I. take an interest anyhow in the Titanium industry, as it is a chemical process in their line.

Major Barley thought they could be of much assistance to us in the development. I showed some diffidence in accepting this view, as I considered the development of the manufacturing part would be done by the company's own organisation, and the advantage to the Titanium Industry of I.C.I.'s experience generally would much depend upon the chemists I.C.I. put in, and their ability to make this experience available to us, but anyhow I felt that we were more or less of the same family.

Talking of the 50-50% or 49-51% interests, I repeated some of my previously mentioned arguments, and added that it might well be that W.S. Robinson was right in his view that the National Lead Company would not insist upon 50% if there were good reasons for the British interests having 51%, and therefore I had asked him in the first interview, if he had any reasons for asking this. Major Barley told me, that generally they wanted that the British interests should have 51%, as a principle. They had a company together with Dupont in England, in which Dupont had 49%, and it was working very well. They had another company on the basis of 50-50%, which did not

work so well; they were then obliged to put up a lot of details for consideration with their partner, delaying decisions, etc.

Later the same afternoon, I saw L.B.R. and mentioned to him my remarks to Major Barley, concerning your possible point of view as to 49 or 50% interest in the company, asking him to mention this to W.S.R.

I asked him, when leaving, whether the linking up of Titanium with Lithopone and Zinc Oxide was such, that it could lead to I.C.I. considering only all three, or if they might take interest in one and not in the other. He first thought they would have to take the stones with the plums, and not only pick out the plums. This has been said in connection with the question of Lithopone and Zinc Oxide. He did not know his father's point of view as to Titanium, but anyhow they were not partners in Titanium yet.

With kindest regards,

Yours very truly,

Dr. G. Jebsen
Societé Industrielle du Titane
24 Rue de la Papiniere
Paris, France.

Dear Dr. Jebsen:

In the absence of Mr. Cornish we called the Executive Committee together yesterday and as a result of their deliberations we cabled you as per enclosed copy, which I trust is perfectly clear to you.

There is one other point I think is necessary to emphasize. In your letter of April 27th to Major L. J. Barley of the Imperial Chemical Industries Limited, copy of which you also sent to the Associated Lead and to Mr. Robinson, you specify the division of the capital, on the last item, as National Lead Company or its subsidiary £125,000 for compensation for patents, trade mark and good-will. This is not strictly a true statement of what the £125,000 is being paid for. This amount is being paid to the National Lead Company or its subsidiary for its established business in Great Britain, for its trade marks, good-will and technical knowledge which will be given the new company to enable them to start off without all the trouble that we have had in the past.

We think it is absolutely essential for them to thoroughly understand that we are asking nothing for the patents. Unless this is thoroughly understood by them you will have the A.L.M. and National Pigments people, if

taken in, making a demand for payments for their patents which must be avoided as our laboratory people attach no importance to these patents whatever.

I would therefore suggest that you write Major Barley and send copies of your letter to both Mr. Robinson and the A. L. M. people, correcting this particular statement. You will readily understand how vitally important this will be in your future negotiations.

Yours very truly,

Vice President.

Ref.—HST/ML.

W.C. Beschorman, Esq.
New York.

Dear Mr. Beschorman,

I want to let you know the present position with regard to Titanium.

The result of the correspondence which has taken place, and of discussions which followed, was that it seemed best that, if possible, we should work along with the National Smelting Company and Imperial Chemical Industries, in endeavouring to bring about a working arrangement with your goodselves, and it was our hope that we might be able, through this association, to bring into such a group the two patent positions in which we were involved. Negotiations were proceeding, as you know, with this general end in view.

You will remember that so far as National Titanium Pigments Limited were concerned, we had arranged to have an option over their position for a six months' period. We had kept them fully advised of the position, and, to the best of our belief, they were completely satisfied with the line of action that was being followed, but, somewhat to our surprise, immediately on the expiry of the option period, they

advised us that they had made an arrangement with Messrs. Laporte, of Luton, who are manufacturers of Blanc Fixe, for the establishment with them of a plant.

It will not, therefore, be possible to get hold of this outfit—at any rate for the time being.

I have seen Dr. Jebsen this morning, on the eve of his sailing for New York, and he will be able to give you further particulars of the position.

I think it is advisable that if arrangements are made for manufacture by a more influential group, a definite move, which would be known about in the trade, should be made at an early date.

With kind regards,

I am,

Your sincerely,

H. J. TASKER.

Exhibit 119

IMPERIAL SMELTING CORPORATION LIMITED

96, Gresham Street,
London, E. C. 2

The Savoy-Plaza Hotel,
New York, N. Y.
July 16, 1932.

Edward Cornish, Esq., President
National Lead Company
111 Broadway, New York, N. Y.

Dear Mr. Cornish:

I have to advise you that the Imperial Chemical Industries, Goodlass Wall and Associated Lead, and the Imperial Smelting Corporation are prepared to accept the proposals in your cable to me of 25th June with the following modifications—

1. The necessary capital for constructing works, equipment and working capital to be found in 7% cumulative First Preference stock,—

   51% by the British interests
   49% by National Lead

2. After payment of 6% on the £125,000. of Second Preferred stock alloted to you, the profits to be divided thus—

   51% to the British interests, and
   49% to the American interests.

Exhibit 119

3. The new company to take over your British Empire business, patents and goodwill—not "English" only as stated in your cable.

4. Immediate maximum commitment of British group to be limited to 51% of £10,000., capital for further investment to depend on result of technical and market study, and satisfaction of Imperial Chemical Industries' accountant with the valuation of present profits of the business National Lead is to hand over.

The Imperial Chemical Industries state that it is very desirable to eliminate competition in the relatively small British market, and subject to your concurrence, they will do this by offering a small participation to the Blumenthal people, who are desirous of entering the business.

I trust the proposals set out herein will be satisfactory to you.

With best personal regards.

Yours sincerely,

W. S. ROBINSON

Exhibit 120

COPY

July 20, 1932.

Mr. W. S. Robinson
Chateau Laurier
Ottawa, Canada

Dear Mr. Robinson:

I have your letter of the 16th instant.

The first modification, requiring the National Lead Company to advance 49% of the cash required to construct necessary works in England, to be represented by 7% cumulative First Preferred stock, is quite satisfactory.

The second modification, which I presume contemplates an issue of Common stock which is subject to the First and Second Preferred stock, is also satisfactory to us.

The third modification could not be made to apply to Canada but could be made to apply to all of the rest of the British Empire. This is because the American company has the exclusive rights in Canada, whereas the European company would not be able to transfer any rights in Canada whatsoever, although the National Lead Company has the controlling interest in both companies. The other stockholders differ in the two companies; Dr. Jebsen holding a minority interest in the European company and none in the American company, and some stockholders owning stock in the American company and none in the European.

Inasmuch as our sales department is thoroughly organized in Canada and negotiations have been pending with other Canadian interests to manufacture in Canada, and we have $550,000 par value of Canadian gold bonds with which to build the plant (if necessary) in Canada, I think

Exhibit 120

probably this feature will adjust itself by letting our Canadian company, instead of building a plant, buy from the American company or the new plant to be constructed in England, whichever may prove to be more advantageous to it; but itself to keep control of its own sales, that are already well organized far beyond anything we have in England proper. For the time being, therefore, the Canadian business should be excluded from consideration.

Referring to Paragraph 4. of your modifications. I assume that the £10,000 is deemed sufficient to provide immediate requirements for working capital, with the English company acquiring its goods from the I. G. at cost and paying the necessary expenses of selling etc., until such time as we can determine, in consultation with the Imperial Chemical Industries, yourself and others immediately associated with us, the location of the plant, its probable cost and the amount of cash required for its construction and ultimate working capital. If it means a further discussion as to the value of what we are putting in at £125,000, I suggest that the Imperial Chemical Industries satisfy themselves as to that point before we attempt to get together on further details, as I desire that matter not to be the subject of negotiations with any man whom we send over to Europe.

It would be satisfactory to the National Lead Company for you to invite the Blumenfeld interest, or any other interest that you desire, to join in the enterprise.

Dr. Jebsen left for Paris on the "Aquitania" last Saturday.

Sincerely yours,

(Signed) E. J. CORNISH
President.

Mr. J. S. Robinson
S. S. Bremen
58th Street
Brooklyn, N. Y.

Dear Mr. Robinson:

As requested yesterday at our conference, I am enclosing you memorandum showing Blumenfeld's position in the world markets.

Trusting you will have a pleasant voyage and with kindest regards,

Yours very truly,

Vice President.

Exhibit 121

831

August 12, 1932.

Memorandum for Mr. W. S. Robinson re Blumenfeld position.

Blumenfeld sold the North American rights to Commercial Pigments Company originally for part cash and royalty; the royalty has since been computed on to a cash basis and purchased by the Commercial Pigments Company so that Blumenfeld has no income from the North American rights.

They were also given an option on the British rights, and consequently before Blumenfeld could sell or transfer his British rights to any one he would have to offer them to the Commercial Pigments Company on the same basis as the suggested transfer.

Blumenfeld's French rights are held by Thann & Mulhouse, terms unknown.

The Italian rights were sold to Montecatini for one-half common stock interest in the plant, with restrictions not to ship out of Italy without Blumenfeld's permission. Montecatini has since obtained Blumenfeld's permission to ship into Great Britain, and we understand ships somewhere between 300 and 400 tons of pure TiO_2 per annum. We understand that this stock has never paid a dividend.

The rights for Germany, Switzerland, Spain, Portugal, China and Japan were sold to Aussig, on what terms we do not know. Our best information is that Aussig's production is approximately 300 tons of pure Titanium oxide per annum.

We further understand that on all of these contracts both parties to each contract are required to post the other party on all improvements developed, and give the other party the right to use said improvements. It is for this reason that I felt that it would be dangerous to take Blumenfeld into the English company.

10th November 1932

Mr. E. J. Cornish, President
National Lead Co.
111 Broadway, New York

Dear Mr. Cornish:

I am enclosing a copy of a letter from Mr. Tasker dated November 1st which I received on November 8th with reference to Klein/Brown patents. I am also enclosing a copy of my reply to Mr. Tasker's letter. Mr. Tasker has sent copies of this letter to all of our partners.

Neither Dr. Jebsen nor I know anything of any "preliminary discussions" to which Mr. Tasker refers. These discussions may have taken place with Mr. Robinson. I have not previously heard of anything nor seen the letter from Mr. Cookson to Mr. Robinson dated September 26th referred to in his letter. I have since obtained copy of this letter from Mr. Robinson and am enclosing it herein. In my acknowledgment to Mr. Tasker I merely stated that I am sending this letter on to you without any further comment. I did the same thing with Mr. Cooksons letter in which he also referred to the Klein/Brown patents. Unless I receive definite instructions from you to discuss this matter further I will not do so. My own feeling, however, is that payment of shares amounting to £125,000 which we receive for our business, goodwill, technical assistance and

so forth did not nearly cover its actual value as can be readily seen from the report from Thomson McLintock & Co. The offset to what we put in was the goodwill value brought in by our partners which in the case of I.C.I. and I.S.C. was very substantial. *In the case of Goodlass Wall I imagined that one of the* considerations in bringing them in was to eliminate any friction with the Klein/Brown patents, without any payments whatever other than the privilege of subscribing to stock in the new company at par. Why don't they give a portion of their shares at par to Brown & Klein and satisfy them in that way?

In order to give you a complete picture of this question I communicated with Major Barley since his name was mentioned in connection with the Hopkin & Williams (Travancore) Ltd. and obtained from him a copy of the letter which he wrote to Mr. Tasker on November 8th in reply to Mr. Tasker's letter.

This matter will probably come up at one of the early meetings of the Board of Directors of the new company and they will obviously wish to have your opinion or any suggestions you wish to make in this connection.

The contracts and agreements have all now been tentatively drawn and will be sent out to the various parties on Friday the 11th November. We are still awaiting your decision with reference to the reservation made by I.C.I. as to licensed field and your decision will involve some changes throughout the various agreements, but we are hoping to put them into effect as soon as possible upon receipt of word from you.

Mr. L. B. Robinson, Dr. Jebsen and myself, together with the attorneys are having a final meeting this afternoon after which the completed drafts of the contracts will be sent out to our other partners who will then submit them

to their legal departments. Some time next week we will have a meeting of all the partners to discuss any suggestions or possible changes and I am hoping that by the end of next week we will have the final drafts of the completed contracts and documents and that I will be ready to return. Dr. Jebsen feels that I am too optimistic in that respect but I feel that subject to any unusual snag coming up I shall be able to follow these plans.

Most cordial regards

Sincerely yours

H. T. Warshow,

P. S. Jebsen received your cable today, Nov. 10th, and will probably decide to go to Cologne to get the approval of the I.G. to this contract in advance. W. S. Robinson leaves for Australia Tuesday. L. B. Robinson goes to Paris next week for several days. It may be *three* weeks or perhaps even longer before the *actual* agreements are in final shape for me to take back. Furthermore, everything is settled except the license field, on which point Jebsen is in complete charge. I am perfectly willing to follow your wishes, but I believe I should be back in my office immediately. If you have no objections, I should like to return immediately with the contract, as it is at present, and have Jebsen send on licensed field later. If you approve, will you be good enough to cable me *immediately* upon receipt of this letter.

H. T. W.

Confidential

Mr. Evans McCarty,
Vice-President,
National Lead Company,
New York.

Dear Mr. McCarty,

I enclose copies of two letters, of April 28th and August 12th this year regarding Mr. Chase, which Dr. Raspe has given me.

Dr. Raspe asked me to leave out the names, for the purpose of discretion, as he did not want to risk that the I. G. should come into an inconvenient situation by these letters', through coincidence, coming into other hands. Consequently, I have only put in the initial letter of each name, which I presume is sufficient to you with the information you already have received; and trust you will take due regard to Dr. Raspe's anxiety.

Yours very truly,

G. JEBSEN

Enclosures:
Copies of letters.

Exhibit 123

R1.

Albert,
80 William Street,
NEW YORK. April 28, 1927.

You will note from my letter of to-day that Mr. C. is again departing for Europe on April 30th. Regarding titanium oxide. He was unable to get to Frankfurt on his last trip, and I also doubt whether he'll be able to get there on this trip. He expects to be gone but one month.

I understand he concluded, or is concluding, a very fine (and important) deal with European interests on titanium oxide patents. His work has interested and occupied him to such an extent that he has been forced to turn over to his partner Col. W., his old and very lucrative Columbia account,—worth to him $15.000 to $25.000 a year. I cite this to indicate Mr. C. important attitude towards titanium.

Glidden Company (paints) came out recently with an announcement that it as arranging to go into the titanium oxide business on a big scale. (By the way, the Commercial Solvents Company seems to be mixed up in some important way with Mr. C. recent activities).

I have also recently read an announcement that the National Lead Company has bought up (or into) a Norwegian titanium producer.

Now I might be able to get Mr. C. ear when he returns anent your interest in titanium oxide. So if you care to, you may send me what data you have,—and explain briefly your position,—and I will feel Mr. C. out.

Sincerely yours,

R.

P.S. By the way,—other friends of mine are very anxious to get connected with a titanium oxide producer. They are important in the American paint industry.

A.-P.-R.

Exhibit 123

R.
New York. August 12, 1927.

Mr. H.
I. G. Farbenindustrie,
Frankfurt a.M., Germany.

Dear Mr. H.:

I beg to acknowledge receipt of your cablegramm as follows:

> "Please cable name of Firm backing C an his position in firm is it Titanium Pigment Company"

I had been on the point of sending you some additional information on this C. matter. Since writing you last, I have been informed that this C. Titanium syndicate has decided on *Baltimore* as the location for Titanium Oxide plant, and that is already planning the erection of a plant there. My informant expressed the opinion that Baltimore was decided upon as the location because of its accessibility to Titanium (barytes?) deposits in Virginia. Whether this was merely a guess on his part, or something which had been definitely told him by Mr. C., I do not know. He also thought that other reasons for locating the plant in Baltimore may have been due to the fact that it is a seaport and within cheap freight distance of the import eastern markets.

I have not seen Mr. C. in some three weeks. When I last saw him, he informed me definitely that he had organized and was the head of a syndikate composed of men who were heavily financially interested in the Commercial Solvents Corporation, but whom he, intimated, were acting as

individuals and not for the Commercial Solvents Corporation. He also gave me to understand, that this group was not organized into a company as yet, and had made no affiliation or combination with any industrial organization. A few days ago Mr. Silsby informed me that more recent information he had received indicated that there had been no change in the status of this group, or their relations with others, since my interview with Mr. C. of some weeks ago. (Should this letter be repetitious of my last letter to you, please note that in order to get this off in a hurry, I am writing it without access to the copy of my last letter to you, which is home in my private file.)

The Titanium Pigment Company is owned entirely or controlled by the National Lead Company, which is the controlling factor in the American white lead business.

Mr. C. gave me to understand, that his group were not connected with the National Lead Company; but expected to be indirect and definite opposition and competition to them. You will recall my having informed you that Mr. C. had made the statement that his crowd would control the American (and foreign?) Titanium Oxide situation because of their control of patents. He made this remark in direct reference to the National Lead Company's Titanium Pigment Company, and as an illustration of this group's weaker position relative to the position of his group. He intimated that regardless of the National Lead Company, his group would control the Titanium Oxide situation in America and that if the National Lead Company were fully alive to the situation, it would get out of the business, or attempt to make a deal with them.

It is general knowledge here that the National Lead Company has invested considerable money and is prepared to invest considerable more in the Titanium Pigment Com-

Exhibit 123

pany and is going at the business in a very serious and earnest manner.

(In my letter of April 28th., I made reference to the National Lead Company having bought up the Norwegian Titanium Company. By National Lead Company, I meant the Titanium Pigment Company).

By a coincidence, I happened to see Mr. S. (of R. & H.) this morning, who again urged me to inform Mr. C. that his Company was ready to discuss a titanium affiliation with Mr. C.'s syndicate, and asked me to take the matter up with Mr. C. for him. I informed Mr. S. that it would be useless for any one to attempt to interest Mr. C. in a affiliation unless he had something else to offer besides money, as this group had all the capital behind it, it could use. The R. & H. people have nothing to offer except a keen desire to go into the business. Mr. S. also said that his company would be ready to put their almost inactive St. Albans, W. Va. plant into a combination. I have reason to believe, however, that even this would not make a proposal from R. & H. of any special interest to Mr. C.

I wish to confirm again, my previous advice to you that Mr. C. group is ready to make a corporate or other affiliation with any company having something of value to offer it,—such as good sales and propaganda, position or patents. I advise you to take this group very seriously. They will be a very important, if not the most important factor, in the American or world Titanium Oxide situation.

Our mutual friend, Mr. Litter, has been authorized by the oldest established and one of the best known white lead producers in the country, to act for it and attempt to make an affiliation between it and Mr. C. group. The assumption is that the repitation and name of this firm would help

introduce Titanium Oxide. This particular producer went so far as to offer to throw his entire business into a titanium oxide Company in return for stock participation and a reasonable amount of cash.

I am arranging to see Mr. C. next week on this particular proposal. If you, however, are interested in this angle, Mr. Litter instructs me to inform you he is ready to hold matters in abeyance until you have been given an opportunity to study this matter also.

I am holding off cabling you until later today in the hope that I may be able to locate Mr. C. or Mr. Silsby to as certain whether or not this syndicate has formed itself into a company.

Yours very truly,

sign. R.

APR:EJ.

P.S.:—Since dictating the above letter I have been informed that Mr. C. titanium oxide syndicate has not as yet been formed into a company or corporation. I was also definitely informed that this group is not the Titanium Pigment Company, or any connection with it. National Lead Company bought out this company about a year or two ago. Prior to then it appeared to have a status independent from the National Lead Company. Note enclosed advertisement.

"I cabled you as follows:—

"C. organized and heads syndicate men financially prominent in Commercial Solvents Corporation apparently acting as individuals and not yet incorpodated stop Syndicate is not connected with Titanium Pigment Company which is National Lead Company subsidiary".

Exhibit 124

November 4, 1927

Dr. G. Jebsen
Societe Industrielle du Titane
23 Rue Ballu, Paris, France

Dear Dr. Jebsen:

I have your letter of October 19th with reference to the Blumenfeld Process as carried out in the Montecatini factory, and have sent copies of your letter to those of our people who are interested.

I have also your further letter of the same date enclosing copies of two letters addressed to the I. G., and referring to the activities of Mr. Chase. Mr. Chase, whom I have known for some years, lunched with me a short time ago, and gave me a complete account of the new enterprise which I presume was an accurate one.

He informed me that a company called the Commercial Pigment Company had been formed by a group of men who originally financed the Commercial Solvents Company, and had engaged him to investigate the subject of titanium and erect for them a factory in Baltimore for the production of titanium oxide. He mentioned the names of the several gentlemen connected with the enterprise some of whom I recognized. I did not, however, recognize the names of any of the R & H people so that I think they have no connection with the venture. The Glidden Company, I understand, hold an interest of about 10%.

Mr. Chase told me that a factory was under construction in Baltimore, and should be ready for operation about the first of the year. It is intended to use the Blumenfeld Process which Mr. Chase investigated carefully in Europe visiting the plants of Montecatini and others. He seemed

quite confident of the Process, and stated that the reason that those using the Process in Europe had been so long in getting their product on the market was that they had worked out every detail of the process carefully before attempting actual manufacturing operations. He stated that when he was in Europe Montecatini was producing about two tons of TiO_2 a day, but that they had a capacity for producing approximately ten tons.

He stated to me that the problems connected with the recovery of the iron as ferrous sulphate and of the concentration of the free acid had all been satisfactorily solved by various people in Europe who had been working with Blumenfeld.

The initial capacity of the Baltimore plant is stated to be ten tons of TiO_2 per day. It is my understanding that they do not at present contemplate the manufacture of composite pigments, but principally to sell their TiO_2 either pure or reduced by mechanical mixture of other materials.

I was further informed by Mr. Chase that his company had made a contract with Travancore Minerals, Ltd., for their supply of ilmenite. This statement has been confirmed by information given to us through European representatives of American railroads. We have reason to think that the Commercial Pigments Co., tried to obtain some ilmenite deposits in Virginia which the Titanium Pigment Co., acquired during the spring.

I asked Mr. Chase if his company were prepared for patent litigation, and he told me that their counsel had assured them that they were secure on that point. Mr. Chase went on to say, however, that he personally had no connection with the patents having been engaged simply as an engineer.

This is evidently a serious undertaking, and brings us face to face with a problem that will have to be dealt with as soon as the production of the company is on the market.

I cannot quite make up my mind whether Mr. Chase's object in telling me all this was to let me have first-hand instead of hearsay information, or whether he was building up a background for a proposal to sell the plant to us a little later on. We have no information that the Commercial Pigment Company is connected in any way with any of the American white lead manufacturers with the exception of the Glidden Company who manufacture white lead in a small way by a precipitation process.

If Mr. Chase's report of the European situation is correct you will have the Blumenfeld companies to deal with in Europe next year, and we will appreciate it if you will keep us informed of any developments that come to your knowledge.

Yours very truly,

McCarty
Vice President

Exhibit 125

TITAN CO. A/S

GJ/AK

p.t. 23 Rue Ballu.
Paris, November 25th 1927.

Evans McCarty Esq.
Vice-President
National Lead Company
111 Broadway
New-York City
U.S.A.

Dear Mr. McCarty,

Your favours of November 4th and 9th at hand.

I have noted with much interest the conversation with Mr. Chase.

Mr. Gilbert informs me that he is meeting offers of Mr. Blumenfeld's concern here rather often now. They ask a price of Frs: 8.00 per Kilo for a pigment which they say is practically 100%; it seems to vary from 97% and upwards. The quality as to colour and hiding power varies, but seems to be improving. Mr. Gilbert's people find it difficult to keep the position with our present prices; they are now more than 25% above white zinc—the maximum difference we agreed upon last summer. If the price should be reduced to corresponding with 25% difference, it will mean a loss of nearly 80.000 Frs. for the French company on their present stock. I have agreed to a proposal from Mr. Gilbert to keep the price officially the same, as it was, but make reductions in special cases where it cannot be avoided.

Exhibit 125

The amount of sales has declined compared with last year as to quantities. According to reports from Mr. Gilbert's inspector of sales, it is a matter of price to reach an increase,—the quality is acknowledged. Mr. Gilbert further informs me that the tendency of the market is going more and more in the direction of adulterated pigments.

Montecatini.

In the newspapers it has recently been published that the Company let know that they produce now Titan White, Lithophone and White Zinc for the requirements in Italy and also for the export; also that negotiations are going on between Montecatini and some American groups, re licenses for the production in Italy of chemical products which are imported at present.

Yours very truly,

G. JEBSEN

Dr. G. Jebsen
Societe Industrielle du Titane
23 Rue Ballu, Paris, France

Dear Dr. Jebsen:

I have your letter No. 18 dated November 25th with reference to the activities of the companies operating under Mr. Blumenfeld's patents.

It is expected that the plant of the Commercial Pigment Company at Baltimore will be in operation early in the new year, and we may expect some active competition.

The question of the attitude we should take toward these Blumenfeld patents is one of the subjects that we would like to discuss with you if you find it convenient to visit us this winter.

Yours very truly,

Vice President

847

Exhibit 127

Letterhead of

PHILIP C. PECK

December 19th, 1927.

Mr. William F. Meredith, President,
Titanium Pigment Company, Inc.,
94 Fulton Street, New York City.

Re: Commercial Pigments Corporation

Dear Mr. Meredith:—

You and Mr. McCarty have instructed me to study the various U. S. patents issued to your Company as well as to the Titan Co., in order to determine, at least preliminarily, what patent-protection would be afforded you as against the use by Commercial Pigments Corporation of the so-called Blumenfeld processes for production of titanic acid at Baltimore, and the subsequent sale of the resulting titanium compounds for use by others in the manufacture of paints, etc.

Mr. Barton has furnished me with a list containing 51 patents owned by your Company and also 21 patents issued to the Titan Company involving this subject matter, all of which I have carefully examined with regard to their various claims for processes, products and for uses of titanium compounds in the arts and their possible infringement by the above Company and its customers.

The only information as to what comprises the Blumenfeld procedure in the manufacture of the sample product is obtained from recent letters of Mr. Jebsen as to what a Dr.

Raspe told him regarding the operations used at the Montecatini plant in Italy, such information coming from a man of the "I.G." who had visited this plant. Hence the vagueness and uncertainty as to what detailed procedure was actually employed, and the hearsay character of the proof is manifest.

Such Blumenfeld-Montecatini methods may be summarized as follows:—

Finely ground ilmenite is mixed with sulphuric acid and heated in flat iron pans while the mass is stirred by rotary stirrers. The stiffened cake obtained from this decomposition is in the form of lumps which are then cooled.

The titanic sulphate lumps are then dissolved and the solution drawn off to a clearing tank where the clear solution is treated with copper sulphide which settles and takes with it the finest sludge. What chemical reactions take place are not disclosed.

The titanium iron sulphate clear solution so obtained is then cooled on revolving cylinders at about 0° C., which artificial refrigeration causes the sulphate of iron to crystallise without combining with the titanium salts. The iron sulphate crystals are then removed, and then the titanium oxide is precipitated by hydrolysis, washed and calcined.

The sample product so obtained has been analysed by Mr. Barton as follows:—

Titanium Oxide	96.75%
Sulphuric Anhydride	.48%
Phosphoric Anhydride	.50%
Loss on Calcination	.51%
	98.24%

Exhibit 127

Mr. Barton has informed me that the particles are not amorphous, but exhibit a crystalline structure under the microscope and that the product has a specific gravity of 3.92.

In the process as above outlined, the treatment of the solution with copper sulphide and the subsequent artificial refrigeration of the titanium iron sulphate solution to crystallize the sulphate of iron appear to be novel features. The other steps employed have long been common practice in this art with different intermediate steps to attain various titanium compounds and products.

The Blumenfeld patents do not aid in explaining the details of their plant procedure to any great extent, though British patent No. 253,550 appears to disclose that intermediate step in which artificial cold is used for crystallising the sulphate of iron accompanying the sulphuric solutions of titanium oxide. No U. S. patent on this feature has been granted so far as my information goes.

Of course we have no assurance that Commercial Pigments Corporation will actually use the Montecatini processes as above outlined, or any of those methods described in the Blumenfeld patents which it is supposed to own or control. Hence the inherent difficulties of positively determining infringement.

Three main questions arise viz:—

1) Does the Blumenfeld procedure at the Montecatini plant infringe any process claim or claims contained in your patents and/or in those of the Titan Co?

2) Does the sample product obtained by the use of these Blumenfeld processes and having the characteristics which I have given infringe any article or product claim of these patents?

3) What protection would be afforded you as against uses of the Commercial Pigments Corporation's titanium products and sold to their customers for making paints etc?

I will discuss theese questions 1 and 2 together since many of the patents have both process and product claims phrased in similar language. As to the process or method, your patents may have certain claims embracing the entire procedure, and other claims covering only an intermediate step or steps less than the entire process used.

In regard to the article or product, your patents may have claims covering the final product, or any intermediate compound or solution which is patentably new.

Processes and products are regarded as separate inventions though often combined in a single patent, since normally a new process may result in several products besides that one which is new and patented; and likewise a new product may be made as well by some old process, or even by some new method different from the one patented. Hence each patent and its several groups of claims must be analysed and studied from two different view-points to determine whether the Blumenfeld methods and resulting product are covered by the claim-language defining the respective improvements in order to make out a *prima facie* case of infringement.

Process and Product Patents

I will first consider the patents owned by your Titanium Pigment Company and then those of the Titan Company.

I do not find that your Pigment Company has any patent or patents which have claims covering the Blumenfeld process either in its entirety or in any step or combination

of steps as a sub-feature of the process. Most of your patents for extracting TiO_2 from ilmenite ores prescribe their fusion with alkali compounds as the preliminary step. However some of your patents have article or product claims that might be infringed.

Rossi & Barton No. 1,106,406 (claims 18-21) specify the "amorphous" character of the calcined product which shall also contain some iron. These claims would not be infringed by the Blumenfeld product as analyzed by Mr. Barton.

Rossi & Barton No. 1,171,542 (claim 2) covers broadly a titanic acid product "by analysis as consisting principally of titanic oxid and as containing also sulfuric anhydrid". The Blumenfeld product by analysis contains such constitutents and would infringe such claim 2.

Barton No. 1,189,229 (claim 14) covers substantially pure TiO^2 since the product must contain "titanic oxid not less than 99.75%". Claim 14 does not specify that the particles are "amorphous" as in claims 11-13. However the Blumenfeld product by analysis contains only 96.7% titanic oxid and so is outside the prescribed purity of claim 14.

Other Pigment Company patents having article claims are Rossi & Barton No. 1,166,547 (claim 10) limited to amorphous titanic oxid not less than 90% and as also containing soda; Rossi & Barton No. 1,196,031 for a basic titanium sulphate; and Rossi No. 1,272,855 (claim 7) specifying a powder consisting essentially of titanic oxid and "as containing constitutents of organic origin". None of these patents appears to be infringed by the Blumenfeld product so far as we know of its characteristics chemical and otherwise. However the basic titanium sulphate claim for a titanium compound (No. 1,196,031) comprising a pre-

ponderance of TiO_2, less combined water and less sulfuric anhydrid than combined water may be infringed when further data is obtainable as to the procedure to be employed by Commercial Pigments Corporation.

Several of the Titan Co. patents *may* ultimately be infringed when we learn more in detail just how the Blumenfeld methods are to be used industrially at Baltimore.

Goldschmidt No. 1,348,127 has claims for effecting crystallization in a titanium oxygen compound by heating such compound (temperature range 900°-1000° C.) "until the particles (TiO_2) constituting the structure exhibit a crystalline interior structure and a smooth exterior surface" (claim 1). Claim 19 covers the article in like terms. Goldschmidt states that his invention broadly consists in changing amorphous titanium dioxid or compounds containing titanium and oxygen into a "crypto-crystalline modification" by heating above the usual temperatures required to produce amorphous TiO^2 (p 3 lines 5-7). Assuming that the Blumenfeld product is in crystalline form as stated by Mr. Barton, was this super-heating feature of the Goldschmidt process actually used to produce such claimed crypto-crystalline structure? At present we do not know what temperatures were employed at Montecatini in calcining. But irrespective of the process, claim 19 covers the resulting final product and reads as follows:—

> "As a new and useful article of manufacture, a substance comprising titanium oxid, the particles of which exhibit a crystalline interior structure and *a smooth exterior surface.*"

Farup No. 1,360,737 (claim 8) covers broadly a new step in the manufacture of white pigment by the introduc-

tion of a small amount (2½%) of phosphoric acid into the mixing vat containing crude titanium oxygen compound and sulphuric acid as a decomposing agent. The Blumenfeld procedure does not state that any phosphoric acid is added in the ilmenite decomposition, but the sample product contains .50% phosphoric anhydride which comes within the scope of claim 12:

> "As a new and improved article of manufacture, a white or light colored pigment containing *an oxygen compound of titanium and combined phosphorus.*".

This constituent may have been derived from the titaniferous material. Assuming, however, that some phosphoric acid was added in the mixing vat, Farup's claim 8 would likewise be infringed for it covers the single step of "intimately mixing a titanium hydrate with a relatively small amount of phosphoric acid". Mr. Barton thinks that this phosphoric constituent was derived from the ores used as starting material.
